The Literary Digest

VOL. XXVI., NO. 1 NEW YORK, JANUARY 3, 1903. WHOLE NUMBER, 663

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

PUBLISHERS' NOTE.

The index of Vol. XXV. of THE LITERARY DIGEST will be ready about January 31, and will be mailed free to subscribers who have previously made application. Other subscribers who wish to be supplied regularly with future indexes will please send request accordingly.

Publishers of THE LITERARY DIGEST

TOPICS OF THE DAY.

THE NON-UNION MINERS.

IF the miners' union approved the violence in the strike region last summer, it is not a fit organization to make contracts with; and if it disapproved the violence, but could not control its members, then it is, by its weakness, equally unfit—such is the dilemma upon whose horns the operators' lawyers are trying to impale the United Mine Workers, in the argument before the strike commission. For four days, from December 17 to 20, a procession of non-unionists, their wives and children, passed in review before the commission and told of violence, boycotting, abuse, and intimidation. No newspaper defends the perpetrators of these acts, and none charges now that the violence existed only in the imagination of "yellow journal" reporters.

The following paragraphs from the report of the proceedings for December 18 is a fair sample of the non-unionist testimony:

"The first witness to-day said that a member of the miners' union threatened to kill him if he did not stop working, and finally did shoot him. The offender was sent to prison.

"The next three witnesses were John Hoffman and his son, and the son's wife. The men were working at the Upper Lehigh Colliery assisting in putting in a new boiler. They said a crowd of strikers visited their home at midnight to harm the son. He fled five miles to another town, and the crowd smashed the furniture and attempted to burn the house.

"The next witness said he and his wife were hung in effigy in the streets of Nanticoke, the effigy of the wife being of a most offensive character.

"Mrs. Kate McNamara, of Parsons, the mother of four small children, whose husband was in the mines and could not come home for fear of bodily harm, testified that their house was destroyed by fire at night and she and her children were rescued with difficulty.

"Counsel for the miners called the commission's attention to the fact that the fire had not been connected with the strikers. Judge Gray said that while the evidence did not directly connect the strikers with the fire, the inference was that the fire was most probably of incendiary origin.

"August Scheuch, of Hazleton, who worked for the Lehigh Valley Company, testified that he was attacked by a mob while he and his sons were going to work. He was severely injured by stones, was stabbed three times, and had five ribs broken. He was acting as a coal and iron policeman, but did not use his pistol because he was afraid of hitting his son. Many of the men in the crowd were strikers, among them being Squire McKelvey, of Hazleton. His son corroborated his testimony.

"Henry Vermillye, of Dorrancetown, said he was forced to join the union by the superintendent of the John C. Haddock Coal Company in order to keep peace at the colliery. He left the colliery because he thought the union was too arbitrary. He worked for another company during the strike. He was hung in effigy, stones were thrown at him while going to and from his work, and storekeepers were compelled to refrain from selling his relatives the necessaries of life.

"John Doran, manager of the Wilkesbarre Lace Mills, testified that because he would not discharge two girls who had relatives working in the mines the 1,100 employees went on strike and stayed out eight weeks."

Such testimony as this "calls for undivided public indignation," declares the New York *Sun*, "with the resolve that hereafter lawlessness must be punished and put down without mercy or compromise, and organized labor be required to pursue its ends by other means." Mr. Mitchell's assertion that the violence was instigated by the coal and iron police is not warranted by this testimony, notes the Philadelphia *Record*, but, "on the contrary, it shows that assaults by the strikers upon peaceable non-union workers were by no means infrequent." Many papers that sympathize with the miners' side of the controversy condemn the lawless acts that marked the strike.

The Philadelphia *North American*, however, holds that all this testimony is irrelevant to the question at issue, and, therefore, should not have been admitted. To quote:

"The arbitration commission was not created to ascertain whether or not there were disorder and violence in the anthracite coal district during the strike. If the scope of its inquiry does not cover the notorious defiance of the organic law of Pennsylvania by railroad corporations in the coal trust, it is limited to the simple question of wages and hours of labor, and can not be extended consistently to acts of lawlessness incidental to the strike.

"Acts of lawless violence were committed by strikers and their friends. It is as unnecessary for the operators to prove that fact as it is idle in the miners to deny it and foolish for any one to attempt to justify it. Unless the commission proposes to make a thorough investigation of the history of the anthracite mining business, dig deep into the causes of industrial conflicts, fix responsibility for the existence of poverty and ignorance in a nation rolling in wealth, and constitute itself the judge between the House of Have and the House of Want, its proper course is to affirm judicial knowledge of the fact that strikers are not invariably peaceable, and direct the operators to confine themselves to the questions at issue.

"It is the business of the commission to ascertain what wages the operators should pay to the miners. Evidence that a crowd of foreigners stoned a fellow laborer or fired his house does not assist the commission in reaching a conclusion as to the cost of producing a ton of coal. The operators are plainly eager to make strike violence the main issue and divert attention from the exposure of their attempts to deceive the commission with carefully falsified figures relating to wages paid to their em-

ployees. They should be denied the privilege of putting in evidence on any other point or making any statement whatever until they have produced a true record of wages and proved its accuracy beyond possibility of doubt.

"The commission knows there was disorder around the mines, and it knows also that there would have been no violence, no rioting, no boycotting had the coal trust shown the slightest consideration for public interests. Acceptance of the miners' proposal to arbitrate would have preserved the peace and averted all the evils accompanying and following the strike. When the operators invited a strike they knew it would lead to lawlessness, and they confidently expected the foreign laborers, whom they had imported to reduce wages and disorganize the unions by supplying two men for every job, to make trouble so serious as to call for military suppression and to turn public opinion against the cause of the strikers."

CROWDED CONDITION OF NEW YORK CITY.

THE Venezuela blockade may be "peaceful," some of the New York papers remark, but the blockades on the elevated and surface lines in the metropolis are decidedly belligerent. Belligerent, also, is the attitude of the New York newspapers and associations that are trying to relieve the crush by prodding the street-railroad officials with demands for more cars. Mayor Low, Controller Grout, Borough President Cantor, the State railroad commissioners, the Merchants' Association, the Women's Health Protective Association, the Passengers' Rights Association, and the Central Federated Union are agitating for better accommodations, and if the Board of Aldermen fails to enact remedial legislation, there is a prospect that the matter will be carried into the legislature.

The Sun and *The Evening Post* seem to think that the railroad companies have been swamped by a tremendous increase in population within the last year. It is reckoned, roughly, that the elevated and surface lines on Manhattan island carry about 500,000 people southward in the morning and back at night, and the officials aver that it is a physical impossibility to run more cars than they are now running. The underground road is to be ready in a year, but it is common remark that that road, too, will soon be swamped by the city's rapid growth. *The Sun* sums up the situation thus:

"The clamor in the public prints over the shortcomings of our system of local transportation is full of interest. Our elevated railroad system and our electric and other surface lines are plainly inadequate. Inadequate also are our streets. There is not room enough for the traffic of New York and the congestion is gravely prejudicial to business, to comfort, and to health.

"But that which we have to endure now is trivial when compared with what the near future has in store for us; and it is apparent to all competent observers that even the accession to our resources of the underground system will afford a merely momentary and wholly insufficient relief.

"We are confronted with a problem the like of which was never before presented to any great community. Nothing at all approaching it has ever existed anywhere else. New York is ten times as long as it is wide. However rapid and great be its growth, it must ever be confined to that singularly shaped area. It expansion is now, and always will be, vertical; and that expansion has only been made possible by that simple but most revolutionary invention, the vertical railway, or elevator. Every foot of ground in lower New York is foredoomed to the skyscraper, and each succeeding skyscraper is betraying an inevitable tendency to go yet higher than its predecessors.

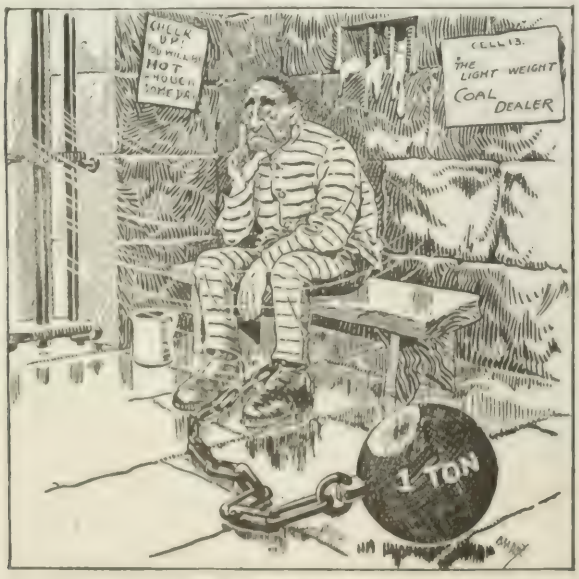
"In the very near future all of lower New York will be built up into the air, and where shall we then find ourselves in the matter of all transportation—elevated, surface, tunnel, horse, automobile, and foot? The prospect is overwhelming! To meet the absolute necessities of the public circulation we shall need not less than a dozen tubular railroads, like those of London, from sixty to seventy feet below the surface. Nothing less will satisfy. So acute is this condition even now becoming that the underground road which is approaching completion will not have been opened to the public before a deeper system of tubular transit will have been projected. It will have been projected, but it will not have reached completion before the public patience shall have been fairly exhausted.

"And what of the streets themselves? The congestion of cars and vehicles of all descriptions at every great intersection of traffic is already a very serious matter. It is visibly growing worse, and it presents a condition that is quite incredible to any one who has not seen it and suffered from it.

"Of a certainty the problem which we have to work out is an extraordinary one. We can not change our topography, but we can not go on piling our tremendous population interminably up and up into the air without making provision for its transportation back and forth, the like of which no other community in the world was ever called on to devise."

The jam in New York has proved too much even for ex-Chief Devery, and he has moved his real-estate office from a downtown skyscraper to a place nearer home. He explains in a newspaper interview that it made him so dizzy every time he looked out of the window of his skyscraper office that he couldn't read his morning mail. And furthermore:

"That riot you stack up against goin' down in the morning



GIVE HIM FULL WEIGHT.
—*The Chicago News.*

HAVE *you* BEEN THE ROUNDS?
—*The St. Paul Dispatch.*

CARTOONS OF A COLD WINTER.

and back again at dinner-bell time is on the football order—too strong to suit me. No hangin' to a strap an' doin' the loop-the-loop stunt for mine if I don't have to. Why, I got tangled up in the middle of Broadway the other day among a lot of trucks and a policeman had to come and lead me out like a child. Then them shoot-the-chute elevators put my breakfast on the bum. Fer mine a big chair on the sidewalk level where I can walk from the house without gettin' tied in knots."

MARCONI'S TRIUMPH.

"WHETHER Italy succeeds in collecting its bill from Venezuela or not, it has made the whole world its debtor," says the New York *Mail and Express*, commenting upon the success of the young Italian inventor, Marconi, in establishing wireless communication across the Atlantic. The inventor, who has kept very quiet about his work, announced December 21 that he had sent inauguratory messages to the King of Great Britain and the King of Italy, from his station at Cape Breton, Canada, to Poldhu, Cornwall, England. The messages contained from twenty to thirty words each. About a year ago Marconi announced that the letter "S" had been signaled from his Cornwall station to the Newfoundland coast. "Marconi has done the deed," says the New York *Sun*, "and it is one of the greatest ever done." The Baltimore *News* declares that the work "is a great triumph, so wonderful in its results as to give ground for looking to future wonders of invention as startling as any of those of the past." The Providence *Journal* says:

"The mind refuses to grasp the significance of this achievement in Cape Breton. When the first Atlantic cable was laid, the world greeted it as one of the most marvelous facts of the nineteenth century, and indeed it was. It required faith and courage to lay a telegraph line under the ocean from continent to continent, and success was attained only after repeated discouragements. But is it not a greater achievement to manipulate the mere atmosphere and cause it to carry, without wires or any other exterior medium, the winged words of men? From this initial success greater successes will grow. There is at present some difficulty in transmitting despatches in bright sunlight, tho why the rays of the sun should interfere is not clearly understood. It is safe to say that other hindrances will be encountered before the two continents are put into absolutely reliable wireless communication with one another. But Marconi's feat of Sunday points the way to complete success. If within one year so great an advance can be made as is represented in the difference between the transmission of the one letter 'S' and the sending of a message of over thirty words, what may we not hope for in the immediate future? Meanwhile, the congratulations of all the nations are due to Marconi for bringing to pass what would have been considered impossible and absurd not long ago."

But some papers believe that it will be a long time before the wireless system can become a commercial factor. They declare that there are many defects to be perfected. "That it will for a long time be anything more than an auxiliary to the cable may well be doubted," says the New York *Evening Post*; and the Pittsburg *Chronicle Telegraph* thinks that "the entire system is too uncertain; too indefinite as to actual results at all times, to accept it as an actual addition to the world's working forces." Sir William Henry Preece, formerly president of the Institute of Civil Engineers, and a well-known electrician of London, declares that wireless telegraphy will never become a serious competitor of the submarine cable. He thinks that there is a lack of reliability, no privacy, and that the wireless system is slower than the cables. Colonel Reber, of the United States army, Signal Service branch, expresses about the same opinion. In a paper read before the National Geographical Society, he states that the advantages are and will remain in favor of the wire service wherever it can be established, and the practical use of the wireless system will be limited to the communication of ship with ship and of ships with the shore. In the wireless system secrecy is impossible. Anybody understanding the system may read a wireless message, and one system may be made to interfere with another. Says the Philadelphia *Record*:

"It is likely, however, the existing vested interests in long-distance communication will hear of M. Marconi's successful experiment without much added or undue perturbation. They have enjoyed possession of their own peculiar field for more than a generation, and will not readily surrender it. As the existing surface telegraph system rose to the occasion when the telephone was introduced, and made effectual provision against its threatened rivalry, so the commercial cable lines should be enabled to clip the buoyant wings of the various devices of wireless telegraphy. To be already in possession of the field is in itself a

WILLIAM MARCONI.

distinct advantage, worth many points of presumed superiority imputed to a rival system. A perfectly organized cable service, responsive quickly at all points to the demands of commerce, need fear no wireless assailants 'horsed on the sightless couriers of the air.' The new system, if rendered commercially effective, would be far more likely to create for itself a new sphere of usefulness than to trench upon ground already occupied in the public service.

"The extraordinary feat of wireless transmission which M. Marconi claims to have performed is by no means under-estimated by the public, notwithstanding open or covert derogation in expert quarters. But the popular mind does not exactly understand the matter as yet, and prefers not to sail on a sea of speculation. If telegraphy without wires should be at length realized, there would be laurel wreaths and rewards galore for all concerned; if not, the great world's pulses would beat on quite undisturbed."

Another phase in the discussion regarding the wireless system is its use in war. Rear-Admiral Bradford, chief of the Bureau of Equipment, is so impressed with the possibilities of wireless messages that he wants the United States Government to control all stations along the coast to protect the operations of the United States navy in times of war against interference with wireless telegraph signals between ships and the shore. This is a "matter for serious attention," says the New York *Sun*. France has taken the station at Cherbourg, because it was believed to be a menace to national defense. The Philadelphia *Inquirer*, too,

sees international complications in the use of wireless telegraphy. It says:

"The action of France is important, because it seems likely that that Government will either forbid the use of the system or else absolutely control it. In time of war, of course, a code would be used which one would suppose would be a sufficient guaranty, but the facts which have been revealed in the last few years indicate that every nation has at every European capital a band of spies who procure codes and secret plans and the like with unfailing regularity. The Esterhazy crime for which Dreyfus was persecuted is a case in point. With every war-vessel equipped with the system the next naval war is sure to be very interesting and will involve tactics and situations which would have made Lord Nelson shiver.

"Practically wireless systems have proved a success, and it remains to be seen to what extent they will be used in commerce and national intercourse. They are certain to make changes which will give great opportunites to the future historian."

CHARLES FRANCIS ADAMS ON SECESSION.

MR. CHARLES FRANCIS ADAMS, of Boston, descendant of the Puritans and of the only Presidents that Massachusetts has given to the nation, a brevet brigadier-general for services in the Civil War, formerly president of the Union Pacific Railroad, and now a writer of history, is attracting almost as much attention at seventy as he ever did in his earlier years. The press are now discussing an address which he delivered on December 22 at a banquet of the New England Society in Charleston, S. C., in which he considered the ethics of secession. His conclusion is, in brief, that both sides were right. Most of the newspapers seem glad to accept this comforting compromise, altho some are willing to go with him only half-way, and admit that their own side was right. Two of the latter class are the Springfield *Republican*, on the Northern side, and the Charleston *News and Courier*, on the Southern. The Jacksonville (Fla.) *Times-Union* agrees with Mr. Adams so heartily that it suggests him for the Presidency.

Mr. Adams's method of vindicating both sides may be seen in the following paragraphs from his address:

"So far as I can ascertain, every State of the federation became a member of the Union with mental reservations, often unexpressed, growing out of local traditions and interests, in the full and correct understanding of which the action of each must be studied. Dissatisfied with the past and doubtful of the future, jealous of liberties, to the last degree provincial and suspicious of all external rule, intensely common sensed, but illogical and alive with local prejudice, the one thing our ancestry united in most apprehending was a centralized Government.

"What did the framers of the Constitution propose? Taking refuge in metaphysics, they proposed a contradiction in terms—a divided sovereignty. Sovereignty, it was argued, was in the people. But who are the people? The people of the United States, it was replied, are the aggregate of those inhabiting the particular States. Then they began to apportion sovereignty, oblivious of the fact that sovereignty does not admit of apportionment. Pursuing some vague analogy of the solar system, and conceiving of States as planets in their orbits, the people of the particular States assigned to the nation a modicum of sovereignty, conferred another modicum on the state governments, and reserved whatever remained to themselves. Now, it is written, 'No man can serve two masters: for either he will hate the one and love the other, or else he will hold to one and despise the other.' The everlasting truth of this precept in the fulness of time held good in our case. From the moment the fathers sought to divide the indivisible, the result was written on the wall. It was a mere question of years and of might.

"Thus, intentionally by some of the most farseeing, unintentionally by others anxious to effect only a more perfect union, a pious fraud was in 1788 perpetrated on the average American, and his feet were directed into a path which inevitably led him to the goal he least designed for his journey's end.

"When the federal Constitution was framed and adopted—'an indestructible Union of imperishable States'—what was the law of treason—to what or to whom, in case of final issue, did the average citizen owe allegiance? Was it to the Union, or to his State? As a practical question, seeing things as they then were—sweeping aside all incontrovertible legal arguments and metaphysical disquisitions—I do not think the answer admits of doubt. If put in 1788, or, indeed, at any time anterior to 1825, the immediate reply of nine men out of ten in the Northern States, and of ninety-nine out of a hundred in the Southern States, would have been that, as between the Union and the State, ultimate allegiance was due to the State. In studying the history of that period, we are confronted by a condition, and not a theory; but, as I read the record and understand the real facts of that now forgotten social and political existence, in case of direct and insoluble issue between sovereign State and sovereign nation between 1788 and 1861, every man was not only free to decide, but had to decide for himself; and, whichever way he decided, he was right. . . . . .

"I assert in its fundamentals there was no right or wrong about it; it was an inevitable, irrepressible conflict—the question

SOME OIL SKETCHES.

of sovereignty was to be decided, and either side could offer good ground, historical and legal, for any attitude taken in regard to it. That shield did actually have a silver as well as a golden side."

If the attempt to secede had been made earlier, it would have succeeded, Mr. Adams thinks. He says:

"I hold that, here again, it was merely a question of time, and that such a withdrawal as then took place would never have failed of success at any anterior period in our national history. It was steam and electricity which then settled the issue of sovereignty; not argument, not military skill, not wealth, courage, or endurance; not even men in arms. Before 1861 steam and electricity, neither on land nor water, had been rendered so subservient to man as to make him equal to the prodigious, and unprecedented, task then undertaken and finally accomplished. In that case, might in the end made right; but the end was in no degree a foregone conclusion."

If the latter statement is true, remarks the Charleston *News and Courier*, dryly, "we do not care particularly what view he and the people of the section from which he comes may take of the achievements of Might over Right. We are perfectly willing to let the case rest there for all time." "The doctrine of secession was written in the Constitution and it required the sword to reverse it," declares the Charlotte (N. C.) *Observer*. The Charleston *Post* supplements Mr. Adams's finding by the conclusion that not only was the war inevitable, but that the resulting Union was inevitable. It says, in a discerning editorial:

"The question which could not be determined in the beginning had to be settled before the end, and it was bound to be settled at last in favor of a union, not because that was abstractly the right settlement, but because it was practically the most expedient and in a large consideration the best. Whether the Union should be enforced by the North or the South remained for material conditions to determine. It is reasonable to conclude that the weaker of the opposing forces only would have withdrawn from the compact, and it happened that the South was the weaker. Had the South felt its control of the national impulse sure, it would have remained and forced the North to make the issue, and had the issue been so made the North would have been brought back into the Union as the South was.

"It is a very excellent thing to hear such words from an Adams of Massachusetts as were heard last night from this worthy representative of a most distinguished line, and it is interesting and very appropriate that a representative of Massachusetts should pronounce what he well termed the 'final word' on secession in the very place where that idea was put into practical effect."

The Springfield *Republican*, however, thinks the case was not so much a matter of theory as would appear from Mr. Adams's address. It says:

"Back of the argument for State allegiance was an evil interest dictating and justifying it all; and without the existence of that peculiar material interest there would never have been resistance to the forces making for nationality, carried to the point it was. In this aspect of the case the civil war can not be described as inevitable. It was the work of human greed and selfishness carried to the point of being ready to fight to maintain themselves in peculiar privilege and power; and we might as well say that men are absolutely helpless against such impulses as to say that the war was inevitable. Failing to find any support for the one assertion, we must deny the truth of the other."

Still another theory of the war is set forth in a circular that is being sent out as "The Georgia Confederate Bulletin No. 2." It says, in part:

"The Northern States rebelled against the Constitution of the Revolutionary fathers of the republic and overthrew it and set up an imperial government; made war upon the South, invaded and subjugated her. Abraham Lincoln headed the greatest rebellion since history has been written—3,300,000 of the best-armed, best-drilled, and best-equipped soldiers money and power could command. President Jefferson Davis led the most patriotic army since history commenced—600,000 men, all told—without arms or ordnance, without commissary or quartermaster. Blockaded by sea and walled in by land, by the Yankee rebels, negroes, and foreigners, the Confederate army killed and wounded more than three Yankees to every one of their enlisted men, as shown by their rolls. But with the world to back them they, after four long years, overpowered the Confederate army, and the flag of truth and liberty that had waved over the bravest and most patriotic people that ever lived was furled over the grave of Democracy, and the virtue of the ballot took its flight at Appomattox."

NEW YORK'S NEW POLICE COMMISSIONER.

MAYOR LOW'S selection of Maj.-Gen. Francis V. Greene to succeed Col. John N. Partridge as police commissioner is regarded by most of the New York papers as a wise choice. "It is creditable to the judgment and good faith of the mayor,"

MAJOR-GENERAL FRANCIS V. GREENE,
The new head of the New York city police department.

remarks *The Times;* and *The Tribune* says that "it justifies a hope that the most important department of the municipal government, and the one which thus far has done Mayor Low's administration least credit, will steadily, if perhaps slowly, be imbued with the right spirit and ultimately raised to a satisfactory standard of discipline and efficiency." If General Greene's intrinsic qualities, it adds, "do not fit him for the place in which so many predecessors have been found wanting, there is a widespread misunderstanding as to the kind of man he is or as to the kind of man a police commissioner should be."

General Greene was graduated from West Point in 1870 and was afterward an instructor in the academy. He was military attaché of the United States Legation at St. Petersburg from 1877 to 1879. He served in the war with Spain, in Cuba, and the Philippines, and soon after the war was made major-general. He is the author of a number of works on military subjects. General Greene was president of the Asphalt Company of America and the National Asphalt Company, and, up to the time of his appointment as police commissioner, was president of the Eastern Trust Company. He is a Republican and was presi-

dent of the Republican county committee in 1900. "No man of his caliber and training has ever before been called to this position," says *The World*, and if he reorganizes and directs the police on "entirely non-partizan lines," then "Mayor Low's administration may yet see the inauguration of that only effective and permanent police reform—one that shall 'take politics out of the police and the police out of politics.'" So, too, think *The Times*, *The Evening Post*, and *The Mail and Express*.

The Brooklyn *Times* and *Standard Union* both believe that it would have been better had the mayor chosen some man who had served on the police force; but *The Times* says that "so far as can be known, the mayor could hardly have made a better choice, outside of the ranks of the force." *The Standard Union* says:

"Perhaps General Greene will make as good a police commissioner as Captain Goddard, but he is, nevertheless, in the nature of an experiment. Yet he can hardly prove a failure, for he has only to carry out the work so admirably planned by his predecessor, who was hounded out of office by a lot of impracticable and perhaps insincere reformers, to place the department in an excellent position both as to discipline and work accomplished. What an energetic man of fine executive ability may do in addition toward elevating the standard of service rendered by the police will no doubt be done during the next year by General Greene."

ONE of the big flywheels in the machinery hall of the St. Louis exposition is to attain a speed of [illegible] revolutions per minute. South American visitors will be provided with reserved seats.—*The Chicago Tribune.*

ENDING OF THE WAR ON VENEZUELA.

THE American papers show a loss of interest in the Venezuelan imbroglio at the very time when they are declaring triumphantly that American diplomacy has scored another success. The success is the President's persuasion of all concerned to "tell their troubles" to The Hague court of arbitration, and the loss of interest appears to be due to the fact that a war is more interesting than a lawsuit. It seems to be the general opinion that the President has done good turns to President Castro, who can hardly gain less from arbitration than from war; to the Powers, whose blockade was not yielding anything in the way of debt payments: to The Hague court, which has been practically "boycotted" by the Powers, as a French deputy remarks, since it was organized, three and a half years ago; and to the United States, which is relieved at the same time of the danger of a war uncomfortably near and full of possible complications, and of the responsibility of acting as arbiter. The desire of the Powers that Mr. Roosevelt arbitrate their claims was opposed by nearly every prominent newspaper in the United States, and his success in inducing the disputants to resort to The Hague court aroused a corresponding amount of gratification. The President and the Monroe Doctrine, in fact, seem to emerge from the imbroglio with increased prestige. Mr. Roosevelt's "success in bringing all the nations involved to his original plan of arbitration is a proof of his own personal strength

CASTRO AND THE CARTOONISTS.

and an evidence of the commanding position of the United States," thinks the Philadelphia *Press*. And the New York *Evening Telegram* says:

"In the record of President Roosevelt's Administration for 1902 nothing will be more memorable or serviceable than the two signal victories achieved for arbitration —one bringing an end to the lamentable coal strike and the other clearing the way to the peaceful settlement of the menacing Venezuelan trouble. In both cases the action of the President was non-official. He simply used his good offices to settle a dispute which, tho deplorable and harmful to the public, was no affair of the Government at Washington. Yet he rendered in one case a most timely national and in the other international service."

The Monroe Doctrine is protected in the treaty by which The Hague court was formed, so that the present arbitration will not call it into question. Indeed, the New York *Mail and Express* believes that the doctrine has not only been upheld, but that its scope has been broadened, for "the principle is established that the claims of Europe against the weakest American state must be proved before they can be collected." The daily newspapers seem to be under the impression that the Venezuelan case will be the second one to be referred to The Hague court; but, as noticed in our issue for November 29 (page 715), nearly twenty cases have been referred to it, some of them cases of considerable importance. There is a weak point in the reference of the case to that court, thinks the Pittsburg *Gazette*, in the fact "that the tribunal has no power to enforce its judgments, so it is conceivable that the whole process of coercion would have to be begun over again."

Puck.

EDITORS OF AMERICAN HUMOROUS WEEKLIES.

The attitude of our newspapers during the imbroglio arouses the admiration of the New York *Times*, which says:

"We own that we are proud of the American press in its course in the controversy concerning Venezuela, of which the most critical stage appears to have passed. And when we say the American press we necessarily mean the American people, whose casual mood the American press have never failed to reflect with accuracy. What we particularly mean is the sobriety, the moderation, the circumspection with which the American press, so much of it as counts at all, has handled this very delicate business. It has formed and expressed its opinions upon the passing phases of the controversy under an evident sense of responsibility for its utterances, of responsibility for the impression it made upon its own immediate constituency, of the necessity that it should not excite or inflame its readers, and also, in the cases of all important papers, of responsibility for the effect which its utterances might have if transmitted or translated abroad. There has been nothing of the swashbuckler in its attitude, no talk of 'backing down' or of 'taking water,' no 'fifty-four-forty or fight.' On the contrary, there has been manifest a desire to avoid wounding or even irritating expressions against any of the nations concerned.

"Perhaps this 'correct' attitude might not have been so sedulously maintained if Germany alone had been in question. If the moderation of the American press indicates merely that the American people in general have come to place a higher value than they ever placed before on the mutual good-will and the cooperation in common causes of the two great branches of the English-speaking race, the great empire and the great republic, it is already most valuable. But we believe that it indicates even more than that. We think it denotes that since our entry into 'world politics,' as a consequence of the war with Spain, we have become generally conscious of our international responsibilities, and that we in general perceive the impossibility of maintaining our old exclusive and at the same time defiant attitude when, feeling ourselves impregnable at home, we said and felt 'What have we to do with abroad?' That time has passed. Anything that quickens our sense of international responsibility necessarily tends to quicken our sense of national and civic responsibility. In this view the most earnest of anti-imperialists may find some consolation for our recent acquisitions."

LETTERS AND ART.

A FRENCH VIEW OF AMERICA'S "LITERARY INFERIORITY."

IT is sometimes argued that the literature of the United States lacks great qualities because American life until now has been too strenuous and active to admit of the atmosphere of intellectual repose necessary to the production and appreciation of art. A French scholar resident in this country, M. Albert Schinz, of Bryn Mawr College, takes an opposite view. American literature, he thinks, is distinctly inferior to that of other nations for the reason that it is born of conditions too prosperous and comfortable. He elaborates this argument as follows (in an article in *La Semaine Littéraire* (Geneva):

"What is it that inspires a poet or a writer? Struggles in noble causes, for liberty, country, religion, principles. And these conditions are only met with in the formative periods of peoples, not at the time when they have 'arrived.' The United States have 'arrived' too soon and too easily. Unlike the peoples of Europe, Americans have, so to speak, begun their evolution in the middle; and the periods that they have not jumped, they have crossed with prodigious rapidity. Thanks to their tardy entrance into the history of the world, they have, in a few years, passed over ground that the oldest nations have spent centuries in getting over. They have not had to conquer their country; they have not undergone long conflicts with neighboring peoples, accompanied by a long succession of heroic deeds, inspiring bards and minstrels. The rivalries of the Spanish, English, and French are prior to and remotely connected with the history of the United States. The dramatic features in the lives of the Puritans, Quakers, and other colonists are upon the whole quickly enumerated. Longfellow has extolled them in song of wholly modern sentimentality and sweetness; and, moreover, one of his two great poems, 'Hiawatha,' is an Indian epic, and the other, 'Evangeline,' retraces an episode of the war between the French and English in Canada. There has been nothing like the Crusades, nothing like the wars of religion. The emigrants departed for the New World simply because they were seeking a country where there should be no fratricidal wars in the name of God. Finally, there has been no great social revolution for the suppression of the privileged castes, like that whose echo filled the whole of the nineteenth century in Europe. There was no equality to win; it existed from the beginning. Two important events alone constitute the entire history of the United States: the acquisition of political liberty by the revolution against England—which has been and is still greatly exploited by writers—and the Civil War, which was at the same time the struggle for the enfranchisement of the negroes, and which has produced what is incontestably America's greatest literary masterpiece, 'Uncle Tom's Cabin.' Free from all the shackles of deeply rooted and resisting traditions, the citizens of the New World knew well how to profit by the experiences of others, and find themselves to-day, economically and socially, the most prosperous nation on the globe. Never was it so thoroughly proved that a happy people has no history—but it is necessary to accept the consequences: neither will it have any literature. Let conditions in Russia be compared with those in the United States. Why is it that at the present time the literature of Russia is above all other European literatures truly interesting, truly living? It is because Russia has still her history before her; because politics, social organization, religion, still belong to the medieval period; because Tolstoy and Gorky, as well as Gogol and Dostoyevski, have still a great future with which to dazzle the eyes of their readers. . . . . .

"There is still another reason. Had America a great literature, yet would it have no readers. . . . There is still on the old continent a small literary public, the last representatives of a great tradition. Beyond the sea there is no tradition and no literary public, only the public. . . . The only kind of literature that is recognized is the novel—perhaps the dramatized novel should also be included—and the short story. Doubtless the classics are in all the libraries, but they are read in reality by only two classes of people: students (for whom the reading is obligatory) and the naïve, and neither the one class nor the other derive any pleasure from them. Even periodical literature is yielding more and more to the pressure of the novel. One of the best-known American reviews makes a specialty of publishing a complete novel in each monthly issue, and in the case of a holiday number a string of short stories is added to this novel to the exclusion of any other sort of article. A whole series of magazines publish nothing but short stories. . . . Whether you discuss the question of the immortality of the soul, or the Philippines, a rule of the game of Ping-Pong, or crab-fishing, never think of sending an article of more than 5,000 words—3,000 would be better—to an editor. He will return it unread, requesting you to be so kind as to submit it to the operation of Procrustes or to refrain from offering it again. As was wittily remarked one day by some one who was discussing this astonishing fact, had St. Paul sent his Epistle to the Corinthians to an editor of Boston, New York, or Chicago, he would have seen his divine prose come back to him by return mail, accompanied by a request to shorten it. . . . The fact is that the reader must not be asked for more than he can give. The men in America work exceedingly hard; it is impossible for them, if they read at all, to read what we call a serious book; they must have light literature or none at all. The women have, doubtless, more leisure; and they really constitute the reading public. . . . It may be added incidentally that as they possess to a high degree that delicacy of touch and that chic that is so often lacking in men, except perhaps Frenchmen, they have also more and more invaded literature as authors. It is so already in both America and England; it will be the same upon the European continent before long."—*Translation made for* THE LITERARY DIGEST.

AN EXAMPLE OF PICTORIAL MUSIC.

THE subjoined tone-picture is an ingenious example of music combining qualities both of melody and of pictorial illustration. It is one of a series of pen-and-ink sketches printed at Leipsic in 1842, under the title "Nouveauté Musicale," and is reproduced by the London *Musical Times* from a booklet owned at one time by Friedrich Carl Meyer, librarian to the Prince Consort. "The name of the artist who drew these exceedingly clever sketches," says *The Musical Times*, "is unknown, but in

an explanatory note we are told that he wished by means of figures to express the life inherent in notes, and that he tried 'faithfully to observe the double unity of dramatic action and of melody.'" The following description is given of the Barcarolle:

'Fishermen are bidding farewell to their wives and sisters; one old woman entrusts her child to her husband. The weather is fine; the boats glide smoothly under lofty arches (signs for tying notes). But the weather changes: the sky becomes covered with clouds; the sea becomes stormy; the boats rise and fall with the waves; one breaks over the ship, and two men fall into the water. The fishermen in despair raise their hands to heaven. The tempest increases in fury; a boat founders; six fishermen are engulfed; one inanimate body is seen floating. Sea-gulls (rests) skim over the surface of the water. Some of the boats, with the lighthouse as a guide, hasten to return to the port. The mother in tears, waiting on the shore, receives back her child into her arms."

BJÖRNSON'S SEVENTIETH ANNIVERSARY.

ON December 8 the Norwegian people celebrated with fitting honors the seventieth birthday of Björnstjerne Björnson. "Björnson's fame," observes *Harper's Weekly*, "is complex: he is one of the greatest writers of his day—unquestionably the greatest in Scandinavia, as he is the most read; he is a playwright of the highest rank, his plays being performed almost all over the world; he is his country's most powerful politician; he is an admirable journalist, pithy, brilliant, convincing, of which not only the Norwegian press but several of the most influential papers of England, Germany, and France bear frequent witness."

Björnson's distinction, declares Mr. Hrolf Wisby (in the New York *Evening Post*, December 6), must be attributed to the fact that he is the founder of the national literature of modern Norway. As far back as 1857 he published the Norse pastoral, "Synnöve Solbakken," which first brought him fame. Says Mr. Wisby:

"Like Byron, Björnson woke up one morning to find himself famous. His eloquence had led many of his friends to suppose in him a future notable orator, and his success in journalism pointed with almost equal significance to a more than ordinary newspaper career.

"And then he fooled them all. A little, modest-looking volume, 'Synnöve Solbakken' . . . quietly made its appearance in the booksellers' windows in Copenhagen, producing a most profound impression. As the work was signed 'B. B.,' the leading critics presumed the book to be the work of Ibsen, who on several occasions had used the nom-de-guerre of Brynjolf Bjarme, and who at the time was as well known as Björnson was obscure. When Ibsen disclaimed the honor of the authorship, a more serious scrutiny was given the little volume, resulting in the most unanimous appreciation, turning even the sharpest of critical pens into vehicles of avowed and spontaneous praise. The enthusiasm of both critics and readers was not misspent. The little book contained the cornerstone for Norway's literature. Everything that had been written by Norwegians up to that time, from Wergeland and Welhaven to Ibsen, had a decided Danish flavor. Björnson was the first to produce a Norse work that was all Norse and supreme in its very Norseness. As surely as Homer founded ancient Greek literature with his songs, did Björnson found the national literature of modern Norway with the 'Synnöve' pastoral. He occupies the proud position of being the only living founder of a national literature in the world, or, for that matter, the only one in modern times. That means as much to Norwegian readers as Chaucer means to English."

NORWAY'S "GRAND OLD MAN," ON THE TERRACE OF HIS HOME AT ANLESTAD.
He is "the only living founder of a national literature in the world."
Courtesy of *Harper's Weekly*.

Mr. Wisby discerns two periods in Björnson's literary career, the first in which he was dominated wholly by the Norse motive, the second in which he came partially under the spell of Ibsen and the modern Danish school. We quote again:

"When in 1863 Björnson entered his thirty-first year, he had written his best pastorals, his early dramas, and his most soaring lyrics. His work was already then regarded as the consummate effort of his genius. In entering upon his second period, in 1871, Björnson was influenced by Ibsen and the modern Danish school, in a similar degree that Ibsen was drawn toward national ideals by Björnson's first work. When Björnson at a maturer age tacitly agreed with Ibsen that the time had come for books with stronger and more aggressive contents than could be united with mere historical representation, and accordingly began to interpret the momentous questions of modern life, his fame as a dramatist began again to vie in ascendency with that of Ibsen, and in that line of endeavor they have been on practically equal terms ever since. Ibsen is the greater artist; Björnson the more richly endowed poet.

"Björnson's latest work, 'Paa Storhove'—a social drama in three acts—is just out. In several respects it is a sequel to his 'Laboremus,' working out certain points of psychological moment suggested by the latter work. 'Paa Storhove' shows, with masterly dramatic effect, the magnificent struggle of a great woman, Margrete Ura, against the evil forces which threaten her and her family with ruin, and this struggle is all the more interesting as the evil is embodied by another woman infatuated by Satanic ideals. A superb spiritual combat between two gifted women—the one good, endowed with vast resources for noble ends, the other bad, and doubly dangerous, being equipped with a demoniac capacity for evil."

Everything Björnson has written, declares Mr. Wisby, is traceable to some national fiber or root, while the action of almost all of Ibsen's dramas might be altered to suit a foreign locality without in any way detracting from the flavor of the contents. We quote, in conclusion:

"Björnson is the present-day skald of Norway. He is chanting and speaking from the lofty heights while Ibsen broods and delves in the bowels of the abyss. He is the inspired seer of his people. His endeavors are deeds of the day. His genius unfolds itself before us in a wealth of sunshine like that of the

great men of old who spoke from the heights. Björnson is the man of the soil, as Robert Burns, as Victor Hugo were men of the soil. Besides being the greatest of Norwegian poets in generic source and creative imagination, he is also one of the most pronounced character types among Norsemen. When we wish to know what is fundamentally and essentially Norse in literature, in spirit as in substance, we read Björnson first of all, [illegible]

PRESIDENT ROOSEVELT AND THE NUDE IN ART.

THE national superintendent of the Department of Purity in Literature and Art of the Woman's Christian Temperance Union has revived a ten-year-old controversy by her protest against the President's action in removing the famous Watts painting, "Love and Life," from the Corcoran Art Gallery in Washington to the White House. In a public statement issued [illegible]

"It may be that the President has ordered the picture hung in the White House without inquiring into its history, and without knowing that its presence in the home of the Chief Executive of the nation is extremely objectionable to the women of the country. It can not be that he has resurrected the work from its ten years' obscurity in an art gallery to flaunt any talk of 'art for art's sake' in our faces. It will be very disillusionizing for the women who have admired him to learn that he has given a place on the walls of the White House to this vulgar nude painting of Watts. The President must have been led astray by the great name of the artist, and, like others, concluded that a celebrity could not produce anything that would be demoralizing."

The Providence *Journal* gives the following account of the essential facts in the present controversy:

"The painting in question is the work of perhaps the most eminent English painter now living, Mr. George F. Watts. It was presented by him to the nation, and the White House was the destination approved, it is said, by him. When it first reached this country the objections made to it were so furious that it was lodged in the Corcoran Gallery. This was neither very grateful nor very courteous; and the President, or possibly Mrs. Roosevelt, has had the canvas removed to its proper destination. It is a work of art which any collector in the land would be glad to own, and its monetary value—by which some persons judge works of art—is great. Yet there are 'nice' persons who find it shocking.

"The subject is certainly not immoral. 'Love and Life' the artist has called his composition. He shows two ideal figures—Life, a frail woman, conducted along a sheer and rocky path by the sturdy form of Love. The allegory is obvious, and even a member of the W. C. T. U. should find no evil in it; the use of alcoholic liquors is not remotely implied. But Mr. Watts has been guilty of one awful lapse from the purity of the prurient prude. He has left his figures nude. Now this is shameful. Morality consists wholly in clothes. The 'unco guid' can not see the undraped form even on canvas without horrible suggestions. When man was born into the world naked God made a mistake. To the normal mind the nude human figure may be simply beautiful. Whether in marble or on canvas it is a delight to the 'inward eye' no less than to the outer. Of course men and women in civilized society no longer go about nude; but this is the more reason why the nude figure of the artist is purely conventional and therefore inoffensive. As a matter of fact, drapery may be made to convey immoral ideas much more easily than lack of it; but this is something which the raw critic of art never seems to realize.

"The President is a man of cultivation and a man of sense, and it is not likely that he will pay much attention to 'the barbaric yawp' of those who wish to see Mr. Watts's fine painting banished to obscurity."

"If the women take the matter up in earnest," observes the Philadelphia *Inquirer*, "we are obliged to say the picture will have to go." It continues:

"There are times when a man is glad to give up his convictions for the sake of peace, and this is especially true where the women are concerned. It may be excellent to have a President's power, but it is sometimes politic not to use it like a President. Let us have social peace even if the picture goes from the oblivion of the White House back where an admiring public can see it every day."

A lady correspondent of the New York *Times* declares:

"Those who have sat before 'Love and Life' and felt the infusion of its hope, courage, and joy pouring into a weary soul, must forever entertain a peculiar grievance against Mr. Roosevelt for his act of selfish deprivation to the American public. The picture was given to us, and we love it, and desire it where we may know it is possible to make a pilgrimage to it and feel the uplift of its glory.

"For my part, and, indeed, many others join with me, I hope the nice little minds that secured the banishment (?) of 'Love and Life' to the Corcoran Gallery in the first place will succeed in raising such a storm around the head of the thoughtless President that he will be forced to follow the excellent example of his predecessor, Grover Cleveland, and give back to us to whom it belongs the great pre-Raffaelite's dream of the archangel of love inspiring the fainting human soul."

MULATTOES AS WRITERS.

A LIST of books in the Library of Congress written by colored persons has been compiled by Daniel Murray, assistant librarian of that institution. His list includes about 2,200 titles; but, in the opinion of the Boston *Transcript*, its value is weakened by the fact that he has included writers with only the smallest trace of African blood in their veins. *The Transcript* says:

"Stripped of its superfluities, the fact remains that a surprisingly large amount of literary work has been done by mulattoes. The straight blacks appear to have done almost nothing. The subject was recently brought up by the publication of a work on chemistry by a young colored man connected with the Howard University in Washington, named Herbert C. Scurlock. The head of that department, Prof. William H. Seaman, testifies to the care and intelligence with which this chemical text-book has been prepared. The question was raised whether it might not be the first book on a scientific subject written by a colored man. It was soon found, however, that Benjamin Banneker had become eminent as an astronomer a century ago. He sent his almanac to Jefferson, who was so interested in it that, according to tradition, he invited Banneker to dine with him at the White House. Banneker lived at Ellicott's Mills, near Baltimore, and for years made his living by compiling the astronomical data for the almanacs of that day. He was very nearly white; his grandmother was entirely so.

"Another somewhat noted text-book written by a mixed blood was Professor Scarborough's Greek Grammar. He was a Wilberforce man. Probably the most noted case of literary talent was that of Phyllis Wheatley. Her first book was published in 1773. She was the slave bought by a Mrs. Wheatley, in Boston, who took pity on her, when as an eight-year-old child, wrapped up in a piece of carpet, she was offered for sale. Mrs. Wheatley soon discovered that the forlorn girl had native talents, and so began to educate her. In less than eighteen months she could read the Bible with ease, and in less than two years she began to write verses. She married a man named Peters, and died of tuberculosis when about thirty-three years old. She wrote a poem dedicated to General Washington, with which he was so well pleased that he wrote her an interesting letter. For years this poem was lost, but it was finally recovered in 1851, when certain Washington papers were transferred to the Boston Atheneum. This girl also wrote a rather meritorious poem dedicated to Whitefield, the great evangelist.

"Among the other colored writers are Dr. Edward W. Blyden, who was for a long time Liberian minister at London. His most noted book is 'Liberia's Offering to Christianity, Islam, and to the Negro Race.' Martin R. Delany, who was a major in the United States army during the Civil War, wrote two books, the better one of which treats of the condition of his own race. There have been a number of novels by colored people as well as many books on [illegible] question."

EDWIN MARKHAM'S ESTIMATE OF KIPLING.

MR. KIPLING'S new poem, "The Rowers," which we reprint in this issue of THE LITERARY DIGEST, is not regarded as a very appropriate contribution to Christmas literature. To the New York *Evening Post* these "oracular and bitter verses" against the Anglo-German *entente* suggest Mr. Kipling's "infallible instinct for promoting international quarrels." "He is, or affects to be," it says, "a sort of fighting Berserker, and this necessarily puts him out of touch with his age—except when it appears, in mad moments, to be lurching back toward the cave-man." The Philadelphia *Public Ledger*, however, thinks that it were futile to deny "the poem's power or the remarkable promptitude of the poet in telling in the most forcible verse not only just what the English nation ought to hear, but exactly what it wanted to hear. . . . Kipling expresses the very thought of the great middle class of England. He has displaced the Prime Minister, the Minister of Foreign Affairs, and the leader of the House of Commons in interpreting the thought of the sound and sensible part of the English people, and as the people's poet occupies a more enviable position than the poet laureate."

An interesting critique on "Kipling as a Poet" is contributed by Mr. Edwin Markham in the form of an introduction to the Kipling volume of Collier's "Library of Poetical Literature." "Kipling's greatest limitation," says Mr. Markham, is his "lack of spiritual vision, his failure to apprehend the empire of the Unseen." His greatest strength is his ability to catch the spirit of the "flying hour," to voice the Here and Now. We quote as follows from Mr. Markham's estimate:

A LATE PORTRAIT OF KIPLING.

"Kipling is still a young man, and he is already the laureate of Greater Britain. He has done more than English arms to annex India to England. He has localized and focalized for the Anglo-Saxon race the provinces and peoples of India.

"He is the voice of British imperialism, and he is a dynamic force in the public affairs of the empire. His words have passed with a great power over England, fanning the drooping flame of her patriotism, quickening her faith in her soaring destiny.

"He is the poet of energy, the laureate of action. In his verse all things are alive as with the old Homeric stir; all things are quick with a sense of the untirable endeavor, the imperishable passion of the Anglo-Saxon race.

"No other literary man ever pressed so close to the heated center of the flying hour. He rejoices in the hot arena where men love and lust, where they fight and die. This earth-life, and this trembling hour of it, is the thing that takes his heart. He is the poet of the Here and Now.

"He writes not of men in high places, not of men in sheltered ease, but rather of the millions who are digging the ditches, building the bridges, laying the roads, steering the ships, fighting the battles, in the daring path of empire.

"Kipling's vision is essentially objective and concrete. His mind is unique in its quickness to take impressions, to make assimilations. He absorbs the technicalities of professions, the secrets of experts, the wisdom of adepts, the cant of hypocrites, the instincts of animals. Through his ringing lines we hear the jingle of coins on the dicer's table, the rhythmic minuet of the pistons, the hiss and innuendo of the bullets, the awful hoof-beat of the flying squadron, the march and menace of the ships of England.

"The *motifs* of his ditties and ballads are often slight, trivial, vulgar; but his wonderful power as a story-teller—his irresistible attack, his instant spring, his dramatic grip; the lilt and swing of the rhythm, the touch-and-go of the telling—all these carry the reader as the shallop is carried by wind and billow."

Wordsworth, like Kipling, tried to express the poetry that is in common man; but, in Mr. Markham's opinion, he failed where Kipling has succeeded, and "gives us only bloodless effigies and shapes of clay." We quote further:

"Kipling seizes upon the elemental, the primitive, the significant, and gives us men with marrow in their bones. He has Browning's art of looking at men and things from the individual angle. Vague generalities, cloudy abstractions, he rejects them with a shrug of the shoulder. He has, also, a measure of the Shakespearian instinct that sends out delicate spiritual tentacles in all directions, feeling into life in all its levels and layers, all its heights and hollows.

"Kipling's style is crisp with nervous energy, keen as a swung blade. He has what every literary artist must have—a fine feeling for the unique word, the telling phrase. If he can not find the word he wants, he coins one; and it is usually a word so needful that it jumps into common speech, and will end in the repute of the lexicon. 'Straight-flung words and few' are in his arsenal. Wrong, sham, cant, custom—he spears them all with equal zest. His chief literary fault is the overlaying of local color, the tedious use of technical terms and coarse dialect."

Mr. Markham finds in some of Kipling's later poems a religious feeling, a moral aspiration, that his earlier poetry does not reveal. He says in conclusion:

"The 'Recessional' is a high-keyed poem which touches the Puritan nerve of the descendants of Cromwell. 'Gunga Din,' rude and coarse as it is, extends the frontiers of human sympathy; and so tender is the humanity of this ballad that it stands a near neighbor to the Beatitudes. In 'Tomlinson' and 'The Last Chantey,' Kipling disturbs our crude traditional conceptions of heaven. 'The Last Chantey' is a superb poem, built up and breathed into by the creative imagination.

"We hear in all of Kipling's poems the shrill note of individuality; and there is a marked increase of power in his poetry as the years go by. The ditties of his earlier period are the mere strummings on the banjo; the ballads of his middle period are the melodious chords of the street harp, mixed with the noises of the crowd; while the poems of his third period rise into the splendid reaches of orchestral brass and silver."

NOTES.

A NEW wing of the Metropolitan Museum of Art was opened on December 22 by the mayor of New York. Its design was the final work of the late Richard Morris Hunt.

THE "wireless piano" has arrived. "The Marconi of the piano-field," declares the New York *Concert-Goer*, "is one Ira F. Gilmore, of Bloomington, Ill. He has completed a piano with steel comb-reeds instead of strings, and it is said to produce a beautiful tone. Patents have been granted and there is talk of starting a factory to make the wireless piano."

SCIENCE AND INVENTION.

ARE FAST STEAMERS WASTEFUL?

A COMPARISON between the two largest vessels now building, the *Cedric* and the *Kaiser Wilhelm II.*, is made in the course of a paper on the economy of large ships, read before the Canadian Society of Civil Engineers by A. W. Robinson. The *Cedric*, according to Mr. Robinson, represents a type of vessel having large capacity combined with moderate speed, while the *Kaiser William II.* is of a type in which everything is sacrificed to speed. This is shown in the following tabular statement:

	Displacement.	I. H. P.	Speed Knots.	Dead Weight	Pass. Accom.	Tons Coal Per Day.
Cedric	37,800	14,000	15	18,000	3,000	260
Kaiser William II.	[illegible]	40,000	24	none.	1,800	750

Says Mr. Robinson:

"It is apparent from the foregoing figures that the extra seven knots speed [in the *Kaiser William II.*] is obtained at the cost of an additional coal consumption of nearly 500 tons of coal per day, and that the passenger accommodation is much less and the cargo capacity entirely lost. This will give some idea of the enormous cost of high speed."

It will be seen that Mr. Robinson believes in large vessels, but not in an attempt to drive them too fast through the water. Of

THE LARGEST STEAMSHIP AFLOAT.

The New North German Lloyd liner *Kaiser Wilhelm II.*, launched at the Vulkan Works, at Stettin, Germany, on August 12, 1902. Length, 706 feet; breadth, 72 feet; displacement, 26,000 tons; I. H. P., 40,000.

Courtesy of *Cassier's Magazine* (New York).

the advantages of great size, provided moderation in speed be regarded as sufficient, he says (we quote, in part, an abstract made for *The Engineering Magazine*, December):

"It has been found that the propelling power required for a vessel for a given speed increases in a slower ratio than the increase of its displacement, and in this fact is found the main secret of the superior economy of large vessels. A good deal has been done during the past ten years in the improvement of engines and boilers of ships, and in the reduction of weight and space occupied by them; but this improvement is small compared with the increased economy produced by increasing the size alone. During the past ten years the paying load carried by a representative ocean cargo steamer has about doubled, while the average increase in fuel economy has been reduced from 1.52 pounds coal per horse-power per hour to 1.48 pounds, a comparatively small saving.

"Constructively, the limitations as to size in shipbuilding have by no means been attained. The *Celtic* is about 700 feet long, 75 feet beam, and 33 feet draft; with a displacement of 33,500 tons, and a gross tonnage of 20,800 tons, and this is about the present limit, not of shipyards and marine engineering, but of harbor draft and port facilities. This fact is realized, partially at least, and harbors all over the world are being dredged and docks and channels extensively improved to enable larger vessels to enter.

"It is an unnecessary truism to say that large ships will not be economical unless they can be filled, but this aspect of the question merits more than passing notice. The difficulty of providing cargo for these large vessels is very great, and their advantages will not be realized unless there is a corresponding growth all along the line in facilities for receiving, warehousing, and rapid handling of the different kinds of freight in large quantities.

"In the keenness of competition of the present day it is the large economic cargo carrier which will aid the most in the development of ocean trade, and ships of very great speed are only required for the purpose of carrying mails, and for carrying the comparatively small number of passengers who are willing to pay the extra price for the saving of time.

"The subject of fast ships is always an interesting one to engineers, as it calls for the highest skill in design and construction and the problem is no easy one. . . . . .

"The fact may as well be realized now as later that those ports which expect to retain their commerce must provide safe channels of ample depth and proper harbor handling and warehouse facilities for the large steamers. Vessels of 1,000 feet in length and 40 feet or more draft will have to be reckoned with before very long, and only those seaports which have prepared themselves for such visitors will be able to reap the advantages of the commerce which such ships will bring."

THE FIRST MAP BEARING THE NAME OF AMERICA.

THE discovery of two maps, each thought to have been the first to contain the name of America, has led to a discussion, the result of which will command the attention of all interested in cartography. The map supposed to belong to the "Cosmographiæ Introductio" [Introduction of Cosmography], published in 1507 at St. Dié, by Martin Waldseemüller—wherein is to be found the earliest proposal to give the name of America to the newly discovered world—has, after many years of vain search, only recently come to light in Germany. *Petermann's Mittheilungen* contains an account by Prof. R. von Wieser, of how Waldseemüller's map of 1507 was found by Prof. P. J. Fischer, in the library of the Prince of Waldburg, in Würtemberg. After enumerating the arguments that conclusively established its identity, Dr. von Wieser goes on to say:

"The map of 1507 is of special interest because it shows the new transatlantic discoveries. It should be remarked that we have now before us the first map showing these discoveries, the first map upon which the name of America is for the first time applied to the New World. And it is Waldseemüller, as he proposed in the 'Cosmographiæ Introductio,' who gave this name to the southern continent of the New World. Exactly across the tropic of Capricorn may be read, for the first time, the name: America—that name destined later to acquire such great importance."

The first map to contain the name of America having thus been discovered to the satisfaction of everybody, *The Geographical Journal* (London) publishes an article informing the world that the name of America may be found on still another map bearing date anterior to 1507. This map had been found by Mr. Henry Stevens, of London, inserted in a copy of the Ptolemy of Strasburg of 1513; tho it differed entirely from that of the supplement of that work. Mr. Stevens, by reason of great experience and long and minute research, believed himself able to affirm that the map found by him was the work of Waldseemüller, and had been published before the first edition of the 'Cosmographiæ Introductio.' He was thus justified in considering it the oldest map discovered, up to that time, containing the description of the New World, and bearing the name of America. He made a detailed report of it, and offered it for sale to a rich American library. Shortly after effecting the sale

he heard of the important discovery of Dr. Fischer. *La Revue* (Paris) recently, devoting an article to a review of the history of these two curious discoveries, concludes with the following comment:

"After long deploring the disappearance of the first map containing the name of America, we suddenly find ourselves in possession of two maps of Waldseemüller. . . . Which one will be shown to be right? No opinion can be formed before the publication of the facsimile of the Wolfegg map, numerous copies of which Dr. Fischer has been authorized by the Prince of Waldburg to make. M. Gabriel Marcel, conservator of the geographical section, at the Bibliothèque Nationale, who has followed with interest the researches of Mr. Stevens, of London, is impatiently awaiting this publication, to the end that he may make a comparative study of the maps, the results of which will certainly be interesting to the science of cartography. But is it not strange, apropos of America, to see arise a learned discussion to establish the priority of Waldseemüller's maps, containing for the first time the name of America, after so many dissertations have been published for the purpose of determining the question as to who exactly discovered America?"—*Translations made for* THE LITERARY DIGEST.

FOOD FOR A TRANSATLANTIC VOYAGE.

THE value of the graphic method of impressing large figures on the mind is strikingly illustrated in a picture published in *The Scientific American* to show the huge quantities of food necessary to provision an ocean liner for a single voyage. Says that paper:

"The Book of Genesis does not record the tonnage of the huge vessel which finally stranded on Mount Ararat, after finishing the most wonderful voyage ever described in the annals of mankind. But it is quite safe to assume that the dimensions of the Ark, that old-time floating storehouse, are exceeded in size by the largest of steamships now crossing the Atlantic.

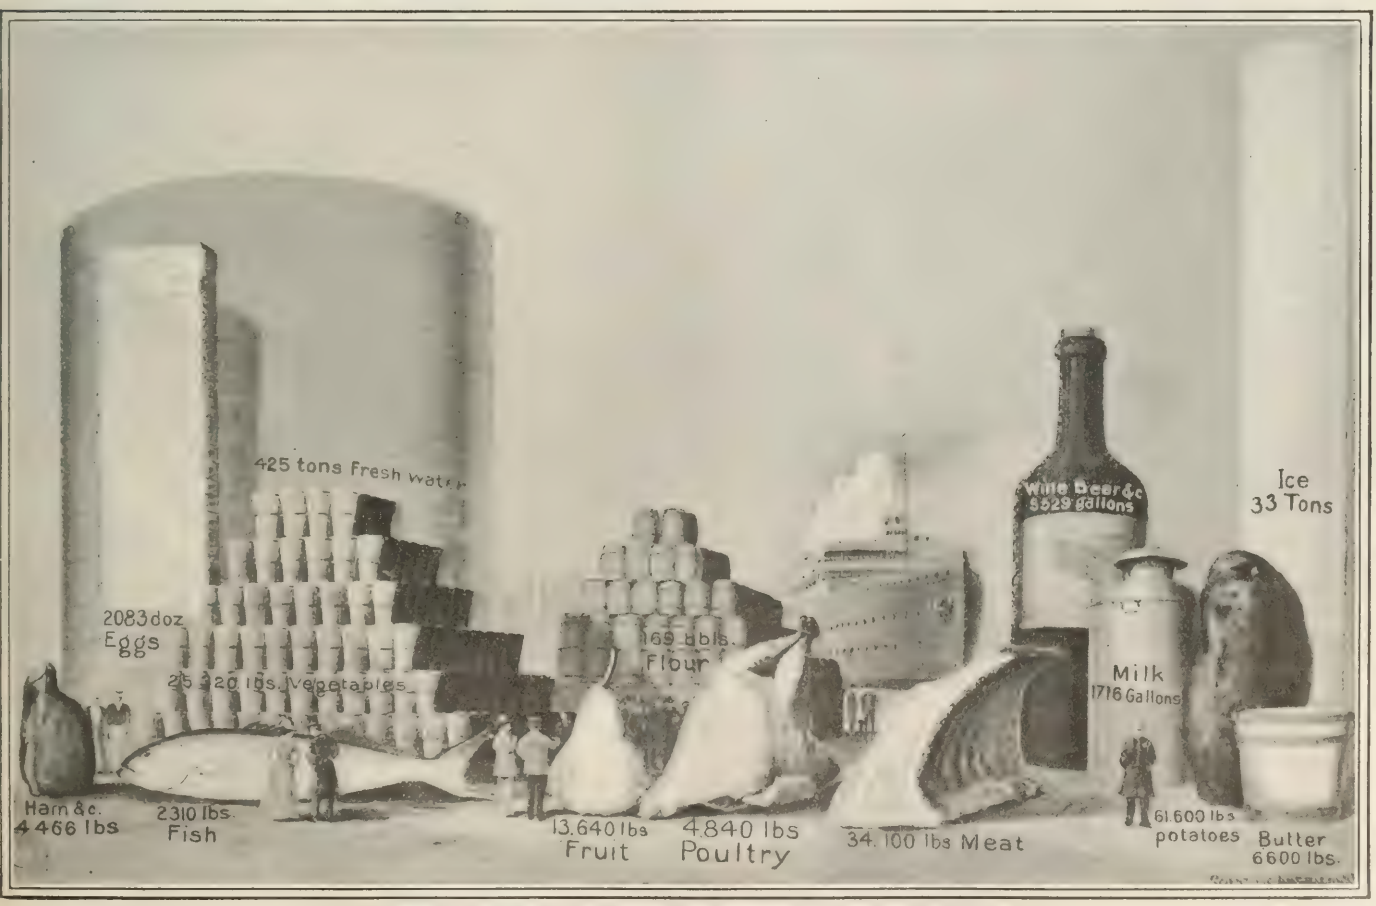
"Not the least striking evidence of the size of these modern monsters of the deep is afforded by the vast quantities of food which must be taken aboard for a single six-day trip across the Atlantic. For the 1,500 passengers and the several hundred men constituting the crew, carloads of food and whole tanks of liquids are necessary. To enumerate in cold type the exact quantities of bread, meat, and vegetables consumed in a weekly trip would give but an inadequate idea of the storing capacity of a modern liner. We have, therefore, prepared a picture which graphically shows by comparison with the average man the equivalent of the meat, poultry, and breadstuffs, as well as the liquors used. Each kind of food has been concentrated into a giant unit, compared with which the figure of the average man seems puny. . . .

"Compared with these vast quantities of food, the live stock of Noah's Ark must pale into insignificance. It must not be forgotten, however, that in provisioning a liner an allowance is made for accidents, which may prolong a voyage over many days. For that reason not all, but only the major portion, of the food taken aboard is consumed."

THIRD-RAIL ELECTRIC CARS IN ICY WEATHER.

THE New York papers have been making a great ado over the recent stoppage of the newly installed electric trains on the elevated roads caused by ice on the third or conducting rail. The icy covering acted as a perfect insulator so that the current could not get to the motors; and the devices provided for cleaning the rail did not do their work thoroughly. This trouble, according to the technical papers, is by no means confined to New York, and no perfectly reliable device for keeping the rail free of ice seems yet to have been discovered. Says *Electricity*:

"Twice now during the past two weeks the elevated railway lines in Greater New York that operate with the third-rail system have been tied up, inconveniencing thousands of people. The trouble is due to the fact that snow or rain lodges on the rail and



A GRAPHICAL COMPARISON OF THE PROVISIONS OF A TRANSATLANTIC LINER.
Courtesy of *The Scientific American* (New York).

becomes ice, thus forming a coating which prevents the shoes on the cars from picking up the current. During the sleet storm last Thursday night traffic on the Second Avenue line in Manhattan was abandoned, while trains ran at very infrequent intervals on the Third and Sixth Avenue lines. The third-rail system in Brooklyn was no more fortunate than those in Manhattan, and the system was practically tied up.

"An attempt was made in this borough to saturate the third rail with so-called 'zero oil,' which is supposed not to congeal; but this supposedly non-freezing oil proved a delusion and snare and only made matters worse.

"That something will have to be done, and that speedily, by the elevated railroad officials goes without saying. A little ice on the third rail means no insignificant financial loss to the company and any amount of inconvenience and financial loss to business men.

"A remedy for ice on the third rail will prove a difficult thing to find. Possibly a judicious use of fine salt aided by steel scrapers on the cars, but insulated from the latter, will solve the problem. In the case of the elevated roads, however, it might have been wise to have suspended the third rail and arranged the shoes to bear up against it rather than laying it on the structure. This arrangement would undoubtedly have entailed a considerable extra expense, but, on the other hand, if properly constructed it would have obviated the trouble from ice and snow and at the same time lessened the chances of persons being electrocuted. The elevated roads may be obliged to make some such change yet."

SUNLIGHT AND WIRELESS TELEGRAPHY.

WIRELESS messages will travel further by night than by day. This is the interpretation put by Marconi on the results of some of his long-distance experiments. Altho all his scientific brethren do not agree with him, the facts on which his conclusions are based are certainly interesting. A paper by Marconi on the subject was read by Professor Fleming to the London Royal Society recently, and the following comments upon it are translated from an article contributed to *La Nature* (Paris, November 29) by Emile Guarini. Says this writer:

"In the course of some of his long-distance experiments in wireless telegraphy, made between Poldhu, Cornwall, and the steamship *Philadelphia*, on her way from Southampton to New York, Mr. Marconi noticed for the first time that there was considerable difference between the distance at which it was possible to detect the electric waves during the day and during the night. . . . According to Marconi the cause of this difference is the fact that sunlight produced 'diselectrization' of the transmitting antenna. The electric oscillations of this antenna ought therefore to be protected from the action of light in order that they may be as effective as in darkness.

"The discharge of a negatively charged metallic body by means of daylight has already been remarked by several observers, and since each oscillation must charge the antenna negatively for a half-period, the diselectrifying effect of the light may be sufficient to produce diminution in the amplitude of the oscillations.

"Marconi found it of no advantage to remove the oscillator from the light; it would be interesting to see whether daytime effects would be increased by covering the transmitting antennæ with substances opaque to light. We have reason to think that the experiment would be successful.

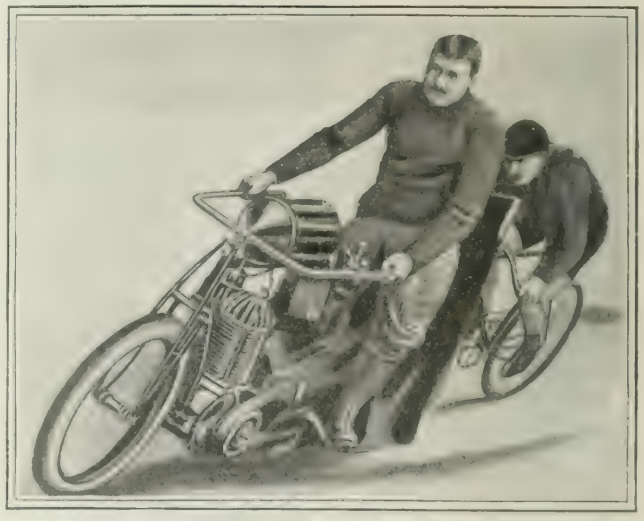
"For short distances the effect of diselectrization either does not exist or is not appreciable. This effect is noticeable only at great distances, when use is made of very powerful apparatus and of high potentials.

"It should be added that all physicists do not agree with Marconi. Thus, for example, M. J. Joly has observed that the effect noticed by the young Italian electrician might be attributed to the fact that the electric waves coming from England were moving during the day in a direction opposed to that of the earth-current and during the night in the same direction, so that the conditions were similar to those of sound transmission in a strong gale.

"Prof. Oliver Lodge does not accept this explanation. According to him, the effect observed by Marconi is due to the conductivity and consequent partial opacity of the air under the influence of the ultra-violet solar radiations. But at present theory is of little importance. It is the facts that are important for us to know."—*Translation made for* THE LITERARY DIGEST.

"PACING" IN MODERN CYCLE RACES.

THE modern high-speed cycle record is made behind a pacing-machine which is driven by a motor. The struggling cyclist behind it is not drawn along with it by an actual connecting band, but the conditions are not very different, for he is practically riding in a wind blowing with him at the same speed as that of the machine in front. A writer in *La Nature*, M. W. Drancourt, protests against this kind of speeding, which, he says with plausibility, is not real sport at all. M. Drancourt gives as the present record for one hour that made by a French-



CYCLIST PACED BY MOTOR-CYCLE WITH WINDSHIELD.

man, Contenet, on October 30, 1902, namely, 77,897 meters [50 miles]. He does not mention the American record of 60 miles an hour behind a railroad train, but probably he does not regard this as official. Says M. Drancourt, after noting the rapid increase of record speeds on cycles:

"What are the causes of this increase of speed? They are numerous, but the principal ones are the larger number of racing bicycles and especially the superiority of recent methods of pacing. When the first bicycle races were organized, in order to force the rider to go more swiftly the riders were preceded by another cyclist whose object was to lead the others on and cut the air for them; this cyclist was relieved by another every two or three laps. When it was necessary to get higher speeds, multiple machines were invented—tandems, triplets, and quadruplets—and the records were raised sensibly. . . . . .

"Then made its appearance the petroleum motor, which has brought about a veritable revolution in cycling training. Placed behind tandems propelled by more and more powerful motors, the racers, literally dragged along by their pacers, succeeded in covering greater and greater distances. . . . . .

"The year 1902 saw another advance in mechanical pacing. The naphtha tandem, carrying two men, was a heavy machine, and it seemed difficult to increase its speed by enlarging the motor. It was replaced early in the present year by the naphtha bicycle, which now seems to be the cycle of the future. It is evident that the ordinary touring motor-cycle can not be used for this purpose; and there have been built powerful cycles with motors of 8, 10, or even 12 horsepower, capable of attaining railroad speed. This was not all, the rear of the cycle was furnished with a windbreak, a kind of huge shield of papier-maché, or leather, behind which the cyclist was absolutely sheltered and had no longer to struggle against the resistance of the air, which is the principal factor when great speeds are concerned. The current of air created by a pacing-machine having a wind-

shield actually draws the cyclist along, and he has only to move his legs quickly enough to follow the motorcycle.

"Under these conditions the record for one hour has been broken ten times in a year. . . . . .

"And now, how about the future? Where will this foolishness stop? There will evidently come a time when, even by increasing the development of the cycle and the shelter offered by bicycles with a wind-shield, we can get no further. What will the limit be? Mathematically we can not get at it, but we should not be astonished to see next year a wheelman cover in a single hour 80 or perhaps even 100 kilometers [50 to 62 miles]. It would seem, however, that the real limit may be fixed by the danger that such an attempt would offer. At these fearful speeds, the least accident—an injury to the motor, a breakage of the chain, or a punctured tire, would bring about a terrible tumble. Already the greater number of the so-called 'stayers' have been the victims of dangerous falls. . . . To follow, wheel to wheel, on a frail bicycle weighing at most 9 kilograms [20 pounds], behind an automobile that is moving at railroad speed is no sport; it is madness! Would it not be preferable to return to real sport, where the man with the best muscles and the greatest endurance wins the victory, and not the one who can command the best pacing-machine?"—*Translation made for* THE LITERARY DIGEST.

IS WATER A FOOD?

THIS question is answered in the affirmative by Dr. John Uri Lloyd in a paper read before the recent meeting of the American Pharmaceutical Association, and now published in *The Canadian Druggist*. Most people, says Dr. Lloyd, believe that water is taken into the body only as a solvent or a cleanser. It is rather to be regarded, he believes, as an integral constituent of organic bodies, just as it is of crystals, and hence its function in the organism is that of a real nutrient. He says, among other things:

"The cabbage, the apple, the fruits of our orchards, the vegetables of our gardens, contain in all cases an enormous amount of water, if we consider the fluid part of the mysterious liquids present in vital juice and organic structure as simply water. Here we are confronted with conditions in which relationships between the large amount of water and the small amount of solid are such as to tolerate the view that this water of combination may be a something very different from pure water, or water obtained by tissue destruction. With such complex examples in mind, we are led consistently to inquire whether such dishes as soups and other aqueous liquids, and water-bearing or water-assimilating foods, can, as tissue-feeders, be in themselves anything beyond simple solutions of solid matters in water.

"We call water driven off in the drying of fruit or food of any kind, water of separation. May it not be rather the result of structural molecular decomposition? In the cooking of dry foods we not only change their structures as regards relationships of solid constituents, but add thereto the qualities that combined water gives under conditions as yet obscure. The same is true of vegetables and fruits. Should we not look on such water, necessary as it is to life, digestion, and tissue replacement, as an integral part of food, instead of simply a carrier of food? It is indeed probable that the student of dietetics must soon broaden his field and consider foods in their structural entirety, rather than from their analytical created ultimates. The method of the analyst now is to first kill the animal or vegetable, then destroy the tissue, then disrupt the molecules. The final result gives him inorganic elements and a few characteristic chemical structures, on which he bases his tables concerning food valuations. Is this just, in the light of what we know concerning the province of vitalized structures as a whole; is it rational, in the light of what we know concerning the worthlessness of chemical elements in foods? Is it not more rational to accept that the exceptional value of albumen and other nutrients, as typical foods, rests on the water compounds so nearly in accord with tissues craving just such vitalized water-bearing structures? . . . . . .

"Possibly the makers of food products of the future will give less attention to analytical values concerning dead elements and more to vitalized and vitalizing structures in which available water is conspicuous. Possibly it behooves us even now to ask if a closer inquiry into the water molecule, the vitalized or easily vitalized water molecule, and its many shadings may not open up a field for the construction of more rational food products."

Radiation from Fresh Rain-Water.—That recently fallen rain possesses the property of radio-activity for several hours after collection; that is, that it is capable during that period of giving off the so-called Becquerel rays, which are very similar to the Roentgen rays, is shown by experiments described in a note presented to the Philosophical Society of Cambridge, England, by Mr. T. R. Wilson. These experiments prove that the rain communicates its properties to the receptacle in which it is collected, after evaporation. Says the *Revue Scientifique*, in a note on the subject:

"The amplitude of the effect obtained from a given quantity of rain was nearly the same whether the rain had fallen in large or fine drops, had been collected by day or by night, at the beginning of a shower or after a continued period of violent rainfall. Only once, during a storm, an abnormal effect was observed. The radio-activity shows itself equally well whether the water was boiled away in a platinum or in a porcelain vessel; with these latter the radiation resembles in certain particulars the induced radiation obtained on negatively charged wires. From 190 cubic centimeters [about ½ pint] of rain, there was a precipitate sufficiently radio-active to increase the action of the recipient one hundred times beyond its normal value. . . . The intensity of the radio-activity falls to about a quarter of its initial value in one hour. Similar precipitates obtained from rain-water preserved twenty-four hours are quite inactive."—*Translation made for* THE LITERARY DIGEST.

SCIENCE BREVITIES.

"ALTHO the use of spices for the purpose of heightening the flavor of food is almost universal, it is generally recognized that their influence on digestion is detrimental," says *The Dietetic and Hygienic Gazette*. "Some experiments recently carried out by a Polish physician, Dr. Korczynski, tend to prove that while spices stimulate the motor function of the stomach, they progressively impair the secretory functions, and, in the long run, inhibit the production of hydrochloric acid. On the whole, therefore, the ingestion of spices hinders, rather than accelerates, digestion, tho an exception may be made in respect of persons in whom slowness of digestion is due to a deficiency of muscular activity on the part of the stomach, and also possibly of the victims of hyperacidity."

SPEAKING of the remarkable migration of the Doukhobors, or Russian Quakers, in the Canadian Northwest Territory, *The Medical Record* (November 15) calls it a "recrudescence of medievalism," and classifies it as an instance of "epidemic infatuation." It says: "This state of affairs would, indeed, be strange were it to break out suddenly among a happy and contented people. But no more in human affairs than in the natural sciences does something come from nothing. From the day when Moses led his downtrodden host forth from the land of Egypt, such movements have usually marked the stress of hard conditions upon peculiar mental temperaments. In other words, they are the outcome of reaction against calamities, such as epidemics, famines, and persecutions, and seem to be born of the idea that, as the condition of this world is too bad, it is to another that man's gaze must be turned. Such conditions always bring fanatics to the front and secure for them a hearing; and from amid the innumerable mental variations present at any given moment in the human species by a process of accretion, like becomes assimilated to like, and an aggregate is formed such as the one now in question."

"ARE there cold and hot zones below the surface of the earth just as there are on the surface?" asks *Popular Mechanics*. "Recent developments would tend to prove that such is the case and that the long accepted theory that heat uniformly increases with descent into the interior of the earth is wrong. It has recently been shown that heat generated by oxidization is often a deterring or determining factor in deep mining. In sundry localities it has been noted that the increase in temperature with depth is not regular, being subject to the amount of pyrites in the ground, or to the time that the holes in the ground is opened up. At Sandhurst, Victoria, N. S. W., a fall of 5° F. in temperature was noted after the ground had been opened up for one year, and after four years had elapsed there was a further fall and then an unchanged temperature. *The Mining and Scientific Press*, in relating an instance at Comstock, Nev., says: 'At a depth of 1,700 feet boiling hot water was found, and the statement was then made that a little farther down all matter was molten; yet on passing the 2,000-foot level the temperature decreased, the Union shaft at a depth of 3,500 feet having a more comfortable temperature than could be found halfway to the surface.' In the Lake Superior region these irregular conditions are conspicuous. Here there appears to be a local cold zone, as is demonstrated in the Calumet & Hecla shaft, where at 4,700 feet the temperature was 79° F., or only 20° warmer than at a depth of 100 feet."

THE RELIGIOUS WORLD.

ULTRAMONTANISM IN THE TWENTIETH CENTURY.

SOME months ago the brilliant Papal Nuncio in Paris, Mgr. Lorenzelli, addressed a class of Roman Catholic theological students on the subject of the Pope's "temporal power." Given, according to the Vatican diplomatist, the existence of Catholicism, or the universality of the Roman Church, given the partition of the civilized world into various states, and given the relations (of right or of fact) which the church can not but have with these states, it follows of necessity that the supreme pontiff of the church not only should not be dependent, but should not even seem to be dependent upon a single one of these states. Were it otherwise, the peril that schisms and divisions might arise through political pretexts would be serious. Hence, in order to maintain the body of Roman Catholicism strictly within its unity, it is demanded that its head be emancipated from any subjection whatever to another power—that is, be free and really, not nominally, sovereign. But this is not possible without a principality, which in fact pertains to the office.

This argument, observes that authoritative and official organ of the Vatican, the *Civilta Cattolica* (Rome)—to which we are indebted for the above summary of the Nuncio's address—"is incontestable not only in itself but also in its consequences, and the vigorous logic with which the orator proves it leaves no place for a reply." The Nuncio manifests "such clearness of argument as must convince all who do not wish to withstand truth either through sectarian hatred or through various motives of interest or through that crass ignorance which incapacitates the mind for reasoning." And yet it would seem that there is another important Roman Catholic point of view from which this matter is looked at. Writing in *The Guardian* (Anglican, London) on "The Conditions Created by Modern Ultramontanism," a writer for whom that paper vouches as "a Roman Catholic correspondent," says:

"The Americans were the first to realize (as they were the last to imagine) the state of things undoubtedly presented by the *Curia* and the Roman congregations; the existence, that is, of a huge worldly apparatus working for ends in which religious considerations are the least evident. These ends are governmental and administrative, political, diplomatic; and it is fair to the Vatican to remind ourselves that in its view this is as it should be. The Holy See does not regard itself as the organ of the church's spiritual life, but as the organ of its government. The various branches of this universal government are carried on by departments at headquarters, and these departments are the Roman congregations. 'We give the law, and you keep it' is the accepted formula in Rome. We are neither prophets nor preachers—our *charisma* is for government, and for authoritative teaching; the sources of the Christian life are to be looked for in the sacraments and the other means of grace flowing without stint in the church. This is a point of view which should be kept in mind in any estimate of the work of the Roman Congregations, and it can be kept in mind even if we see the fatally weak spots in the argument. . . . Not only in this way has Rome as a political engine damaged its position as a great religious factor. The effect of Ultramontanism has been to make Catholicism itself a political engine in every country. Ultramontanism is a less spiritual, a more secular form of Christianity, and it is indissolubly bound up at present with the Pope's temporal prerogatives. The bishops everywhere are the emissaries of this Ultramontanism."

To this state of things the writer attributes the losses in membership sustained by the Roman Catholic Church in the United States and in England.

"It must be recognized that spiritual despotism in the nineteenth and twentieth centuries is fraught with new danger. In the Middle Ages church fulminations on the credulous mighty or the simple peasant—the former, as a large predominating class, has ceased to exist—there is a constant appeal from the credulous mighty to the incredulous mighty, from the simple peasant to the educated artisan with a considerable moral equipment, which besets the trade of the spiritual despot with pitfalls.

"But there are worthier motives for defection than the alleged arrogance' which is largely the grown-up childishness of the seminary. No one who wishes to withdraw himself from such interference need for a moment be the subject of it, and herein is some justification for the 'arrogant' priest. It is sterner stuff than this which has acted powerfully on the man of robuster conscience and intellect, and has caused, and is causing, disunion, in spite of the ill-timed assertion made by Cardinal Vaughan last year, that Catholics were never so united. . . . England and America should, however, have been free from the 'leakage' which is due in other countries to the abuse of religion as a political machine. This is not the case."

The most eminent Roman Catholic student of Ultramontanism is Dr. Albert Ehrhard, whose book on "Catholicism in the Twentieth Century" (noticed in our issue of December 13) has become famous. In this book, published with the official permission of the Roman Catholic bishop of Rottenburg—who says it is "characterized by warm love for holy church"—the author notes "the growing estrangement of the educated classes from the Catholic Church even in Catholic states and nations." He observes: "Certainly, if all those who inwardly no longer belong to the Catholic Church, were stricken from the list of her members, the proud number of millions of Catholics would appreciably shrink." The author further refers to a developing "Catholic paganism," and declares: "These forecasts are not rose-colored, and yet I only fear that the coming days will be even darker than the blackness of the shadow they cast before." The trouble has its root, we are informed, in "an unjustifiable Ultramontanism" which seeks "the restoration of a specifically medieval papal power as a thing demanded by Catholic dogma."—*Translations made for* THE LITERARY DIGEST.

THE LATE ARCHBISHOP OF CANTERBURY.

"THE archbishop's chair in Canterbury, which has up to this date been held by some of the most distinguished men in the history of England, was never occupied by a man of more gifted scholarship, more simple piety, more earnest faith, and more magnificent manhood than when it was occupied by Frederick Temple." This statement is made by an English writer in the New York *Sun*, and is echoed in much of the press comment evoked by Dr. Temple's death last week at the age of eighty-one years. The same writer gives the following account of the late archbishop's life and work:

"In the death of Dr. Temple, Archbishop of Canterbury, the world loses one of its great personalities. This only those can understand who, like myself, knew Temple at Rugby, saw him condemned on all sides as a heretic when he wrote the first article in the notorious 'Essays and Reviews,' witnessed his sudden elevation to the episcopate when he was made Bishop of Exeter, watched his increasing popularity as Bishop of London, and then in these last few years reverenced him as the dignified archbishop who cast such a halo of grandeur around the throne of Canterbury, and who formed such a pathetic figure in the recent coronation of the King.

"Dr. Temple was one of the most eminent scholars in the church. At Oxford he took a 'double first'—that is, a first-class in classics and a first-class in mathematics. He succeeded Tait at Rugby and won the respect of every boy. 'Temple's a brute,' the boys used to say; 'but he is a just brute.' . . . . . .

"He was always classed among the Evangelicals or Low Churchmen. But as archbishop he gave many decisions favorable to the sacerdotal party, to the surprise of many. He owed his preferment, it is said, entirely to the influence of Queen Victoria. This seems probable because neither Mr. Gladstone nor Lord Salisbury would have selected any one but a High Churchman for the post of archbishop. His appointment to

Canterbury took the ecclesiastical world by surprise. But Dr. Temple completely overshadowed his High-Church predecessor, Dr. Benson. He frequently spoke from his seat in the House of Lords, when his utterances commanded the profoundest respect of every peer, from the Lord Chancellor on the woolsack to the

MOST REV. FREDERICK TEMPLE,
The Late Primate of all England.

youngest baron. And why not? Temple, as master of Rugby, had been a presence feared by many of the members of the House of Lords. Besides this, there was not a university man present who did not know that he had taken the highest degree possible at Oxford.

"As a very strong advocate of total abstinence Dr. Temple gained much popularity outside the limits of his own church. He was no 'temperance man' who drank wine with his dinner and discouraged the saloons. He was a water-drinker by conviction, and his magnificent physique and his great mental power were the finest advertisement the total abstainers ever had. . . .

"It may be truly said that at the recent coronation Archbishop Temple stood as the central figure when he faced that great assembly, standing at the high altar as King Edward and his Queen knelt to receive the benediction of the church. As the venerable and gifted successor of Augustine, Stigand, and Lanfranc knelt to do obeisance to the King there was scarcely a dry eye in the whole Abbey when King Edward gently lifted the aged archbishop from his knees. It is an incident in the coronation of Edward VII. which will probably supply the poet and the artist as well as the historian with a theme of touching beauty in one of the greatest spectacular assemblies of the beginning of the century.

"But if Dr. Temple was a church dignitary of sober mien and dignified bearing, he was, nevertheless, a man of intense humor. After dinner at the deanery in Exeter a lady came up to the bishop and exclaimed somewhat hysterically: 'Oh, my lord, was not that a dreadful railway accident which occurred this morning on the Great Western? Do you know my aunt might have been in the train, but she missed it. Now was it not providential, my lord?' 'Well, madam,' replied the bishop with dry humor; 'I can't say, I have never seen your aunt.' On another occasion a lady, wishing to commend a young clergyman to the notice of the bishop, described his preaching, and then said, 'Oh, what a saint in the pulpit!' 'Ah,' replied the bishop, 'and what a martyr in the pew!'"

There have been seven Archbishops of Canterbury since the beginning of the nineteenth century, and the writer in *The Sun* describes their personalities as follows:

"The first of them was Sutton, who occupied the archiepiscopal chair during the close of the Evangelical revival, and of whom it is related that he once complained to the Prince Regent that the Methodists were doing much harm, and he wanted to know what could be done to stop their preaching. 'Why, make 'em bishops,' replied the worldly prince.

"The next archbishop was Howley, who crowned William IV. and Queen Victoria. He was a man of scholarship and piety, and won the respect of the church people of his day. Next came Sumner . . . a churchman of the lowest type, who ought never to have occupied the position, simply because he lacked Episcopal instinct. Then came Longly, translated from York. He was a man of simple piety, who only occupied the chair a short period. He was followed by Tait, a Broad Churchman of much learning and character; the personal friend of Dean Stanley. He was followed by Benson, an advanced churchman, said to have been translated from Truro at the earnest request of the Prince of Wales, now King Edward. Benson dropped dead in the pew as he was worshiping in Mr. Gladstone's church. And then, to the surprise of almost every one, Dr. Temple, then Bishop of London, was made Archbishop of Canterbury."

In regard to the question of Dr. Temple's successor, the writer says:

"Dr. Maclagan, the Archbishop of York, was passed over when Dr. Temple was selected, and Dr. Davidson, the Bishop of Winchester, it is understood, declined the appointment on the death of Dr. Benson. Consequently two names stand out with prominence as candidates in popular favor for this coveted appointment, Dr. Ingram, Bishop of London, and Dr. Moule. These two bishops very decidedly represent the two extreme parties in the church. Dr. Ingram is a High Churchman, Dr.

From copyrighted (1902) stereoscopic photograph by Underwood & Underwood, New York.

THE ARCHBISHOPS OF CANTERBURY AND YORK, WITH THEIR SONS

Moule is a pronounced Evangelical. Both are good preachers, but while Dr. Ingram has no reputation for scholarship Dr. Moule was for many years a distinguished professor at Cambridge. It is said that the sovereign of England always names the Archbishop of Canterbury to the Prime Minister, and not as in the case of other prelates, when the nomination is presented to the King by the Prime Minister. Taken altogether, the Bishop of Durham seems the more likely of the two."

MR. MALLOCK ON THE CREDIBILITY OF RELIGION.

IN his new book, "Religion as a Credible Doctrine," Mr. W. H. Mallock endeavors to deal with the question of "how far that theory of life which is associated with the name of religion is a theory to which, under existing conditions of knowledge, a reasonable man can any longer assent." He begins with the following definition of religion:

"An assent to the proposition that a living God exists who is worthy of our religious emotion, and is able to take account of it, is as necessary a part of religion as is the emotion itself. And with this proposition are connected two others equally necessary, and necessary in the same way. These are the propositions that the will of man is free, and that his life does not cease with the dissolution of his physical organism. If our actions were all of them predetermined, there would be in them nothing on which a God could justly adjudicate; and if with the death of the body we utterly ceased to be, it would matter to us very little whether He adjudicated on them or no. . . . In these propositions, says Professor Haeckel, we have 'the three buttresses of superstition,' which science sets itself to destroy."

MR. W. H. MALLOCK.

His new argument on behalf of religion is at once iconoclastic and conservative.

Mr. Mallock's arguments on both sides of the central questions discussed are of a rather bewildering character. On the one hand, he admits that the methods "generally employed by the religious apologists of to-day" are "worthless and hopeless, and do far more harm than good." On the other, he compares Professor Huxley's polemic efforts to "the antics of a barking dog in front of a locomotive-engine," and accuses Herbert Spencer of gross inconsistency. He arrives at the conclusion:

"If we consider the universe apart from the organic life contained in it, it is, according to the admission of thinkers of every school, a system of absolute monism, so far as observation reveals it to us. In spite of every argument by which religious and metaphysical apologists endeavor to escape from the conclusion, organic life is a system of absolute monism likewise, and if in the cosmic process there has been any interference at any time, it was, to quote an expression of Professor Ward's, an interference that 'took place before the process began, not during it.' Consequently, the entire intellectual scheme of religion—the doctrines of immortality, of freedom, and a God who is, in his relation to ourselves, separable from this process—is not only a system which is unsupported by any single scientific fact, but is also a system for which amongst the facts of science it is utterly impossible for the intellect to find a place. In other words, that entire conception of existence which alone for the mass of mankind has invested life with value is in absolute opposition to that general system of the universe the accuracy of which is every day reattested by every fresh addition made to our positive knowledge."

It must not be assumed from this argument that Mr. Mallock denies the truth of the three fundamental religious propositions which he mentions. On the contrary, he aims to show that there is "a very simple method—different from that of the religious apologist or the idle metaphysical dreamer—by which, without any surrender of science or common sense" the truth of these propositions may be established. This method involves the recognition of a "practical synthesis of contradictories." "In asserting the truth of religion," he declares, "we must assert a doctrine absolutely opposed to the doctrines of science, which we are compelled to accept." He continues:

"Nobody doubts the reality of time, as dealt with by Bradshaw, because his intellect refuses to grasp the idea of eternity. No one denies the practical reality of space, tho nothing intervenes between the space, without which he could not live, and the boundless depths of infinity, in the presence of which he can not think. Nobody, again, disbelieves in the reality of the universe, tho the existence of it implies a cause, and every cause we can imagine is unthinkable as soon as we analyze it.

"If, then, every synthesis which we make in picturing the world as real involves, when submitted to analysis, contradictions which can not be reconciled, and if nevertheless our belief in the reality of the world continues, it is perfectly obvious that there can be no *a priori* reason why we should not believe in the reality of the religious synthesis, tho the principle of freedom which it obliges us to assert appears to our intellect incompatible with the determinism which we are unable to deny."

We are compelled to give assent to religion, concludes Mr. Mallock, for precisely the same reasons that we accept the phenomena and so-called laws of science. "In this broad fact," he asserts, "lies the reasonable basis for religion." We quote further:

"Just as faith or instinct having given us the cosmic world as a reality, science discovers the principles which underlie its phenomena, so, faith or instinct having given us the moral world as a reality, analytical reason and a study of the human character perform with regard to the moral world an office of the same kind. They discover the principles involved, by direct assent or implication in the judgments, activities, actions, and sentiments of which human life in its higher manifestations is composed; and amongst these principles they find that the most fundamental are the three elementary doctrines which constitute the religion of theism—the doctrines that men are free and are not mere cosmic automata; that they have some life which outlasts the dissolution of physical organism; and that between their lives and the supreme cause of the universe a personal relationship subsists in virtue of which human affairs are invested with a meaning and importance imperceptible to the eye of ordinary observation. It is true that these doctrines have not been held consciously by all of the higher races during the past history of the world; but these races have been animated at all events by unconscious or subconscious assumptions of which these three doctrines are the only logical expression; and with every advance which is made in positive knowledge, and with every enlargement of our conception of things which results from it, any substitute for these doctrines becomes more and more impossible."

The peculiar nature of Mr. Mallock's argument draws the following comment from the London *Academy and Literature*:

"Mr. Mallock is in the delightful position of agreeing with no one at all. Many of us would like to enjoy the sensation of being in a minority of one, but few can ever contrive it. However paradoxical the position you assume, some wretch is bound to spoil everything by hatefully agreeing with you. There is a company, it would seem, lying always in wait for unfriended opinions, and espousing them for no better reason than that they are friendless—espousing them like anything. Mr. Mallock's present ingenious effort leaves him in ecstatic isolation. His simple plan is to deny force to the arguments of one side while accepting its conclusions, and while denying the conclusions of the other to accept its premises."

The Rev. John White Chadwick, the well-known Brooklyn Unitarian minister, who reviews the book for the New York *Times Saturday Review*, finds it "entertaining," but unsatisfying. He says:

"Mr. Mallock's success is remarkable so long as he is only en-

deavoring to convict the scientific and philosophical apologists of foolishness. But what has he to give us where they fail? A practical synthesis of contradictories. . . . We are comforted with the assurance that there is a similar assertion of contradictories underlying our belief in everything. But to justify a belief in contradictories some practical grounds are requisite. There are such in religion. We must have religion in Mr. Mallock's sense of the word for the orderly and comfortable conduct of life. It is reasonable to acquiesce in the coexistence of two orders of being, which are not reconcilable in terms of science. To this complexion have we come at length, and its blush is much the same as that of Prof. William James's 'pragmatism' in his recent 'Varieties of Religious Belief.' A good many will no doubt rejoice in such a recommendation of religion, but some will repudiate it utterly, having perhaps in mind the warning of Carlyle: 'Go to perdition if thou must. But with a lie in thy mouth! By the Eternal Maker, No!'"

A NEW INTERPRETATION OF THE SECOND COMING OF CHRIST.

RELIGIOUS minds have been occupied with the question of the second advent of Christ ever since the day when the message came to the apostles: "Ye men of Galilee, why stand ye gazing up into heaven? this same Jesus, which is taken up from you into heaven, shall so come in like manner as ye have seen him go into heaven." Great multitudes have always believed, and to-day believe, that Christ will come again in his visible person. Among those who have taken this view are some of the foremost Christian teachers of our generation—Charles H. Spurgeon, Newman Hall, A. J. Gordon, Dwight L. Moody, Theodore Monod, Arthur T. Pierson, F. B. Meyer, J. H. Brookes, and Charles Cuthbert Hall. The beginning of the new century gives some indications that a revival of this belief is at hand.

The Rev. Dr. I. K. Funk, of New York, has been considering the question of the second advent in a brochure entitled "The Next Step in Evolution." He does not doubt that there is to be a second coming, but he interprets it in new terms. He believes that "Christ came the first time into men's vision by coming on the plane of their senses, he comes the second time into men's vision by lifting them up into his plane of spiritual comprehension." We quote further:

"This coming is in harmony with the laws of sequence and continuity.

"Each of the successive steps or kingdoms has had its type-life. The plant—that is, the physical basis of the plant-life—came from the inorganic matter; the animal—that is, the physical basis of the animal life—came from the plant and through the plant from the mineral kingdom; the natural man—that is the physical basis of the life of the natural man—came from the animal and the kingdoms below it; the spiritual man—that is, the physical basis of the life of the spiritual man—comes from the natural man and the kingdoms below him.

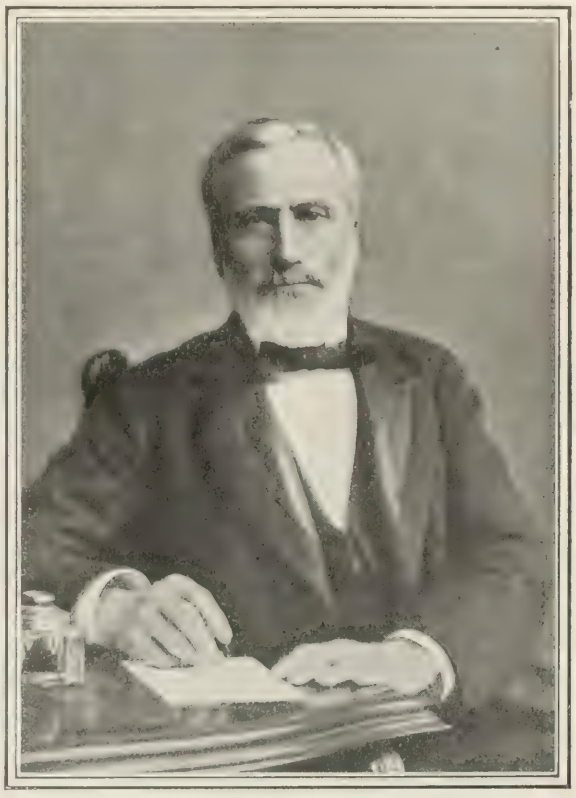
"The development from kingdom to kingdom was a natural unfolding; yet the new creature of the next higher order always came through a new birth—a double birth: (1) the birth of the new type-life of the next higher kingdom into the evolutionary order of nature, through the hereditary chain; and (2) the birth of each individual into this type-life."

The birth of Christ, according to Dr. Funk's view, represents the last great transition, and the only transition in historic times, from a lower to a higher kingdom. We quote again:

"The cradle at Bethlehem flashes a searchlight down the spiral stairway up which man has come from platform to platform, kingdom to kingdom. Here we see clearly that the type-life of the kingdom of the spiritual man is born from above into the hereditary chain of evolution. Many times, and in many ways, he declares, 'I am "from above."' He is born a natural man, and yet possesses the life of the kingdom next higher, and proceeds to lift the natural man by a new birth into the kingdom of the spiritual man. He is born the son of man and the son of God, bridging the chasm with his own being."

Thus Christ came into the world, "the type-life and potent king of the kingdom of the spiritual man." He is coming back into the world as "a present force, producing changes, quickening and directing energies":

"To see him this time we must have eyes and ears fitted to recognize the manifestations of the inner kingdom—the kingdom of all first causes and real forces. He is not coming with the noise of trumpets, nor with whirlwinds, nor with earthquakes;



THE REV. I. K. FUNK, LL.D.
He views the second advent as a spiritual manifestation.

but with the silence of the growth of the mustard-seed, of the leaven, of the grain of corn reaching up to the blade and full corn in the ear.

"There can be nothing more manifest to-day to the optic nerve of the spiritual man than is this coming. The lightning flashing from the east to the west is not nearly so manifest."

The signs of this second coming, we are assured, are to be discerned in the growing Christliness of our age. The kingdom of love is being established in the hearts of men. Dr. Funk says in conclusion:

"Judge these things as you would the motions of the hands of the clock. Look back a half-dozen centuries and make comparisons. War is recognized more and more as a barbarism, and its end is over yonder hill. The court of nations to settle wrongs is looming above the horizon—is already holding its sessions. The nation that loves its fellow nations is also born of God. The Golden Rule is finding its place in international diplomacy.

"The humanities are in order. Over one hundred and seven million dollars were contributed in the United States for educational and other charities within the last year. Nearly two million dollars were given to suffering Galveston; and Carnegie's immense benefactions are but one of the many indications of the full dawning of the day of living for others.

"A single individual the other day, a member of an unpopular race, is wronged in France, and all the world is aroused, and flashes thunderbolts of wrath under oceans and across continents until there is a beginning to right the wrong. Mankind is rapidly becoming

> . . . one in spirit, and an instinct bears along
> Around the earth's electric circle the swift flash of right and wrong.

"The marvelous sowing about the Sea of Galilee is reaching

it, ripening. The leaven is leavening the whole lump. The mustard-seed reappears in hundreds and hundreds of millions of souls. Cuba is helped to freedom for its own sake; the Russian Czar—he at least in Russia—in sincerity says: 'War should end.' In business it is ceasing to be a maxim that the benefit of the one is ever opposed to the benefit of the many. We are learning that the Golden Rule and the law of self-preservation run parallel. Applied to commercialism, the Golden Rule is so to make money as to give a benefit also to him from whom you make it; and that, too, is common sense. The children of the inner kingdom never crowd: the more, the more room.

"In all these things we see just the beginnings of the results of his coming: all men of one family, God the Father, and Christ the eldest Brother; the sacredness of truth, of the soul, of all life; the reality of the inner world."

THE LAYMAN'S INTEREST IN RELIGION.

THE question of the place and work of the laity in the church has come up for discussion in several of the religious journals, and it is generally agreed that the failure of laymen to cooperate more actively with the clergy in religious work is a discouraging sign of the times. Mr. Tobias Schanfarber, who considers the subject from the Jewish point of view, declares (in a signed editorial in *The Reform Advocate*, Chicago) that it must be confessed that there are very few active laymen in the household of Judaism. In the case of the majority, he adds, "their interest ceases with simply being members of a congregation, and the interest of a great many does not even go that far." Looking out over the broader religious field, however, he finds ground for some encouragement:

"The name of the Rockefellers appears quite frequently in print as taking interest in the Sabbath-school work of the church. The younger Rockefeller rises from the sick-couch, so the newspapers report, goes to the church, and talks to his young men on 'Success.' He leads the Bible class of his church, and in other ways shows that the church-interests are his interests. It is praiseworthy of the Rockefellers, situated as they are in life, to make the church their solicitude. When men count their money by the millions, they usually put themselves in the place of God, and think that they are to be worshiped instead of the Supreme Ruler of the universe. Mr. Multi-Millionaire, self-made—as he claims he is—puffed up with inordinate conceit, thinks that he has no duties toward his God, religion, or the church. He paraphrases the declaration of that French monarch who said 'L'état est moi,' by grandiloquently announcing that 'he is the universe,' that 'the earth is his, and the fulness thereof.'

"It is refreshing to note that there are exceptions to this rule. Mr. Wanamaker has always shown deep interest in Sabbath-school work, and there are numberless other men in the Christian church, rich in this world's goods, who are anxious to add to the spiritual treasures of mankind by giving of their time, their thought, and their money toward the upbuilding of church-interests.

"It is not our intention here to touch upon that other question as to the manner in which these men have accumulated their vast fortunes. It is true our sages declared that the stolen 'lulab' was not to be brought into the sanctuary, and it certainly minimizes the good done when it is known that the 'lulab' is stolen. But for all that there is something gratifying in the fact, when the rich man shows by his devotion to religion that its appeal is not wholly dead to him.

"But it is not only the rich man in Christendom who is devoted to the religious interests of the church. As a rule we find in many churches of the country laymen holding up the right hand of their ministers. We find them superintending the Sabbath-schools, heads of the church-gilds, leaders in the Epworth League clubs and Christian Endeavor societies, and public spokesmen in behalf of the church when the occasion calls for it. We all know with what devotion the late ex-President of the United States, Benjamin Harrison, was attached to his particular church affiliation, and how, when the occasion called for it, he publicly spoke and worked in the interest of the church, and did all in his power for its growth and development."

The Rev. W. E. McLennan, of Evanston, Ill., recalls that "the two greatest leaders of Puritan England were John Milton and Oliver Cromwell, both laymen"; that the founders of American Methodism were three lay preachers, Philip Embury, Robert Strawbridge, and Captain Webb; and that "the two greatest preachers of our day, Charles H. Spurgeon and Dwight L. Moody, never consented to be ordained by human hands." He continues (in *The Methodist Review*, November-December):

"The stars in their courses fought against Sisera, and destiny, which is only another name for God in history, is fighting against privilege in the church. Long ago the state renounced the doctrine of the divine right of kings; is it not time for the church to renounce the divine right of the clergy? God's men, like God's truth, should be accepted on their merits without labels of any kind.

"In emphasizing the 'priesthood of the people' there is no leveling down, but a leveling up. In showing the sandy foundation on which the medieval church so laboriously built up its elaborate system of a sacrificing priesthood far removed from the laity, which modern Romanism and its imitators under a Protestant name so passionately strive to maintain, there is no purpose to depreciate God's true ministers. They can not be depreciated, for their claim to respect and acceptance proceeds from no laying on of human hands, nor is it based on any presumed right to open the doors of the kingdom of heaven to men, but from a divine call as revealed in their tone of authority joined to their humility, love, and zeal. That such men should be recognized as possessed of a gift for ministering, and set apart by the church as worthy of confidence, is admitted at once; but the call of God and the fruits of service are the real tests after all. To such a ministry the whole body of God's people is called. Never was such a ministry needed more than now. Never were the opportunities for Christ-like service so numerous. In Christian lands there are millions growing up right around our church doors—many of them the sons and daughters of church-members—who never cross the threshold of a church from one end of the year to another. The rich, many of them, are growing up as purely pagan as were the Romans under the Cæsars. The working classes, as a rule, will have nothing to do with the church. Our cities, admitted to be the plague-spots of the earth, are working out their destinies without any particular concern for the church or for Christianity. What is the remedy? There is but one. It is the same means which organize the church and sent it forward on its glorious career; the same which made the Waldenses, the Franciscans, the Puritans, the early Methodists, such mighty forces in the world of their day. The laity must arise. Without waiting for star preachers or hesitating leaders among the stated ministry, the laity should magnify its call and privilege."

RELIGIOUS NOTES.

THE RIGHT REV. JAMES E. QUIGLEY, D.D., the Roman Catholic Bishop of Buffalo, has been named by the Pope to succeed to the see of Chicago, left vacant by the death of Archbishop Feehan.

AN income of $2,299,761 for foreign missionary work is reported in the annual summary of Protestant missions compiled by the Rev. J. F. Strong, of Boston, the editorial secretary of the American Board of Foreign Missions. The totals of all continents show 29,081 stations and out-stations; 6,535 men, 7,335 women, 78,812 natives, in the field as missionaries; and 1,445,635 communicants, of whom 90,890 were added last year.

A PRIZE of $5,000 is offered by the Trustees of Lake Forest College, Illinois, for the best book written in defense of the Christian faith. The offer is "open to scientific men, Christian philosophers, and historians of all nations." The fund whose income furnishes the money was given by the late William Bross, of Chicago, as a memorial to his son. The donor's object, as expressed by him, was "to call out the best efforts of the highest talent and the ripest scholarship of the world, to illustrate from science or any department of knowledge, and to demonstrate the divine origin and the authority of the Christian Scriptures; and, further, to show how both science and revelation coincide, and to prove the existence, the providence, or any or all of the attributes of the only living and true God, infinite, eternal, and unchangeable in His being, wisdom, power, holiness, justice, goodness, and truth." Courses of lectures are also provided for under the terms of the same bequest, and President Patton, of Princeton Theological Seminary, has been invited to give the first course in April next.

FOREIGN TOPICS.

OUTLINES OF TWENTIETH-CENTURY WORLD-POLITICS.

THERE is in London a group of public men who are working hard to bring about a revolutionary change in British foreign policy. Their idea is to detach Great Britain from Germany altogether and to bring Edward VII.'s empire within the political orbit of the Franco-Russian alliance. The men who aim at this great change are influential in diplomacy, in politics, in finance, and in journalism. They have made *The National Review* (London) their official organ, and the anonymous and signed articles in that periodical have repeatedly caused sensations in the foreign offices of Europe.

For the first time since this agitation was started, a French authoritative view of the whole matter has been made public. It takes the shape of an elaborate article in the *Grande Revue* (Paris) entitled "The Perspectives of International Politics at the Beginning of the Twentieth Century." It is from the pen of Ernest Lefrançais, who is peculiarly qualified to handle the topic both as an authority on world-politics and as an exponent of an influential school of French thought. Great Britain, he says, may come into the Franco-Russian alliance, but she must agree to aid in the restoration of Alsace-Lorraine to France. She must frankly face the fact that the days of her supremacy on the seas are over; but, on the other hand, neither France nor Russia will move a finger to replace British naval supremacy with German naval supremacy. In looking over the world-situation, not from the point of view of any one nation, but from a cosmopolitan standpoint, one is struck by the fact that Great Britain, long glorying in her "splendid isolation," is now eagerly looking about her for an ally:

"When the history of the nineteenth century is studied . . . it is impossible not to be impressed by the dominant part which a single nation has played: England. Victorious over France with the aid of a European coalition, it was England who at the fall of the Second Empire reaped all the advantages of success. Her rival beaten, on land as well as on the sea, she made the most of her colonial opportunities and remained the one solitary and single great Power of the world. She won what she called the scepter of the seas. On every ocean of the globe she reigned as absolute mistress. Nobody interfered with her. Her will was law. Outside Europe she could expand her empire to suit herself and lay hands on any territories that appealed to her sense of expediency. She met with no other obstacles than those presented by unhealthy climates or barbarian peoples. Aided by strength of will and purpose and by the formidable instruments that modern science placed at her disposal, she triumphed over everything without too much difficulty. Hence, in less than a century, she succeeded in building up a vast empire beyond the sea that grew continually while the old colonial empires of Spain and Portugal shrunk bit by bit. There was a moment when it might well be asked if the whole world outside of Europe was not destined to become British."

Even in Europe itself, M. Lefrançais goes on to say, Great Britain shone in the front rank of Powers. Not a cannon could be fired without her leave. "The greatest nations on the continent felt honored by her friendship. Throughout the whole duration of the Second Empire France was content to be the satellite of her former enemy, to sustain whose policy she generously lent her armies in the Crimea and in China. For more than half a century Great Britain was at the height of her material strength and moral power. She was mistress of the world, and grew accustomed to regarding this dominant position as an accomplished fact of history that nothing could change in the future." We quote again:

"Suddenly resound the cannon of Sedan, and events are precipitated in Europe during the closing years of the nineteenth century without disturbing the serenity of British calm. Then a wretched incident in Great Britain's colonial history, a quarrel with a handful of South African rebels, less numerous than those whom she has crushed a hundred times in her triumphal progress, brings her to a sudden halt. The formidable Power, accustomed to see the greatest step out of her path, stops in amazement at a new sight—some brave peasants, confiding in the justice of their cause and relying upon God's help, have sworn to fight for their independence to the death. For three years they succeeded in checking the British colossus, who sacrificed money by millions and men by thousands, rode over the principles of humanity and the rights of nations to overcome this desperate resistance. Thereupon Great Britain, roused from her dream of universal dominion, decided to look about the world, and she saw with surprise the changes that have been brought about in thirty years. While she thought she was dominating with indisputable supremacy all the nations of the earth, many of them have grown greatly all about her to such an extent that she can no longer, without denying the evidence, regard them as negligible quantities at the beginning of the new century."

The United States, "her revolted daughter who became independent more than a hundred years ago, but whose development had for a long time nothing alarming about it, has gradually become a great nation, powerful in her commerce and industry, and seized with the ambition to dominate the American continent." Japan has entered the list of formidable Powers. In Europe the situation has vastly changed:

"Germany, which comprised only an agglomeration of principalities and adjacent kingdoms, has emerged from the victorious war she waged in 1870 against France with the benevolent neutrality of Great Britain, and has transformed herself into a united and powerful empire, great not only in her military and naval resources, but greater through her vast industries and her ambitious foreign commerce. An economic rival, filled with the idea that the future belongs to herself, confronts Great Britain. German products invade the world, and in every market they wage a fierce conflict with the productions of Britain. The young empire wanted colonies, and it was necessary to resign to her a great part of Africa and numerous islands of Oceanica. To confirm in Europe the power won by her victory of 1870 she formed with Austria and the recently unified Italy the Triple Alliance that can put 6,000,000 men under arms, and thanks to their support she was able for a while to play the part of Europe's arbiter."

France, too, has risen from her ruins. Her army and her navy are now more formidable than ever, while her colonial empire is exceeded in vastness only by that of Great Britain herself. Russia, finally, "who, thanks to the aid so imprudently furnished by France, was defeated by England in 1855, has likewise recovered. She has reconstituted her navy and built up the mightiest land force existing on the earth." Thus there is a great change in the international aspect of the world:

"Formerly, to designate the problems of collective interest to all civilized peoples mention was made merely of 'European affairs.' This expression has become inadequate, and we are obliged to speak of 'world-politics.' Great Britain formerly appeared as the prima-donna surrounded by her supporters. A number of nations now deem themselves in a position to play the leading part themselves, and they are not disposed to see their rights disregarded. Great Britain is no longer alone as the 'ranking first' of nations, and yet she is in a state of isolation. This isolation, which formerly attested the overwhelming superiority of her might and could be truly called splendid, has become to-day a source of weakness."

This fact, we are assured, is the key to world politics to-day, and we must never lose sight of it. Great Britain does not. Her first idea was to maintain the supremacy of her navy so that it could cope numerically with any possible combination of her enemies. "But the number of modern war-ships that a nation can keep on the seas could not be increased to infinity." Great Britain can not become a great military power in the German sense, for her people will not tolerate conscription,

which would revolutionize the fabric of their institutions. "When Great Britain's position in the world is calmy examined, it can be understood why it inspires serious reflections in all British patriots who are not misled by memories of the past, and why they have a desire to see their country give to her foreign policy a trend more in conformity with the needs of the present time." This is the explanation of the attitude of the influential men whose organ is *The National Review*. The view of the case is this: "Russia and France have the choice of joining Great Britain to oppose the ambition of the German empire, or else of ranging themselves on Germany's side—in which event Great Britain will not hesitate to rush into a gigantic struggle with the three great Powers united." But this is overlooking another point entirely—the absolute neutrality of France and

NOT A BAD IDEA.

FRANCE (to John Bull): "Suppose we kiss and be friends."
—*Judy* (London).

her ally Russia in the struggle between Great Britain and Germany. Great Britain persistently overlooks the fact that her supremacy on the seas is doomed from the very nature of things:

"The possession of the empire of the seas and of the preeminence over all other nations remains the supreme aim of British policy. Such was inevitably the object of the struggles among the nations down to the beginning of the nineteenth century, because there were generally only two and rarely three competitors for the prize. But this belongs to the history of the past. In the twentieth century the competitors are too numerous, their strength is too nearly equal, for a practical policy to reasonably aim at universal dominion. A sort of equilibrium among the great nations, based upon mutual respect of everybody's rights, is imposed by force of circumstances. The commercial monopoly of the world outside of Europe, which great Britain thought for a time assured to herself, has been divided among various rivals. Germany is no longer the only competitor. France, the United States, Russia, and even Japan, are taking an increasing share of the world's commerce, and a British victory would not wholly deprive them of it. History teaches that the most cruel defeats may weaken a nation but can not cause her to disappear economically. The empire of the sea is also a conception of the past that can no longer be applied to our epoch."

Great Britain therefore is on the wrong road entirely when she persists in giving her foreign policy the chimerical aim of her own supremacy. She will meet with an inevitable check. "It is to the interest neither of Russia nor of France—London may rest assured on this point—to aid Germany in substituting her own preeminence in the world for that of Great Britain. But it would be manifestly equally absurd for France and Russia to aid Great Britain to restore her own supremacy. Ideas which have had their day and which meet none of the requirements of the present can not form the basis of a serious alliance." But if Great Britain really wishes to enter the Franco-Russian alliance, she has only to agree to a few things. She must cease to interfere with Russia in Asia and with France all over the world. She must support the restoration of Alsace-Lorraine to France, and above all she must regard herself as one among equals and not as "mistress" of sea or land. This may be very disagreeable to Great Britain, but it can not be helped. She will certainly get no first-class ally elsewhere, for Japan does not count in such a manner, and Germany has never worked in real harmony with her:

"Great Britain has made various attempts to find an ally in the past few years. She turned first to the United States, whom she affected to regard as a nation of her own blood, forgetting the great proportion of Germans in that country's composition. Up to the present time her appeals to the memory of their common origin have not led to practical results. Moreover, it must be remembered that the points of contact of the two Powers outside of America are too few to facilitate the conclusion of a sound alliance. Great Britain then thought of Germany, whose Emperor is united to her own sovereign by close ties of blood. But the friendliness of her relations with the German empire do not seem likely to be of long duration. She perceives that the benefits of such an agreement would be all on one side and that side not her own. This works too great a change in her habits for her not to feel cruelly the injustice of which she thinks she has a right to complain. The nature of things does not lend itself to a permanent understanding between two nations who are engaged in every quarter of the globe in a desperate commercial struggle of which the end can not be seen."

Nor must it be lost sight of that twentieth-century world-politics will be governed by economic considerations. Great Britain knows this. Her entry into the Franco-Russian alliance would not only protect her from attack, but would save her from the necessity of establishing compulsory military service, leaving her industries unfettered. "It would become possible to consider, without leaving the domain of practical things, the realization of those generous ideas which inspired the Czar when he summoned the Peace Conference at The Hague."—*Translations made for* THE LITERARY DIGEST.

SILVELA AND SPAIN.

SEÑOR SAGASTA had to retire as Spain's Premier almost as soon as he had formed, or rather reformed, his cabinet. He was succeeded by Señor Silvela, whose ministry is heartily welcomed by the loyalist Spanish press. The feeling is that negotiations will now be undertaken with the Vatican in a more independent spirit than has hitherto been shown. The building of a navy of some sort is announced as under consideration, which causes the *Época* (Madrid) to say:

"We are well aware that the task of building a Spanish navy will be one of immense difficulty. Señor Silvela was in the right when he declared that leaving our squadrons in their present condition would be virtually a confession that the old national pride and spirit of Spain had fallen into decay. Nevertheless there is not sufficient enthusiasm manifested over the idea. The disappointments and disasters of the last war have had their effect upon many spirits. There is a widespread lack

of self-confidence; for would it avail to deny that our recent naval and military history warrants discouragement."

But the matter must settle itself favorably to the future of Spain, and the authority quoted looks for a revival of her naval importance. The *Correo* (Madrid) doubts, however, if Spain can support the taxation demanded by all this. Of the Silvela ministry in general the *Hamburger Nachrichten* speaks favorably:

"Silvela himself has only one good quality. He gathers a number of able men about him whenever he is asked to form a ministry. Then he leaves those men to do as they think best, and he does not interfere with them in any manner, provided only they acknowledge his authority in a general way. One thing Silvela must have learned from the fate of his predecessor. The people of Spain do not want to be ground under the chariot wheels of the Vatican any longer. They wish due respect paid to the civil power as well as to the ecclesiastical."

The Spanish situation is arousing keen interest in France, as the idea of an alliance between the two countries is never lost sight of. The Paris *Temps* says things in Madrid were never so embroiled, and it is not difficult to imagine a situation that no normally constituted Spanish ministry could meet.—*Translations made for* THE LITERARY DIGEST.

HOW THE MONROE DOCTRINE CAN BE DEFIED.

THE Monroe Doctrine is not worth the paper it is written on, in the opinion of the consistently anti-American *Saturday Review* (London). That aggressive weekly has been giving much consideration to South American affairs lately, and it avows itself much impressed by the vain pretensions of the United States in undertaking to lay down "limits" for Germany or any other Power in Venezuela or elsewhere. Not only is the Monroe Doctrine untenable in morals and in international law, but also in the matter of physical force. The United States is not strong enough to-day to enforce it. To let the British organ speak for itself:

"Mr. Roosevelt admitted in his Presidential message that he could do nothing to protect South American states when they were in the wrong. They would have to suffer the consequences of their own offenses against the comity of nations, subject to the limitation that the United States would not allow those consequences to take the form of loss of their territory to any European Power. The Monroe rule will not therefore be brought into operation on behalf of Venezuela. This is not the act of gracious condescension on the part of the United States which it has been represented to be. The real reason for not applying the doctrine is not that

CHAMBERLAIN'S TRIP.
How he will make his tour through the Transvaal.
—*Der Wahre Jacob* (Stuttgart).

CHAMBERLAIN'S GUARD.
A maid of honor for him in South Africa.
—*Jugend* (Munich).

ONE OF THE MOST IMPORTANT FACTORS IN CREATING, IN GREAT BRITAIN, PUBLIC RESENTMENT AGAINST THE COOPERATION BETWEEN THE BRITISH AND GERMAN GOVERNMENT IN VENEZUELAN WATERS HAS BEEN THE SERIES OF BITTER CARTOONS IN GERMAN PAPERS IN REFERENCE TO THE TRIP OF SECRETARY CHAMBERLAIN TO SOUTH AFRICA.

GERMAN CARTOONS OF SECRETARY CHAMBERLAIN.

Venezuela has misbehaved, is recalcitrant, and therefore ought to be chastised, but that the United States is powerless to avert her punishment in any case. The statement that the United States will only interfere in disputes of this nature to prevent loss of territory to a European Power is an idle boast and must remain so as long as the United States does not possess a navy equal to the combined navies of the great Powers of Europe."

Let it be supposed, proceeds this lucid expositor, that Germany or Great Britain had territorial ambitions in South America and determined to gratify them:

"Could the United States prevent either Power from taking as much of Venezuelan territory as it pleased? The United States navy gives a negative answer. How much less could she prevent both Powers from acting in concert and dividing Venezuela between them? We may carry the argument further. Not only Germany and England but other European Powers also have, or recently had, grievances against Venezuela like our own. Could the United States prevent a concert of Europe, acting through the navies of the Old World, from parceling Venezuela, or, for that matter, all the South American republics among its members? To put the case in this form is to demonstrate the uselessness of the Monroe rule as an operative force either in the present case or in easily conceivable contingencies. The reservation made by Mr. Roosevelt means that war would be declared upon any Power or Powers which obtained compensation by the seizure or cession of territory; but it is valueless because war could not be successfully waged in the present condition of the United States navy."

These views are in accordance with those of the *Kreuz Zeitung* (Berlin), which treats as preposterous the notion that the United States could prevent German expansion in the New World if that expansion were to assume a territorial aspect.

ITALY'S JEWISH MINISTER OF WAR.

A REMARKABLE fact which has attracted little attention in the European press, even in the antisemitic branch of it, is that the Minister of War in the Italian cabinet is a Jew. It appears, moreover, that the King himself secured this appointment, and that the Italian Parliament has expressed cordial approval of the selection. The minister's name is Giuseppe Ottolengi, and he is one of the leading generals of the Italian army.

The Roman correspondent of the *Voskhod*, the monthly organ of the Jews of Russia, furnishes a sketch of this minister and the particulars of the appointment:

"Italy has had Jewish ministers before, notably Luigi Luzzatti, the influential financier who holds a conspicuous place in political life. But no one ever imagined the possibility of seeing a Jew at the head of the Italian army, at the post of the Minister of War. Ottolengi is one of the five Jews in the Italian army who have reached the rank of a division general; moreover, he is one of the four generals who, in case of war, will have actual command of the Italian army. He owes this rare distinction to his brilliant and patriotic services.

"Ottolengi belongs to a very orthodox Lombard Jewish family. In his youth he attended the University of Turin. In 1859, when the Austrian war with Italy broke out, he joined the army as a volunteer, and he has remained a soldier ever since. He devoted himself to the profession of arms with zeal and single-mindedness, and his career has been a most extraordinary one. He has been wounded more than once, and has received medals for exceptional bravery. He fought in the Italian war for independence and unity, and after that campaign he studied military science. He has been professor in the highest military schools, and some years ago he commanded the Naples garrison, one of his subordinates then being the Crown Prince, now the King of Italy.

"When the present ministry was under consideration, the King, in view of the need of army reforms and opposition to his plans in Parliament, decided to offer the war portfolio to his former chief, at that time the commander of an army corps. Ottolengi was disinclined to accept the post, never having concerned himself with politics and not caring to engage in party warfare in Parliament. But the King insisted, and Ottolengi yielded out of admiration and affection for his sovereign."

It is stated that General Ottolengi is very devout and orthodox. He attends the synagog regularly and makes no concealment of his conformity to the ritual of his faith. In a letter to the *Vessilio Israelitico*, he recently said he belonged to a generation which had to surmount many obstacles and resist many influences in the effort to prove that, without breaking with racial and religious traditions, a Jew could be a true patriot and a useful worker for the good of his country and humanity. He regretted that the younger generation of his coreligionists were not following in the footsteps of that which he represented.

VENEZUELAN PAPERS ON THE CRISIS.

IT was announced during the "blockade" of La Guayra by Great Britain and Germany that President Castro had found it necessary to suppress most of the newspapers. This must have been an erroneous statement. The newspapers have continued to appear and they have been criticizing events. It is, however, beyond a doubt that President Castro finds it expedient to exercise over the press of his republic a control that is less moral than forcible. *The Venezuelan Herald* (Caracas) inclines to view the Venezuelan situation hopefully, altho it refrains from committing itself to details. It says that Castro will emerge from his sea of troubles:

"The Government is master of the situation and seems to be pursued by good fortune. The Mochist or Nationalist party, which appeared to wish to stir, has just published a manifesto through the mouth of their chief counseling their numerous partizans to rally around the standard of peace. This manifesto has been widely echoed throughout the country, and will assuredly assist President Castro in smoothing away his difficulties."

We are indebted to this authority for a translation of an editorial in the *República* (Caracas), one of President Castro's official organs, which insists that Venezuela will straighten out every complication. Here is President Castro's policy as given by his organ:

"The basis of Venezuela's economic future has taken in Castro's mind the form of four ideas which were conceived or developed and strengthened during his late campaign, which has been beneficial in more than one respect.

"1. The protection, by means of a national Territorial Bank, established in Caracas, with branches in the capitals of all the states, and commissions in all the districts, of agriculture, whether carried on on a large scale, by way of loans, in the former case, on long terms with periodical payments, and in the latter, by loans without guaranty, based only on the honesty and good faith of the laboring agriculturists.

"2. The making and opening of highways for the transport of produce, the connection of villages, and the advantage of the working people.

"3. The construction by the state, or in copartnership with existing railway companies, of the great railroad of the republic, which shall extend from Guacipati to Barcelona, to Caracas and Puerto Cabello, from Puerto Cabello to Barquisimeto, and from Barquisimeto to San Antonio del Táchira.

"4. The reduction of the public debt by means of financial arrangements and decrees which shall neither expropriate the creditors, nor admit enormous sums as due, nor agree to pay their unpayable interest, giving guaranties to those who are entitled, such as no honest or well-intentioned debtor may refuse."

From the tone of the Venezuelan press generally, it is manifest that the allies have brought many elements around to Castro's side that formerly opposed him. Exception must be made in the case of a paper published here and there in the mountains from a hand-press and which upholds the cause of General Matos.

FAIRBANK'S GLYCERINE TAR SOAP

CHAPPED HANDS

are the bane of the little tot's existence—and sometimes of older folks. Wintry winds raise havoc with tender skins.

FAIRBANK'S GLYCERINE TAR SOAP first cleanses the skin of all impurities, then heals, soothes and keeps it soft and velvety.

It makes a rich creamy lather and has pronounced antiseptic qualities.

Removes grease and dirt like magic, and lathers in hard or soft, hot or cold water. Each cake is wrapped and packed in separate carton.

Ask for FAIRBANK'S GLYCERINE TAR SOAP at your drug or grocery store. If you fail to find it, send us name and address for free sample. It has an odor

A HEALTHY FOUR-YEAR-OLD.

The Mahin Advertising Company will occupy the entire 8th floor of the Williams Building, 225 Monroe Street, Chicago, on December 15th and four years to the day from the time this young agency commenced business with five persons.

Now it employs 116 persons, only 13 of whom are solicitors, the rest being necessary to execute all the details of advertising instituted and maintained by the Mahin Advertising Company.

Two hundred and ninety-one active advertisers place their orders with the Mahin Advertising Company.

ABOUT 75% OF THE MEN

in mercantile and professional life owe something of their success to personal appearance. The leisure class owes still more to the same cause. The few genuine geniuses succeed in spite of it. Personal appearance is largely a matter of dress. Dress is largely a matter of the Cravat. This was understood by some as far back as the days of Beau Brummel, but it is only the later section of the present generation of men who have fully grasped it. The well-groomed man of today, even when he must economize on other articles of apparel, buys ten Cravats where his daddy bought one.

There is a 36-page text-book called "THE CRAVAT." It tells of the What, Where, When and How of a Man's Cravat—Its Names and Shapes, Its Tying, Its Care, Its Selection, Its Various Forms for Special Occasions and Functions, Its Color Scheme, Its Adjuncts: Pins, Fasteners, Etc., Its Dont's, in fact,

All About A Man's Cravat.

It is profusely and sumptuously illustrated by one of the foremost artists of America. The first edition cost the publishers over $15,000, but you can have a copy for the asking, by sending this Adv't with your address and 6 cents in stamps to the Publisher, James R. Keiser, 122-124 Fifth Avenue, New York. If you prefer a bound copy, de Luxe edition, send 15 cents in stamps.

CURRENT POETRY.

The Rowers.*

By RUDYARD KIPLING.

[Mr. Kipling's latest poem, quoted here from the New York *Times*, comes with an editorial force that is evoking considerable talk and editorial comment. The denouncing of the Anglo-German Alliance is so strong that if it represents the feeling of the British people, it will, as *The Times* says, put the Government in somewhat of an embarrassing position to explain why the English nation finds itself so placed. This poem of Kipling's is a good illustration of some of the characteristics claimed for him by Mr. Edwin Markham. Mr. Markham's words on Kipling are found elsewhere in the present issue of THE LITERARY DIGEST.]

The banked oars fell an hundred strong,
  And backed and threshed and ground;
But bitter was the rowers' song
  As they brought the war-boat round.

They had no heart for the rally and roar
  That makes the whaleback smoke
When the great blades cleave and hold and leave
  As one on the racing stroke.

They sang: "What reckoning do ye keep,
  And steer her by what star,
If we come unscathed from the Southern deep
  To be wrecked on a Baltic bar?

"Last night ye swore our voyage was done,
  But seaward still we go;
And ye tell us now of a secret vow
  Ye have made with an open foe;

"That we must lie off a lightless coast
  And haul and back and veer
At the will of the breed that have wronged us most
  For a year and a year and a year.

"There was never a shame in Christendie
  They laid not to our door:
And ye say we must take the Winter sea,
  And safe with them once more!

"Look south, the gale is scarce o'er past
  That stripped and laid us down
When we stood forth, but they stood fast
  And prayed to see us drown.

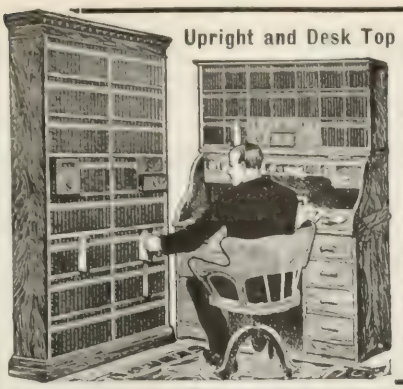
"The dead they mocked are scarcely cold;
  Our wounds are bleeding yet;
And ye tell us now that our strength is sold
  To help them press for a debt!

"'Neath all the flags of all mankind
  That use upon the seas,
Was there no other fleet to find,
  That ye strike hands with these?

"Of evil times that men could choose
  On evil fate to fall,
What brooding judgment let ye loose
  To pick the worst of all;

"In sight of peace from the narrow seas,
  O'er half the world to run
With a cheated crew to league anew
  With the Goth and the shameless Hun?"

*Copyright, 1902.



Upright and Desk Top **FILING CABINETS**

The most convenient device for filing and classifying clippings, illustrations, manuscripts, etc. It is the acme of simplicity and ready reference and a stimulus to the busy man by reason of the accuracy and facility with which memoranda are preserved and referred to.

J. H. HYDE
VICE PRESIDENT

A GOOD RESOLUTION

for 1903 would be to save something from your income.

An Equitable Endowment policy will not only help you to save something during 1903, but will help you to save during every year for 15 or 20 years — and will assure your life in addition.

A resolution of this kind will not benefit you — or your family — unless it is carried out. If it *is* acted upon, the money you might waste will be saved.

If you would like to accustom yourself to saving something each year, fill out coupon below

(Vacancies in every State for men of character to act as representatives. Apply to Gage E. Tarbell, 2d Vice-Pres.)

THE EQUITABLE LIFE ASSURANCE SOCIETY.

Begin 1903 By Saving

A Diamond

20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20%

We deliver any Diamond, Watch or other article in our million dollar stock upon a small payment and let you pay the balance in small amounts monthly just as you would put a little of your earnings in a Savings Bank. We are assured by the highest European authorities that Diamonds will increase in value at least 2½ annually. Savings banks pay 3%. You also have the pleasure and prestige of wearing the Diamond while paying for it, and when paid for you have the most valuable commodity in the world, which can be exchanged for full cash value in any civilized country. Your local jeweler if he is posted in diamond values will tell you that a 20% increase during the next year is a certainty.

Your Credit: It is just as easy and confidential to open an account with us as it is with a savings bank. All we require to know is **Are your intentions good, and are you disposed to do as you agree to do?** Your cash resources are unimportant, honesty is all that we require.

How it is Done: You send for our beautifully illustrated catalogue which shows thousands of Diamond rings, brooches, lockets, studs, earrings, cuff buttons, Watches, etc. together with the price and full description of each. Select any article that you would like to see and we will send it to you for your examination. If you like it, and are convinced that it is the best value you ever saw for the money, pay one-fifth of the price and keep it—sending us the balance in 8 equal monthly payments.

Note This: We give a Guarantee Certificate of quality and value with every Diamond; make liberal exchanges at any time, allowing full price paid for the Diamond in exchange for other goods or a larger stone. We pay all Express Charges, and if you send the first payment (one-fifth) with your request, we cheerfully refund your money in case you decide not to buy. Your interests are safe-guarded at every point in dealing with us. We are the largest house in the world in our line of business and one of the oldest—established in 1858. We refer to any bank in America, for instance: Ask your local banker how we stand in the business world. He will refer to his Dun or Bradstreet book of commercial ratings, and tell you that we stand at the top in credit, promptness and responsibility, and that our representations may be accepted without question.

Our Prices: Notwithstanding the fact that our prices are from 10 to 20 per cent. lower than the cash prices of local Jewelers, we make a discount of 8 per cent. on cash sales. We make the most startling refund proposition on cash sales that you ever heard of; we also show how you can wear a fifty-dollar diamond for ten cents a week—if interested, write for it.

Write to-day for our Free Catalogue, which shows more fine genuine goods than any catalogue published—worth its weight in gold to any intending purchaser.

Music.

By MONTROSE J. MOSES.

I am born of the freedom of earth,
Like the breath of a rose in the air;
I am born and I die at my birth
Ere the soul is aware.

On the wind I am carried afar
As the scent of the spray of the sea;
And I rise to the height of a star,
Where I sing, eternally free.

I am one with the pulse of the heart,
With the ebb and the flow of the tide;
I am come, I am gone, I am part
Of the world on the farther side.

I am wild, I am tame, I am coy,
As I slip from the bow and the strings;
I am born of a flame: I am Joy
I am born of the soul that sings.

With a glory I come and I go,
Now a secret, a power, a breath,—
I am warm, I am cold as the snow,—
I am Life, I am Death.

—In December *Things and Thoughts*.

PERSONALS.

Anecdotes of Mr. Reed.—The late Thomas B. Reed will be remembered for his keen wit and brilliancy of repartee. Many good stories told of him are current at this time. We quote a few:

One day, while he was making a somewhat labored argument, an older member tried to break him up by putting a question to him suddenly and demanding an immediate answer. Reed gave the answer readily. Then he paused, turned toward the speaker's desk and drawled out: "And now, having embalmed that fly in the liquid amber of my remarks, I will go on again." The house roared. The galleries took it up. The newspaper correspondents sent it flying all over the country, and, to his own surprise more than any one else's, Reed found himself a man of note from that hour.—*The Hartford Times*.

An important party measure was about to be voted on by the Fifty-first Congress, and the Republicans needed every vote. "Come at once," Speaker Reed telegraphed to Congressman Lansing of the Watertown (N. Y.) district. "Impossible," the Congressman wired back; "washout on line." Reed's reply to this was promptly wired, and was as follows: "Never mind little thing like that; buy another shirt and come on."—*The Hartford Times*.

When President McKinley was considering the appointment of a successor to John Russell Young as Librarian of Congress, ex-Representative Barrows of Massachusetts, was a candidate for the place. John D. Long was his most persistent champion, and Mr. Reed inquired of a friend the reason of Mr. Long's insistence.

"I suppose," was the reply, "that it is due to the Secretary's interest in things pertaining to the Unitarian Church. You know, Mr. Barrows is a Unitarian minister."

"You don't say so," responded Reed. "Why, I thought Barrows was a religious man."—*The New York Sun*.

WHEN speaking before the House, Mr. Reed avoided the customary tricks of the spreadeagle stump orator and contended himself with saying what he had to say in his own characteristic drawl, without any oratorical flourishes. Col. W. C. P. Breckinridge came to Congress with the reputation of a "silver-tongued orator," and used in his speeches in the House all the expedients that Mr. Reed avoided. He could not speak for

THE "BEST" LIGHT CO.
92 E. 5th Street, CANTON, OHIO.

five minutes, even on ordinary subjects, without falling into a funereal tone that grated exceedingly on Mr. Reed's sensibilities. One day, when Colonel Breckinridge was holding forth in his usual mourning cadences, Mr. Reed's attention was caught by the Colonel's melancholy tones. Turning to a friend, Mr. Reed asked in a drawling but solemn voice: "Judge, were you acquainted with the deceased?"—*The Hartford Times.*

Mr. Reed had fallen off in flesh a great deal of late years. When he was in Congress he was a tremendous man physically. One day during his Speakership, in the last year of Mr. Cleveland's Administration, a friend said to him:

"How much do you weigh?"

"I weigh two hundred pounds," said Mr. Reed.

"Oh, you weigh more than that," was the surprised reply. "You must weigh nearly three hundred pounds."

"No," said the Speaker, with an air of finality. "No gentleman weighs more than two hundred pounds."—*The New York Times.*

REED MEETS HIS MATCH.—He used to drop in at the queer old curiosity shop at the foot of the Capitol, kept by a quaint old character named Guild. Guild is a taciturn old man who seems to resent the presence of customers and who sells his curios as a favor. Reed used to spend hours there, delving among the old books, magazines, and engravings, watched with a suspicious eye by the old man. One day he picked up two fine engravings of Oliver Cromwell and asked how much they were.

"Five dollars, Mr. Reed," said Guild.

"Oh, you know who I am?" said Reed. "That is why you charge me such an outrageous price."

"It's five dollars to you and five dollars to anybody else," growled the old eccentric. "That's my price."

Reed went away, but he came back the next day and asked Guild again how much he wanted for the engravings.

"You know the price," grumbled Guild, and would say no more. He refused to answer any of Mr. Reed's arguments, and the Speaker went away defeated.

Months passed, and every day the persevering statesman dropped in and asked the price. The answer always was, "You know the price," and after that Guild locked himself up in silence and made no answer to the statesman's protests. Mr. Reed had met an antagonist he could not overcome. At last one day, after three months of daily visits, he walked in without a word, took up the engravings and handed Guild $5. Guild took them without a word.

Mr. Reed used to go in there daily after that. He struck up an acquaintance with the old man, and seemed to enjoy his eccentricity as much as he did the queer, tumble-down old store with its huddled stock.—*The New York Times.*

One day Mr. Reed was browsing in Guild's dingy bookshop. He took up a number of books and finally the novel "Scruples."

"What is the price of this?" asked Mr. Reed.

"A dollar, sir," replied the old man rather tartly.

"Too much," said Reed laconically, and laid the book down.

"Well, sir," retorted Guild, who has a sharp tongue of his own. "I don't know of any law you have passed that compels you to buy if you don't want to. Besides, I don't see what a member of Congress wants of a book with that title, anyway."

Reed broke into a hearty laugh, and as he rolled on down the avenue he was still smiling at the old man's reply.—*The New York Times.*

UNITED STATES GOVERNMENT SOLD
200,000 Guns, Revolvers, Swords, etc., to FRANCIS BANNERMAN, 579 Broadway, New York. Catalog, 1,000 Illustrations, free.

will insist on the payment by Venezuela of some $350,000 before any arbitration begins.

December 26.—The Powers concerned in the Venezuelan controversy agree to submit the case to The Hague Tribunal.

December 28.—The revolutionists have renewed operations against the Government.

OTHER FOREIGN NEWS.

December 22.—The Crown Princess of Saxony, it is reported, fled from Salzburg Castle on the night of December 11.

2,500 people are killed and 16,000 houses destroyed by the earthquake at Audigon, Turkestan.

December 24.—General Nord, the new Haitian President, takes the oath of office.

Frederick Temple, Archbishop of Canterbury, dies at London.

The Crown Princess of Saxony is discovered in Geneva, where she is living under an assumed name, with her brother and a French tutor.

December 26.—Secretary and Mrs. Chamberlain arrive at Durban, South Africa.

Lieutenant-General Miles arrives in Peking.

December 27.—The burial of the Archbishop of Canterbury takes place at Canterbury Cathedral.

Thirty persons are killed and many more injured in a train wreck at Wanstead, Ontario.

The Rumanian Senate adopts a measure providing for the naturalization of Jews.

December 28.—The Moorish troops are reported to have been defeated on December 22 by the forces of the pretender, two thousand of the Sultan's troops being killed or wounded.

Marconi continues to maintain daily wireless communication with Cornwall, England.

Domestic.

December 22.—Mascagni cancels all dates for his opera company, and brings his American tour to an end in Chicago.

The United States Supreme Court decides that an insurance policy on a man executed for murder is invalid.

Secretary Wilson raises the quarantine on cattle in Connecticut.

December 23.—The Cabinet meets and discusses the Venezuelan controversy and the advisability of the President's acting as arbitrator.

December 24.—The President receives the formal proposals of Great Britain and Germany requesting him to act as arbitrator in the Venezuelan controversy.

The text of the reciprocity treaty with Cuba is made public.

The H. C. Frick Coke Company increases the wages of its twenty thousand employees eight per cent.

December 25.—The charge of lavish expenditure of money by the Isthmian Canal Commission made by Representative Hepburn is to be investigated by Congress.

December 27.—Notes are exchanged between Washington, London, Berlin, Rome, and Caracas regarding the method of submitting the Venezuelan dispute to The Hague Tribunal for arbitration.

Baron von Hengelmüller, Ambassador to the United States from Austria, presents his credentials to the President.

President Roosevelt receives a letter from Baron d'Estournelles de Constant in which he declares that the European Powers intended to obliterate The Hague Tribunal, and that the President by his action had saved the integrity of that court.

MAIN BUILDING ARMOUR INSTITUTE OF TECHNOLOGY.

Technical Education for Ambitious Young Men.

Instruction under Members of the Faculty of Armour Institute of Technology

A YOUNG MAN'S SUCCESS

depends upon his *capital* and what he does with it. Cash is a convenience, not necessarily real capital. A young man's brains are his true capital. He can afford to invest his time in improving his capital. If he cannot go to a technical school, the technical school must be brought to him. This is the simple definition of "University Extension by Correspondence." *The successful differ from the unsuccessful more in education than in brains. Opportunity comes to all, the educated man seizes it.* We provide technical instruction by mail, giving individual attention and criticism by able teachers, through correspondence with each student.

COMPLETE COURSES IN

Electrical, Mechanical, Civil and Sanitary Engineering, the Science of Navigation, of Locomotives, of Stationary and Marine Engines, Telegraphy, Telephony, Architecture, Mechanical and Perspective Drawing, Sheet-metal Work, Woolen and Worsted Spinning, Textile Design, Fabric Structure, Textile Chemistry, Textile Dyeing, Cotton Spinning.

There are also Forty Shorter Courses in Engineering Specialties Adapted to Particular Vocations

Students are under the instruction of the very men who preside over the laboratories and teach the classes of the Armour Institute of Technology. All work therefore will receive full credit toward resident work at the Armour Institute should the student at any time continue his studies there. *For example:* Parts 1–6 of Mechanical Drawing mastered under the American School of Correspondence are accepted as entrance preparation on that subject to the College of Engineering.

In addition to their regular instruction papers, students in full engineering courses are provided with a Technical Reference Library in 10 volumes as a help in their studies.

Full particulars and catalogue may be had upon request. State course in which you are interested and present occupation.

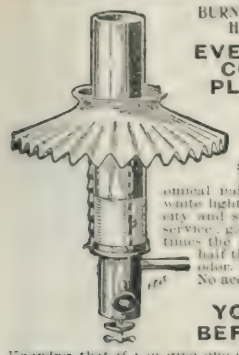
"Its invention supersedes all other methods of House Lighting." SCIENTIFIC AMERICAN.

CLEVELAND HYDRO-CARBON LIGHT



BURNS 84% OF AIR AND 16% OF HYDRO-CARBON GAS.

EVERY LIGHT IS A COMPLETE GAS PLANT IN ITSELF.

Generating and burning its own Gas.

More light but less cost than any known system of lighting. For all Houses wishing economical independence. Gives a steady white light, more brilliant than electricity and softer. Excels any town gas service; gas cannot escape. It gives ten times the light of a kerosene lamp at half the cost, with no smoke and no odor. Nothing to get out of order. No accidents of any kind possible.

YOU CAN TEST BEFORE PAYING.

Knowing that if you give one of our lights a test you will at once realize it as being far beyond anything in the line of house lighting, we will send you one of our Pendent Lights complete, \$8.00, express prepaid, with mantle, chimney and dainty porcelain shade, ready to light; test it three nights and if not entirely satisfactory and the most brilliant and inexpensive light you ever saw, return it to express agent, whom we instruct to refund your money and return light at our expense. **NOTE: If west of the Mississippi River enclose 50 cents for expressage. If west of Denver, \$1.00.**

Special Notice

On and after Jan. 1, 1903, to prevent sickness, **children under 10 years** of age should be cured of Colds, Grip and Headache **when first symptoms appear** by prompt application of "Half **Orangeine** Powders." **Older persons** should take full powders as directed in package for prevention and prompt cure of even stubborn cases.

ORANGEINE

(Powders)

For Fatigue, Colds, "Grip," Asthma, Headache, All Pain, Dyspepsia, Biliousness, Neuralgia, "Nerves," Indigestion, "Half Sick," "Out of Sorts" Condition, ACTS WHILE YOU TAKE.

Permanently benefits—Prevents little ills from becoming serious.

THOROUGH AND INSTRUCTIVE TESTS

Orangeine in China—A Startling Tribute to its Power.

Mr. Charles F. Gammon, Supt. American Bible Society, writes from Tientsin: "On a recent visit to the United States I brought back with me a quantity of 'Orangeine' which I found to be the first remedy effective in severe cases of headache, which I had suffered many years. I have administered the remedy to American and European friends with excellent results and have relieved much suffering among the Chinese. I send you a P. O. order for \$5.00, and assure you that I have no motive of personal gain in asking your lowest prices. I feel interested because of my success in the use of 'Orangeine' among the Chinese for various disorders. Used alternately with aromatic sulphuric acid, it checked several cases of the worst type of cholera, from which tens of thousands died here this summer."

A New York Editor's Wide Experience.

Mr. J. A. Waldron, Managing Editor of The New York Dramatic Mirror, gives his personal experience of great value to every human being who desires good health, good spirits and freedom from common ills: "I am not only a steady user of 'Orangeine' powders, being of an age when their singular and admirable stimulating powers prove very beneficial, and being also subject to Hay Fever in summer and Grip in winter; but I have formed the philanthropic habit of dispensing them to friends, for various temporary ailments which 'Orangeine' so accurately reaches.

"I congratulate you not only upon the ownership of a medicine that must become universal in use, but also on the philosophic happiness that should be the portion of those who do incalculable good while pursuing a legitimate business."

TRIAL PACKAGE FREE

Orangeine is sold by druggists everywhere in 25c, 50c and \$1.00 packages. On receipt of 2c postage we will mail 10c trial package FREE with full directions, composition, and description of its wide human influence. Also "Club Offer."

MODENE

HAIR ON FACE NECK AND ARMS

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. **It Cannot Fail.** If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

Modene supersedes electrolysis.

Used by people of refinement, and recommended by all who have tested its merits.

Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of **$1.00** per bottle. Send money by letter, with your full address written plainly. Postage-stamps taken.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

OIL AND STEEL TRUST PENSIONS AND PROFIT-SHARING.

WORDS of praise for the Standard Oil Company and the United States Steel Corporation, commonly known as the "steel trust," follow the announcements made by those concerns—by the former to the effect that it will pension its aged employees, and by the latter to the effect that it will share profits with its men by selling them preferred stock at a low price on the instalment plan. The Standard Oil employees who have reached the age of sixty-four and have been in the company's service twenty-five years may retire on half-pay for the first year and quarter pay for the years succeeding; and the pensions will come out of the company's treasury, not out of a fund contributed in whole or in part by the men themselves, as in some other pension plans. The steel-trust scheme is summarized in a paragraph at the end of this article.

Most of the newspapers are favorably impressed by these announcements; but some have their doubts. The Boston *Herald*, for example, guesses that "this somewhat elaborate pension scheme for the benefit of the Standard Oil employees probably means another boost in the price per gallon." *The United States Investor* (Boston) throws out an equally unfeeling hint that the steel trust may be trying to find a new market for its shares, whose price has shown a tendency to sag, and which the public have not been very eager to buy; and the New York *Journal of Commerce* reminds the workingmen that the trust has not yet been tried by hard times, and suggests "to the prudent employee" that "it will be time enough to accept the preferred stock of the corporation as a gilt-edged security after it has stood the test of a year or two of bad business."

The great majority of the press, however, have more faith in the trusts' good intentions. The Philadelphia *Press* regards the Standard Oil plan as "very generous," and calls the steel trust plan "the most important event that has happened in the industrial world in a generation." The latter plan is "an excellent example of enlightened self-interest whereby the good of all concerned is the main object in view," declares *The Wall Street Journal*, and the New York *Commercial Advertiser* says that it "is well calculated to disarm much of the absurd criticism of all such corporations as greedy monsters intended only to enrich the few." The New York *Sun*, which probably leads the press of the country in its approval of the movement toward industrial combination, has difficulty in finding adjectives laudatory enough to express its admiration. "Nothing in the history of corporations, or, indeed, in the annals of sociology, at all approaches the scheme . . . there has never been anything imagined which in its comprehensiveness, in its scope, in its wisdom, and, necessarily, in its humanity, approached this plan," declares *The Sun*. And even further:

"It goes far beyond anything of the kind that liberality or sagacity has ever devised, and we do not think we err when we characterize it as the most portentous and far-reaching problem in practical sociology that the world has ever seen. It is impossible now to circumscribe or define its effects. We think they must prove almost revolutionary; and that they will be felt in every great corporate industry in this and other countries does not admit of question.

"There is no aspect in which this astounding project can be profitably considered or rightly understood which does not take account primarily of the liberal and humanitarian policy in which it had its inspiration. Therein lie its foundation and its explanation and therein alone can it find its final acceptance and justification.

"The new year begins auspiciously."

What the steel trust is doing in other directions is told by the New York *Journal of Commerce* in the following paragraph:

"In spite of all the encomiums that have been lavished on the intelligent and businesslike management of the United States Steel Corporation, its methods are found to be pretty much the same as those of any other combination formed to create a virtual monopoly in production and to maintain a purely artificial standard of price. It was but the other day that the purchasers of steel blooms were subjected to a turn of the trust screw, and now it is the independent sheet and tin-plate manufacturers who are complaining that their profits have been wiped out and that they are face to face with impending ruin because of the tactics of the trust in reducing the prices of finished sheets and plates while holding up the prices on the sheets and bars before coaling. When the creation of the tin-plate industry here was claimed as a great triumph for the protective system, it was pointed out that it owed its existence absolutely to the ability of our rolling-mills to turn out steel plates at a lower price than their European competitors, and that the tinning of these plates was a mere incident in the process of manufacture altogether unworthy of the jubilation with which the ability to accomplish it had been hailed. The steel trust is engaged in demonstrating that the tin-plate industry, in so far as it is divorced from the manufacture of steel plates, is a thoroughly artificial product. The trust has it in its power, by cutting prices again on finished sheets and tin plate, to compel every sheet and tin-plate mill in the country, outside of its own, to shut down. This eventuality is sufficiently imminent to compel the independent manufacturers to discuss the question of forming a new company to put up blast-furnaces and steel-works of their own, and a fund of from $1,000,000 to $1,500,000 is named as the amount which should be subscribed by the concerns who are at present at the mercy of a corporation fully committed to the policy of industrial rule or ruin."

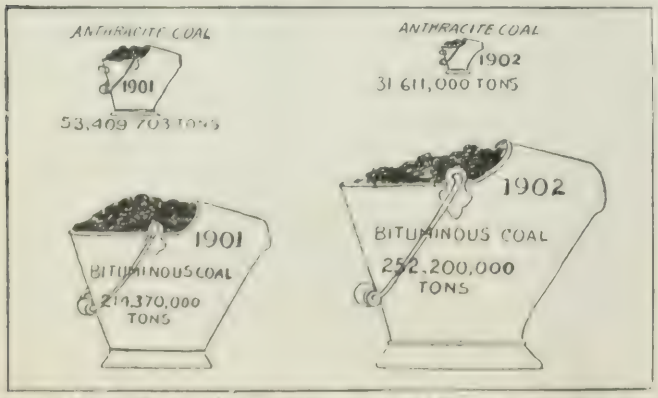
The profit-sharing plan of the steel corporation is outlined as follows by the New York *Evening Post*:

"It offers to sell to each member of the salaried class a certain amount of the preferred stock of the company at a fixed price,

not far from the present market price. The payments to be made by instalments within three years at 5 per cent. interest on deferred payments—the buyer to draw the accruing dividends. After holding the shares for five years, rendering faithful service to the company and continuing in its service, the holder shall be entitled to $5 per year for each share in addition to the dividends on the same. At the end of five years more, under like conditions, he will receive additional compensation if the company's earnings justify it. Part two provides that still further compensation shall be given to those included in part one, and to 'all other men charged with responsibility in managing the affairs of the corporation.' Who are the persons coming within this classification shall be determined by the finance committee. Under part two it is declared that net profits to the amount of $75,000,000 per annum are required to pay interest, dividends, and sinking fund. Whenever the net earnings exceed $80,000,000, one per cent. of that sum shall be set aside for distribution to these two classes, one-half in cash, and the other half in preferred stock. All the privileges apply to officers and employees of the subsidiary companies as well as of the United States Steel Corporation itself. The scheme seems well adapted to its declared aim of attaching to the company its officers and employees, and will probably be accepted by most of them, since they risk very little by so doing. It does not bear the character of benevolence or philanthropy in any sense, and makes no pretensions of that sort. It can be judged only by its results from the business point of view."

MEMORABLE FEATURES OF 1902.

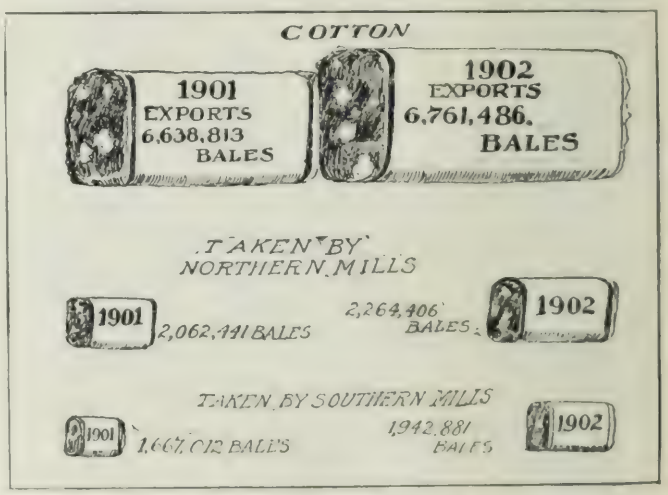
THE year that saw the Boer republics disappear from among the nations of the earth saw the Cuban republic begin its independence; and the year that saw Great Britain unite with Japan to protect Korea and China from Russian and German aggression saw Great Britain unite with Germany in an aggressive movement upon Venezuela. These are regarded as the chief events in world-politics by the journals that sum up the doings of 1902. The chief event in our own country, the editors think, was the great coal strike, which, like the Venezuelan imbroglio, will be settled by arbitration, thanks to the good offices of the President. And while Mr. Roosevelt has united opposing nations and factions in the bonds of arbitration, Mr. Marconi has spanned the Atlantic with his wireless telegraphy, and the Pacific has been crossed by a British cable. Ties of another sort have been established between the United States and Austria by the visit of Dr. Lorenz, and between the United States and Germany by the visit of Prince Henry. In this connection, too, should be mentioned the effort of Cecil Rhodes to promote world-



—*The New York Herald.*

peace by providing in his remarkable will for the education of American and other foreign youth at Oxford.

And while 1902 is regarded as a year of increasing peace and good-will in international affairs, it is regarded as a year of unprecedented prosperity in the United States, despite the hard times abroad. "The best year the country has ever experienced" is the verdict of *Bradstreet's*; and a good many other journals agree. Not only have the capitalists and captains of industry prospered, but it has been a year of large demand for labor and of wage-raising for those already at work. The farmers have produced more than $2,500,000,000 in crops and the manufacturers have turned out $14,000,000,000 worth of their products. American capitalists have startled the Britishand accomplished what the New York *Times* calls "the chief business feat of the year" by forming the Atlantic shipping combine. The year as a whole, however, has not been notable for the increase of combinations; indeed, the "two leading features" of the year in business, according to the New York *Journal of Commerce*, have been "a heavy decrease in consolidation of industrial properties and a marked increase in the organization of competitive enterprises." The prosperity was threatened seriously by the coal strike, whose effects are still severely felt, but the business interests appear to have weathered the storm successfully, as they have also stood the unprecedented drop in the price of silver, which has declined 17½ cents an ounce in the last two years, and reached the lowest price on record, about 46½ cents an ounce, a few weeks ago. An even larger degree of prosperity is expected from two enterprises sanctioned by Congress last spring—irrigation of the arid West and the construction of the isthmian canal. Despite the good times, however, we are informed by the Chicago *Tribune*, which publishes a great sheaf



GROWTH OF AMERICAN COTTON EXPORTS AND MANUFACTURE IN ONE YEAR. —*The New York Herald.*

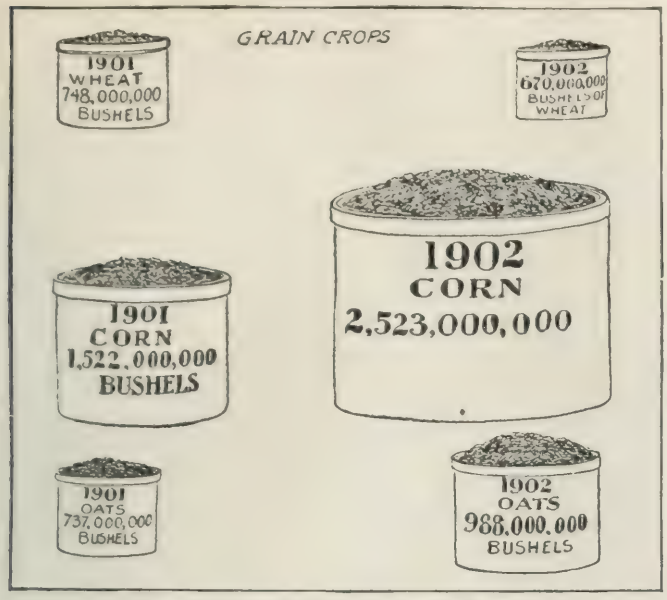
of interesting statistics at the end of each year, that the gifts and bequests to educational, charitable, and religious enterprises in this country foot up to about $77,000,000, as compared with $124,000,000 in 1901.

The year will also be remembered as "the volcanic and earthquake year," thinks *The Tribune*. Pelée and Soufrière destroyed 45,600 lives in Martinique and St. Vincent, and more than 20,000 others were killed in Mexico, Guatemala, and the Orient by volcanoes and earthquakes. Storms and floods claimed 12,000 more victims. The figures for suicide show that the increase in that form of crime still goes on, with a sudden and startling increase in the number of women. The lynchings show a decrease from 135 in 1901 to 96 in 1902, while the legal executions show a corresponding increase from 118 in 1901 to 144 in 1902.

As the iron industry is considered by many to be at the basis of our commercial system, the following comment on the year's business by *The Iron Age* is of especial interest:

"The history of the world can be scoured in vain to find a parallel with the condition of affairs in the United States in 1902. At no time since the advent of steam as a motive power in transportation have the facilities for the distribution of commodities been so completely overwhelmed by the vast offerings

of all classes of merchandise as within the past few months. The greatest railroad systems of the country, whose capabilities had always previously been rated far in excess of any demands,



AMERICAN GRAIN CROPS OF 1901 AND 1902.
—*The New York Herald.*

fell as seriously short of serving the manufacturing and commercial interests dependent upon them as the lines less ably managed and admittedly poorly equiped. Manufacturers turned out greater outputs than ever before, but could have done still better by considerable if they had not been hampered by the difficulty of securing raw materials on the one hand, particularly coke, and the frequent inability to make shipments of their products on the other. A specially remarkable feature of this experience is that it came not after a period of pinching economy by the railroads, in which their equipment had suffered, but after several years of heavy earnings and unprecedented expenditures for rolling-stock of greater capacity as well as for other facilities. In no previous year had the railroad companies been such heavy purchasers of all classes of supplies as in 1902, their urgent demand crowding manufacturing establishments to the utmost.

"The natural increase in the business of the country, due to the growth of population and the great purchasing power of a people whose average earnings were far more than sufficient to cover the necessities of life, would in itself have been enough to keep the iron trade well employed. But the extraordinary and insatiable demands of the railroads undoubtedly brought about the marvelous growth in consumption of iron and steel which outran the huge productive capacity of this country. The revolution in the currents of trade, changing the United States from an exporter of pig iron, steel billets, steel rails, and structural steel to an importer of all these commodities, was one of the notable features of 1902. When the figures are made up for the year it will be found in all probability that our importations of these products alone will aggregate over 1,000,000 tons. Such a volume of iron and steel imports has not been known since the famous boom period of 1879–80. Its foundries and steel-works were compelled to seek additional supplies of pig iron abroad, the rolling-mills were obliged to import steel billets, and consumers who urgently needed finished iron and steel products of various kinds found foreign mills their surest source of prompt supplies."

CUBAN OPINIONS ON RECIPROCITY.

WE learn from the Havana papers that the proposed reciprocity treaty between the United States and Cuba, now before the Senate in Washington, is regarded in Havana with more or less coldness and indifference. The Cuban planters are receiving nearly twice as much for their sugar as they did a year ago, and the island is reported by the British minister at Havana as being in a greatly improved commercial condition. As to the feeling in the United States Senate, the special correspondents at Washington appear to be entirely at variance with one another. We are told by different correspondents that the treaty will pass and that it will fail, that the beet-sugar interests have abandoned their opposition and that they have not, that the Republican leaders have decided to leave the matter to the judgment of the sugar advocates, and that they have decided to kill the treaty regardless of the sugar interests.

To return to Havana, the *Discusion* and *Diario de la Marina* favor the treaty very strongly, and express the hope that it will speedily be ratified. But the other Havana papers appear to regard it with either indifference or open opposition. It is urged that the favor shown to American trade will cut off the trade with European countries, especially Spain; and "it is highly probable," says *El Comercio*, "that not only material interests will be imperiled," but that Cuban independence will be put in danger. *El Avisador Comercial* expresses the same idea, and observes ominously that "ever since the world began the big fish swallowed the small one," and that "the case was never known when a sardine swallowed a whale." It adds, in effect:

Our production, with a vigor utterly unexpected and in spite of every obstacle, has weathered the longest and worst crisis in our history and has emerged victorious. But now the nation that closed its doors to our production when we were in misfortune offers, not to open them ajar, but to promise a petty reciprocity that seems like alms, or the throwing of a hard crust, to a

SHORTCOMINGS OF 1902.

need that does not exist. We do not believe that any one can regard this treaty with pleasure, and we believe that even President Palma accedes to it with regret.

La Lucha thinks the reciprocity advocates would be more frank if they should admit plainly that the treaty is part of the scheme for annexation. It says:

"Everybody here knows what the destiny of Cuba must ultimately prove to be, both politically and commercially, and most people can see that the Cuban republic is a prisoner of war of the United States; but in spite of knowing this, nevertheless they are not devoid of the instinct of self-preservation to such an extent as to make them support and desire the consummation of a treaty which, if the Executive supports it, does so from motives of self-interest, tho it will destroy or cripple large vested interests here built up in the course of many years, and which will also shut us off commercially from the rest of the world.

"If the failure to put through the reciprocity treaty would cause a rupture with the United States, as is stated by the officious organs in the press of the Administration, it would be better to finish at once with the policy of hypocrisy, both within and without the country, and that Cuba should be told plainly that 'You are no more than a small and miserable people, and if you wish to keep what I voluntarily am ready to give you, you will have to fulfil the decrees and orders which I give to your Government to sign, the Government which I set up and supported for your good and my own ends.'

"In this way the country would be spared having to think, ponder on, or discuss those matters which, according to a mere formula, are submitted to it. Moreover, these same officious organs of the Government should make it their business to tell us that this matter or the other is accepted, with or without law, as to do so is for the interests of the Government and in accordance with the wishes of those who support it.

"If this country, as we have already been told semi-officially, is an American country, why are we called upon to talk of our independence, of our own laws, our personality, and other nonsense of the same style?"

The provisions of the proposed treaty are outlined as follows by the Washington correspondent of the New York *Journal of Commerce*:

"The reductions of duty on special classes of goods vary from 40 per cent. in some cases to 30 in other cases, and fall to 25 in some. On all American goods except tobacco, imported into Cuba, and not included in the 25-, 30-, and 40-per-cent. classifications, it is said, a uniform reduction of 20 per cent. is granted. Our grant in return is 20 per cent. upon all goods coming to this country from Cuba. It is understood that the failure to give any reduction on tobacco is intended to prevent the Cuban crop from being mixed with cheap importations and its reputation thereby destroyed. The excessively high import duties into Cuba are, therefore, to be maintained on that article. Of the American goods which Cuba will admit at a reduction of 25 per cent. the chief are pottery, salt fish, copper machinery, cast iron and steel and manufactures thereof, glass, cotton and some cotton goods, ships and boats, whisky and brandy. Under the 20-per-cent. reduction fall cutlery, shoes, plated ware, photographs, common soap, canned vegetables, butter, drugs, bottled beer, articles made of hemp, musical instruments, and printing-paper. Under the 40-per-cent. reduction fall watches, umbrellas, knit cottons, preserved fruits, perfumery, and woolen and silk goods. These rates are to be preferential in favor of each party to the treaty as against all other countries."

Here are some paragraphs from the optimistic report on Cuban prosperity made by the British minister at Havana, and referred to above:

"It is highly satisfactory to note the remarkable progress the island has made in the past three years in spite of the deplorable condition in which it was left at the end of the war.

"The production of sugar has risen from 335,000 tons in 1899 to over 800,000 tons in 1901, and probably will reach 1,000,000 tons in this year's crop. The cultivation and manufacture of tobacco, as well as the minor industries, show considerable improvement. The stock of cattle on the island, thanks to large importations, is now probably upward of 750,000, as compared with less than 200,000 at the beginning of 1899.

"Finally, the value of the exports has increased from £9,260,000 to £12,650,000, and would have reached much higher figures but for the fall in the price of sugar.

"Considering how little financial assistance the Cubans have received from abroad, it speaks very highly for their energy and industry that they should have achieved so much in so short a time and with such limited resources at their command, and affords strong ground for believing that the work of developing the island's industries anew, commenced under such difficulties, will be persevered in."

VERMONT OPINIONS ON PROHIBITION AND LICENSE.

VERMONT is now in the midst of a hot campaign that will culminate on February 3 in a vote on the question of high license or prohibition; and as Vermont has been a prohibition State for fifty years, this is an exceptionally good opportunity to take the testimony of the press of that State on the saloon question. In this way, to borrow a phrase from the Montpelier correspondent of the Boston *Transcript*, the campaign may "develop light as well as heat." The legislature has passed a local-option high-license measure, and if the voters indorse it next month, it will go into effect four weeks later; if they vote against it, the measure will not go into effect until December, 1904, a delay that will give time for another political campaign on the question, and will permit the next legislature to repeal the measure, if that is what the voters want. The editor of the Randolph *Herald and News* figures out a license victory by a margin of less than 100 votes, while the St. Johnsbury *Caledonian* and the Newport *Express and Standard* figure out a narrow victory for prohibition.

Only two Vermont papers indorsing the proposed license measure have come to our attention, altho it is probable that they are not the only ones that take such a stand. One is the St. Albans *Messenger*, and it explains its position thus:

"The preponderance of opinion consulted in the framing of the new license act appeared to believe that there might be a legitimate need of the few saloons that may be expected under it, and *The Messenger* can not do otherwise than abide by the judgment of the majority in this one detail of a cause where it is in sympathy with the general intent and purpose of that majority and is traveling the same path with it in the hope of eventually evolving a practical liquor law for Vermont."

The other is the Brandon *Union*. *The Union* considers rum-selling worse than the slave trade, and believes it ought to be prohibited; but the Vermont prohibition law, it declares, is "the weakest measure that ever disgraced the statutes of this or any other State" and fails to stop liquor-selling. It continues:

"How, then, shall we answer the question, 'Shall we license the open saloon'? We dislike to answer yes, it is revolting to our ideas of good morals, but under the existing conditions we can not answer no. We will then answer by saying that of the two evils we accept the lesser. Let us restrict rum-selling what we may under a license law, rather than allow it longer to be sold promiscuously under the prohibition law. Those responsible for the law ask us to retain it, but they have done nothing to strengthen it, and until they do, until they make the penalty for breaking it at least equal to the penalty for dealing in imitation butter, every temperance man, and woman too, in Vermont, should repudiate it."

"Why not consider the interests of school and church and state, and let the rumsellers go to the devil?" asks the St. Johnsbury *Republican*, which remarks that this "may be sufficient to indicate *The Republican's* attitude." The general tone of the Vermont papers, indeed, seems to indicate an apprehension that the "rumsellers" will gain control of local and state politics, if the saloon is legalized. The prohibition law may

have its defects, says the Northfield *News*, but to replace it with the proposed measure would be to "jump from the frying-pan into the furnace," and it adds that unless the new law is voted down, "the open saloon will prevail in Vermont, and when it is once in the saddle, all the fine theories in regard to its modification will amount to nothing whatever." "With the referendum license bill in force," says the Burlington *Free Press*, similarly, "the liquor saloon will at once become the most prominent factor in local politics," and "when a publication like *Bonfort's Wine and Spirit Circular*, devoted to the interests of the liquor trade, finds itself constrained to declare that 'the average saloon is a nuisance, a resort for all tough characters, and a disgrace to the wine and spirit trade,' it ought not to be necessary for the friends of temperance in Vermont to argue against the introduction of the open saloon in this State." Says the Rutland *Evening News*:

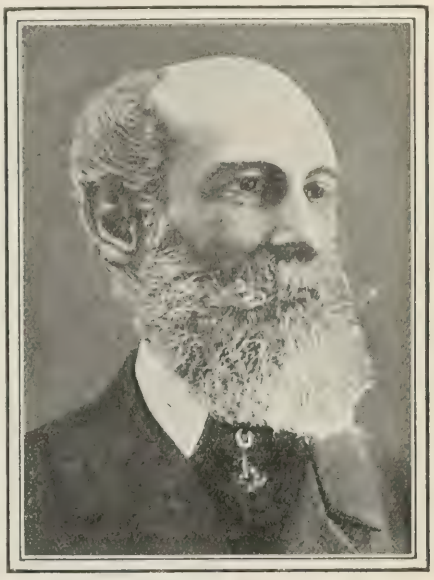
"The state prohibitory law does not put a stop to quiet or 'respectable' selling, and probably never will, but it effectively suppresses open bars, and makes life a nightmare to those persisting in its violation. The best license-local-option law—such as the proposed law for this State is—rigidly enforced, would not conduce to temperance or abstinence to the degree that the present prohibitory law does, enforced as it has been enforced. Neither would it be possible for Vermonters to be the thrifty, saving people they are, under the new system. If Rutland had the eleven saloons—respectable drinking-places—that the license law would assign it, how long would the people of this little city of less than 12,000 have $5,000,000 on deposit in its various banks?"

And so thinks the Enosburg *Standard*, which says:

"*The Standard* is not one of those papers that holds to the idea that the prohibitory law is of divine origin and sacred, and perfect in its operation, but we do claim that for Vermont, with its scattered communities and no large centers, it is the best restrictive measure for restraining the traffic in intoxicating liquors that is before the public to-day. On the other hand we do not indorse the proposition that, because it does not absolutely prohibit the sale of intoxicating liquors, it has failed of its purpose. A law that would absolutely prohibit the sale of intoxicating liquors even in Vermont would be an utter impossibility. But we believe that it restricts the sale of liquor more than any other law that has been tried, and that the restrictive provisions of the high-license laws in the respective States where they are in operation are more often violated and are less satisfactory as a deterrent to crime and a restraining influence on the habits of the young than the prohibitory law."

GERMAN-AMERICAN COMMENTS ON THE VENEZUELAN COMPLICATIONS.

THE idea entertained by some that Germany is getting ready to challenge the Monroe Doctrine, and that her part in the movement against Venezuela was in the nature of a "feeler," gives interest to the comment of the German-American papers on the matter. These German papers published in America evidently have no expectation of any serious trouble between the two countries; they believe that Germany has no hostile feeling toward the Monroe Doctrine, and allege that what ill-temper exists has been stirred up by the British. The Venezuela episode has from first to last been improved by Great Britain to prejudice the United States against Germany, insists the *New Yorker Staats-Zeitung*, a paper which has been accused of reflecting the views of the Berlin Foreign Office, an accusation which it repels with indignation. Says the German-American daily:



GEN. MANUEL A. MATOS,

Directing the Venezuelan revolutionists, who are threatening the supremacy of President Castro.

"Insinuations against Germany on England's part still continue. Systematic poisoning of the wells by England goes on, altho Germany has made her position plain not once but many times in an open, honorable, self-contained way. Such utterances go so far as to justify a fear that English official circles may yet spring a surprise upon confiding Germany. We have ourselves hinted at such a contingency. The demeanor of England's official circle has not indeed countenanced this suspicion hitherto. One can not deny the English Government credit

TROUBLES OF THE POWERS.

for having acted loyally so far. Significant, however, of existing relations and of prevailing sentiment is the fact that in Germany this distrust is growing."

The duty of the German-American as between the fatherland and the country of his adoption is made the subject of sarcastic remarks by the Socialist *New-Yorker Volks-Zeitung*. The Monroe Doctrine, according to this paper, is merely an assertion of the purpose of the United States to exploit South America. The *Wächter und Anzeiger* (Cleveland) thinks a dilemma faces the United States in regard to the Monroe Doctrine in Venezuela. Europe will point out that if we forbid territorial acquisition we should, to be logical, guarantee creditors from losses. Otherwise we shall be accused of playing the part of the dog in the manger. The *Westliche Post* (St. Louis), however, insists that the United States can never assume any financial responsibility for South America if it proposes to remain solvent. At the same time it deprecates any questioning of Germany's good faith. The *Volksblatt und Freiheits Freund* (Pittsburg) says Great Britain and Germany have at last accepted arbitration in principle and that their united demonstration made Castro "reasonable." Hence some good has resulted. The *Tägliches Cincinnatier Volksblatt* says the Monroe Doctrine must be upheld whatever else happens. It takes the Louisville *Courier-Journal* severely to task for suggesting a reconsideration of the Doctrine:

PROF. GEORGE GUNTON,
Who draws a distinction between the non-union workingman and the "scab."

"This far-sighted declaration of policy would have been largely nullified had European Powers, after being driven out of South America, been left free to return there, as they intended. In this effort to eliminate aggressive Powers as neighbors we have the very essence of the Monroe Doctrine. Its justification is greater to-day than ever before."—*Translations made for* THE LITERARY DIGEST.

DIFFERENCE BETWEEN THE NON-UNIONIST AND THE "SCAB."

THE first writer to differentiate the non-union workingman from the so-called "scab," so far as we have seen, is Prof. George Gunton, who writes on this topic in the January number of *Gunton's Magazine* (New York). As he regards them, a non-unionist is any workman who does not belong to a union, tho he may not be hostile to it, while the "scab" is a non-unionist who takes a striker's place, plays traitor to the cause of labor, and virtually stabs his fellow workingman in the back in the time of battle. With regard to the non-unionist:

"Between those who think him a martyr and those who think him an enemy to labor, the non-union man has come to be regarded as synonymous with a 'scab.' This is a great mistake; they are not necessarily alike; indeed, they fill quite different functions in the economy of industrial adjustment. The non-union man is one who simply does not join the union. This is not always, nor even generally, because he is hostile to the union. He stands aloof for a multitude of reasons; sometimes because he is reluctant to pay the dues and assume the responsibilities of membership; sometimes because he has a personal dislike for some of the officers; but much the larger number stay outside the unions from a general indifference. Theoretically, they believe in the unions; they are in general spirit and action in accord with them, but lack that interest which materializes in active service. . . . So, when a strike comes on, the great mass of non-union men go out with the strikers and go in with the strikers; they abide by the decision that the union accepts, and, moreover, the union men always share with them the strike funds. In the recent coal strike, only a small fraction of the miners were members of the union until the strike was imminent; but the non-union men were just as loyal to the strike as the members of the union, and the union was just as loyal to the non-union men as if they had each paid their dues."

Now for the other fellow:

"But the 'scab' is altogether a different man. He is the one who, when a strike is on, takes the place of the striker. If President Eliot and those like him really knew more of the character of the 'scab,' knew more about the actual kind of laborers that become 'scabs,' they would hesitate about calling the modern scab 'a very good type of a hero.' As a matter of fact, in probably ninety per cent. of the cases he is really a loose, irregular, disreputable, *quasi*-tramp laborer. He is the kind that seldom works regularly and is almost never a good workman. 'Scabs' are essentially camp followers of labor disturbances. President Eliot is probably not aware that in case of strikes the chief object of the employer is to demonstrate to the strikers and to the public that there are plenty of men who are willing to work on the terms offered. In order to demonstrate this they send out into the highways and hedges and offer exceptional inducements for men to come to work, simply to make a showing. The writer knows of several instances of the kind, where the wages offered have been fifty per cent. more than the strikers were asking. In addition to this, they often furnish board and lodging. They seldom expect to keep these workingmen permanently. They know in advance that only a few of them will prove competent workmen; but these men serve the purpose for the time being, as instruments to break the strike.

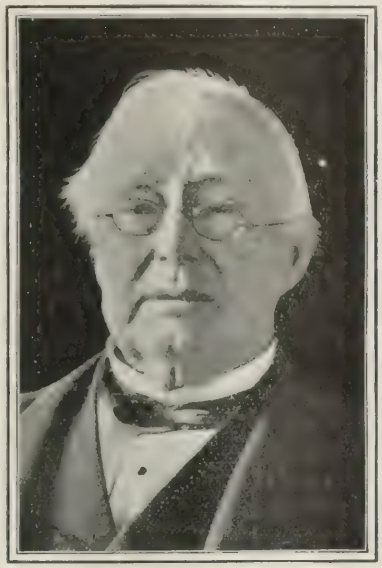
"Moreover, in most industries it usually happens that they spoil as much as they accomplish. The writer remembers one instance where the incompetency of the 'scab' laborers was such as to render them actually worthless, and in order to make a showing the material was taken out of the machinery which stood round the outside of the workroom, nearest the windows, and the machinery was run empty, the 'scabs' simply moving the machines as if they were working, so that the passers-by, hearing the noise, would think the factories were running, and the newspapers would announce with flaring headlines that the mills were rapidly filling up and would have no use for the strikers if they remained out a little longer. Of course, there are exceptions; but in the main there is really no heroism in the 'scab.' And he doesn't come as a hero. He seldom comes because he wants to work. He usually comes because there are exceptional inducements offered and because he is made an object of considerable attention. . . . . .

"He not only does not lessen the total of unemployed, but he defeats the effort of the other man to improve the condition of his whole class. He makes the job worse for himself, for everybody else, and for those that come after him. Is he a benefactor? To the extent that he succeeds, he prevents improvement. His only contribution is to the forces that make it impossible for the laborers in that group to get better economic or social conditions, and he is used specifically for that purpose. Under no other conditions would he have been employed. He is employed only as an instrument for preventing that improvement. . . . .

"From the viewpoint of the progress of society the 'scab' is an injury. He lacks every element that goes to make up a hero; his whole attitude is that of the sneak and the camp follower; of the man who robs the corpses on the battle-field, or attends a fire for the sake of the pickings. He contributes no element, either of personal honor, public spirit, or good workmanship, and adds nothing to the forces which make for the social betterment of anybody. There is every reason why honest, industrious laborers, whether members of unions or not, should despise the 'scab' and refuse to associate with him. It is an ethical impulse to ostracize him."

SENATOR HOAR'S TRUST BILL.

"PLAINLY the work of a master hand," is the verdict of the Philadelphia *Press* (Rep.) upon the anti-trust bill introduced into the Senate by Senator Hoar, chairman of the Senate judiciary committee. "If these provisions, powers, and penalties will not suppress 'trusts,'" declares *The Press*, "nothing will." Other papers also speak in similarly warm terms of the measure, but many of them believe that Congress will not pass this or any other anti-trust measure at this session. "The prospect for anti-trust legislation, which has never been bright," observes the New York *Commercial Advertiser* (Rep.), "is poorer now than it was when Congress assembled."



Copyrighted stereoscopic photograph by Underwood & Underwood, New York.

SENATOR HOAR,

Whose anti-trust bill is attracting more attention than any other that has been introduced at this session of Congress.

Senator Hoar's measure, after providing that previous laws on the subject "shall continue in force, and shall in no wise be held to be limited, restrained, or repealed by this act," appropriates $500,000 for the enforcement of this and the previous laws; and provides that every corporation engaging in foreign or interstate trade shall file statements with the Interstate Commerce Commission yearly, beginning September 15, 1904, showing the amount and value of the capital stock, how much of it has been paid in in cash, and what has been received for it otherwise, the names of the officers and agents, the facts regarding dividends, a statement of the interest held in other corporations, and an agreement signed by officers, managers, and directors to comply with this and other laws. The measure authorizes the Attorney-General to require of any such corporation "any statement he may think fit in regard to the conduct of its business" and "especially . . . a list of all contracts or transactions entered into within the twelve months preceding such requisition, in which it has sold any article or product, or carried any article or product at a rate less than the ordinary market price, if such article or product had been sold or carried by any other person than the party to such transaction; and he may further require the reasons for such distinction and the circumstances attending the same."

"A fine not exceeding $5,000" or "imprisonment not exceeding one year," or both, is provided for every person or corporation engaged in foreign or interstate trade "who shall enter into any contract, combination, or conspiracy, or who shall give any direction or authority to do any act for the purpose of driving out of business any other person engaged therein, or who for such purpose shall in the course of such commerce sell any article or product at less than its fair market value, or at a less price than it is accustomed to demand or receive therefor in any other place under like conditions; or who shall sell any article upon a condition, contract, or undertaking that it shall not be sold again by the purchaser, or restrain such sale by the purchaser." Every subsidiary corporation controlled by another corporation which violates this law is barred from foreign and interstate trade, and must submit its books to the inspection of the Attorney-General. Several sections follow covering attempts to evade the act, and providing for modified action by the Attorney-General in cases where the interruption of a business would injure the public; and then comes the concluding section, in which the Senator is said to take considerable pride, providing "that every president, treasurer, general manager, agent, or other person usually exercising the powers of such officers of any corporation, joint stock company, or other association, who has himself in its behalf violated, united to violate, or voted for or consented to the violation of any of the provisions of this act, shall thereafter be personally liable for all the debts and obligations of any such corporation, joint stock company, or other association, created while such person holds such office or agency, whether under the same or subsequent elections or appointments."

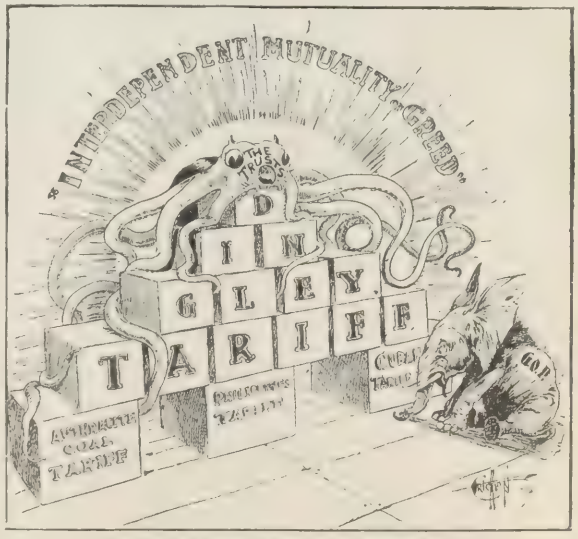
This measure would prohibit the bargain-counter, objects the New York *Sun* (Rep.), pointing to the clause against selling "any article or product at less than its fair market value, or at a less price than it [the corporation] is accustomed to demand or receive therefor in any other place under like conditions." *The Sun* continues:

"In the exciting race to be first in at the death of monopoly no incident is more curious than the inversion or perversion of ideas which has led the venerable chairman of the Senate judiciary committee to propose this legislation directly in restraint of competition—to make it a misdemeanor, under certain circumstances, to attempt to undersell a rival in trade."

The tariff-revision papers reiterate, in their comments on this bill, their assertion that the way to regulate the trusts is through the tariff. Some other objections are offered by the Philadelphia *Ledger* (Ind.) in the following paragraphs:

"Senator Hoar's plan for driving the public heel into the trust, to prod and goad it out of existence, is chimerical, as it is very likely intended to be. There is no mark of sincerity in the bill. It glows with impracticable provisions and futile suggestions. Its main idea is the filing of a statement with the Interstate Commerce Commission, to the accuracy of which the officers of the corporation shall attest.

"The proposition is ludicrous. It makes a body which has proven itself impotent to an unexpected degree in performing its own duties the repository of facts about the capitalization and organization of manufacturing companies, where they will be as safely preserved as archives as tho they were sent to the Congressional Library or the Smithsonian Institution. The Interstate Commerce Commission has no right to nor business with such statements. By this bill it would also wholly lack legal power of compulsion. The law would be laughed at after it was passed, and to save it from that disgrace we should laugh at it now. What purpose is the measure designed to serve? What is the object of attack? The whole question of anti-trust legislation presumes an evil which it is within the power and scope of the Government to control and suppress. Is the trust such an evil?



AFRAID TO PUSH, LEST THE EDIFICE FALL.
—*The Philadelphia Record.*

"While we are no friends of the trust, it must be admitted that the industrial combination is the natural outgrowth of modern economic conditions. With some wrongs have come unmis-

takable blessings and benefits. The concentration of capital has cheapened productive processes and advanced civilization by bringing necessities, conveniences, and luxuries of all kinds within the reach of all classes of men, and it is idle for us to close our eyes to the advantages which have accrued to society from this world-wide movement. It goes forward in spite of all we may do to resist its advance, and neither this generation nor the next, neither moralist nor politician will effectually or for long check a development which is the most characteristic economic trait to-day in all latitudes and longitudes on the civilized earth.'

LOOTING THE PUBLIC DOMAIN.

AN "epidemic" of public land frauds extending from Washington and Oregon to New Mexico and Arizona, has, so it is charged, afflicted the West; and the only way to stop it is by the immediate repeal of the Desert Land act, the commutation clause of the Homestead act and the Timber and Stone act, all of which were enacted to assist the poor man but are working in the opposite direction and are helping the rich man to gain large tracts of land. This is the conclusion reached by the Washington correspondent of *Maxwell's Talisman*, published in Chicago in the interest of irrigators and homemakers. He gives as a basis of his statement the reports of special land agents and an analysis of the figures which will appear in the forthcoming report of the commissioner of the General Land Office. During the fiscal year ending June, 1902, nearly 20,000,000 acres of land passed from the Government to private ownership, which is about 4,000,000 acres more than in 1901, when the "record" for land disposals was supposed to have been made. This leads the correspondent to believe that the Government is parting with its land more rapidly than the law allows. He says further:

"It is not necessary to go beyond official reports to obtain sensational statements in regard to these homestead filings and the corrupt use to which this once beneficial law is now being put. One special agent of the General Land Office who has been investigating conditions in Nebraska, where in 1901 there were over four thousand homestead filings and in 1902 nearly as many, the two years involving an area of over one million acres of land, says: 'It is openly boasted that a genuine legal homestead entry has not been made in Nebraska for some time. Of course this is not so, as some have been made in good faith and the law is being complied with; but they are a small part of the aggregate number of entries.'

"This same agent, in referring to the fraudulent use of the homestead law for the purpose of securing a color of title to the public lands, says: 'This method has grown alarmingly in this State during the last two or three years, these filings being made by cattlemen and ranch owners with a view to protecting their fence lines. They allude to them as "our filings" just the same as so many cattle. No attempt is made or expected to be made to comply with the law. These entries are made by anybody and everybody that they can get who will certify to the oath. If a ranch owner wants to extend a certain fence line or take up a few entries in his pasture, he arranges for claimants at five or ten dollars a head, taking at the time the filing is made a relinquishment and a lease for the tract. Of course they file in all kinds of names and possibly two or three times under disguise. Thousands upon thousands of such entries have been made in this State within the past two or three years. The homestead law is a dead letter—absolutely no attention is paid to it. I understand that the same conditions prevail in other States.'

"If any one outside of an official of the Government were to make the above statement he would be looked upon as a sensational alarmist, but these words are taken from the published preliminary report of the land commissioner, and the detailed report which will follow tells the same story of other States in the remarkable number and location of filings under a law which was intended for the use of homebuilders and not for those whose sole purpose was to keep homebuilders out."

During the past year, we are further told, 500,000 acres of valuable timber land were disposed of under the Timber and Stone act at $2.50 per acre, one tree on each acre often yielding lumber enough to pay for the acre. In these cases some enterprising firm or individual hired others to take out a timber claim of 160 acres, and soon after to transfer it, on the payment of a small sum, a procedure strictly prohibited by the law. In many States and Territories, where most of the land has been disposed of, the commissioner's figures show that the population has not increased by a family, showing "that the land is not being absorbed by settlers; but by those who already control large areas and are extending their holdings."

The attention of Congress will be called to this matter this winter, but twenty-five years ago Senator Teller, then Secretary of the Interior, recommended the repeal of all the land laws allowing the Government to dispose of its land, excepting the one under which a man could secure 160 acres of land by living upon it and improving it. Every succeeding Secretary of the Interior has practically followed Senator Teller's recommendations, and yet Congress has not paid any attention to these. The law now existing in Oklahoma embodies some of the reforms which have been demanded in the general land laws, but still there is a chance for fraudulent acquisition. William E. Smythe dwells at length on the same subject in the same issue of *Maxwell's Talisman*. He describes how the frauds are perpetrated under the Desert Land act, which he refers to as "a fraud upon the people of the United States," and "a disgrace to the American name." This act gives any man or woman an opportunity to acquire 640 acres of desert land for $1.25 an acre. The applicants must swear that they have made arrangements to obtain water for the irrigation of the soil, and that they have actually seen the land. The men are not compelled to live on the land at all. This provision gives the exploiter his opportunity to get possession of the land, so that he may "be enriched by some other man's labors, or sell out at a large profit to some one who would need the land for a real home."

IT is claimed that the bill providing for a department of commerce will save the Government some money by combining the statistical work. The Senate probably didn't know this, or it wouldn't have got through so easily.—*The Atlanta Journal.*

LETTERS AND ART.

A SYMBOLIST IN STONE.

At a national exhibition of sculpture held in New York a few weeks ago the most prominent place was given to the work of George Grey Barnard. Mr. Barnard has been winning a larger and larger share of public attention for several years past. His great bronze "Pan," which is at present housed in the Metropolitan Museum, New York, won him distinction if only for the reason that it is the largest single piece of bronze ever cast in this country. Quite recently, he has been signally honored by being awarded the contract for the entire sculpture scheme of the new capitol of Pennsylvania, a work which he will perform in collaboration with Edwin A. Abbey, who has been chosen to do the mural painting on the same building. "It is a thing to be thankful for," declares Mr. Alexander Blair Thaw (in *The World's Work*, December), "that America has learned to appreciate his work and to realize that in George Grey Barnard she has produced that man of the ages, a really great sculptor." The same writer gives an account of Mr. Barnard's life, which we summarize as follows:

Copyrighted 1902 by Doubleday, Page & Co.

MR. BARNARD AT WORK ON "THE HEWER" IN CLAY.

Courtesy of *The World's Work*.

The son of a clergyman of broad sympathies and of a mother through whom his artistic temperament was chiefly derived, he was born at Bellefonte, Pa., in 1863. He went out West early in his boyhood, living a free, untrammeled life in Illinois, in Iowa, and on the Mississippi, wandering through woods and swamps and becoming intimately acquainted with all phases of geology and of animal life. By fifteen he was an expert taxidermist and in the habit of drawing each creature from the life and so mounting them. He had as many as 1,200 specimens in his collection at this time. Then for about three years he earned his living as an engraver and worker in gold and silver ornaments. But at the same period he had already found his vocation and begun to model in clay. At the age of seventeen, he went to Chicago, and for a year studied the technique of drawing and modeling at the Chicago Art Institute. There was a closed room in the Institute building, closed and locked because the students of the previous year had mutilated the treasures concealed behind that locked door. This treasure was a complete collection of casts of the works of Michelangelo. One day the president of the Art Institute gave the key of that door to the boy Barnard, and there, for the first time, the man Barnard found himself face to face with the great drama of humanity as expressed through the human form. From that day he has known his own powers clearly, and has gone on over obstacles and through privations, temptations, and sacrifices straight toward his goal.

Later he went to Paris, where, for twelve long years, he struggled against difficulties of every kind. It is a thing of happy omen that his first work, made in Paris fifteen years ago, was seen and appreciated by a fellow countryman, the late Mr. Alfred Corning Clark, and by him brought, at a critical time, when Barnard could not have borne much longer the extreme privations of his condition of life. This work, "The Boy," made when Barnard was little more than a boy himself, was modeled in his little bedroom under a roof through which the rain and snow poured in, so that the sculptor was obliged to hang canvas over his iron bed; and the clay in its wet wrappings had to be covered with part of his bedclothes. But for a rare perfection of physical health and strength he could not have endured such extreme hardships. For instance, there was a time when, for many months, with nothing to eat but a little rice and milk, he kept on constantly with his work, drawing or modeling sixteen hours a day. And so during these twelve years, in the midst of that gay Paris, he had to struggle for his very life.

In the schools, and later, for many years, alone, Barnard's skill in handling clay and charcoal and the development of his powers of visualization brought him many honors, all culminating in the year "'94," when, at the age of thirty-one, he won his greatest success up to that time upon the exhibition of his work at the Salon, a triumph accorded him by a jury of the greatest artists, by the foremost critics, and by the people of Paris.

Mr. Barnard's first work of importance was a design for the tomb of a Norwegian philanthropist. It represents "Brotherly Love," and shows the nude figures of two young men with their heads partly buried in the rough marble, through which they seem to be groping for each other. Mr. Thaw writes of this piece:

"It is thus that Barnard seeks to make his appeal, through the simple symbolism of humanity itself, with none of the adventitious aids of convention or traditional allegory, and free also from their limitations, which held back even the strong hand of a Michelangelo. Therefore, we are not altogether surprised, when we turn to look at the great group called 'I Feel Two Natures Struggling Within Me,' to feel a sense of doubt, or at least of wonder; and we ask ourselves whether the sculptor, in this group, taken by itself, has not ventured too near the confines of his art.

"A study of the group, however, convinces one that it is important in itself; by its wonderful technical treatment; by the great and immediate impression of struggle which is conveyed in its unique ensemble as well as in the characterization and details of the group; and more especially by its expression of pure vital force. More important still was the indirect value of the 'Two Natures' to the artist himself—psychologically as a step in his development as man and artist, and practically as a means of development of his rare powers of visualization and technique."

"Man's Struggle with Nature" is the title of another of Mr. Barnard's groups; and he has achieved remarkable originality of design in a cinerary urn in memory of the late Anton Seidl, encircled by twenty-seven figures. His last two works, "The Hewer" and "Maidenhood," are thus contrasted by Mr. Thaw:

"Of these two works, 'The Hewer,' a colossal figure in a gray toned marble from the same quarry as Michelangelo's 'David,'

and the infinitely and tenderly beautiful 'Maidenhood,' it may be said that, with all the tremendous difference between them, each is, as it were, a complement to the other; and together they splendidly complete Barnard's present achievement, and serve as sure omens of his success in future creations. In 'The Hewer,' by the simplest synthesis, he has brought together and concentrated in a single figure of primitive man the whole gospel of labor, in its birth and beginning, in its discipline and in its dignity.

"In the harmoniously forceful movement of 'The Hewer,' as in the very central meaning of 'Maidenhood,' there is some suggestion of the unusual fertility of conception and invention of the artist, the 'Hewer' being but a single figure of a proposed colossal group of 'Primitive Man.' For Barnard's future promise consists not only in these works already done, but in that exuberance of imagination, not too often seen in modern art, which, given power of execution, is one of the marks of genius."

SOME ASPECTS OF JEWISH FICTION.

IN a recent article on "The Attitude of the Jews toward Jewish Fiction," Mr. Bernard G. Richards, a young Jewish journalist, of New York, points out that the Jewish people are, on the whole, decidedly indifferent, if not actually hostile, to the literary efforts of even their greatest novelists. This attitude he ascribes to the fact that "the marked sensitiveness of the Jew makes him shrink from exposure of his exclusive, isolated, and self-centered life." He continues (in *The Reader*, New York):

"The distinct people desires to remain distinct, and, above all, in its spiritual pursuits it wishes to be left alone. The same aloofness has for centuries kept it from fusing with other peoples, when fusion would have meant exemption from the direst persecutions. Into the holy of holies of his private and religious life, the eye of the stranger is not welcome. Judaism was ever sufficient unto itself, and never sought any converts or conquests. It has never wished to go on parade. In all his secular interests and mundane activities, in all appertaining to his contributions to the world's work and progress, the Jew was ready and willing to have intercourse with the rest of the world; but in his synagog and his home he wished to be left alone. And now when the novelist follows him to these holy places he turns around facing him sternly and asks: 'Whither, sir?' The cosmopolitanism of the Jew has been much commented upon, but his other and earlier extreme is his clannishness, or, to call it by a more pleasing name, exclusiveness. Whatever the Jew was subjected to outwardly, he was perfectly safe when he retired into his inner self, a world of dreams and ideals of his own, wherein no one ever molested him. The modern realistic, critical novelist comes somewhat in the nature of a disturbing agitator, and it can not be said that he is very welcome."

Among the younger generation of Jews, however, as Mr. Richards goes on to say, are to be found an increasing number of liberals and radicals who have outgrown the "exclusive" attitude and who read and appreciate the stories of Zangwill, Cahan, Gordon, Herman Bernstein, and others. Zangwill Mr. Richards regards as by far the greatest of modern Jewish novelists—"a consummate artist," who "has penetrated the very depth of Israel's soul and with all the faith and fervor of an inspired poet has pictured its inner dreams and outward realities." We quote further:

"The publication of the 'Children of the Ghetto' evoked much opposition, and most of it came from the German, or reformed, or rich Jews—for there is usually a marriage between these three conditions. It was so in the case of other productions of a like nature. Pictures of the poverty and misery, the squalor and the sordidness of the Ghetto, and such graphic and glowing pictures as Zangwill has painted, are very offensive to the aristocratic, the fashionable, and wealthy members of the tribes that have not been lost. They do not want the world to know of these circumstances, and they fear that they may be confounded with and likened to these lowly Jews. It is like an effort to conceal the black sheep of the family. They are ashamed of their poor relations. And for those crawling creatures, anxious and ambitious to shine in unfriendly Christian society, exhibitions of Whitechapel or East-Side life are a distinct advantage. In their anger they forget, or ignore that the Ghetto is a 'world which hides beneath its stony and unlovely surface an inner world of dreams, fantastic and poetic as the mirage of the Orient where they were woven, of superstitions grotesque as the cathedral gargoyles of the Dark Ages in which they had birth,' and that 'over all lie tenderly some streaks of celestial light shining from the face of the great Lawgiver.'"

The views set forth by Mr. Richards are evidently of special interest to the Jewish mind, for they elicit extended comment in the Jewish journals both of this country and of England. *The Jewish American* (Detroit) finds his article unsatisfactory both in its delineation of what constitutes Jewish fiction and in its diagnosis of the cause of the Jew's dislike to that literature. It declares:

"Mr. Zanwgill has portrayed the grotesque, the ugly, the repulsive in ghetto life and thought, but what is sweet and sacred and soulful in it he has failed to bring into prominence. His realism is one-sided, and in so far is not true. . . . This is the real cause of the Jew's dislike of the so-called Jewish fiction, a fact which Mr. Richards and many another who like him speak of the Jew as 'a race,' will do well to learn. Paint us the Jew

as he is—a man among men with human virtues and human weaknesses, but neither devil nor saint, and the portrayal will not fail of appreciation, even at the hands of our hypersensitive coreligionists."

The Jewish Exponent (Philadelphia) says:

"Considering that at least two-thirds of the Jewish people are still living in the shadow of the Ghetto, it must be likewise conceded that the remaining third have a higher claim on the novelist's attention than has hitherto been acknowledged. Their lives are not so barren and prosaic as to be unworthy of description; their actions are replete with material for dramatic and even romantic treatment, and even their failings can be used to 'point a moral and adorn a tale.' The older Jewish communities in America provide numerous themes, worthy of the pen of a Cable, a Howells, or even a Hawthorne. There is material for many a romance, many a comedy, and many a tragedy contained in the lives of the members of these communities. And if this is true of the New World, it is true in even greater degree of the Old. The material is at hand. It only requires the pen of a genius to give expression to the life of the Jews who never lived in the Ghetto, and were never really brought within its direct influence. The pen of this genius has another fruitful field for Jewish romance—the historical field, which Jewish novelists have done so little to cultivate. The Jewish historical novel would not attract the writer who delights in 'Sword and Cloak' romance. But its possibilities are none the less strong, and its interest might be made even more absorbing than the works of the modern romantic school. The material is at hand. The real difficulty is to find the genius who knows how to use it."

RISE OF A BOER LITERATURE.

THE London *Academy and Literature* has recently taken occasion to note the absence of any artistic work of distinction dealing with the South African war. "Of the three or four hundred thousand men that have been sent over-seas to a strange continent," it says, "not a single artist of significance has stepped out of the ranks of the fighters to create a cunning living image in literature of the strange life of the camp and battle-field." And yet, on the Boer side at least, the literature growing out of the war has been sufficiently remarkable. Says the Chicago *Record-Herald:*

"Before the war the world had scarcely heard of a Boer book, and the silence on that side during the hostilities seemed to confirm the impression that the Afrikander farmers were an inarticulate race. Now every burgher seems to have thrown down the rifle only to take up the pen, and we have the phenomenon of a Boer literature created out of hand.

"Ex-President Kruger has written his reminiscences, and General De Wet has told the story of his three-year campaign. General Botha has given his version of the fight, and the wife of General De la Rey is about to record her sufferings and experiences in a book. The English papers have just finished reviewing extensive volumes written by General Ben Viljoen and the chaplain of President Steyn. The Free State President himself is still to be heard from, and so is General Cronje, but these and half a score besides are not likely to remain silent. The conditions are peculiarly favorable for this literary outpouring from the defeated side; the Boers are naturally proud of their strong resistance, while the British public is in a generous mood, which gives the burghers a large audience in that country as well as in America and Europe.

"The quality of these books is almost as noteworthy as their quantity. The Dutch Afrikanders write as vigorously and intelligently as they fought. They show less bitterness than might have been expected, and the British press treats them with a reasonable degree of respect. All this is fortunate politically. It is likely to do a good deal toward reconciling vanquished and victor, thus simplifying the difficult task of reconstruction.

"The only disquieting thought is that these literary soldiers, having had a taste of the Pierian spring, may lose their presence of mind and join the innumerable army of novelists. In that case Tolstoy's theory of the evil effects of all wars would be established."

BURNS AS AN ENGLISH POET.

ROBERT BURNS has for so long been accepted as the typical and distinctively national representative of Scottish literature that it comes as something of a surprise to find him championed as an English poet. Mr. David Christie Murray, the novelist and playwright, not only maintains that Burns was as indisputably a poet in the English, as in the Scotch, tongue, but attempts to demonstrate that "he is at his best and highest in those frequent passages in which he diverges from that Ayrshire Scottish, which was his birthright, to the English tongue." Mr. Murray writes (in *The Contemporary Review*, November):

"It is not commonly recognized that (apart from his humorous and satirical poems) something like half of Burns's work is done in English pure and simple, nor is it apparently observed that even in some of those poems which are cited as being in the vernacular, the greater bulk of the verse is not even salted with a hint of dialect. One could readily imagine the laughter which might greet the statement that 'Scots Wha Hae' is an English poem. Yet the fact remains that there are only five words in a work of twenty-four lines which are not indisputably English. They are 'wha,' 'hae,' 'wham,' 'aften,' and 'fa',' and it is not necessary to point out that these also are English with a localized spelling. In the 'Lines to a Mountain Daisy' there are eight Ayrshire words, and the poem contains nine verses of six lines each. In the 'Vision' there are thirty-five consecutive verses of six lines each in which there is not a solitary word of dialect or even of localized spelling. In 'Mary in Heaven' we

"CAVALLERIA BARNUMIANA."—A GERMAN VIEW OF MASCAGNI'S AMERICAN TOUR.
—*Ulk* (Berlin).

AND YET FOREIGNERS SAY AMERICANS DO NOT APPRECIATE GENIUS.
—*The Chicago News.*

MASCAGNI'S TROUBLES IN CARTOON

have four eight-line verses of pure English and no intrusion of a hint of Scots. In 'Man Was Made to Mourn' there is no dialect. It contains eighty-eight lines. In the 'Cotter's Saturday Night' there are one hundred and eighty lines, of which one hundred and thirty contain no Scottish word. . . . By the general consent of critical mankind 'Scots Wha Hae' is the fieriest and intensest call to freedom to which the world has listened. You have but to write 'o' for 'a,' to insert a 'v' and a double 'l,' and, behold! a poem without a trace of local color. And it would appear to be pretended that this volcanic splendor of patriotic rage owes its virtue to a few odd forms of spelling. It is fairly clear that it owes its qualities to the fact that its author was a poet of very unusual faculty, and was, when he chose to be so, a poet in the English tongue."

If Burns had rigorously confined himself to Scotch dialect, his audience must necessarily have been very limited. Furthermore, "a little language such as the Ayrshire Scotch was at the time when Burns was born to make it glorious, is excellent for humor, and super-excellent for the tenderer intimacies of the heart; but it is naturally without terms in which to express certain lofty and subtle forms of thought." Mr. Murray contends that Burns realized this keenly, and that it was this realization which enabled him to lay soundly the foundations of a world-wide fame, instead of building a merely local reputation:

"Let us notice the overwhelming advantage which Burns enjoys over other great British poets. He is the owner of an additional language, which he can use in its purity if he so pleases, and which he alone amongst other writers of acknowledged greatness is permitted to intermix in any degree which may seem befitting to him with a more dignified and copious vocabulary. To illustrate the astonishing and perfect art with which he does this I must needs have recourse to quotation. But before I proceed to the actual citation of words, I will offer a broad illustration of the principle of the criticism I apply to Burns. Often as he has proved his mastery of pathos, his two greatest achievements in that way are—I presume I may say by common consent—the lines to Mary and 'Ye Banks and Braes.' Each lays before us the sorrow of departed joys, and the emotions produced by the reading of the one are very closely akin to the emotions produced by the reading of the other. What instinct led the poet to write the one wholly in English and the other in a delicately blended form of the English and Ayrshire tongues? The answer appears to be simple. In the lines to Mary no touch of local color is needed to add to the poignant effect produced. We are here in the presence of a bereaved human creature whose soul is one anguish cry after the departed. It does not matter in the least whether the heart be that of a Scot or a Breton or a Mongol. Humanity is greater than nationality. Manhood—simple manhood—writhing in that agony we have all known or are doomed to know, sends forth this lamentable and exceeding bitter cry. That it is an Ayrshire peasant who thus suffers makes no difference in the world. But in 'Bonnie Doon' rusticity is an essential of the whole matter. A country girl is lamenting the perfidy of her lover, and if we had not the touching dialect in which she pours forth her grief we should not have present to our minds the simplicity which contributed to her downfall, and which at once elicits our prying pardon. Let us try the last four lines in English:

DAVID CHRISTIE MURRAY.

He thinks that Burns was at his highest as an English rather than as a Scottish poet.

> With lightsome heart I pulled a rose
> Full sweet upon its thorny tree,
> And my false lover stole my rose,
> But ah! he left the thorn to me.

Nothing can spoil the beauty of the conceit, and yet a something has evaporated—a suggestion of artlessness and innocence. Beautiful it is and beautiful it remains, and if Burns had chosen so to write it, it would have gone home: but he did better with it. It is pure English with an Ayrshire accent—nothing more. But the accent is an essential here. And so we get it. For Burns never writes English where Scotch will serve his turn better, and never writes a word of Scotch where English is needed for his purpose."

Mr. Murray presents this further illustration of his theory from "Tam o' Shanter":

"In a wholly humorous consideration of

> The many serious sage advises
> The husband frae the wife despises,

the poet permits himself the broadest employment of dialect: as for example:

> She tauld thee weel thou was a skellum.
> A blethering, blustering, drunken blellum
> That frae November till October
> Ae market day thou wasna sober;
> That ilka melder, wi' the miller,
> Thou sat as long as thou had siller;
> That every naig was ca'd a shoe on
> The smith an' thee got roaring fou on:

"And so on, in almost but not quite the broadest of dialect, until the poet's thought rises beyond the noise of Soutar Johnnie's mirth, and the atmosphere of the reaming swats that drank divinely: and with the rising of the thought, he chooses once again the nobler medium of expression, and in eight lines of universally acknowledged beauty he challenges a place beside the best of those who have written in English verse alone.

> But pleasures are like poppies spread,
> You seize the flow'r, its bloom is shed!
> Or like the snow-flake in the river,
> One moment white—then melts for ever;
> Or like the borealis race
> That flit ere you can point their place;
> Or like the rainbow's lovely form
> Evanishing amid the storm."

We are reminded, in conclusion, of the "absence of dialect in many of the poet's best-known single lines, such as 'the rank is but the guinea stamp,' or that noble phrase of mourning, 'and left us darkling in a world of tears.'" Burns did not *sink* into English, declares Mr. Murray, but "rose into it with complete spontaneity and unfailing judgment in all his more delicate, dignified, and charming work, and it is to his mastery of a most delicate, dignified, and charming English that he mainly owes the unique place he occupies among poets."

NOTES.

HENRY JAMES'S new novel, "The Ambassadors," is appearing serially in *The North American Review*.

FREDERICK W. RUCKSTUHL, of New York, chief of sculpture for the St. Louis World's Fair, has resigned on account of a disagreement with the Exposition directors. His place will be filled by Karl Bitter.

READERS of the first issue of *The Protest: a Journal for Philistines*, published last September "at ye Sign of ye Hop-Pole" in Crockham Hill, Kent, England, were urged to set a proper value on that number if only for the reason that it might be the last. Three more issues, however, have since made their appearance, "quaint, fragmentary, perverse, and quite unnecessary," according to the view of the London *Academy and Literature*. *The Protest* is printed by a coterie of young artists whose methods and ideals recall those of the Roycrofters at East Aurora.

IN the death of Mary Hartwell Catherwood, Western literature loses an interesting figure. Mrs. Catherwood was the author of sixteen books, among the best known of which are "The Romance of Dollard," "The Lady of Fort St. John," and "Lazarre." "She early recognized the fictional value of the history of the French in this country," declares the Chicago *Evening Post*, "and whatever of success she attained as a novelist rests upon her treatment of the material she garnered from the romance and realism of those early pioneering and pathfinding days."

SCIENCE AND INVENTION.

A SCIENTIFIC INVESTIGATION OF THE YEAR 1902.

THE year that has just come to a close is regarded as so remarkable from a physical standpoint by Messrs. Lagrange and Van den Broeck, two Belgian physicists, that at a recent meeting of the Belgian Geological Society they proposed that a scientific commission should be appointed to study the phenomena of the year and their interrelations. The proposition, we are told by the *Revue Scientifique* (December 6), was very favorably received. The writers said, as reported in that paper:

"It appears as if the year 1902 is to assume a peculiar character among those that precede and follow it. If we consider it from the point of view of seismic phenomena, or from that of volcanic action, we seem to agree in recognizing that it stands out in special prominence in the ordinary progress of such events. The geographical phenomena of which the region of the Antilles, and especially the islands of Martinique and St. Vincent have been the theater almost continuously since last March, and more particularly since May (the great explosion that destroyed St. Pierre was on the eighth of this month), have attracted our attention, amid this mass of geophysical disturbances, on account of the ruin and disaster that they have caused.

"If we consider them, however, from the scientific point of view alone, they seem to present themselves only as one of the aspects of a general disturbed condition in the totality of the phenomena; or, if the word 'disturbed' is perhaps too strong, in our present state of ignorance, let us say of a peculiar condition of these phenomena.

"This apparently peculiar state of the year 1902 we think it useful to study in a general manner, and to prove or disprove its existence by a scientific investigation in some definite directions. . . . These directions may be classified as follows: (1) Seismic phenomena; (2) volcanic phenomena; (3) meteorologic phenomena; (4) magnetic phenomena; (5) solar physics.

"But we do not wish the inquiry to stop here; we think that the commission should be asked to pass on a third point that it seems to us should give to our proposal its principal interest. Does the comparison of the material at our disposal indicate a dependence, a relationship between these different orders of phenomena; and if this relation exists, how does it manifest itself, what is its importance, where does it begin, and where does it end?

"Our project is a vast one. . . . The questions of general cosmic influences, of the close relationships between the divers phenomena of which the atmosphere, the oceans, and the earth's crust are the outward manifestations, gain daily in scope and are becoming more firmly established. We do not desire to quote here the systems that have been worked out, often most laboriously, along this line; we even wish to disregard all such systems in submitting this program. But who will deny that our central star, our sun, is the divinity that gives us life? . . . Who does not know that geophysic activity, the superficial variation of such elements as temperature and pressure, is in intimate correlation with the rotation of the globe? Need we mention the terrestrial magnetic system, whose elements show themselves in constant daily relation with the sun's height, and whose perturbations follow those of the sun's surface? The question, of course, does not lie here. The investigation that we propose is not for the verification of a system, but for the study of facts, the following-up of correlations of which a certain number are already well established by science, so that we may profit, while perhaps throwing a little light on the great questions raised, by a general investigation devoted to a year which, we repeat, seems to have been of a unique character. First of all, it is desirable precisely to define this character and to seek to make its causes clear."

It is remarked by *Ciel et Terre* (Paris) that this is not the first proposal for such an investigation. Among others, such a study was made in England after the memorable Krakatoa eruption; and even further back—three-quarters of a century ago—Quetelet established a sort of permanent investigating bureau for remarkable terrestrial phenomena, which was carried on at the Observatory of Uccle.—*Translation made for* THE LITERARY DIGEST.

IS ARSENIC A NECESSITY OF LIFE?

ONE would scarcely reckon arsenic as one of the things that we can not get along without; yet the recent discoveries of Prof. Armand Gautier, of Paris, seem to show that its presence in the body is absolutely necessary to some of the most important vital processes. The consequences of this discovery, which has already been mentioned in these columns, are thus set forth by M. Capitan, a contributor to *La Nature* (Paris, December 13):

"Arsenic—that terrible poison, abhorred of all peoples for ages; the chief ingredient of the philters of antiquity and the Middle Ages, when they were designed to get rid of a troublesome enemy—arsenic is neither more nor less than a constituent element of the tissues of all living beings, vegetable or animal. Without arsenic no life is possible; this purveyor of death is one of the great supporters of life. Such is the apparent paradox affirmed by Prof. Armand Gautier, as the result of physiological and clinical observations . . . . . .

"Arsenic, in fact, exists normally in man and animals, in the skin and its appendages, the thyroid and mammary glands, the brain and the bones. In the other organs it has been found only in slight traces. This organic arsenic is eliminated by the epidermis, the skin, the hair, and the horns in mammals. . . . . .

"Whence comes this arsenic? M. Gautier, not having found it in wheat, sought it in the lower plants that contain iodin. . . . In marine algæ, the seaweeds, containing large proportions of iodin, Gautier found considerable quantities of arsenic, as large as 0.208 milligram in 100 grams. In fresh-water algæ, poor in iodin, there was less arsenic. Curiously enough the mass of fossil algæ and their spores, constituting the special form of coal called 'boghead,' contain in 100 grams about 2.20 milligrams of arsenic.

"Is marine arsenic found in seaweed alone? To get information on this point, M. Gautier examined the living material known as 'plankton,' consisting of vegetable débris, lower animal life, and microscopic algæ, everywhere found in visible or invisible suspension in sea-water. In it he found a quantity of arsenic amounting to 0.0025 milligram to the liter. Sea-water, then, the great generator of the lower forms of life, is a veritable bouillon of arsenical cultures. Even when deprived of its plankton it still contains clear traces of dissolved arsenic, partly organic.

"But where does the sea get this quantity of arsenic, which, taking into account the enormous mass of sea-water that covers the globe, must represent a huge weight? Only the primitive rocks that have been corroded and abraded by the sea since geologic times would seem capable of furnishing this quantity of arsenic. And, in fact, M. Gautier has found 0.06 milligram of the metalloid in 100 grams of granite. The provision of arsenic on the earth's surface is therefore enormous, and will be sufficient for ages for the consumption of living beings, who also constantly restore it. The arsenical cycle has thus been established by the eminent chemist. First the sea takes it from eruptive rocks and dissolves it. Numerous marine plants, as well as fishes, take it up, and can transmit it to man. Land plants also take it from the soil formed by the detritus of old rocks and pass it on to other plants and to animals.

"When it has once entered the organism, as we have seen, the arsenic localizes itself in certain groups of organs. It is certainly not abundant in the tissues like nitrogen, nor even like phosphorus, but it plays a very important part there. Just as phosphorus is the exciting element of the functions of cellular nutrition, arsenic appears to be the exciting ferment of the still more important functions of sensation and reproduction.

"We see then that the old physicians who prescribed arsenic to tone up the organism and stimulate its functions, and at the same time to save its own substance, did good without knowing it, as M. Jourdain wrote prose. They thought that they were bringing about a simple stimulation of the organism by means

of a poison administered in feeble doses, and they were right; but they were doing still more—they were furnishing to the organism one of its necessary constituent principles of which it was in need.

"Thus, from all these different points of view, the discovery of M. Gautier is of the liveliest interest. It introduces a new idea into the chemistry of living beings; it tells us of the universal part played by arsenic; it may also be fertile in various applications to therapeutics, perhaps even to hygiene, mental as well as physical, since to absorb assimilable arsenic is to enrich the brain, increase its vitality, and improve the psychic functions. Half a century ago Moleschott's exclamation—'No mind without phosphorus!'—made a great sensation among his contemporaries. Now we can say with even more reason, 'No thought without arsenic!'"—*Translation made for* THE LITERARY DIGEST.

THE OVERPRODUCTION OF WEAKLINGS.

OF the fact that civilization sometimes involves retrogression as well as progress there seems to be, unfortunately, little doubt. Especially along the lines of the physical condition of the race does this tendency show itself. This question, which has challenged the attention of more than one thinker, has recently been treated by Mr. H. G. Wells in *The Cosmopolitan* in an interesting manner. Altho Mr. Wells is chiefly known as a writer of imaginative fiction, he has had a thorough training in science, and his book "Anticipations" has shown that his ideas on the social problems of the future, especially as related to advances in applied mechanics, can be thrown into a more serious form than that of romance. Says a reviewer in *The Medical Record:*

"He deals with the question of overpopulation, and the deterioration of the human race under the present conditions of life in civilized countries. With regard to infant mortality, Mr. Wells is especially eloquent, and his strictures on things as they are pungently scathing. He says, in part: 'A portion of infant and child mortality represents, no doubt, the lingering and wasteful removal from this world of beings with inherent defects, beings who, for the most part, ought never to have been born, and need not have been born under conditions of greater foresight. These, however, are the merest small fraction of our infant mortality. It leaves entirely untouched the fact that a vast multitude of children of untainted blood and good mental and moral possibilities—as many, perhaps, as one hundred in each one thousand born—die yearly through lack of sufficient food, lack of sufficient good air, and lack of sufficient attention. The plain and simple truth is that they are born needlessly. There are still far too many births for our civilization to look after adequately; we are still unfit to be trusted with a rising birth-rate.'

"Mr. Wells's remedy for this state of affairs, while no doubt Utopian at the present juncture, is, nevertheless, based upon some solid foundation of common sense. The first of the expedients, he thinks, which would lead to a permanent improvement in these matters is the establishment of a minimum of soundness and sanitary convenience in houses, below which standard it shall be illegal to inhabit a house at all. There should be a certain relation between the size of rooms and their ventilating appliances, a certain minimum of lighting, certain conditions of open space about the house, and sane rules about foundations and materials. These regulations would vary with the local density of population. Legislation against overcrowding is another measure recommended by the writer.

"Mr. Wells's views have received much attention at the hands of English medical men, and it is recognized that he has treated the subject in a brilliant and, in many respects, in an illuminating manner."

TALKING OVER A BEAM OF LIGHT.

THE ingenious improvements on Bell's photophone, recently made by Ernest Ruhmer, of Berlin, have already been noticed in this department of THE LITERARY DIGEST. We are now enabled to give further particulars from a description of Herr Ruhmer's apparatus contributed to *The Electrical World and Engineer* by A. F. Collins. The two fundamental principles involved in the Ruhmer electro-optical telephone are the variation in the resistance of selenium under the action of luminous waves, and the changes in the light-emitting qualities of an electric arc under the influence of a superimposed current. Says Mr. Collins:

"In one of the earliest types of arc-transmitter and selenium-receiver . . . a beam of light, either from the sun or an arc-lamp—altho the latter is the more preferable form—is caused to pass through a condensing lens where the converged rays fall on a concave mirror of small dimensions. This mirror is fastened with exactness to the center of a diaphragm—such as is used in an ordinary telephone-transmitter; and placed immediately back of it is a mouthpiece.

"An objective lens for projecting the light to a distant receiving-device completes the transmitting system, and it is at once obvious that an electric current plays no part in the propagation of the message, if we except the fact that light is itself of electro-magnetic origin.

"The receiver differs from the transmitter in that it is strictly an electro-optical apparatus. [It consists of] a parabolic reflector of short focal length and having in its focal line a selenium cell. Connected to the terminals of the selenium cell and in series with it are a single [battery] element and a telephone-receiver.

"In action, the apparatus is quite simple. When the diaphragm of the transmitter is caused to vibrate, there is a relative change in the amount and intensity of the beam of light reflected from the mirror and through the lens. The light waves, so propagated, are received by the parabolic reflector, and here again the diverging light is brought to a concentrated point of great intensity, where it acts upon the photo-electric cell of selenium, which, with every minute variation of the converged pencil of light, responds by a similar change in its resistivity properties to an electric current.

"With the object in view of developing the experimental photophone of Professor Bell into a wireless telephone having an application which should be of commercial value, Mr. Ruhmer has devoted much time to the experimental investigation of the speaking-arc, the selenium cell, and their combination as forming a completed whole."

Shortly after Professor Bell concluded his experiments with the photophone in this country, Dr. H. T. Simon devised the so-called speaking-arc. In this an alternating current due to an induction-coil to which a telephone-transmitter is attached is passed through the lamp, where it is found that the emitted light varies proportionately. These variations of volume and inten-

sity, altho so rapid that the eye can not detect them, are sufficiently great to impress either a selenium cell or a sensitive photographic film. Says the writer:

"By causing a kinetoscopic film, such as is used in moving-picture machines, to move rapidly before the speaking-arc, Ruhmer has succeeded in photographing these changes and in this way be obtained a continuous record of the different degrees of light representing articulate speech; and by passing this moving record of the voice before an arc-light and a selenium cell in circuit with a telephone-receiver the original sound-waves

RUHMER'S RECEIVING APPARATUS.

are reproduced with very little distortion and with considerable distinctness, and thus a new form of phonograph results."

Ruhmer's trials of this device have been remarkably successful. To quote again:

"The first trial was made across the Wannsee in the daytime, a distance of 1½ kilometers [about a mile] when the air was clear. The second experiment took place in a heavy rain. This was also across the Wannsee, the distance being 1.6 kilometers. An accident to the storage-battery prevented tests to a greater distance.

"On July 16, in the afternoon, when the sun was shining, another test was made and proved entirely successful, articulate speech being reproduced clearly a distance of 2.3 kilometers [1⅓ miles]. As these tests exceeded in range the limits of the Wannsee it was determined to test the photo-electrical telephone on the Havel, where a greater distance could be obtained. On the evening of July 25 tests were made between the transmitter on the *Germania*, near Peacock Island, over a distance of 7 kilometers [4⅓ miles], to the receiving-station erected on an eminence at Kaiser Wilhelm Tower, Grunewald, and when the atmosphere was heavy and somewhat foggy. This ended the series of experiments, but I am informed by Herr Ruhmer that at subsequent tests he was enabled to transmit articulate speech a distance of 15 kilometers [9⅓ miles], when it was received in a very satisfactory manner."

ARE THE NEGROS DEFICIENT IN VITAL RESISTANCE?

THE vital statistics of the last census show that at every age-period the mortality among the colored people is far higher than among the whites. This fact has been widely commented on both in the medical and the lay press, and has been generally held to show that the powers of vital resistance in the negro race are below par. In *The Medical Examiner*, which is largely devoted to life-insurance, the problem is considered by F. J. Hoffman, statistician to the Prudential Insurance Company, who comes to the conclusion that "the various races and types of mankind differ fundamentally and widely in longevity and specific disease liability," and that from the insurance standpoint it would be the height of folly to grant equal rates to the two races. Among other things Mr. Hoffman shows that the death-rate from consumption among colored adults is nearly four times as great as among whites, while it is nine times as great among colored as among white children. These facts would seem at first sight as conclusive as they are startling, yet Mr. Hoffman's inferences are challenged editorially by *The Hospital* (December 13), which on looking carefully into his tables finds room for doubting whether the data prove the existence of special liability to disease in the negro. Says the writer:

"That the death-rate among the colored population is excessive there seems to be no doubt or question. But before we can put this down to any special weakness of stamina, any special defect in disease-resisting power, we must be assured that the average negro is exposed to no greater risks, and that the sanitary conditions amid which he lives are on an average no worse than those of the surrounding whites; and it is here that the statistics not only fail, but appear to suggest another explanation. Among the tables given is one which, as well as showing the comparative mortalities of whites and blacks, gives also the comparative mortalities of various races of whites, arranged according to the nationalities of their mothers. From this we see that while the difference in the death-rates between whites and colored far transcends any that is to be found between the whites of various nativities, yet a very considerable difference does occur among the several groups of whites. At adult ages it is the Irish who, next to the colored races, have the highest death-rate. Take the age-period of 34 to 44, and we find that, against 7.5 among the United States whites, it was 15.0—that is, more than twice as great—among the Irish, and 21.0, or nearly three times as great, among the colored population; while in regard to consumption the Irish death-rate at certain ages treads closely on the heels of the excessive mortality of the colored races. What is there, then, which is common to the colored and the Irish?

"In regard to the difference between the death-rates of the native-born and the foreign whites, we are told that 'The fact must not be overlooked that the foreign whites are very largely employed in dangerous and unhealthy occupations . . . so that the observed difference in the death-rate is probably less the result of type than of social and economic condition.' Does not this quotation let the cat out of the bag? Is it not the fact that the very influences which lead to excessive mortality among the foreign-born, and especially the Irish, in American cities, operate in an enhanced degree among the colored races? The Irish who emigrate are to a large extent unskilled laborers who live in poverty amid insanitary conditions. Hence they die. But is not this tenfold the case with the colored races in the South, and do they not also die for the same reason? This is the point on which the whole question hinges. At first sight the reading of the statistics seems to teach us that when we see a sick negro we must allow for an inherent deficiency of stamina and give a prognosis proportionately grave because he is a negro; and, indeed, that for other races also we must make a 'correction' for nationality before we can truly estimate their vital resistance.

A more careful reading seems to show that certain races are willing to accept, and are even capable of being happy among, surroundings which to others would be absolutely repugnant; and that the striking differences in mortality are to be explained by differences in mode of life and in sanitary surroundings rather than by some inexplicable racial tendency to disease."

THE BIRTH AND DEATH OF WORLDS.

THE theory of Prof. W. Meyer, of Berlin, connecting the destruction of bodies in space with the elements of volcanic catastrophes, has already been noticed in these pages. An unfavorable criticism in *Nature* (London) provokes the following retort in *La Science Illustrée* (November 29) from M. W. de Fonvielle, who regards such criticism as lacking in philosophic spirit. That old worlds perish daily in volcanic disaster and that new ones are continually formed from their dust and fragments, he regards as eminently probable, but he is not particular about the exact details of the process. He says:

"The author regards the universe as formed by the successive crystallization of the débris of exploded worlds which abound in all parts of space and of which the earth collects specimens daily. As a proof of this latter assertion it may be remarked that falls of aerolites are much more frequent than is generally supposed. . . . This idea is only a generalization from those of the two great Englishmen, Lord Kelvin and Sir Norman Lockyer, whose genius has been aroused by the innumerable celestial collisions of which we are the mute witnesses and of the volcanic explosions that seem to indicate how the earth is to come to an end in some far-off day.

"The earth is at a distance from the sun equal to 108 times the latter's diameter, or say 100 times to simplify calculation. Neptune is 30 times farther away, which makes its distance 3,000 solar diameters. Suppose that the planetary system stops at these narrow limits, and that it represents the boundaries of the ancient nebula.

"The matter condensed in the sun's mass must then have occupied a volume 27,000,000,000 greater than at the present time.

"Suppose, further, that the matter left behind equals 26 suns, the dilatation would be still in the ratio of a thousand million to one.

"As the density of the sun is nearly that of water, the mass of the matter distributed over each cubic kilometer [about ¼ cubic mile] must have been no greater than a ton. What quantity of heat would be necessary to produce such an expansion?

"Supposing that the conditions resemble those that obtain in the case of water, 212 calories are sufficient to vaporize a kilogram of water, that is, to increase its volume 1,500 times; we shall require about 7 calories to double the volume of each kilogram of the nebulous matter, whose total volume was a thousand million times greater than now, so that each must have contained 7,000,000,000 calories of primitive heat. As the sun is 300,000 times as large as the earth, the substance that composes it weighs 300,000 times as much. But the earth weighs more than 5,000,000,000 million million of kilograms. I leave to the reader the task of multiplying together these various numbers.

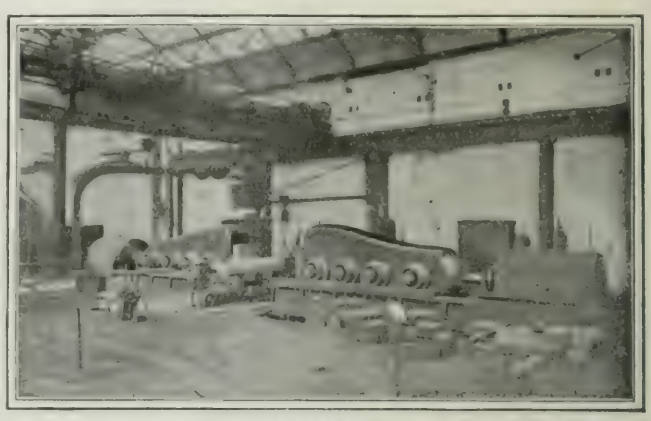
"Nature . . . always adopts the simplest solutions. Explosions of planets, collisions, conflagrations, are frequent events in the universe. Certainly each instant sees some sun or some giant planet perish in infinite space. Consequently, since we are continually seeing some of these unfortunate bodies perish, it is only logical to assume that others are continually being formed. Providence must hold the balance equally between life and death. If there are worlds that disappear, whose separated fragments are hurled in all directions, reason tells us that others must arise, which will perhaps serve as habitations for wiser men, less imperfect, less barbarous. . . . . .

"To criticize petty details of Mayer's work is to fail to comprehend its bearings. He has tried to give us an idea of the drama of eternity, and we should not pass judgment on him with close analysis that is lacking in the philosophic spirit."—*Translation made for* THE LITERARY DIGEST.

HORIZONTAL STEAM-HAMMER.

AN unusual type of steam-hammer has been placed in the shop of the Lancashire and Yorkshire Railway, at Horwich, England. It is duplex, that is, it consists of two great battering rams, which catch between them the ingot to be worked upon. Says *Cassier's Magazine*, in a brief description of the accompanying illustration:

"The engraving shows also the overhead traveling-crane and other mechanism for carrying the ingots under treatment from furnace to hammer. The movement of the ingot to and fro is



A 35-TON HORIZONTAL DUPLEX STEAM HAMMER IN THE SHOPS OF THE LANCASHIRE AND YORKSHIRE RAILWAY, HORWICH, ENGLAND.
Courtesy of *Cassier's Magazine* (New York).

hydraulically operated by a man who stands at the lever shown in front. He has complete control of the machine, with a clear view of the work. It will be observed that foundations such as are requisite in a vertical steam-hammer are needless in the case of the one under notice. Each hammer-head acts as an anvil for the other, the impact of the blow being absorbed mutually. In comparing the work of a single 35-ton hammer it is evident that each blow of this duplex 35-ton design has to be through only one-half the space in order to produce the same effect, and a greater number of blows can, therefore, be given in the same time. The blows, also, being in opposite directions, counteract one another with a resulting absence of vibration."

SCIENCE BREVITIES.

"THE University of California will begin at once the construction of a special laboratory of physiology for Dr. Jacques Loeb," says *Science* (December 19). "It is now announced that the $[illegible] lately given to the University will be used for the construction of a Hall of Physiology to be completely equipped with research laboratories, salt-water aquaria, etc. Professor Loeb will begin his work at the University of California in January."

"THE bactericidal effects of the arc-light are much superior to those of sunlight," says *Science Abstracts*; "the very rapid ultra-violet is absorbed by the atmosphere. A rapid oscillation high-tension arc, particularly between iron points, gives off an abundance of ultra-violet rays of extremely small wave-length, with a fair proportion of lower refrangibility; to these ultra-violet rays quartz is transparent, . . . gelatin is quite opaque, ice is as transparent as air, and a film of iron oxid quite opaque. For use, as blood is opaque to the rays, they are passed through ice made to press upon the region affected, so as to make it anemic."

"ANOTHER scientific experimenter," says *The Scientific American*, "has been working on the same line with Professor Loeb, of Chicago, who has obtained, as claimed, a material form of the life principle. In a recent report of the Psychical Science Congress at Ajaccio, Dr. Leduc told how by sprinkling a few drops of ferrocyanid of potassium on a thin layer of gelatin, he could cause to 'start into life a collection of cells having a regular polyhedric form and containing each a nucleus, a sac of protoplasm and a membrane, exactly like the cell of a plant or animal.' It was not, however, claimed by the speaker that these cells have the power to grow, or to move, or to reproduce themselves."

THE American Association for the Advancement of Science, the American Society of Naturalists, and various special societies have just held sessions at Washington, in what was the first of an annual series of scientific convocations at the national capital. "The national scientific societies," says *Science*, "have hitherto met in two groups—the American Association and its affiliated societies in the summer and the American Society of Naturalists, with most of the societies devoted to the biological sciences, in the winter. These two great groups of scientific societies will this year meet together during convocation week at the chief scientific center of the country. Under these circumstances the meetings will be the largest and most important ever held on this continent. Press despatches indicate that the convocation was largely attended and very successful."

THE RELIGIOUS WORLD.

THE METHODISTS' TWENTIETH-CENTURY FUND.

FOUR years ago a plan was broached in the Trinity Methodist Church, Springfield, Mass., to raise a Methodist "thank-offering fund" of $20,000,000, in celebration of the opening of the twentieth century. At a watch-night service held in the same church on December 31 last, the Rev. Dr. Edmund M. Mills, corresponding secretary for the fund, announced from the pulpit that the last dollar of this great total had been raised. His achievement, observes the Philadelphia *Press*, is "unprecedented in church history." And the Chicago *Northwestern Christian Advocate* (Meth. Episc.) says: "The thank-offering movement will make the closing years of the nineteenth century and the opening years of the twentieth century an epoch in the history of American Methodism."

THE REV. DR. EDMUND M. MILLS, Organizer of the Methodist $20,000,000 fund.

The Springfield *Republican* gives the following account of the work undertaken by Dr. Mills:

"The task of raising this immense fund was of stupendous magnitude. The minister upon whom the committee at first pitched, a Philadelphia man, declined with haste. Dr. Mills was then selected. He was a presiding elder in the Elmira district, and at the conclusion of his great task has made arrangements to step back into his district as quietly as he emerged from it. He has visited every conference in the United States from Maine to Oregon, and has written and received hundreds of thousands of letters.

"'It was romantic work,' he said; 'almost like gambling, I should imagine, for I never felt sure just where the next dollar was coming from to make some desired fund complete. One feature of the work which has struck me with peculiar force is the wonderful part played by the sons of Methodist clergymen. We have found them, these boys of the parsonage—East, West, North, and South—now grown into men of wealth, ready and eager to give to the cause. The father of one man who gave us $400,000 was a poor Methodist clergyman, whose largest salary was $400 a year. The son is worth $20,000,000 to-day, and with one stroke of his pen has given to the church what his father would have earned in one thousand years. Another interesting thing is the fact that, averaged up, the fund has not been increased by any great gift or series of gifts. It has come from the rank and file of the church. For instance, the Norwegian conference in Minnesota, made up of poor men, leads the list with an average gift of $22 a member, while the German conference of Oregon comes in second with an average of $20 a member.' . . . . .

"Of the fund, Rev. Dr. Mills says that $7,850,758 has been raised for educational purposes, and of the total, more than $500,000 has come in within a month and a half. More than 86 universities and schools will be its beneficiaries. Syracuse University leads, with gifts amounting to $1,176,800, and Ohio Wesleyan is next, with $1,092,806. 'There are several of our college presidents,' said Dr. Mills, 'who have not been doing their duty in the matter, and now, when they begin to realize what has been accomplished, are moving heaven and earth to keep from losing their positions next year.'

"For the purpose of paying off church indebtedness $8,000,000 will be devoted, and it is the expectation of the directors of the fund that not a Methodist church in the United States will be in debt when the payments are complete. The plans for the charitable side of the movement are not less remarkable. Since the fund was started three years ago ten new hospitals have been founded. Two of them have been founded outright by wealthy laymen, one being located in Mason City, Iowa, and the other in Mattoon, Ill. Within the last month Mrs. Clement Studebaker, of Indianapolis, widow of the well-known wagon-maker, has paid off the rest of the $60,000 debt on the Epworth hospital in that city, in which another one is soon to be erected at a cost of $100,000. Of this sum $70,000 has been subscribed by Dr. Halsted. 'Thirty years ago,' said Dr. Mills, 'the Methodist Church had not one hospital in the world; now we have twenty.'"

The Baltimore *American* points out that the distribution of so great a fund will mean "an advance movement for Methodism all along the line." The Chicago *Daily News* comments:

"Measured simply by its tangible benefits, a movement which has resulted in more than doubling all the capital which the church hitherto has had invested in philanthropy and charity must be accounted remarkable; but the Methodists will not overlook its finer significance as a revelation of the abiding vitality and vigor of human faith. In the light of this exhibition of earnest zeal and religious conviction who shall say that the twentieth century finds the forces of doubt or selfish materialism in the ascendency?"

THE "RECESSION" OF FAITH IN MIRACLES.

THE controversy in regard to the reality of Christian miracles, which has been actively carried on in both England and this country during recent months, and to which many references have been made in our pages, has been given a new impetus by an editorial in the New York *Independent*, bearing the title, "The Recession of Miracle." The conclusions reached in this article are certainly startling, when their source is considered, for *The Independent* evidently wishes to convey the idea that belief in miracles is not essential to Christianity. It says, in part:

"Belief in miracle is a purely intellectual act. It is not ethical or spiritual. It has nothing to do with character. It depends on arguments, on evidence. It goes when evidence goes. So far as it is religious, it is concerned solely with the theological side of religion, with its philosophy or its history. It has value, great value, if it is true, in the evidence it brings of God. Yet we have sufficient evidence of God without miracle. But even so, it is only additional evidence, arguments, purely intellectual. It may be persuasive to character, but it is not character.

"If the miracles of our Lord should be discredited as history, the teachings of his Gospel must remain. The peculiar glory of Christianity is in the regeneration which it brings to the soul. It teaches no Buddhist self-effacement, no mere Jewish honesty of righteousness, but that central reforming of the soul which puts it under the rule of love. It is not enough to do no wrong to one's neighbor; one must positively love his neighbor and even his enemy. Whether Christ was born of a virgin or not, whether his flesh and blood and bones rose from the sepulcher or not, whether four hundred believers saw him ascend into heaven or not—and we shall not hasten to give up our belief—we yet know that the Christian religion rests on the Sermon on the Mount, on the Eleventh Commandment, on the regeneration of the soul taught to Nicodemus, on Paul's psalm of charity. So, if the miracles should one of these days have to go, we should still hold fast to all the duty, the obligation, the service, the character, the new heart, the holy life of love, and should still believe that we had retained all that was vital in Christianity, all that the miracle was used to support."

Protests against this view of the place of the miraculous in Christian belief find utterance in several of the more conservative religious papers. The Chicago *Advance* (Congregationalist) says:

"Much of our interest in the New Testament centers in its

great miracles. We are here told of a Mighty Being who commanded nature to do his bidding. His was the master mind. Christ does not stand upon the same ground as that of any great, good man; he was this and infinitely more than this. The early preachers made the supremacy of Christ and the stupendous miracle of his resurrection from the dead the chief elements in their preaching. These men believed that Christ was raised from the dead, as a historical fact; it was this fact of the miracle that revived the drooping spirits of the disciples after he had been crucified upon the cross. It was this setting forth of the great claims of Christ that brought about the severe persecutions, that caused many to gladly suffer and die for him, and brought into the fold of the church great multitudes of people. We believe in the regeneration of the soul as it was taught to Nicodemus, the greatness of the teachings of the Sermon on the Mount, and the obligation to a holy life of love. But behind all these the surety of our faith is in the indisputable signs that Christ gave that he was the Son of God."

The Boston *Watchman* (Baptist) asks: "May it not be that one of the reasons why Christianity is not advancing to-day as we believe it should is that so many are substituting for the Christianity of the New Testament a type of religion that is emasculated of the miracle of the Resurrection, and, hence, is a stranger to the divine certainty of the truth of Jesus, to the sovereignty of his authority, to the efficacy of his atonement, and the assurance of his triumph that are involved in his resurrection?" And the Louisville *Western Recorder* (Baptist) says:

"*The Independent* is making progress away from 'the faith once for all delivered to the saints.' Some time since it repudiated the binding authority of Scripture, and now it gives up insistance on miracles. It has not yet formally abandoned its faith in miracles, but that will come in due time. *The Independent* claims that we can let miracles go and still hold to what is 'vital in Christianity'; in other words, we can be good and not believe in miracles. So it goes.

"The next step will be to give up everything divine, and to hold that we can still be good and hold to all that is vital and essential in religion while yielding to pure naturalism. The next step will be to give up immortality and to become like the beasts that perish.

"When a man starts on the line of evolution and higher criticism he gives up more and more, and he has no logical stopping-place till he has given up everything. The frantic efforts of those who start on this line to hold to 'wh t is vital,' while giving up more and more, are pitiful. Their claiming that 'after all we have this or that much left' is simply whistling to keep their courage up. They have surrendered everything, and have left themselves at the mercy of the enemy. As George Adam Smith says, it is left only for the critics to fix the indemnity, and to take all they want, and verybody ought to have learned that they want everything With them 'progress' means to deny more and more. And their work will not be done as long as any belief is left."

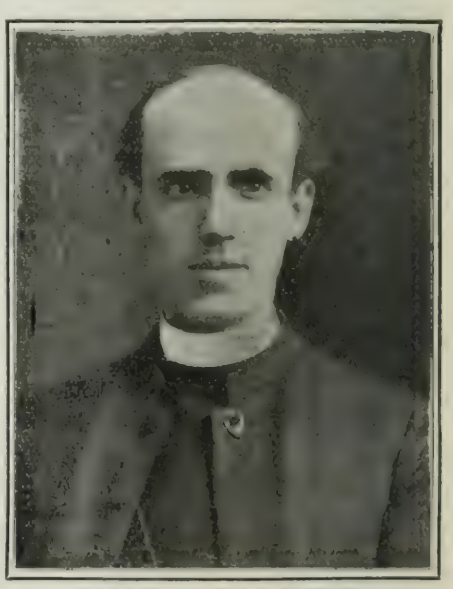
Zion's Herald (Meth. Episc., Boston) says:

"Even from a purely naturalistic standpoint we have to admit that there were great religious geniuses when the New Testament was written. We should all have said that the story of the Annunciation could not be told without shocking every sentiment of religious reverence But read it, and see the impossible accomplished. Assuming the historical fact, it could not be more simply and divinely told. Or take the song of the angels. As Tayler Lewis said, it is not surprising that shepherds should see lights and hear voices; but such lights and such voices! These are the wonder. For there was nothing in their thought and training so to shape the vision as to bring out on earth's weary air that message of good tidings of great joy for all people for which men had waited so long. And as for the angels, they were never more fittingly employed since the beginning of time. . . . . .

"If it was only poetry, it was magnificent poetry; and there are some who think that, so far as human language can express the unpicturable and ineffable relations of the spiritual world, it was not only poetry, but also divine fact."

THE THEATER AS AN ADJUNCT OF THE CHURCH.

THERE are many evidences nowadays of a growing sympathy between the theater and the church. We have already had occasion to note in our pages the activities of the Rev. Forbes Phillips, of Gorleston, England, who has organized a dramatic society in his own parish, and proposes that such societies be established under church auspices throughout the United Kingdom. In this country the "Actors' Church Alliance," of which Bishop Potter is president and Joseph Jefferson vice-president, is steadily enlarging the sphere of its influence. It now has 2,500 members in 400 cities of the United States, Canada, Hawaii, and the Philippines. Its secretary, the Rev. Walter E. Bentley, has recently transformed the basement of his church in New York into a theatrical auditorium, and is planning to have "Everyman," the fifteenth-century morality play, and other suitable dramas, performed there. In an interview with a New York *Tribune* reporter, he has explained as follows his views of the relation between the church and the stage:



THE REV. WALTER E. BENTLEY,
General Secretary of the Actors' Church Alliance.

"The church should touch the life of the people at every point. There should be nothing foreign to the clergyman. When there is, it is because he isn't wide awake. The church should direct all the amusements of the people, not control them—that is a very different thing. But the church should recognize the universal, natural demand for amusement, and should supply that demand. . . . The stage is one of the greatest teaching agencies that has ever been given to man; as great as the school, the press, or the ballot-box. The trouble is that the stage isn't taken seriously as these are. The church doesn't take it seriously, the people don't take it seriously, and it doesn't take itself seriously. It is regarded as existing merely to cater to the amusements of the people; but even if this be true, the amusements of a people have fully as important an influence in molding their lives as anything else in their environment. There is no greater channel for the conveyance of moral truths or high ideals to mankind than the stage. But of course it can't fill that function when it is governed by the little window out in front. If actors could cooperate and manage their own theaters, it might be different. But the trouble is that a man who is a good actor can rarely do anything else. Dramatic sense and business sense don't commonly go together. Sir Henry Irving is a wonder, and wonders are rare. The stage itself doesn't realize its own value or worth to the world. It is for the church to realize the value of this teaching agency and take it up and make use of it."

The Rev. Dr. W. S. Rainsford, of New York, is encouraging the same spirit in his parish, and his last annual report bears witness to the fact that the St. George's Dramatic Society "has met a long-felt need." In a letter to the New York *Outlook* he says:

"A great number of our East Side young men and women—as a rule the smartest and best among them—are interested in dra-

matic affairs; . . . and the members are doing quite serious work in helping our parish organization in many ways."

In some quarters, the disposition to unite the functions of church and of stage evokes expressions of emphatic disapproval. The Philadelphia *Church Standard* (Prot. Episc.) thinks "there has been a good deal of well-meant but very silly gush of late on the supposed relations of the church and the theater." It continues:

"There have been times in the history of civilization when the drama has fulfilled a notable and noble function in the education, and even in the moral and the political instruction, of the people. The Homeric ballads which were afterward combined in the great epics of the Iliad and the Odyssey became only more useful, because more lively, when they were presented in a dramatic form on the rude stage of Thespis; and there came a time when the Greek drama led the threefold function of press, pulpit, and social censor all at once, and served them fairly well. Nor have we the slightest inclination to forget that the unlettered people of the Middle Ages were taught many a Bible story and many a lesson in good living by moralities and miracle plays of which the Passion Play of Ober-Ammergau is so interesting a survival. Finally, it ought not to be forgotten that the Bible itself contains two books which, tho they are not written in the form either of the classic or of the more modern drama, are certainly of a dramatic character, and one of them *may be* an ancient specimen of a form of dramatic composition and performance which is still extant in Syria. But to what, after all, do all these liberal admissions amount? To this only, that the form of a dramatic composition is a matter of literary art, and its performance a matter of esthetic art, while its intellectual and moral character must be judged by reason and conscience. The form of a play may be faultless from the literary point of view and its dramatic exhibition may be esthetically beautiful, but if it borrows the livery of heaven to serve the devil of licentiousness, then its literary and dramatic excellences make it only so much the more detestable as an agency of evil."

In the opinion of *The Church Standard*, the majority of modern plays are either insipid or else actually vicious. It says:

"The plays which are actually brought out on the modern stage have mostly no literary character at all. They are just sheer undiluted nonsense, interspersed with songs and dances and an occasional joke which is sometimes, tho we should hope seldom, of an equivocal character. It would be difficult to rouse any very strenuous moral indignation against shows of that kind. Their worst fault is their incredible silliness. Yet we know men, hard-working and hard-thinking men, who prefer such shows to others of a more intellectual character, probably because they are *amusements* in the strictest sense of that word, since they serve to draw off the mind from its customary activities and so allure the jaded nerves into a brief period of repose. What has the church to do with such performances? Nothing more, so far as we can see, than it has to do with the exercises of athletic clubs. . . . . .

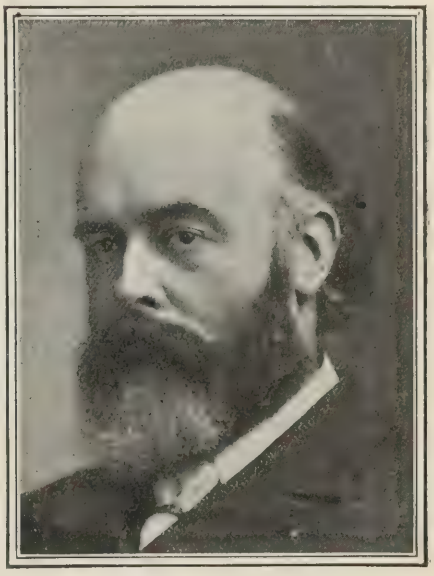
"But there is another class, the main attraction of which consists in the direction of the mind of the spectators into channels of depravity. On these we can not, will not, need not dwell. They are a disgraceful fact in what we are pleased to call our present advanced civilization. They enlighten no man's mind; they stimulate no man's conscience; they rouse, and they are meant to rouse, the sensual passions. Pretending to deal with 'life as life is,' the warp and woof of them is spun from the vile secretion of a morbid and morbidly infectious imagination.

"'' 'Tis true, 'tis pity, and pity 'tis 'tis true,' that such performances draw crowds of eager spectators, so that it pays to produce them. That is the great trouble; for the worst vice of the modern stage is its absolute venality. The whole thing is governed by the vulgarest law of supply and demand; and nothing in the world is more absolutely venal, or more ready to be sold to the purposes of vice, than the modern theater. If the public wants to gloat over a spectacle of vice, that spectacle will always be forthcoming. There will always be managers willing to prostitute the stage to that foul purpose, and there will always be literary purveyors of filth ready to prostitute such talents as they have to the production of 'realistic' dramas, which in plain words signify dramas of vice."

The conclusion reached is that "with the theater, as the theater is, the church has no connection, and can have none." But church-members can and do sustain a definite relation to the drama, and by their patronage are able to influence the nature of the plays presented. "If they would have the powerful attractions of the drama ranged on virtue's side, they can do that most effectually by supporting the innocent and truly intellectual drama, while refusing to contribute one penny or one moment to the support of the drama of vice."

A SCIENTIST'S VIEW OF THE CONFLICT BETWEEN SCIENCE AND FAITH.

THERE is a disposition among theologians nowadays to insist that there is no essential conflict between science and religion, and that, if properly interpreted, the conclusions of science are in harmony with Christian belief. Sir Oliver Lodge, the principal of Birmingham University and an eminent British scientist, dissents from this view. In an article contributed to the first issue of *The Hibbert Journal*, a "Quarterly Review of Religion, Theology, and Philosophy," published in London under the terms of the Hibbert bequest, he declares: "No doubt it must be admitted by both sides that the highest science and the truest theology must ultimately be mutually consistent, and may be actually one; but that is far from the case at present." He continues:



SIR OLIVER LODGE,
Principal of Birmingham University.

"It must, I think, be admitted that the modern scientific atmosphere, in spite of much that is wholesome and nutritious, exercises some sort of blighting influence upon religious ardor, and that the great saints or seers have as a rule not been eminent for their acquaintance with exact scientific knowledge, but, on the contrary, have felt a distrust and a dislike of that uncompromising quest for cold hard truth in which the leaders of science are engaged; and on the other hand, that the leaders of science have shown an aloofness from, if not a hostility for, the theoretical aspects of religion. In fact, it may be held that the general drift or atmosphere of modern science is adverse to the highest religious emotion, because hostile to many of the doctrines and beliefs upon which such an exalted state of feeling must be based, if it is to be anything more than a wave of transient enthusiasm.

"Nevertheless, we must admit that there have been men of science, there must be many now living, who accept fully the facts and implications of science, who accept also the creeds of the church, and who do not keep the two sets of ideas in watertight compartments of their minds, but do distinctly perceive a reconciling and fusing element.

"If we proceed to ask what is this reconciling element, we find that it is neither science nor theology, but that it is philosophy, or else it is poetry. By aid of philosophy, or by aid of poetry, a great deal can be accomplished. Mind and matter may be then no longer two, but one; this material universe may then become the living garment of God; gross matter may be regarded as a mere inference, a mode of apprehending an idealistic cosmic

reality, in which we live and move and have our being; the whole of existence can become infused and suffused with immanent Deity."

Such theories of the universe as these, observes Principal Lodge, represent "a guess, an intuition, an inspiration, perhaps, but are not links in a chain of assured and reasoned knowledge." They do not solve "the knotty entanglement," but "soar above it." He writes further:

"It is difficult to resist yielding to the bent and trend of 'modern science,' as well as to its proved conclusions. Its bent and trend may have been wrongly estimated by its present disciples: a large tract of knowledge may have been omitted from its ken, which when included will revolutionize some of their speculative opinions; but, however this may be, there can be no doubt about the tendency of orthodox science at the present time. It suggests to us that the Cosmos is self-explanatory, self-contained, and self-maintaining. From everlasting to everlasting the material universe rolls on, evolving worlds and disintegrating them, evolving vegetable beauty and destroying it, evolving intelligent animal life, developing that into a self-conscious human race, and then plunging it once more into annihilation."

The rejoinder of the theologian to the scientist has ever been that science reveals the laws of life, but not its origin; and the scientist, as Principal Lodge admits, has hitherto had to confess that this statement is true. He adds:

"But will the theologian triumph in the admission? Will he therein detect at last the dam which shall stem the torrent of skepticism? . . . Any year, or any century, the physical aspect of the nature of life may become more intelligible, and may perhaps resolve itself into an action of already known forces acting on the very complex molecule of protoplasm. Already in Germany have inorganic and artificial substances been found to crawl about on glass slides under the action of surface-tension or capillarity, with an appearance which is said to have deceived even a biologist into hastily pronouncing them living amebæ. Life in its ultimate element and on its material side is such a simple thing, it is but a slight extension of known chemical and physical forces; the cell must be able to respond to stimuli, to assimilate outside materials, and to subdivide. I apprehend that there is not a biologist but believes (perhaps quite erroneously) that sooner or later the discovery will be made, and that a cell having all the essential functions of life will be constructed out of inorganic material."

The real controversy between religion and science, concludes Principal Lodge, is not so much a controversy as to the being or not being of God. Even if science conceded the existence of God, "there would still remain a question as to His mode of action, a controversy as to the method of the divine government of the world." We quote again:

"This is the standing controversy, by no means really dead at the present day. Is the world controlled by a living Person, accessible to prayer, influenced by love, able and willing to foresee, to intervene, to guide, and wistfully to lead without compulsion spirits in some sort akin to Himself?

"Or is the world a self-generated, self-controlling machine, complete and fully organized for movement, either up or down, for progress or degeneration, according to the chances of heredity and the influence of environment? . . . . . .

"According to the one conception, faith is childish and prayer absurd; the only individual immortality lies in the memory of descendants; kind actions and cheerful acquiescence in fate are the highest religious attributes possible; and the future of the human race is determined by the law of gravitation and the circumstances of space.

"According to the other conception, prayer may be mighty to the removal of mountains, and by faith we may feel ourselves citizens of an eternal and glorious cosmogony of mutual help and cooperation, advancing from lowly stages to even higher states of happy activity, world without end, and may catch in anticipation some glimpses of that 'one far-off divine event to which the whole creation moves.'

"The whole controversy hinges, in one sense, on a practical pivot—the efficacy of prayer. Is prayer to hypothetical and supersensuous beings as senseless and useless as it is unscientific; or does prayer pierce through the husk and apparent covering of the sensuous universe, and reach something living, loving, and helpful beyond?

"And in another sense the controversy turns upon a question of fact. Do we live in a universe permeated with life and mind: life and mind independent of matter and unlimited in individual duration? Or is life limited, in space to the surface of masses of matter, and in time to the duration of the material envelope essential to its manifestation?

"The answer is given in one way by orthodox modern science, and in another way by Religion of all times; and until these opposite answers are made consistent, the reconciliation between Science and Faith is incomplete."

THE MOST ANCIENT NAME OF THE DEITY.

THE words "Jehovah" and "Elohim" were in common use among the Jews in Old-Testament times, and there is good reason for assuming that the latter term, a plural of a word signifying majesty, lordship, and government, was in use among the primitive nations of the East long antecedent to the Mosaic era. These facts do not, however, warrant the conclusion that "Jehovah" and "Elohim" are the most ancient names of the Deity. They are antedated by the Egyptian title "Nutar"—or, to be more exact, "Nutar Nutra Amtu Heret" (the Almighty Power which is in Heaven). Professor Renouf, a French archeologist, emphasizes this point in his book on "The Religion of Ancient Egypt." He declares:

"The Egyptian 'Nutar' means Power, which is also the meaning of the Hebrew 'El.' The extremely common Egyptian expression 'Nutar Nutra' exactly corresponds in sense to the Hebrew 'El Shaddai,' the very title by which God tells Moses that he was known to Abraham and Isaac and Jacob: 'And God spoke unto Moses, and said unto him, I am Jahve; and I appeared unto Abraham, unto Isaac and unto Jacob by the name of "El Shaddai"; but by my name "Jahve" was I not known to them.' . . . . . .

"It is very remarkable that 'Brahma' in Sanscrit meant originally Power, the same as 'El.' It resisted for a long time the mythological contagion, but at last it yielded like all other names of God and became the name of one god. But the Egyptian 'Nutar' never became a proper name. It was indeed restricted in its use as far back as our knowledge of the language enables us to trace it, but it never ceased to be a common noun, and was applied indifferently to each of the powers which the Egyptians conceived as active in the universe, and to the Power from which all powers proceed. 'Horus' and 'Ra,' and 'Osiris,' and 'Set' are names of individual finite powers; but a power without a name or any mythological characteristic is constantly referred to in the singular number and can only be regarded as the *sensus numinis*, or direct conception of the Infinite, which like my learned predecessor, Prof. Max Müller, I consider not the 'result of reasoning or generalizing for revelation,' but as an intuition as irresistible as the impressions of the senses."

These views are indorsed by Mr. Logan A. Wood, a writer in *Biblia* (Meriden, November), who says:

"In the foregoing we unquestionably get the true and most ancient name of the Deity. That ancient Egyptian civilization is the oldest known civilization is an indisputable fact. More than six thousand years ago Egypt bursts upon the world in history a full-grown nation with a full-blown civilization in the flower of its matchless perfection, with no evidence of so-called patriarchal life, rude beginning, or infancy. It is unquestionably the father of the civilized peoples and nations of the world—ay, the civilized world for more than two thousand years. Hence, the inexorable logic of this fact is that *there* is where the 'memorial name God forever among all generations' was of record and known. Where else could it have been? There was no other place to record it, for, I repeat, ancient Egypt was the whole civilized world for more than two thousand years, during which the Pharaohs claimed dominion over the whole world."

FOREIGN TOPICS.

PREMIER BALFOUR'S FIRST SESSION.

THE Parliament of Great Britain does not meet again until February 17, Premier Balfour's first session having been brought to a close last month with a speech from the throne. The session must remain memorable for the passage of the education bill. But other measures of importance have been adopted since Parliament came together on January 16 of last year. The bread tax, an increase in the income tax, the extension of the crimes act in Ireland, and far-reaching changes in the procedure of the House of Commons have been in turn matters of warm debate. The general view is that Premier Balfour is a success—that is, he knows what he wants and he manages to obtain it. *The Standard* (London), a Conservative paper, is filled with admiration:

"Mr. Balfour has well earned congratulations on the success of the Government during the first session of his responsibility as Prime Minister. He has placed upon the statute-book not only all the measures that he hoped to see pass when Parliament reassembled in October last, but some as to which he did not allow himself to be sanguine. It is a case in which fortune has smiled upon good management."

The education bill—or act as it has now become—inevitably draws comment from every source as the grand feature of the session. The London *Times* editorially interprets its effect thus:

"Because a majority of the managers of schools supplied and hitherto largely supported by private subscriptions are to remain representative of the denominations finding the money, it is continually argued that those who pay the greater part of the cost of education are defrauded of rightful control. Now, to begin with, the managers as a body, no matter how the body is composed, have only a fractional and subordinate control over education. They are entirely subject in all educational matters to the board of education, which represents the central government—in other words, the whole body of taxpayers—and to the local municipal authority, which represents the whole body of local ratepayers. Beyond administrative functions strictly supervised by these two bodies, who hold the entire power of the purse, the managers have no power except over the religious instruction given in the schools. Therefore, the whole of the authority concerning the allocation of which so much fuss has been made is a small fraction of the controling educational authority, and hardly can be said to touch the secular educational work of the schools at all. Strange as it may seem to those who have not gone into the matter for themselves, almost the whole of this long fight has been about a fraction of this fraction. The fraction of independence left to the managers is divided into six parts, and the whole question is whether the denomination should have four of these parts or only two. Hitherto, under the belauded settlement of 1870, the denomination has had the whole six parts; under the new arrangement it has only four."

Much as this prospect pleases, it affords no pleasure whatever to the Liberal *Daily News* (London). "England," says this emphatic organ, "will reel for long under the shock of this bill":

"It has taken the direct control of education out of the hands of the people, and it has identified the schools with a gross and scandalous financial injustice. Not by such methods is England to 'wake up,' or to place herself in line with the nations that are going ahead of her in the race. So much for the chief measure of the session. The rest have been like unto it."

As for Premier Balfour himself, the Liberal daily expresses its views of that gentlemen with the bluntness of the proverbial candid friend:

"Mr. Balfour has doubtless displayed a certain intellectual adroitness in defense of a bad policy. Mr. Balfour is at his best when he is at bay. The defect of inertness which so often takes the edge off his finer edges vanishes like a cloud, and he becomes the well-trained parliamentary athlete. But his parliamentary success has been won at grave cost to his reputation for statesmanship."

Fortunately for the British Premier's friends, there is a wealth of praise from which to choose. We select the following from *The St. James's Gazette* (London):

"Mr. Balfour's first session as Premier has proved a most signal success, and, if such a fact bring satisfaction to his philosophic mind, he may lay the unction to his soul that the success is his own personal property. He has not only guided the House of Commons in all matters with surprising tact and skill but he has also 'personally conducted' a most difficult measure through its various stages with an iron grip on principle and a gracious tolerance in detail which marks him as a born 'parliamentary hand.' Those arrogant claimants of intellectual superiority who have persistently sneered at him as a lazy dilettante and a tepid philosopher may well have waked this morning to find themselves foolish. Mr. Balfour, in their lofty view, may have proved himself slovenly in his methods, a niggling dialectician in debate, and all the rest of it; but the work has been done."

GERMANY'S "TRAP" FOR GREAT BRITAIN.

GERMANY set a trap and Great Britain fell into it. This is the long and short of the Venezuela muddle in the opinion of the great majority of the British press. The vigorous contentions resulting from this idea have completely obscured the issue involving President Castro and his unwillingness to settle anything that has the appearance of a debt. The vials of British journalistic wrath are uncorked upon designing Germany, which put innocent Great Britain up to things that else would never have entered her head. Germany's purpose, we are told, was to embroil Britannia with that great object of her esteem, the United States. The key to the plot is to be found by comparing dates immediately before and immediately after the visit of Emperor William to England. *The Spectator* (London), as the authoritative exponent of all these views, may well be quoted first:

"On November 8, the day on which the German Emperor landed in England, we asked what was the object of his visit. We assumed that he had not merely come to shoot pheasants, but that he was in England to further some 'specific project, and one not very alarming in itself—one, too, which he means to urge with all his wonderful personal magnetism.' Tho the greater part of the press joined with us in warning the nation that the German Emperor was anxious to entangle us in some agreement which could later on be paraded before the world as a German-British alliance, our interpretation of the objects of the Emperor's visit to England was officially denounced as fantastic and absurd. The country was assured that there was nothing behind the visit, and that no attempt was being made to get hold of or control our diplomacy. Yet, astonishing as it sounds, on the very day on which we were assured that there was nothing at all in the newspaper talk about German attempts to obtain an alliance, Lord Lansdowne was actually concluding one of the most amazingly indiscreet alliances ever made with a foreign power."

This piece of amazing indiscretion was the alliance of Great Britain with Germany, as is clearly shown by a comparison of dates:

"On November 8 the German Emperor, accompanied by the German ambassador, Count Metternich, goes to Sandringham, and there meets Mr. Balfour and other ministers. On November 10 Mr. Balfour and the ministers above-mentioned leave, but the Secretary of State for Foreign Affairs, Lord Lansdowne, goes down to meet the Emperor. On November 11, Lord Lansdowne returns to London, and on that very day writes a despatch to Mr. Buchanan in Berlin saying, in effect, that Britain and Germany had determined to take joint action in Venezuela, and that the two Powers had agreed to what was, in fact, the closest form of alliance as regards the coercion of Venezuela—*i.e.*, we bound ourselves not to make any settlement with Venezuela

unless Germany had also come to terms with that republic. We bound ourselves, that is, not to recede from the policy of joint coercion unless Germany also receded. Thus only three days after the Kaiser landed we had been led into a definite alliance with Germany as regards the coercion of Venezuela—an alliance which the Germans can prolong at their pleasure, since we can not escape from it or from the joint action it involves as long as Germany likes to assert that her claims have not been met, or that the objects with which joint action has been taken remain unfulfilled."

Having acted in this dark and devious way, the German Emperor is now permitting Great Britain to survey at her leisure the trap into which he led her. Who knows what other secret traps await to be sprung upon the unhappy British public? To quote *The Spectator* again:

"We now know that the German Emperor managed while he was here to entangle us in an alliance calculated to wound the susceptibilities of the Americans in the Caribbean Sea, and to parade us before the world as his faithful supporters. Can we feel sure, in spite of official disclaimers, that he did not also manage to entangle us—possibly without our being conscious of the fact at the moment, for of course we do not doubt the *bona fides* in intention of the official denials—in agreeing to some scheme of joint action in the region of the Persian Gulf which would be equally wounding to Russia? We admit that it sounds incredible, but after the fashioning of such an agreement as that just made by Lord Lansdowne nothing seems impossible."

An even deeper despair is reflected in the utterances of *The Daily News* (London). The United States alienated, Great Britain led by the nose, the German Emperor laughing in his sleeve—these and worse are the consequences of being hypnotized:

"We have to go to Berlin for our policy. The German Emperor will probably want to wipe out some insult—perhaps, the attack on the German consulate—and probably he will be the less anxious to make peace as his real grievance is less. He has no love for the United States. Why should he respect their feelings? But with us it is different. There is no nation in the world for whose friendship this country really cares more than the United States."

"Public men [in the United States] are simply amazed that England should be so undiplomatic," continues this excited Liberal organ, and even the Conservative sheets seem taken aback. Thus *The Times* (London), which is reserved in dealing with this matter editorially, nevertheless prints letters from leading public men which reflect British distrust. Yet there is a Conservative sheet here and there like *The Standard* (London) which makes light of the theories discrediting Germany.

It is a suggestive fact that the German press at first received these British utterances in silence. The temptation to reply must have been extreme, but even the papers which are apt to be most provoked by British imputations of German bad faith failed to notice the stream of insinuation. But this is now changed. The leading organs of Berlin, official and semi-official, are noting with pained surprise that Great Britain is once more, through her press, "slandering" Germany. The *Hamburger Nachrichten* is especially indignant. "Such misrepresentations," it declares, "show what little reliance can be placed upon the professions of esteem in which the English indulge regarding the grandson of Queen Victoria." At one moment the British journals remind us that William II. is dear to them "for his grandmother's sake," and in the next breath they accuse him of laying a pitfall for the people and Government of Great Britain. The *Kölnische Zeitung* is indignant at the attempts made to throw responsibility for summary measures in Venezuela upon Germany. It says Germany has not been harsher than Great Britain. The *Vossische Zeitung* sees in London utterances the activity of Germany's enemies and a renewal of "the campaign of hatred":

"These English enemies of Germany profess to speak from a conviction that the German authorities have set deliberately to work to provoke conflict. The utterances of certain members of Parliament to the effect that it was impossible to foresee the lengths to which Germany would go in this business are simply incomprehensible. . . . It is in the highest degree lamentable that so favorable an opportunity of removing the many Anglo-German misunderstandings by loyal cooperation should be made use of to create new dissensions."

It is a matter for indignation, says the *Berliner Neueste Nachrichten*, that the British Premier should have spoken as he did in Parliament about the operations of the allies in Venezuela. Germany was plainly told that she had been lured into this complication. Mr. Balfour calmly announced that Great Britain would leave Germany in the lurch whenever such action was found expedient.—*Translation made for* THE LITERARY DIGEST.

THEODORE MOMMSEN ON "THE OVERTHROW OF THE CONSTITUTION" IN GERMANY.

MOMMSEN, the illustrious German historian and publicist, has hurled a firebrand into his country's distracted political situation in the shape of a manifesto to the effect that "the imperial constitution is destroyed." He was led to this proceeding by the "revolutionary conditions" in the Reichstag, which has approved the famous tariff bill and at the same time "made

AGRARIAN PARTY: "It is not a fine child, this tariff baby, but its birth angers the Socialists and that is enough for me."
—*Der Wahre Jacob* (Stuttgart).

popular government a thing of the past." The bill emerged triumphantly from its third reading through a combination of Clericals, national Liberals, and Agrarians, the final vote being 202 to 100. The measure is not quite what the Emperor wanted, as many concessions were made to the Agrarians; but it constitutes a decided triumph for William II. The Socialists are furious, as all debate was cut off and parliamentary rights were, as they maintain, "invaded." Such is the situation affording Mommsen his text.

According to him, Germany's constitution is "doomed." From his manifesto, as published in the *Nation* (Berlin), we

learn that the German Emperor and the German Reichstag are overwhelmed by a combination of the Clericals and Agrarians. "This is revolution." Every party in Germany is "one of revolution."

"What, in truth, are the aims of the Liberals, the Clericals, the Agrarians, the Social-Democrats? The Liberals want to convert the imperial sovereignty into the first servant of the state upon the model of England and North America. For our nation, with its profound and apparently rooted dynastic sentiment, this means revolution. The Clericals want to re-Catholicize Germany along the lines of the seventeenth century and transform our ruler into a vicar of the vicar of Christ on earth. This, too, is revolution. The Agrarian lords are striving for a monopoly of the higher civil and military posts, and they propose to reduce the German Emperor to the level of a ruler who is simply first among his equals. This is equally revolution. The Social-Democrats aim or profess to aim at the emancipation of economic conditions from capitalistic enterprise by allowing each individual a like quantity of soup from a general pot. This portends an overthrow of all existing relations."

The great historian draws the gloomiest inferences from all these things. The tariff bill episode in the Reichstag shows that "the country is only at the beginning of an era of overthrow." The fatherland is threatened by the elements which thus put might before right. The constitution can scarcely be expected to withstand the strain. The immediate future may be expected to bring forth absolutism and the destruction of whatever political freedom still subsists in Germany. These conclusions are thoroughly indorsed by the democratic *Frankfurter Zeitung*, which says the very next step on the reactionary program will be abolition of universal suffrage:

"The present supremacy of the Agrarian elements will certainly be menaced by the growing strength of the popular movement. The reactionaries and their allies will consequently be driven to maintain their power at all costs. They will have to aim at the abolition of universal suffrage. And this is overthrow of the constitution. That the Conservatives would prefer such an overthrow at once rather than postpone it a day they have often plainly acknowledged."

But any movement in this revolutionary direction will be vehemently resisted by the Social-Democrats and by the elements favorably inclined to the constitution. The outlook therefore is that a fierce struggle will be precipitated and all friends of the German people must view the situation with alarm. But the official organ of the Agrarians, the *Kreuz Zeitung* (Berlin), takes it upon itself to cover these views, as well as the Mommsen manifesto, with ridicule. The views of this paper are too evidently colored by the rosy prospects presented by the passage of the tariff bill. The Agrarian organ, however, condescends to be serious over that part of the manifesto in which Mommsen urges the Liberals to form a sort of combination with the Social-Democrats and in which mention is made of "the dissatisfied toiling millions, downtrodden, and to some extent completely crushed." Such language seems to the *Kreuz Zeitung* to show how incompetent a political guide the great historian is notwithstanding his vast erudition. He is meddling with what does not concern him, anyhow:

"Theodore Mommsen, urged by his sympathizers, has already felt called upon to issue manifestos of one kind and another, but his post as instructor makes such proceedings somewhat uncalled for. All right-thinking and calm citizens will deem the latest Mommsen manifesto of even less importance than its predecessors. The Social-Democratic press and its sympathizers among the Liberals will naturally strive to make a sensation in approved fashion out of this Mommsen effusion."

This effort "to make a sensation" on the part of the Socialist press is certainly energetic and successful, but the *Vorwärts* (Berlin) points out that the Social-Democratic party can not make any concession of its principles to the Liberals, altho willing enough to accept their cooperation. The *Vossische Zeitung* (Berlin), the Liberal organ which has never ceased, since the tariff bill passed, its cry of Cæsarism, thinks the situation so desperate that Germany's best friends may well despair.—*Translations made for* THE LITERARY DIGEST.

TOO MANY TARIFF COOKS.
The result is that the soup is not quite to Germany's taste.
—*Kladderadatsch* (Berlin).

REVIVAL OF THE DIVORCE QUESTION IN ITALY.

PREMIER ZANARDELLI, head of the Liberal ministry in Italy, has announced his intention of pushing the bill permitting divorce under certain specified conditions. The opposition has at once become formidable—so formidable as to involve the possibility of a cabinet crisis in the immediate future. Even some of the moderate Liberals are threatening to vote against the Government. The Clericals form the backbone of the opposition, altho they do not openly take part in political contests in Italy. Their influence is felt none the less owing to the powerful Catholic feeling in many influential families. The Vatican denounces the divorce measure as a blow at the institution of the family. It is said that the Queen-Mother, widow of the assassinated Humbert, has made a personal appeal to her son, the King, to veto the bill should it be enacted. "It is not to be wondered at," says the *Indépendance Belge* (Brussels), "that the Italian Parliament has been impressed by the vehemence of the opposition." The Brussels paper continues:

"But it is difficult to see how the Liberals, however moderate they may be, can vote against the bill as presented by Premier Zanardelli. It affords every desirable safeguard and, so far from undermining the institution of marriage, protects it in many ways. The bill makes divorce litigation long and difficult. It makes actual separation before divorce an essential feature of every case. It does not permit divorce by mutual consent nor

from incompatibility of temperament. Adultery, abandonment, assaults, grave ill-treatment, and infamous crime (when conviction follows) are the only grounds for divorce recognized in the bill. The guilty party can not bring a suit for divorce. Surely a measure of this sort can not be accused of disregarding the rights of the family institution. Signor Zanardelli has shown every consideration for the unit of society. Elsewhere, even in Catholic countries, the bill would seem conservative."

The Vatican organs do not admit the possibility of Clerical sanction of the measure. The *Osservatore Romano*, organ of the Roman Catholic Church, denounces the measure, and calls attention to the monster petition against it which the Clericals have caused to be presented to Parliament. The Vatican *Civiltà Cattolica* (Rome) says the Zanardelli ministry shows its atheism and impiety by reviving the divorce question. The end and aim of Liberalism, it says, is to repudiate the law of God and to make of the state a negation of the divine and spiritual in every relation of life. Such warmth of language from Clerical sources leads the *Patria* (Rome) to suspect that the Vatican may withdraw its prohibition of Catholic participation in elections. But this rumor has been in circulation many times heretofore and has always turned out to have no foundation in fact.—*Translations made for* THE LITERARY DIGEST.

POLITICS IN BRAZIL.

SENHOR RODRIGUES ALVES was inaugurated President of Brazil on November 15 last. The first acts of his administration tend to confirm the favorable impression he has always inspired. It is true that the *Paiz* (Rio Janeiro) criticizes the new cabinet, and the *Aurora* (Rio Janeiro) thinks the administration will lack energy; but the more influential organs are generally favorable. The international problem facing the country, in the opinion of many Brazilian papers, will have to do with Germany. That country seems determined to get control of the rubber trade. A German steamship line is developing its service on the Amazon, and there are charges that Germans refuse to recognize Brazilian laws in the prosecution of their enterprises. There is a certain significance in the fact that the former Brazilian minister in Berlin has become Secretary of State in the cabinet of the new President. Of this member of the cabinet, Senhor Rio Branco, *The Saturday Review* (London) says:

"His name alone is a guaranty of a new *régime* beneficial to the country, for it is certain that his influence will largely dominate in every office. Unquestionably there is urgent need for redress of grievances. Taxation has fallen upon the poorest; the necessary commodity of every-day life is taxed alike with luxuries, no discrimination has been exercised."

This authority attributes much of Brazil's trouble just now to the fact that she has generally hesitated to go into debt:

"She did not borrow enough when she had the opportunity. She could have borrowed scores of millions and she was content with forty. Two or three hundred millions invested in a country beget a wonderful condescension of treatment in the foreign lender. He is anxious to safeguard his interest, he is willing that his own country should help his debtor in all ways, he will even lend more to assure his security. His stake is too large to lose. It is different when only a trifling sum is at stake. What are forty millions to the great creditors of great nations? The creditor can afford to be nasty, to insist upon onerous conditions, to deny help, to require the utmost letter of his bond, to be blind to aught that is not written in the bond. What matter to him the political or agricultural difficulties of the debtor? Encumbered by problems at home, with a revenue foolishly raised, ill-administered expenditure, inefficient servants, Brazil receives no assistance from abroad and in her difficulties all hands are raised to demand from her. Had the national responsibility been higher she would be freer to-day; were the pecuniary burden more heavy, she would more lightly bear the weight."

The German element in Brazil must be organized without delay into a German political party, says the *Kölnische Zeitung*. The "unfortunate fact" is, it finds, that those Germans who became prominent in Brazilian politics ceased to regard themselves primarily as Germans and to act in that spirit:

"Still more observable is the lack of influential and capable men who could bring the German voters under their leadership. Only within a recent period, since the establishment of the republic, which conferred the suffrage upon all qualified foreigners, has there come about a change which is most evident in the names of the politicians to the fore in the state of Santa Catharina. There the first republican governor, right-hand man of Brazil's first President, bore the true German name of Müller. The present governor, Felippe Schmidt, shows in his name a German origin. Both are native-born Brazilians whose fathers came to the country from Germany. They are firm friends. But they can not be looked upon as Germans since they know no German, or claim to know none—perhaps to avoid becoming objects of suspicion to their Brazilian party associates. As long as a German speaks his own language, he remains a foreigner to the Brazilian, even if he be Brazilian-born."

But the German organ congratulates the fatherland upon the fact that there are five Germans in the state legislature of Santa Catharina who are German in speech, thought, and training, and who never lose sight of distinctively German interests. A writer in the *Vossische Zeitung* (Berlin), however, protests against the "Germanizing of people abroad simply because they are of German stock," and says a man's patriotic feeling belongs rightfully to the land in which he makes his home, his wife's home, and his children's home.—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

KRUPP SCANDAL.—The legal proceedings against the Socialist organ *Vörwarts* of Berlin for "defaming" the late Herr Krupp have been withdrawn, a fact which that paper interprets as a vindication of itself.

CHAMBERLAIN'S ODYSSEY.—The wanderings of Joseph Chamberlain in South Africa inspire the *Kreuz Zeitung* (Berlin) with cynical criticism. If we are to credit this conservative sheet, the tour will come to nothing and end in a large bill for personal expenses.

DONKEYS AND A TIGER.—The Reichstag in Berlin suffers for want of intelligent management, asserts the *Volkszeitung* (Leipsic). The situation in which it finds itself proves that "a herd of mad donkeys can be more dangerous than a bloodthirsty tiger."

ITALY'S NEED OF A NAVY.—Certain ministerial sheets in Rome declare that Italy is in danger of falling greatly behind in her naval expansion. The *Patria* (Rome) says the Venezuelan affair shows Italy's need of a navy strong enough to uphold her rights in foreign waters.

AUSTRIA, RUSSIA, AND THE BALKANS.—A thorough understanding between Russia and Austria with reference to the Balkans is a probability of the near future, says the *Neue Freie Presse* (Vienna), which intimates that important negotiations are pending covering every point now in dispute.

A SOUTH AMERICAN STATESMAN.—The European press devotes much space to the career of the late Prudente de Moraes, some time President of Brazil, who died in retirement lately. The *Indépendance Belge* (Brussels) pronounces him a statesman in every sense of the word, and one whose career did much to rescue the public life of Brazil and South America generally from discredit.

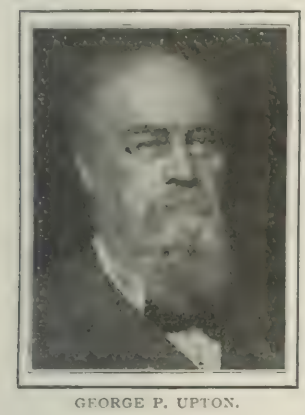
AN ANTI-ANARCHIST AUTOMOBILE.
Suggested by *Ulk* (Berlin) to King Leopold of Belgium

NOTABLE BOOKS OF THE DAY.

SOME MUSICAL BY-WAYS.

MUSICAL PASTELS. By George P. Upton. Cloth, 6¼ x 8¾ in., 213 pp. Price, $2.00 net. A. C. McClurg & Co.

IT will depend on the reader's ignorance of the subjects which Mr. Upton has treated whether or not he will enjoy this book. The more the reader knows the less he will enjoy. If the subject is all but new to him, he will find the pastel—just why "pastel" is not obvious—entertaining; but otherwise one will feel that what Mr. Upton's little essays have to convey is rather meager. However, when every Christmas sees the publication of so many perfunctory biographies of great musicians, a book that is bright and spontaneous and has anything new to say is to be welcomed.



GEORGE P. UPTON.

The ten essays which compose this volume deal with dissimilar subjects, which have in common only the fact that they are on out-of-the-way themes. This statement is not, however, entirely true. "The Beggar's Opera," for instance, gives a brief history of that famous work; but any one who knows anything whatever about the artistic life of England in the eighteenth century knows almost as much about the subject as Mr. Upton has to tell. In "Music and Religion," we are told that most of the great German composers were true Christians, which, while edifying in a way, is not made to seem either interesting or important. "Some Musical Controversies" is too large a theme to be treated in any other than a superficial way within the limits of an essay. The same is true of the essay "The Man Beethoven," which consists largely of amusing anecdotes about the great master. The most out-of-the-way subjects, which are also handled in the most interesting manner are: "The First American Composer," "The First Opera," and "The Bullfinch and the Nightingale."

The studies are chatty and informal in tone, and to people interested in reading about musical subjects, they can not fail to prove of interest; and even the more familiar topics will find a certain percentage of readers glad to have their knowledge reinforced. The book as a whole, if superficial, may serve to quicken the reader's interest.

DEVELOPMENT OF AMERICAN SHIPPING.

THE AMERICAN MERCHANT MARINE. By Winthrop L. Marvin. Cloth, 5¾ x 8½ in., 444 pp. Price, $2.00. Charles Scribner's Sons.

IT is but natural that the recent political agitation in favor of the subsidizing of American ships should have fertilized popular interest in our merchant marine. It is also natural that such a book produced at such a time should be in the nature of a campaign document; and altho the reader may fairly reserve his decision as to the wisdom of any particular bill for the support of American shipping, he can hardly fail to be interested in the history of the effect which previous legislation has had in developing the prosperity of our commerce. There is, perhaps, no more important economic problem before the country than that which treats of the best method of fostering American ownership of merchant vessels. It has been Mr. Marvin's task to show that our shipping industry, if not exactly an infant industry, at least needs government support in order to struggle successfully with shipping which is still under allowance in foreign countries, and particularly in England. That the country at large is to receive benefit from American ownership of vessels, Mr. Marvin has been at little pains to prove; and he has practically taken it for granted that his readers have started with that premise. The merchant marine is worth developing at any price; that seems to be the spirit of his book. Whether or not the reader agrees with him, whether or not he believes that the development of American shipping ought to be forced by hot-house legislation or allowed to develop slowly as our great store of capital seeks investment, at all events there is a charm about Mr. Marvin's enthusiasm which can not fail to carry the reader through his pages. His style is attractive in its impetuousness; his facts are in the main accurate, and, if there is room for debate on some of his conclusions, at least the conclusions themselves are presented strongly enough to arouse debate, and that, of course, is a great thing in a book. Those readers who are interested in the South Seas may, perhaps, complain that not enough attention is given to our considerable sealing fleet, which did the main part of the pioneer work in the Antarctic regions in the early part of the nineteenth century. But this is a chapter of our mercantile history which is chiefly contained in old log-books which have never appeared in print. There is no need, however, for grumbling about deficiencies in Mr. Marvin's book. The details of the history of the American Merchant Marine can not be treated in 436 octavo pages, and the general proportions of the subject have been very judiciously laid out by this author.

WINTHROP L. MARVIN.

OOM PAUL SPEAKS FOR HIMSELF.

THE MEMOIRS OF PAUL KRUGER, TOLD BY HIMSELF. Cloth, 6 x 9¼ in., 445 pp. Price, $3.50. The Century Company, New York.

WHEN we consider that these memoirs, dictated by Mr. Kruger, partly to his private secretary, and partly to the former Under Secretary of State of the South African Republic (Mr. Piet Grobler), were first submitted to the vigilant scrutiny of an editor, Dr. Schowalter, and then revised by him in persistent colloquy with the President, who found himself under fire from a battery of two hundred (cross) questions, which his critical friend had masked for his reception; and, finally, that the editor's revised German text, "collated line for line with Mr. Kruger's original Dutch," is done into English with painful particularity by Mr. Teixeira de Mattos, including many interesting and edifying Notes by the editor of the German edition—after all this, the wonder is how anything Oom-Paulish can be left of the homespun and often surprising personality we are looking for. But, to the honor of the book and of all concerned in the making of it, be it said, the Oom Paul reflected in the frontispiece is disclosed on every page of this record. Not pretty to look at, mark you, nor a thing to be set to music; a man more apt to take off his coat to an affront than his hat to a coat-of-arms. As when an English lord, on a certain occasion, was presented to the President by some one who was induced to dilate upon the visitor's imposing pedigree and dignities, the President thought the gentleman might be interested to know that "I was a cowherd and my father a farmer"—a story which has led many simply good people to conclude that Mr. Kruger was never either arrogant or conceited. And now, at the end of the war, when "the Old Lion of the Transvaal" goes sadly *passant regardant*, looking for his lair, for a country that he might call his own, one's thought is recalled to the pathetic significance of a verbal incident in the Table of Contents, where the first word is "Homeless"—spoken of the child; and the last word is "Homeless"—spoken of the stout old heart that refuses to part with its courage and its hope, "because the peace is not such as the burghers wished."

PAUL KRUGER.

Between those two fateful words is spun the story of the making of a Man, told without fuss or flourish; beginning with the wanderings and wonderings of the child, nine years old, who goes trekking with his people across the Orange River, for hatred of the British, who, "having taken away his father's slaves, and sold them without accounting for the money, then set them free." And presently the child is busy with the other children and the women, molding bullets, loading rifles, even taking a shot now and then, in defense of Sarel Celliers and his small garrison, desperately holding a laager against a furious force of Zulus, who had just received oxen and cows for the land.

And so, to the end of the disheartening category of forlorn consecrations and thwarted fortitudes and outwitted projects of "plain dealing," it runs, a story of foes and fightings, at first with lion and panther, rhinoceros and elephant and buffalo; next with Kafir and Basuto and Zulu; and at last, and inevitably, with British High Commissioners, Sir Bartle Frere and Sir Garnet Wolseley, Rhodes and Milner and Chamberlain, the Jameson Raid, and all the geographical varieties of trial and judgment grimly comprehended in the name of "Tommy Atkins."

The discovery of the gold-fields of the Witwatersrand wrought a revolution in the affairs of the republic. "Without the gold-fields," says Paul Kruger, "there would have been no war." When a burgher came to General Joubert, to tell him gleefully of the finding of a new gold-reef, Joubert rebuked him: "You would do better to weep; for this gold our country will be soaked in blood!"

Oom Paul had his impulses of generosity and affection, but they quite

failed to embrace the average Uitlander. At Paarde Kraal, on the occasion of the septennial commemoration of independence, "when he reviewed the history of his people in the light of God's Word," he saluted the mixed multitude in characteristic fashion: "People of the Lord: you old people of the country; you who are foreigners; you newcomers—yes, even you thieves and murderers." And in discussing with the British High Commissioner the circumstances of the riot at Johannesburg, he was reminded of a little story about a baboon he once had, which was so fond of him that it would attack any one who touched him. But once, when they were sitting by the fire, "the beast's tail got caught in the blaze; and immediately he flew at his beloved Oom." The Johannesburgers are just like that. They have burnt their fingers in speculations, and now they fly at Paul Kruger."

No, decidedly not pretty, nor picturesque, nor poetic; by no means courtly, gracious, or debonair. Nevertheless, we trace through these pages a very memorable figure—crude but convincing type of such a home-made hero as the Muse of History need not be ashamed to kiss her hand to.

THE LAST OF THE STOCKTON STORIES.

JOHN GAYTHER'S GARDEN. By Frank R. Stockton. Cloth, 5¼ x 7¼ in., 365 pp. Price, $1.50. Charles Scribner's Sons.

HERE is Mr. Stockton's last book. It is full of that rare and whimsical humor which made his genius so personal. This is the last crop of those inimitable whimsicalities which combined so much sound human nature with situations so grotesque and so irresistibly funny. It would be hard to estimate how much Mr. Stockton added to the gaiety of this country. How many people have laughed until they cried foolish tears over the wonderful Casting Away of Mrs. Lecks and Mrs. Aleshine! There are thousands of families where that ginger-jar has developed into a household word, and "black stockings for sharks" passed into the slang of the day. There was only one imagination which could have conceived the remarkable wreck of the *Thomas Hyde*; and the very name of Rudder Grange makes one wish to read about Pomona once again; we are guessing yet if it was the lady or the tiger.

FRANK R. STOCKTON.

The world of literature has seen a merry crew of burlesquers, and the whimsical books are among the most precious that we have. There is one great difference between Mr. Stockton's absurdities and all others—excepting perhaps some of Robert Louis Stevenson's. Other writers of this class have spent themselves on the intricacies of their plots. Once the situation was worked out there seemed to be no force left to make real people. So this class of books is peopled almost exclusively with puppets. But no matter how impossible a situation Mr. Stockton's fantasy chanced, his characters were always real men and women.

Then, too, there was never anything portentous in Mr. Stockton's manner of telling a story. His style had always a child-like simplicity, and the more complex and wonderful was the narrative, the more matter-of-fact and convincing was the way he told the story. Neither were his imaginings at any time forced; marvelous plots, strange conceits, were as natural to him as going to market is to a careful housekeeper.

What is true of Mr. Stockton's younger work is also true of "John Gaypher's Garden." The humor of these last tales is not as riotous as formerly, but it is deeper than in some of his earlier short stories. There is the barest thread of narrative running through the book. Various people sit down under the trees in John Gaypher's sunny garden and spin yarns, and the audience comments upon them. It would be about as easy to write a story like one of them as to describe one. One can only say that they are inimitably funny.

AN ELEMENTAL MAID.

A DAUGHTER OF THE SNOWS. By Jack London. Cloth, 5 x 7½ in., 334 pp. Price, $1.50. J. B. Lippincott Company.

THIS novel of Jack London's shows more power than anything he has done. The book throughout is splendidly virile, and glowing passages illumine the narrative. He has created a new woman, something elemental, physically almost savage, but with touches of the eternal feminine that prevent her being a man in petticoats—"A Daughter of the Snows," in truth, and a credit and embellishment of that wonderful region, Alaska. She must be an ideal of Mr. London's aggressive cerebrality, but she rings true and would not be herself in any other setting than that in which he places her. Frona Welse is a magnificent Amazon of the snowy Edge of Things, and if she ever seems escaping from the hold of her creator, Mr. London, it is when he lets her grow young-ladyish. She is a woman, clean-souled, strong-thewed, and with an essential touch of deep underlying sympathy. It is an achievement to have drawn a girl who has such a number of strictly masculine qualities and yet appeals to the best in a man keenly susceptible to womanly influence and charm.

JACK LONDON.

"A Daughter of the Snows" is the most vital presentation of Alaska that literature has yet known. The bitter cold, the wearying trails, the tremendous spring break-up of the ice-bound Yukon, the rough atmosphere of mining life, the biting color of social intercourse in Dawson and in the mining-camps, together with sharp-cut, forceful human beings, are all powerfully depicted. The reader is there and sees things pass before his eyes.

Mr. London could not handle his theme with such thorough assertiveness were he not strong and frank. He treats an episode, necessarily suggestive, in the wholesomest fashion, and with breezy purity. Frona Welse, the heroine, returns to Alaska after having been "on the outside" since she was a girl, getting cultured. She is twenty, and that the States and London have not enervated her is shown by the plucky and enduring way she treads the bitter trail which puts strong men on their mettle. She is separated from her outfit through some casualty, and arrives at a tent on a dismal night, wet and weary. An engaging young man is the sole occupant. She explains her plight and asks hospitality. He accords it willingly, and magnanimously says he will "sit up and watch the fire."

"Fiddlesticks!" she cried. "As tho your foolish little code were saved in the least! We are not in civilization. This is the trail to the Pole. Go to bed." So they sleep like tired children, their blanket couches on either side of the stove. It is only allowing her a proper share of feminine inconsistency, that she falls in love, not with this fine Vance Corliss, but a specious adventurer named St. Vincent.

The book is open to some criticism on the ground of technique. Mr. London's craftmanship is faulty. The narrative lacks perfect cohesion and unity. He dispenses his tale in sections which stand too much apart, and greater clearness as to place and date would help the novel materially. The language of two or three of the characters is absurdly polished. But it is a vigorous work, and Frona Welse is, as a whole, a wonderful and quite new phase of womanhood.

A MODERN ORATOR.

A FIGHTING FRIGATE, And Other Essays and Addresses. By Henry Cabot Lodge. Cloth, 316 pp. Price, $1.50. Charles Scribner's Sons.

THIS volume contains ten essays and orations, of which seven are biographical. The title is that of the first essay, which proves to be an oration delivered in Boston several years ago upon the old *Constitution*, on the occasion of her return to the Charleston navy-yard. Senator Lodge uses this occasion to point out the effect of our naval victories in the war of 1812. Upon Great Britain the results were depressing and alarming. "In twenty years England had fought over two hundred single-ship actions with pretty much every people in Europe, and had lost only five of them. In six months she had fought five single-ship actions with us, and lost every one of them."

HENRY CABOT LODGE.

By far the best oration in this volume is that on John Marshall, whom Senator Lodge considers as a statesman pursuing steadily throughout his career the purpose of erecting out of the confederation of separate States a centralized government adherent to a dominant constitution. In this task, Marshall is credited with a share even greater than that of Washington or Hamilton, continuing their labors after the Federalist party had perished, and robbing Jefferson of the fruits of his ultra-republican policies by hedging them about with constitutional interpretations that made them instruments for accomplishing results that Jefferson abhorred.

An oration of almost equal interest upon Daniel Webster dwells chiefly upon his power and gift of oratory. Webster united in himself Shakespearian diction and the solidity and eloquence, at his best moments, of Cicero and Demosthenes.

The other essays are upon Oliver Ellsworth, Rochambeau, "The Treaty-Making Power of the Senate," called out by the discussions of the recent Hay-Pauncefote Treaty, "Some Impressions of Russia," and a combination eulogy of three Massachusetts governors, Greenhalge, Robinson, and Walcott.

The oratory of Senator Lodge is classical, his language chaste, his periods are sonorous, and his logical grasp of his subject is always that of a man able to see salient features and to marshal them in progress to defined results.

Here's a Perfect Feast

Ralston BREAKFAST FOOD

AND

Purina PANKAKES.

These 2 Packages for 25 Cents at Your Grocer's

Just go 'round the corner to your grocer's and buy these two packages. You'll give the family a perfect feast for breakfast.

Purina Pankake Flour makes the best pankakes you ever tasted—they're so delicious, it just seems like you can't get enough of them.

Ralston Breakfast Food is even more appetizing, and possesses a flavor all its own. Remember, these products are "Appreciated in a Million Homes," which is a magnificent recommendation. Insist on getting Checkerboard Packages. Made by

THE PRESS CO., Meriden, Conn.

A pulsing couplet form in rhythm regal;
And o'er thy bosom drape the vestments white
Tenderly as words by music vestured.
If verse now had the graphic warmth of sun,
If Love could body what his heart would hide,
If thou wert less than wifely vestaled nun,
Dear love of thee might yield to Art's fond pride,
And, dressed in poet's breath, these veils aside,
Thou shouldst be wife and poem merged in one."

EDGAR ALLAN POE.

Dreaming along the haunted shore of time
And mad that sea's Hellan song to sing,
He found the shell of beauty, rhythmic rime,
And fondly deemed its sheen a living thing.

Discord.

By CLARENCE URMY.

As o'er an untuned lyre I swept my hand
And through my soul the jangling sounds were poured,
I thought I could a little understand
Of God's great grief when heart-strings do not chord,
As, bending from His throne, He singles out
A thrice-blest player, bids him strike the strings—
When lo, instead of concord, din of doubt,
Babel of griefs, and cry of bitter things!

—In *Lippincott's Magazine.*

The Turning Dervish.

By ARTHUR SYMONS.

Stars in the heavens turn,
I worship like a star,
And in its footsteps learn
Where peace and wisdom are.

Man crawls as a worm crawls;
Till dust with dust he lies,
A crooked line he scrawls
Between the earth and skies.

Yet God, having ordained
The course of star and sun,
No creature hath constrained
A meaner course to run.

I, by his lesson taught,
Imaging his design,
Have diligently wrought
Motion to be divine.

I turn until my sense,
Dizzied with waves of air,
Spins to a point intense,
And spires and centers there.

There, motionless in speed,
I drink that flaming peace,
Which in the heavens doth feed
The stars with bright increase.

Some spirit in me doth move
Through ways of light untrod,
Till, with excessive love,
I drown, and am in God.

—In London *Saturday Review.*

"Macey" SECTIONAL BOOKCASE Patented—Other Patents Pending

Is the ONLY bookcase having absolutely "Non-Binding, SELF Disappearing" doors.

It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL. There is never any risk in buying genuine "Macey" goods, we ship every article "On Approval," subject to return at our expense if not found at our **factory price** 10 to 15 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal the highest award at both the Pan-American and Charleston Expositions.

CAUTION Do not be misled by the deceiving advertisements of **imitators. No other** Sectional bookcase has **a self-receding door** that is **absolutely non-binding** and **automatic**—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered **a sweeping decision in our favor.**

PERSONALS.

How Dewey Quelled a Mutiny.—Once when Admiral Dewey was executive officer of the old *Kearsarge*, in 1861, says the San Francisco *Argonaut*, the sailors mutinied and went below to the gun-deck.

Summoning the ship's writer, who had charge of the watch muster, and arming himself with twelve pistols (they were of rather ancient pattern), Dewey, it is related, started for them. The ship's writer carried a lantern and the roll.

Reaching the mutineers, the destined hero of Manila Bay, facing them with a cocked pistol in each hand, and the other ten tucked away in the breast of his coat, said: "Call the roll!" The first named happened to be John Jones. Through sheer force of habit he answered, "Here." Aiming his pistol at Jones, who stood in the rear of the crew, Dewey said: "John Jones, I see you. I am going to have your name called once more, and if you do not answer and immediately go up on deck you are a dead man. Call the roll!" "John Jones!" rang out the voice of the ship's writer. No answer. Dewey fired. The bullet meant for John Jones went throught the heart of the man standing beside him.

Almost before his dead body struck the deck, Dewey, recocking his weapon, said: "Now, men, the roll will be continued. As each man's name is called he will answer and go up on deck. Call the roll!" "George Smith!" "Here," answered Smith, putting his hand to his foretop, and as the muzzle of Dewey's pistol frowned uncompromisingly upon him he stepped out from the ranks of his fellows and disappeared through the forehatch. One by one the remaining forty-eight followed suit.

Daudet and His Friends' Books.—Alphonse Daudet received so many new volumes written by his friends that he seldom read one; but this did not prevent him from forwarding the customary letter of approval. As illustrative of this the *Revue Hebdomadaire* publishes the following incident:

When Leon Cladel published his novel, "Omprandailles," he sent a copy to Daudet, who forthwith penned to his address a most elaborate letter of congratulation. The style of "Omprandailles," was unexcelled; the plot marvelous, etc., etc.; in fact the novel was nothing short of a *chef d'œuvre*. A few days later Cladel paid Daudet a visit, and to his great surprise discovered his novel, leaves uncut, in the middle of a big pile of new books. Daudet realized that he was caught and thought that it was best to confess. Therefore he called his secretary and told him in the presence of Cladel: "My dear sir, it seems to me that I instructed you to cut the leaves of all the new books sent to me; do not forget this in the future!" Useless to say that Daudet and Cladel could not look at each other without laughing heartily, and the [illegible] was closed in [illegible] manner.—Translation made for THE LITERARY DIGEST.

Grant's First Speech.—[illegible] Grant was worshiped when fresh from his triumph of crushing the Confederacy is shown by an incident

National Electric Vehicles

Handsome, graceful, thoroughly dependable. Built for reliable, every-day service and give it. Simplest in construction, safely and easily operated—the perfected automobiles for business or pleasure.

Life Insurance Free from All Speculative Features.

The Travelers Insurance Company, Hartford, Conn.

S. D. DUNHAM, President.

Accident Insurance in the Oldest, Largest, and Strongest Accident Company in the World.

HOW PENNIES COUNT.

ACCIDENT INSURANCE.

About four cents a day, what you spend for newspapers, will procure you, if a preferred risk, an accident policy paying $3,000 for accidental death or loss of both eyes or limbs, and proportionate amounts for loss of one eye or limb; $15 a week for total disability; $6 a week for partial disability; and double the above amounts for injuries received in certain specified accidents, etc., etc.

LIFE INSURANCE.

Fifteen and one-half cents a day will purchase a life insurance policy at age 35 for $2,500.

Twelve cents a day will purchase a twenty-year endowment policy at age 32, paying you $1,000 cash at the end of twenty years if living, and insuring you for $1,000 for the twenty years' time.

LIFE AND ACCIDENT COMBINED.

Nineteen and one-half cents a day purchases $3,000 accident insurance, and at age 35 $2,500 ordinary life insurance.

Who says insurance costs a good deal?

which Thomas B. Bryan writes in *The Saturday Evening Post* (Philadelphia). Grant, Sherman, and Sheridan visited Chicago to attend the Sanitary Fair for the benefit of the sick and disabled soldiers. Mr. Bryan conducted Grant from the station to the fair.

Our progress was through cheering crowds, but above the roar of the multitude I could hear the men at our elbows exclaiming:

"I touched him!"

"Tipped his shoulder!"

"There's good luck for the rest of my life!"

At our entrance such a volume of applause as never before or since assailed my ears shook the huge structure until it trembled. I speak literally when I say that the sound was deafening. At first it was a chaotic roar. Then it soon formed itself into quick pulsation which struck the senses like blows from a hammer. "Grant! Grant! Grant!" it repeated.

Not by a glance or the movement of a muscle did he betray the slightest recognition of the marvelous ovation.

Finally, by force of sheer exhaustion and hoarseness, the crowd began to lessen the volume of its tumult. At last, from somewhere in the body of the house a man with a thunderous voice was heard to shout:

"If Grant won't talk have him make Sherman speak for him."

When Grant heard this his face betrayed the first sign of interest in the scene. Every man on the platform knew the great warrior had never addressed a public audience, and the belief was common that he would rather fight a desperate battle against heavy odds than attempt to say a dozen words from a platform.

Would he dare make the effort?

Suddenly he arose to his feet and took a step forward, as he began to speak.

"Fellow citizens," he said, "it is an inflexible rule of mine never to exact of a subordinate what I am unwilling to undertake myself."

Then he bowed and sat down.

MORE OR LESS PUNGENT.

Poor Type.—

"I can read my lover just like a book!"
Declared fair Winifred Hall.
"Why, what a feat!" exclaimed her friend,
"To master type so small!"

HEALTH, CLEAR SKIN AND A GOOD FIGURE

I am trying to convince you if you want to **reduce flesh, build up your figure, renew** and **strengthen nerve force,** to be relieved of **Indigestion, Sleeplessness, Constipation, Torpid Liver, Sluggish Circulation, Rheumatism, Weak Heart** or **Lungs,** diseases peculiar to the sex, or all so-called chronic ailments, I can do more for you than physicians can do.

I thoroughly study your case, prescribe for you the diet and the bathing which your system requires and give you special exercises necessary to bring you out as an individual in perfect health and symmetry. It is to my 12 years of work with women in person before I began my instructions by mail, that I attribute my marvelous success with my mail pupils. I have failed but in one instance to relieve the condition I set out to relieve. My work is not muscular exercise alone, it is physical **culture.** It begins with the causes—with the vital organs, the nerve centers, the lungs and the heart, and when I reduce a woman, I reduce her to **stay** reduced. When I build her, I build her to **stay** built.

My work cultivates the distinguished carriage and bearing and the engaging presence and ease, which at once bespeak culture and refinement. It gives you poise, mental, moral vital—perfect self-possession, a clear brain, quick perception and a nerve force vibrant with life.

The following are some extracts from letters on my desk since my last month's advertisement:

"Everybody notices the difference in my **complexion.** It has lost that yellow color almost entirely."

"My **deep breathing** has given my **skin** a new life and color and my hands and feet are much better. I am indeed grateful to you."

"Some inquire if my benefit is **permanent,** not seeming to realize that as development is attained, it **must** be **permanent.**"

"Before commencing your exercises I was compelled to use **glasses** which happily I do not need at the present time. I began to feel that **buoyancy** of **body** and **spirit** of which you speak."

"I wish I could have had a picture of my shape before and now—it would speak plainer to you than I can write you."

"I **never paid out any money with more satisfaction** than for these lessons."

"My **throat exercise** is helping my throat to my great delight. The only benefit I have ever received for it."

"My **catarrh** is better than it has been for three years."

"I wish that every **nervous** woman (and their name is legion) could know what benefit is to be derived from your work."

"Miss Cocroft, I am one-half **inch taller,** bust measurement has increased three inches and abdomen reduced 3½ inches."

"My **neck** and **chest** are filling out very perceptibly and am broader across the bust."

"Let me thank you for all you have been doing for my wife. She feels better now than she ever felt in her life, and looks better. She is ready for her third lesson, send it as soon as possible as she is very anxious to get it."

"I have neither had **colds** nor **indigestion** though I was very subject to both. I have gained eight pounds in flesh but 800 times this amount in feeling."

"I have lost twelve pounds so far—my bust and hips are smaller. I am feeling very well and full of courage."

I can take but a limited number of pupils, because I give each pupil my personal attention.

If you will write to me, I shall be glad to tell you just what I can do for you, sending you complete information in regard to my work and telling you whether I can reach your case and how. I know that I can reduce prominent abdomens and hips, build-up thin necks, bust and chest, and bring any woman to roundness and symmetry and I can give them relief from above diseases. I have done all of these hundreds and hundreds of times. It is no longer an experiment with me. Write to me.

For ten cents I send you an instructive and interesting booklet, showing the correct lines of a woman's figure in poise and movement and a card of correct poise for your dressing table.

Yours for a body expressing perfect health, perfect grace and perfect womanhood.

SUSANNA COCROFT,
Dept. 118
57 Washington Street, - - Chicago, Ill.

GOLDEN FLEECE

The American Adventures of a Fortune-Hunting Lord

In this sparkling serial story of American society Mr. David Graham Phillips makes us personally acquainted with a certain type of Englishman.

His campaign, begun on the liner, is continued in New York, Boston, Washington, Philadelphia and Chicago. In each of these cities we are given a glimpse of the local "Smart Set" and its own peculiar fads and foibles. The end—an unexpected one—comes in Chicago.

Dickson School of Memory's Mail Course

Thousands of students are now enrolled from all parts of the United States and Europe. The Dickson Method has long since passed the experimental stage it is an unquestionable success. It is indorsed by ministers, lawyers, bankers, actors, business men, in fact, we have indorsements from every class of thinking men and women.

Read what Rev. J. P. Brushingham, Pastor First M. E. Church, Chicago, says: "I take this occasion to commend your work in teaching. Results have been very gratifying. Your years of experience and standing in Chicago in public estimation will be a further commendation of your work. I wish you most abundant success."

Rev. J. T. Osler, West Milford, N. J., says: "Just as sure as a mother can train her child to walk, your method will guide the weak and tottering memory to strength and vigor. The memory is held to the path by the threads that you provide, and acquires the art of self-government with help for all the mind's powers."

Robert Collyer Dye, Attorney, Riverside, Ill., says: "I have found your memory method invaluable, not only in the mental discipline and concentration acquired, but also in the ease in cross-questioning, thinking upon my feet, speaking without notes, and other details of my profession."

It will enable you to instantly recall names, faces, business details; to speak without notes, to memorize almost at a glance, to converse well—to concentrate your thoughts and to think more clearly.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box.

Your Cigars Free For A Year

You may have noticed the above announcement before with disbelief. We have overcome the skepticism which assails any radical departure from established trade customs.

We offer you two years' smoking for the price of one; twice as many or twice as good cigars for the same money; or the same number for **half the money**; your favorite cigar or a **better one** for one-half what you pay over the counter—**a straight 50 per cent. saving for you, any way you figure it.**

All made possible since we **"burned our bridges behind us"** by cutting loose from the wholesalers, who had taken our product for years, and going straight over the head of Jobber, Salesman, Retailer and all—direct to you, with the same established, time-tested brands; selling them to you by the box, at **actual factory prices.**

Our proposition rests upon our ability to please you and thousands like you, even to the extent of building cigars especially for you, if we cannot please you from our stock.

We have done this for many years with the jobber, salesman and retailer between us; why not all the more so now, **dealing direct,** especially when

SAVING YOU ONE-HALF YOUR SMOKING EXPENSE?

No risk to you.

Everything we say—**proven to you** and confirmed by **you** or

YOUR MONEY BACK.

No expense to confirm our statements or your judgment, is there any reason for not saving yourself half your smoking expense and having your taste pleased every time? Why give it to the long succession of "in between" men unless that is your pet charity?

In order to get the benefit of BUYING DIRECT as soon as possible, send for our booklet "Rolled Reveries," which explains everything, or to hasten matters—for **$1.00** we will send a trial assortment of 25 sizes and blends; for **75c.** twelve regular 10 cent and two-for-a-quarter cigars; **50c.** twelve assorted fives and tens. Each cigar separately wrapped and described and showing you how two-for-a-quarter and 10 cent cigars can be bought in boxes of 25, 50 or 100, for from 4c. to 6c. each, others from 2c. to 3c. each.

All transportation charges prepaid.

Reference:—Any bank, any agency, any customer.

Just a Moment, Please

R. F. ROBERTSON, PSYCH. D.

I WANT to have a plain, straightforward talk with you. Are you successful in all your undertakings? Do you know that your success in business, your happiness in life, depend upon your mental and physical power; your ability to surpass others in thought, in action? Do you know that a clear brain, a bright eye, a magnetic personality, depend largely upon the amount of rich, pure blood in your veins, the nerve force in your nerves? This gives you momentum; it gives you power; it puts you in a position to lead where others follow; to accomplish and achieve where others fail.

MY FREE OFFER

I teach men and women how to develop a fine physique, good digestion, bright eyes, great physical and mental power. I have just published an elegantly illustrated treatise, which gives you invaluable information in regard to yourself. It tells the true secret of acquiring that physical grace, that attractive personality, that vital energy, which has been a prominent characteristic of most great and successful men and women. It is intensely interesting to the young as well as the old; it describes a process of quick development, which took me years to perfect. It will positively prove a revelation to you. For a limited time it will be sent to any address absolutely free. It is highly endorsed by prominent ministers of the gospel, lawyers, doctors, and business men. Write for it to-day.

A. OLIVER, of 58 West 104th Street, New York City, writes: "Every one who values his health and happiness should have your course. It not only develops great physical power and vitality, but it brightens the intellect, quickens the perception, and puts one in prime condition to fight the battles of life, to achieve success and win in his chosen vocation."

MRS. MOLLIE MALIN, of 713 East 5th Street, Kewanee, Ill., writes: "Before taking up your course in Physical Culture I had tried several others, but they were intended for prizefighters, blacksmiths, etc., and nearly killed me. When I took up your course I had almost lost confidence in everything, but I commenced to feel better immediately, my weakness began to disappear, my hearing commenced to return, and I gained in strength. I cannot tell you the inestimable benefit your course has been to my life."

If you have not time to write a letter, drop me a postal card, but do it now. Hundreds write: "Your free treatise is grand; you have just what I have been searching for." Address

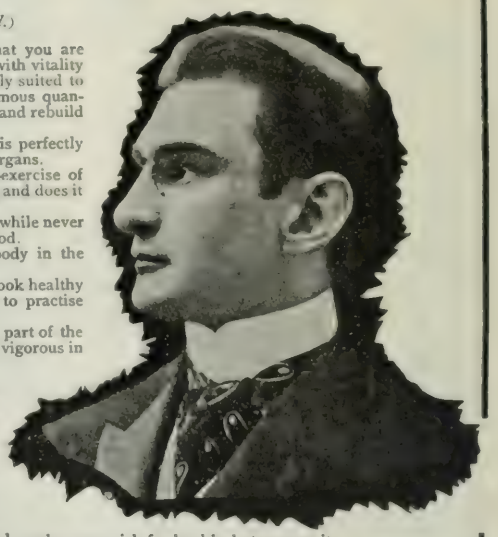
Natural Food MAKES Natural Bodies

SCIENTIFICALLY APPLIED

Extracts from the Remarks of Dr. Thomas at the Physical Culture Mass Meeting, held at the Grand Opera House, New York, June 1st.

(Copyrighted. Infringements Prosecuted.)



The advantage of eating raw food is that you are eating vital food so that you can fill your system with vitality and **cast off disease.** If the food is scientifically suited to your condition, you can take this vital food in enormous quantities, so that you can soon force out all impurities and rebuild your body.

There is no danger of over-eating, as the food is perfectly suited to the requirements of your internal or vital organs.

There is no over-exercise of one organ or under-exercise of another; but each organ has its special work to do, and does it with delight and pleasure.

The food is so pleasant that those who eat it for a while never think of returning to tasteless, devitalized cooked food.

It allows us to make a perfectly symmetrical body in the place of a deformed, diseased one.

Sick and deformed men should be ashamed to look healthy animals in the face. No doctor should be allowed to practise who cannot keep his own body healthy.

There are elements in the Natural Food for each part of the body, so that each tissue is renewed and becomes vigorous in the performance of its individual work.

This vital material is of such nature that it does not long remain in our bodies, but rapidly changes them so that we have a new body every few months.

Hence in the place of growing older, we grow younger.

There is no telling how long a person would live who lives in accordance with nature on Natural Foods.

There are thousands of persons who say they feel healthy, but they do not look so. No Insurance Company would accept them. Natural Food not only makes you wish for health, but possess it.

Raw Food makes it possible for men to be as healthy as wild animals, in spite of their intelligence.

It is a well-known fact that the entire human race is half sick, while the wild animals rejoice in health, and yet we are supposed to have the most intelligence.

The Creator, who formed man, also formed his food.

Do you think He knew what He was doing? I do.

I find by practical experience with it that it was formed perfectly to suit our requirements.

Whereas, if I take the same food after having changed it from a living to a dead thing, that it no longer answers my requirements.

There are elements in Raw Food which not only nourish the body, but keep it clean.

Raw Food harmonizes thoroughly with Natural air, water and Natural heat.

It allows one to exercise and rest in the fullest sense.

I would as soon think of cooking the air I breathe, or the water I drink, as to cook the food I eat.

Each mouthful of vital food taken into your body helps you to digest the next meal.

Over-training is utterly impossible in the mental or physical athlete who is eating Raw Food. While, on the other hand, if he is eating cooked food, there is no telling when he will break.

If one eats the food his Creator intended for him he will be able to manifest his Creator's desires by living a perfectly healthy, happy, vigorous life: doing good to himself and others. Whereas if he materially changes his food from its original nature, he must go through life sick and deformed; making himself and others miserable.

There is no life without life, and no continuation of life without other life.

You may eat uncooked healthy live food and live, or unhealthy cooked food and die.

LET ME DIAGNOSE YOUR CASE. SEND FOR MEASUREMENT BLANK AND I WILL GIVE MY OPINION OF YOUR CASE FREE.

RAW FOOD **Dr. Thomas' Uncooked Bread** cures Constipation, Obesity, Lack of Vitality and Indigestion. If you want to make a good, natural, healthy body, your spirit must have good healthy natural material to make it out of. **BUY DR. THOMAS' UNCOOKED BREAD. A sample** sent on receipt of **10 cents.** Wholesale rates on application. A package of 24 cakes for **50 cents.** Send coin or money order. **LITERATURE SENT FREE ON APPLICATION.**

What the Jew and Christian Owe Each Other.

"Without Judaism Christianity would have had no foundation; without Christianity the spirit of Judaism would have wielded no universal influence," says Mr. Harris Weinstock in his new book "Jesus, the Jew." The Jew has given the world its greatest preachers, teachers and teachings, but the Christian made the God of Israel become the God of all civilization. The Jew was confined by tradition. He lacked aggressiveness. God chose Jesus as the messenger to create a renewed spiritual wave, and Paul's broad cosmopolitanism made it possible to send God's message out to the whole world. These are a few thoughts from one of the ten frank talks by the author of the book. 12mo, Cloth $1.07 post paid. Third edition. Funk & Wagnalls Company, Publishers, New York.

VOL. XXVI., NO. 3 NEW YORK, JANUARY 17, 1903. WHOLE NUMBER, 665

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

SOUTHERN PRESS ON THE INDIANOLA INCIDENT.

STRONG feeling is displayed by the New Orleans papers in their comment on the Indianola (Miss.) post-office affair; but the rest of the press, North and South, seem able to treat it not only with calmness, but in some cases with good-natured repartee. One paper in Chicago and another in Memphis suggest to the people of Indianola that if they don't like their treatment by the Government, they might secede; and a paper in Atlanta suggests, on the other side, that the President appoint a negro postmistress at Oyster Bay, and hints that it is about time the negro postmistress of Indianola was invited to the White House to dinner. Only the most extreme opinions in the Southern papers have been telegraphed to the press of the North and West, and the impression has been created in this way that the people of that region favor violent and savage treatment of negro office-holders, an impression that the Charleston *News and Courier* brands as "a gross libel on the Southern people." A comment that tells the story of the incident, and, at the same time, represents the view of the more temperate Southern papers, is the following one from the Memphis *Commercial Appeal:*

"The trouble at Indianola, Miss., which has resulted in the closing of the post-office at that place, is most regrettable. It is a pity that it could not have been avoided. It is a pity that it should have been brought to such an acute crisis. It has ugly features to it. The Cox woman was appointed six years ago by President Harrison. She was a negress then as now. She was reappointed two years ago. Her husband is a man of means. Her own character is exemplary. No protest against her appointment was heard. She was acceptable to every one. Leading Democrats indorsed her and went on her bond. Leading Democrats still are her friends and defenders. The opposition to her is of recent growth.

"It is not necessary to believe that only 'the lawless element of the town' is opposed to the Cox woman as postmistress, altho this is what her Democratic bondsmen telegraphed the President. There is no escaping the conclusion, however, that the white people are divided on the question, and that only a part of them is acting in a lawless manner by making threats and compelling a postmistress to resign.

"Colored people should not be appointed to public positions in communities where race prejudice exists. It produces unnecessary irritation. But this seems to be an exceptional case, and it is not easy to see what course is left the President other than the one he has taken. He has already declared himself on the question and he need not be expected to change.

"Meantime the business interests of a flourishing town must suffer. The suffering will be temporary because a solution will be found, and all because of two mistakes. One of these mistakes was committed when a colored woman was appointed postmistress in a Mississippi town, and the other was when certain people in that town, six years afterward, drove her from office by threats and menaces."

The New Orleans *Times-Democrat* and the New Orleans *States* take the affair much more seriously. The former journal declares that Postmaster-General Payne "knows that incidents of this kind inflame political prejudice at the North and strengthen Mr. Roosevelt's grip upon the Republican electorate," and that "he would rejoice to coin political capital out of it." And then it exclaims:

"Let him attempt to do so, if he will! The South has for thirty-six years resisted just such attempts and is prepared to resist them forever. . . . If Mr. Roosevelt, knowing as he does the conditions that obtain at the South, persist in this madness of his—for that is what it is, madness—the responsibility will, in the judgment of his countrymen, lie at his own door. If violence follow, its victims will be on his head; for, after all is said, it will be clear to every one that by a nod of his head or by a stroke of his pen the President could have averted it, and averted it, too, without infringing the rights of any citizen of any color in any State of the Union."

Even more outspoken is the comment of *The States*. It charges the President with "the deliberate purpose of offending and insulting the white people of the South" "to pander to the negro vote of the Northern pivotal States," and goes on to make this threat:

"If President Roosevelt has made up his mind to outrage and insult people of the South by appointing and keeping in office obnoxious negroes, his negro appointees will be killed, just as the negro appointees of other Republican Presidents have been put out of the way.

"Some persons will say, no doubt, that these are intemperate and violent views, but we are confident that they will be indorsed by the majority of the people in the Southern States. It may be said also that if Mr. Roosevelt's negro appointees are killed or run out of the country, he will dragoon the South with federal troops. In such an event we are confident that the fact will be quickly established that our people are fully as strenuous as their Knickerbocker President.

"The people of the South were dragooned during the 'Dark Days of Reconstruction,' and the history of that period shows that they did some dragooning on their own account. It was effective then, and it is well for the President to know that it will be still more effective now. If he desires, in order to serve his own political ends, to raise 'a rough house' in the South, he can rest assured that the game will be made entirely interesting for him."

In the midst of this discussion the President has nominated Dr. Crum, a negro, to be collector of the port of Charleston. This appointment is not relished by the white people of South Carolina, but the Charleston *News and Courier* remarks that the President is hurting the blacks more than the whites, for such appointments "will do more to revive race animosities in

the South than any act done by a Republican President in twenty years." It says further:

"Every negro in the South will feel the effects of Crum's appointment in time, and in ways that can not be described. The hope of the negro, so long as he shall remain in this country, is in the friendship and help of the white people of the South. He knows that. The greatest of all the negroes in the United States, Booker Washington, knows that, and has said, in effect, that the best friends the negro has are the Southern white people. There are many ties which have bound them together, but federal office-holding is not one of them. It will be found that the President's policy of appointing negroes to office in the South as a premium to encourage yet other negroes to aspire to office in the South will cost the negroes in one way and another, and none of them unlawful ways, far more than the offices are worth in pay to the office-holder or in 'recognition' to the race."

THE MINERS' UNION AND "THE MIRE."

"I . . . would be glad to see your order come up out of the mire," said Judge Gray, chairman of the coal strike commission, to John Mitchell on Thursday of last week, after listening to about 150 non-union miners and their relatives, who told of murders, assaults, boycotts, the dynamiting of houses, and other acts of violence and persecution to which they were subjected during the strike. And when Mr. Mitchell objected to the Judge's words, the latter exclaimed: "I am waiting to hear of one instance of discipline among these mobs. I have yet to hear of one man being expelled from your union for these evident misdeeds. I have yet to hear of one union voice raised for law and order." And again, referring to the fatal riot at Shenandoah, the Judge said: "There was a crowd, and as yet I have heard no evidence of a disciplining voice in that mob. No man there said: 'Shame on the cowards.' No man that I have heard of raised his voice in behalf of the law and order of the community in which he lived." The colloquy grew warmer, and at length Mr. Darrow, counsel for the union miners, when asked if he thought "it would be entirely consistent with the advice of the president of this organization to allow a man to stay in the union after being convicted of crime, or of violence, and of preventing other men from going to work," replied: "I would say Yes, seven and seventy times seven. I will say that I do not consider that these men who did these things were bad men. They were done under the most terrible provocation and under circumstances of dire distress. I am not willing to believe that these men are criminals."

No daily newspaper that we have seen justifies the miners' union in this inferred approval of violence. The evidence "goes far to justify this most serious allegation" that the union "practically encouraged this reign of terror by doing nothing—beyond verbally disavowing unlawful acts of violence—to put an end to it," says the New York *World*, which sympathizes with the miners' side of the controversy. And the Scranton *Tribune*, which is thoroughly familiar with conditions in the strike region, says:

"The colloquy between President Mitchell and Judge Gray yesterday went to the heart of the serious part of anthracite labor issue. Questions of wages and hours of work are purely mathematical. Their adjustment is by no means difficult where honest intent is present on both sides in interest.

"But when peaceful communities are invaded with the effect of converting them into centers of lawlessness and outrage, it becomes necessary not only for the invaders to show substantial justification for the invasion but also more than a negative innocence of law-breaking. During the recent strike, we had in the coal-fields a government, not by the United States or by Pennsylvania, except in certain general forms; actually the government was by labor-unions. The unions decided what men connected with our chief industry should and should not work in freedom, and tried to decide, and in many instances did decide, how commerce should proceed, and who should be permitted to ride on public conveyances and buy the necessaries of life.

"The chief officers of these unions, it is true, deplored violence and urged their followers to be law-abiding. Their public speech was uniformly correct; but did they exhaust their power in enforcing their professions? Did the miners' union, for instance, throw the whole influence of its powerful organization in the behalf of law-observance and public order? We don't think there can be any doubt as to history's final reply. Judge Gray's wish that this great labor-union may wholly come up into the sunlight of American freedom and civilization is not an unkind wish and John Mitchell had no reason to take umbrage at it. The broad jury of intelligent public opinion before which Mr. Mitchell says he is resting his case will not see in Judge Gray's comment anything to take exception to; on the contrary, it will applaud it and reaffirm it, and, in the long run, enforce it should it be resisted, which is inconceivable."

MAYOR A. A. AMES,
Who fled from Minneapolis, under indictment for corruption in office.

HOVEY C. CLARKE,
"Foreman of the grand jury which cleaned out Mayor Ames's administration, caught and had convicted the officials who sold criminal rights to loot Minneapolis."

D. PERCY JONES,
"The acting-mayor, who refused to license vice either for public revenue or public safety."

MEN PROMINENT IN MINNEAPOLIS CORRUPTION AND REDEMPTION.

Courtesy of *McClure's Magazine*.

The United Mine Workers' Journal (Indianapolis) says in defense of the union:

"The operators are making a huge effort to have the public believe that all the incendiary destruction of property and the shootings and beatings of scabs and their sympathizers were the work of the strikers. There was lawlessness there. There are similar crimes committed every day in every city in our land. There would have been shootings, incendiary fires, and assaults in the anthracite region had there been no strike. As a matter of fact there was less crime committed in the region during the strike than during any other period of five months in the past twenty years. The statistics of the police courts prove that, and those records are irrefutable evidence that the United Mine Workers acted as a restraint upon the lawless. It is a source of wonderment that the oppressed people were so self-contained. Remember what these people had undergone, how they had been oppressed and robbed, and then you will not be surprised that there were some lawless acts done, but rather you will wonder that they were so few of them."

THE PLUNDERING OF MINNEAPOLIS.

WHAT *The Outlook* (New York) characterizes as "a brazenness of municipal corruption not equaled in Chicago or even in New York during the past quarter of a century," is laid bare in an article by Mr. Lincoln Steffens in *McClure's Magazine* under the title "The Shame of Minneapolis." In this article Mr. Steffens tells of an alleged "system of robbery, blackmail, and plunder" which existed during the fourth term of Albert A. Ames as mayor of Minneapolis, beginning in 1900 and continuing until Hovey C. Clarke, foreman of the grand jury last year, brought about the exposure and conviction of most of the criminals. Mayor Ames succeeded in becoming mayor of Minneapolis twice as a Republican and twice as a Democrat, altho Mr. Steffens believes that he would never have been elected for the fourth time had not that year (1900) been a Presidential year. In Mayor Ames's previous administrations he had not been especially venal. He was a "spender" and not a "grafter," being "guilty of corruption chiefly by proxy." At the beginning of his fourth term, he set out to organize a system of corruption for his own enrichment. He made his brother, Col. Fred W. Ames, who recently returned "under a cloud" from service in the Philippines, where "he proved a coward under fire," chief of police, and Norman W. King, who was formerly a gambler, chief of detectives. Irwin A. Gardner, a medical student under Dr. Ames, was made special policeman for the sole purpose of collecting money from disorderly houses, and John Fitchette, known as "Coffee John," was made captain of police with no other duties than to sell places on the police force. Mr. Steffens then goes on to tell of the carnival of corruption that followed:

"The administration opened with the revolution on the police force. They liberated the thieves in the local jail, and made known to the Under World generally that 'things were doing' in Minneapolis. The incoming swindlers reported to King or his staff for instructions, and went to work, turning the 'swag' over to the detectives in charge. Gambling went on openly, and disorderly houses multiplied under the fostering care of Gardner, the medical student. But all this was not enough. Ames dared to break openly into the municipal system of vice protection.

"There was such a thing. Minneapolis, strict in its laws, forbade vices which are inevitable, then regularly permitted them under certain conditions. . . . Disorderly houses were practically licensed by the city, the women appearing before the clerk of the municipal court each month to pay a 'fine' of $100. Unable at first to get this 'graft,' Ames's man Gardner persuaded women to start houses, apartments, and, of all things, candy stores, which sold sweets to children and tobacco to the 'lumber Jacks' in front, while a nefarious traffic was carried on in the rear. But they paid Ames, not the city. . . . . .

"They let gambling privileges without restriction to location or 'squareness'; the syndicate could cheat and rob as it would. Pedlers and pawnbrokers, formerly licensed by the city, bought permits now instead from 'Gardner's father,' A. L. Gardner, who was the mayor's agent in this field. Some two hundred slot-machines were installed in various parts of the town, with owner's agent and mayor's agent watching and collecting from them enough to pay the mayor $15,000 a year as his share. . . . But the women were the easiest 'graft.' They were compelled to buy illustrated biographies of the city officials; they had to give presents of money, jewelry, and gold stars to police

officers. But the money they still paid direct to the city in fines, some $35,000 a year, fretted the mayor, and at last he reached for it. He came out with a declaration, in his old character as friend of the oppressed, that $100 a month was too much for these women to pay. They should be required to pay the city fine only once in two months. This puzzled the town till it became generally known that Gardner collected the other month for the mayor. The final outrage in this department, however, was an order of the mayor for the periodic visits to disorderly houses, by the city's physicians, at from $5 to $20 per visit. The two physicians he appointed called when they willed, and more and more frequently, till toward the end the calls became a pure formality, with the collections as the one and only object."

The excesses of the administration "became so notorious," we are told, as to cause alarm among certain county officers. Sheriff Megaarden interfered and arrested a few gamblers, which led to his removal from office. Then the final breakdown of the "system" came from dissensions within. The conspirators began to rob one another, and finally the "whole system became so demoralized that every man was for himself."

At this time, April, 1902, the grand jury was drawn with Hovey C. Clarke as foreman. He determined to break up the "Ames gang." Two men who worked for Gardner, "Billy" Edwards and "Cheerful Charlie" Howard, were arrested and arraigned. Says Mr. Steffens:

"A prosecutor was needed. The public prosecutor was being ignored, but his first assistant and friend, Al. J. Smith, was taken in hand by Mr. Clarke. Smith hesitated; he knew better even than the foreman the power and resources of the Ames gang. But he came to believe in Mr. Clarke, just as Edwards had; he was sure the foreman would win; so he went over to his side, and, having once decided, he led the open fighting, and, alone in court, won cases against men who had the best lawyers in the State to defend them. His court record is extraordinary. Moreover, he took over the negotiations with criminals for evidence, Messrs. Clarke, Hield, Elwood, and the other jurors providing means and moral support. These were needed. Bribes were offered to Smith; he was threatened; he was called a fool. But so was Clarke, to whom $28,000 was offered to quit, and for whose slaughter a slugger was hired to come from Chicago. What startled the jury most, however, was the character of the citizens who were sent to them to dissuade them from their course. No reform I ever studied has failed to bring out this phenomenon of virtuous cowardice, the baseness of the decent citizen. Nothing stopped this jury, however. They had courage. They indicted Gardner, Norbeck, Fred Ames, and many lesser persons. But the gang had courage, too, and raised a defense fund to fight Clarke."

Norbeck, Fred Ames, and King were convicted and sentenced to various terms in prison. Mayor Ames, under indictment and heavy bonds, fled from the city. Alderman D. Percy Jones was appointed acting mayor and with the help of the grand jury succeeded in wiping out the last vestige of Mayor Ames's régime.

$3,000,000 RELIEF FOR THE PHILIPPINES.

IT was only two months ago, notes the Springfield *Republican* (Ind.), that the President declared in his Memphis speech that "the progress of the [Philippine] islands in material well-being" had been "astounding." On Wednesday of last week he despatched a special message to Congress calling for an appropriation of $3,000,000 to relieve "the present distress in the islands." The present distress which he refers to was described at some length in these columns in our issue for December 20 (p. 825). Most of the farm animals have been carried off by the rinderpest; cholera, famine, and a disordered currency are working havoc among all classes of the people, and the Philippine commission has felt itself compelled to spend $15,000,000 of the insular revenues for relief supplies. Governor Taft says: "It may be that as the conditions grow worse—for they are likely to do so before they grow better—it will be necessary in a province like Cavité, where ladronism seems inbred in the people, to proclaim martial law and even to call in the military finally to suppress it, but it is still hoped this may be avoided."

"This hideous illustration of the workings of benevolent assimilation," as the Philadelphia *North American* (Ind.) calls it, affords the anti-imperialist journals material for considerable moralizing. Thus the Springfield *Republican* (Ind.) says:

"If a few millions will help to repair some of the waste which our terribly mistaken war in the Philippines has made, let them go. They are but a drop in the bucket of our wasteful and unnecessary outlay there, and they may salve the national conscience a trifle. Reckonings in nature and the moral world are not to be escaped. Oratory will not delay them, or misrepresentation avail to gild them beyond a certain point. Soon or late, and speedily now, we must face the inexorable consequences of an adventure alien to Republican ideals and hence horribly troublesome. The statesmanship of Hoar and of Boutwell, of Reed and

RAISING THE MORTGAGE.

If our southern brother would raise more mortgage and less other things, no one would object. —*The Minneapolis Journal.*

MAINTAINING A DIGNIFIED SILENCE ON THE CANAL QUESTION.

SECRETARY HAY (impatiently): "What's the matter, kitty got your tongue?" —*The Kansas City Journal.*

SOUTH AMERICAN MOODS IN CARICATURE.

of Edmunds, stands already and amply vindicated in more unpleasant ways than one."

What might have been is sketched by the Baltimore *News* (Ind.) in the following paragraphs:

"It is instructive at this stage in our rule of the Philippines to consider what the imperialists would be saying at the present moment if the islands had not been seized by us, and if, under native control, they had drifted into the state in which, according to the official reports of the Philippine commission and of the Secretary of War, they are now languishing. We may be sure that the ladronism, and the cholera, and the loss of nine-tenths of the caribaos, and the demoralized finances, would have been lumped by our imperialists into one great heap of accusing wretchedness, the unanswerable proof of the imbecility of anti-imperialist sentimentalism. No such thing, it would have been said, could have happened if Uncle Sam had taken hold of the affairs of those poor little brown men, and done what he knew was really best for them, instead of letting them do what they thought was best for themselves. But of course, now that the thing has happened with Uncle Sam in charge for the past four years, it must be regarded as an unavoidable visitation of Providence. . . . . .

"Another aspect of our experience in insular management thrusts itself upon public notice at this juncture. In Cuba, thus far, none of the things have come about, or shown signs of coming about, that were looked upon by imperialists as so sure to flow from an attempt of the Cubans to carry on their own government. There is complete order and peace in the island. The public revenue comes in well, and, according to all current reports, is administered in an exemplary way. The general condition of the island is prosperous, in spite of the failure of this country to institute tariff reciprocity with it. Lawlessness that threatened to become serious and general at Havana some weeks ago, in connection with a labor strike, was suppressed with a promptness and completeness that might well put some of our own foremost cities and States to the blush. If there shall be troubles and disturbances in the future, nobody will be surprised; but the experience of the little republic has already been sufficient to disprove the charges of hopeless incapacity which passed current with such ease before the experiment of self-government was tried. The difference between our course in Cuba and our course in the Philippines was precisely the difference between a policy inspired by a genuine desire to give the people a fair chance to show what they could do and a policy in which, while professing to be actuated by the purest motives, we were really controlled by the itching desire to grab the islands. Peaceful establishment of self-government and contentment was the result of the one policy; a devasting war, with famine, pestilence, and destitution as its sequel, is thus far the record of the other."

JOHN MARKLE,
Who differs with his critics in regard to his alleged unkindness to his employees, their widows, and orphans.

An expansionist reply may be seen in the following comment by the New York *Mail and Express* (Rep.):

"The Philippine islands are passing through the same period of adjustment to new conditions that Porto Rico and Cuba had to pass through. They will emerge from it with a vastly larger degree of prosperity and progress than they ever had before, or ever could have had without the American connection. They have been the scene of a war that their people brought upon themselves. . . . Tho the distress proceeds, as to its ultimate cause, from our disposition to help the Philippines, and is not, as the anti-imperialists are trying to make out, the result of a deep and dark American conspiracy to ruin and torture their people, we can not evade our responsibility in the matter. We doubt if any American wishes to evade it, and we are therefore convinced that the President's demand for a $3,000,000 relief appropriation will be granted, as it should be.

"The development of the Philippine islands has not yet been begun. Their sources of wealth have scarcely been touched. When this development has been fully entered upon, there will be no need of relief appropriations. The islands will more than take care of themselves."

The New York *Tribune* (Rep.) says:

"While the islands were the seat of war, nobody except those who denied the right of government to maintain itself could blame the United States for the devastation caused by insurrection against its authority. But when peace is established and American sovereignty is supreme, it is incumbent upon the United States to spare no pains to restore tranquillity and prosperity. No excuse of distance or congressional absorption in other problems will relieve us of responsibility. Our capacity as a nation to deal with the problem is yet on trial. We have shown our power and caused it to be obeyed. Now, if we are not to be disgraced we must show that we have both the disposition and ability to use that power with generosity and with discretion. We can not drift. We must be active and attentive, and make our rule a positive blessing or it will be a curse. If Statehood bills, or beet-sugar interests, or political intrigue stand in the way, they must be shoved aside."

JOHN MARKLE'S DEFENSE.

A WIDESPREAD reputation for humanity and kindness to the men in his employ was given by the newspapers, during the coal strike of 1900, to John Markle, the managing partner of G. B. Markle & Co., independent coal operators at Jeddo, Pa. But in the last few months he seems not only to have lost that reputation, but to have acquired a far different and less desirable one. His rather forcible remarks to the President at the meeting of the strike principals in Washington to consider arbitration brought down upon him a good deal of unfriendly comment; but when some of the strikers from his mines went on the stand before the commission last month and told stories that brought tears to the eyes of the commissioners, the newspapers seemed to regard him as the embodiment of inhuman capitalism. One cartoonist depicted him as weeping over the horrors of the Spanish inquisition while crushing a miner, his wife, and children in a press, and he has been denounced and caricatured all over the country.

Mr. Markle seems to feel this change of sentiment deeply. He has written a pamphlet of forty-four pages in his own defense and is sending it around to the newspapers, who, however, seem to be paying little attention to it. He has also had most of the pamphlet printed in the advertising columns of the Philadelphia *Ledger* and the New York *Evening Post*. Mr. Markle's unpopularity has been due largely to the feeling aroused by the stories of Henry Coll, Andrew Chippie, and Mrs. Burns. Henry Coll, his sick wife, and aged mother were evicted from a Markle house in a November rain-storm, and his wife died not long after, so Mr. Coll testified, from the effects of it. Andrew Chippie, a small boy, told of having his pay withheld by the Markle Company to pay a rent debt owed by his father before he was killed in the mines; and Mrs. Burns said that after her husband was killed in the mines she and her children had to work thirteen years to pay off an accumulated rent and coal bill presented by the company. The general newspaper idea seems to be that the company, instead of collecting from widows and children debts owed, not by them, but by the dead husband and father, ought to have paid them damages. Mr. Markle says, however, that "the father of the boy Chippie was killed as the result of his own negligence," and his mother "had been allowed

to live in the [company] house from the time of the death of her husband without ever having been called upon to pay for rent or coal." When the boy began work, the bill was presented. Mr. Markle does not say whose negligence, if any one's, caused the death of Mr. Burns, but says that Mrs. Burns, for five years, "was allowed to live in the house without paying rent, and was supplied with coal without payment." And further: "When her son began to work, under the rules, she was allowed to go to the store and buy goods on credit. In the regular course she should, at that time, have been credited with the amount due for rent and coal, but this was overlooked, and it was not until 1898 that he was credited with $376.70, the amount of rent and coal; or, in other words, she was forgiven the indebtedness which had accrued down to the time her son began work."

In regard to the Coll eviction, which has been told in the newspapers all over the country, Mr. Markle says that Coll was evicted because he was one of the men who "had been active in preventing the men from resuming work." Coll was given six days' notice, but ten days were allowed to pass before eviction, during which no appeal was made for an extension of time. Mr. Markle points out that Coll's household effects might have been seized and sold for arrears of rent had the company been so disposed, and says that he knew nothing of Mrs. Coll's illness. To quote:

"No one knew anything of the condition of his wife, and she did not die in consequence of the eviction, which occurred on the 6th of November, as she lived until the first week of December. He was one of the men reported to have been advised to refuse to move, and tho he had ten days in which to make ready, he compelled the sheriff to put his goods out of the house. It is manifest that it was thought desirable by some one that the firm should be forced to take this action, in order to make a case which should appeal to the sympathy of the commission. . . . It is also apparent that if, in any case, the parties were entitled to sympathy and help, the United Mine Workers (who had kept them in idleness during six months, and whose officers were in direct communication with them, so that they had the means of knowing the truth as to their condition) might easily have assisted them in removing to suitable homes and provided for their wants, and for the consequences which followed they are responsible."

The following editorial from *The United Mine Workers' Journal* (Indianapolis, of December 25) is of interest in this connection:

"'And God hardened Pharaoh's heart and he would not let his people go.' The employees of G. B. Markle & Co. were on strike for six months and owed that company for rent. When these men went to the office to get their pay last Saturday the company retained the six months' rent from their wages. Few if any had earned in the two weeks enough to pay it, and were left penniless for Christmas. Markle & Co. had a legal right to the money. It 'was so nominated in the bond.' But the company did not need the money, but it saw a chance to embitter and harass the men who had stood for their lawful rights. Just men, men whose hearts and minds are filled with lofty purposes and Christian graces, do not stoop to petty persecutions and do not oppress the poor. Putting the humane side of it out of the question, the act of G. B. Markle & Co. was poor business policy. It tended to keep alive the passions aroused by the strike. It will make any question arising harder to settle, for the human heart is not softened by persecution. It was within the power of the Markles by a small, gracious waiving of a portion of the rent to have established kindly feelings and grateful remembrance. But Pharaoh's heart is hardened. The passover of labor will come."

Toledo, O., January 4.—The coal situation in Toledo has reached the point where a physician's certificate is required before coal dealers before they will sell over a ton of coal. The certificate must show that there is illness in the home of the would-be purchaser, and that coal is necessary as a safeguard for the patient.—*Press Dispatch.*

LABOR PRESS ON THE TAFF-VALE DECISION.

"AN historic trial, which must have an immense influence on the future development of trade-unionism," is the characterization given by the London *Labour Leader*, Keir Hardie's paper, to the Taff-Vale case, which was decided against a British labor-union a few days ago in the Lord Chief Justice's court in London. In this case the Taff-Vale Railway secured a verdict for $140,000 against the Amalgamated Society of Railway Servants, for damages suffered by the railway during a strike two years ago, a strike in which the employees violated their contracts by striking, and in which violence and intimidation were used. The important point, from the labor-union view, is the decision that an unincorporated union can be sued; and it is believed that if the American courts follow this British decision, our labor-unions can be pushed to financial ruin by damage suits following strikes. If the matter should "be allowed to rest here," declares *Justice* (Socialist, London), "it is quite clear that, apart from the question of liability for civil damages where there is no illegality, it would be quite impossible for a union to carry on a large strike. If the union is to be held responsible for the illegal acts of any person in connection with a strike, it will not be difficult to get up enough breaches of the peace through or by 'free laborers'—we suppose we mustn't call them blacklegs!—to ruin any union."

The National Labor Tribune (Pittsburg) says in comment on this case:

"If an American company signs a contract with an unincorporated union, both parties stand upon precisely the same grounds. The union can not be sued for any breach of the contract or agreement, simply because it has no existence in the eyes of the law. On the other hand, neither could the employing company be sued were the breach to be on its part, for the simple reason that the union would have no standing in court to maintain a suit any more than it would have liability to be sued. . . . . .

"The lack of incorporation among American unions gives the unions no legal advantage over employers whatever. If the system gives them any advantage at all, it manifestly must lie in their freedom from the motives of business responsibility and business honor that is supposed to animate employers. And yet the bituminous coal-miners of five great States testify that they regard a contract with the unincorporated United Mine Workers as good as gold, and their experience is quite the opposite of extraordinary. Workmen are not one-half so dishonorable as a certain petty class of trade organs sometimes represent. If there were less social class prejudice on the bench, the unions would have no objection to incorporation."

The Social-Democratic Herald (Socialist, Milwaukee) advises the trade-unionists, in view of this decision, to stop trying to fight capital with money, which they lack, and begin fighting with the ballot, which is their strongest weapon. It says:

"Only fools talk of the harmony between capital and labor; there is none. Capital demands cheap labor and labor demands high wages. Naturally the capitalists regard labor-unions as their foes, and this Taff-Vale case represents the latest effort to cripple trade-unionism and rob it of its most formidable weapon. If the capitalists can get at the union treasuries through damage suits they will achieve a twofold purpose. They will render the union harmless as an antagonist and stop the ability to pay strike benefits, by which strikes are prolonged. It has been well said that the fight between capital and labor is a contest between a fat purse and an empty stomach. . . . . .

"The English decision has carried consternation to trade-unionism in Great Britain. *Justice*, of London, says it ties the unions hand and foot. The inevitable result will be that the unions will now take up the ballot as its chiefest weapon. It is not to their credit that they have neglected it so long, nor would they but for the short-sighted counsel of men of the Gompers type of mind. For the working class to fight their economic enemies with finances, in which respect they are pitifully weak and bound to fall in the long run, and to neglect the ballot, where they are

numerically powerful and all-conquering, is one of the things about labor leadership that have an ugly look. Capitalism will crush trade-unionism if it can, and it has the lawmakers and the courts with which to do it. Only a concerted use of the ballot will frighten it and have a deterrent effect, and a new leadership is arising to that end."

THE ADMINISTRATION TRUST PROGRAM.

"ABOUT the sanest, clearest, and most suggestive utterance yet made on the subject," is the verdict of the Hartford *Post* (Rep.) on Attorney-General Knox's communication to the House and Senate judiciary commissioners on the trust question; and the Pittsburg *Dispatch* agrees that it "strikes at the root of monopoly." It is understood that the President indorses Mr. Knox's opinions, if, indeed, he did not inspire them, and they have been formulated in a bill that has been introduced into Congress. If Congress fails to enact any anti-trust law at this session, it is predicted that the President will call the next Congress in extra session after March 4 to make good the defect.

Monopoly "would be impossible in this country," declares Mr. Knox, in his communication, "if competition were assured of a fair and open field," so he proposes that Congress use its power over interstate commerce to prohibit railroad rebates and discrimination in prices. Then he would have a commission created "to make diligent investigation into the operations and conduct of all corporations, combinations, and concerns engaged in interstate or foreign commerce," and "to make specific recommendations for additional legislation." The gist of his recommendations is contained in the following paragraph:

"My suggestion, therefore, is that as a first step in a policy to be persistently pursued until every industry, large and small, in the country can be assured of equal rights and opportunities, and until the tendency to monopolization of the important industries of the country is checked, that all discriminatory practises affecting interstate trade be made offenses to be enjoined and punished. Such legislation to be directed alike against those who give and those who receive the advantages thereof, and to cover discrimination in prices as against competitors in particular localities resorted to for the purpose of destroying competition in interstate and foreign trade, as well as discrimination by carriers."

"The milk in the coconut is to make the railroads the enemies of the trusts instead of their copartners," says the Baltimore *American* (Ind.), and "Mr. Knox's plan would seem to embody more of the elements of efficacy than are to be found in any of the other and very numerous suggested remedies." The Detroit *News* (Ind.) says of railroad rebates and discriminations:

"The law of gravitation is hardly more generally accepted than the statement that the Standard Oil Company, one of the greatest of all trusts, was built up on the ruins of enterprises destroyed by Rockefeller's criminal agreements with transportation companies, whereby his goods were delivered at consuming points at secret rates, which made competition impossible. While the attorney-general's statement was being made public at Washington yesterday, representatives of the Pittsburg Plate Glass Company were submitting to the interstate commerce commission evidence to show that the freight on 100 pounds of plate glass from Pittsburg to Minneapolis is 25 cents more than on like merchandise from Antwerp, Belgium, to the same point. Some years ago it was established beyond doubt that a box of tinplate, bought in Wales, at the same price quoted in Pittsburg, could be laid down in Chicago at a less cost than the same product bought in the Pennsylvania city. When such preposterous discriminations as these are possible, it is clear that manufacturers not thus favored are at a hopeless disadvantage, and must eventually either go to the wall or accept whatever terms of sale or combination those wielding this irresistible weapon choose to offer. Not even the most cynical combiner can defend such practises, on either ethical or legal grounds, and the right and duty of the Government to go to any necessary length to prevent them is so clear that the New York *Sun* itself could hardly claim that any legitimate interest was threatened by efforts in that direction.

"That they can be prevented if the law-making and law-enforcing officers act honestly and fearlessly is indubitable. That some forms of discrimination are exceedingly difficult of detection is true, but there detection is not impossible, and the offense is so serious that heavy penalties should be provided. A few railroad presidents and managers in prison for long terms would put an end to the business, and the Administration is wholly right in holding that the grantees and grantors of such unjust favors be considered equally guilty."

But "of course a Republican Congress is not going to do anything," says the Norfolk *Virginian-Pilot* (Dem.), and the New York *World* (Ind. Dem.) doubts if there is "the slightest possibility" of such a thing. The New York *Sun* (Rep.) calls the proposed program "radical," "experimental," and "of doubtful constitutionality," and adds:

"The basis of this alleged power is the constitutional clause authorizing Congress to regulate interstate commerce. Carried to its logical development it throws all other parts of the Constitution into the dust pile and enables Congress to reign absolutely over every man or association of men who don't wish to be imprisoned, individually or commercially, within the limits of their particular State. All reforms, all scientific experiments in sociology can be tried on by Congress through the drastic power of the interstate commerce clause, and the restraints of the Constitution and the courts can go out of business. Where are we at?"

THE end of the present month, it is predicted, will see the establishment of the first ocean newspaper. When the passengers begin to write to the editor complaining of the fare or asking for better "rapid-transit" facilities, the steamship companies will begin to see the other aspects of the proposition.—*The New York World.*

IN our issue of December 27 (p. 864) a comment from the Detroit *Journal* was erroneously credited to the Detroit *Free Press.*

LETTERS AND ART.

LITERATURE IN 1902.

IT seems to be the general verdict that the year just past has been, on the whole, one of literary mediocrity. "There have been some very clever and even important contributions to fiction," observes *The Bookman*, "but of course nothing that is to give the year a distinctive place in the history of letters." The same magazine proceeds to comment on the fiction of 1902 as follows:

"Those writers to whom we are in the habit of looking year after year for amusement seem to have been particularly industrious. Mr. Kipling did not publish another 'Kim,' but his 'Just-So Stories' will by no means be ignored. Sir Arthur Conan Doyle brought Sherlock Holmes into being again. . . . Anthony Hope did well with 'The Intrusions of Peggy.' Mr. Arthur Morrison and Mr. W. W. Jacobs each contributes a volume or two. As for Mr. Hall Caine and Miss Marie Corelli—well, there is no burdening the reader with superfluous information. Mr. F. Marion Crawford we have had with us, as usual; but Mr. James Lane Allen has published nothing, and it begins to seem a very long time since the appearance of 'The Reign of Law.' We expect to hear from Mr. Winston Churchill only once in two years, so his silence in 1902 has been in no way surprising. From Mr. F. Hopkinson Smith we are very glad indeed to hear again, especially when it is in the shape of a book so good as 'The Fortunes of Oliver Horn,' and the same is to be said for Mr. Richard Harding Davis, who after what seemed a long retirement gave us during the year 'Ranson's Folly' and 'The Memoirs of Captain Macklin.' Mrs. Atherton's book for the year was 'The Conqueror,' altho 'The Splendid Idle Forties' is likely to be heard from during the first months of 1903. Then there are Mr. Major's 'Dorothy Vernon' and Miss Johnston's 'Audrey,' and by no means least, Mr. Booth Tarkington's 'The Two Vanrevels,' which people had long been awaiting, curious to know just how far it would bear out the fine promise of 'The Gentleman from Indiana' and 'Monsieur Beaucaire.'"

In the lists of the six most popular novels printed in *The Bookman* during 1902, "Mrs. Wiggs of the Cabbage Patch" figures most prominently, having occurred in eight of the twelve monthly tables. "The Right of Way," "The Mississippi Bubble," and "The Virginian" were mentioned five times; "The Crisis" and "The Man from Glengarry" four times; "The Leopard's Spots," "Lazarre," "The Cavalier," and "Sir Richard Calmady" three times; and "Castle Craneycrow" and "The Lady Paramount" twice. The following novels were mentioned only once: "Donovan Pasha," "Hearts Courageous," "The Eternal City," "The Ruling Passion," "If I were King," "The Conqueror," "The House with the Green Shutters," and "The Fifth String."

Several other novels are included in a list compiled by *The Independent*, namely:

"The Kentons." By W. D. Howells.
"The Valley of Decision." By Edith Wharton.
"The Portion of Labor." By Mary Wilkins.
"Spindle and Plough." By Mrs. Henry Dudeney.
"Confessions of a Wife." By "Mary Adams."

In England, Mr. Henry James's new novel, "The Wings of the Dove," wins unstinted praise. "No work of the imagination which has been published in 1902, and which I have read," declares Mr. Edmund Gosse, in a contribution to a literary symposium in the London *Academy and Literature*, "has seemed to me so original, so subtle, or sustained at so high a pitch of excellence as Mr. James's 'The Wings of the Dove.'" The London correspondent of the New York *Herald* refers to Henry Seton Merriman's "The Vultures" as the most successful English novel of the year, and sets next to it Mr. A. E. W. Mason's story, "The Four Feathers." The two premier novelists of England, Thomas Hardy and George Meredith, have been silent during 1902; but Mr. Barrie's "Little White Bird," A. T. Quiller-Couch's "The Westcotes," and Joseph Conrad's "Youth" are all regarded as notable contributions to the fiction of the year. "Love and the Soul Hunters," by "John Oliver Hobbes," has had a large circulation in England. It is "a quite remarkable book," says Mr. Theodore Watts-Dunton, on account of both its "brilliance" and its "fecundity of thought." The London *Academy and Literature* prints, in the order of their popularity, the following list of the twelve most popular novels of the year, as determined by a plebiscite of its readers:

"Love and the Soul Hunters." By "John Oliver Hobbes."
"The Vultures." By Henry Seton Merriman.
"Temporal Power." By Marie Corelli.
"The Intrusions of Peggy." By Anthony Hope.
"Fuel of Fire." By Ellen Thorneycroft Fowler.
"The Lady Paramount." By Henry Harland.
"The Hound of the Baskervilles." By Conan Doyle.
"Audrey." By Mary Johnston.
"Love with Honor." By Charles Marriott.
"The River." By Eden Phillpotts.
"Scarlet and Hyssop." By E. F. Benson.
"The Sea Lady." By H. G. Wells.

In the poetical world, the year's results have been scant indeed. The most noteworthy effort is undoubtedly Stephen Phillips's "Ulysses." William Watson's and Bliss Carman's Coronation Odes, and Rudyard Kipling's polemics, should also be mentioned, as well as Mrs. Margaret Woods's poetic drama, "The Princess of Hanover." Mr. Thomas Hardy declares that "The Princess of Hanover" interested him more than any other book that he read during 1902. In this country, a "companion to 'Hiawatha'" has appeared in "Kulóskap the Master," translations in the original meter of Algonkin folklore by Charles Godfrey Leland and Prof. J. Dyneley Prince. Of original verse *The Independent* selects Prof. George Santayana's "A Hermit of Carmel" and Josephine Preston Peabody's "Marlowe" as most worthy of notice. *Unity* (Chicago), in its annual survey of the literature of the year, calls attention to Ernest Crosby's "Swords and Ploughshares" as a book of poetry that "shows what Walt Whitman, Tolstoy, William Morris, and Henry George may bring forth in a fertile mind when it is coupled with stalwart independence and a glowing heart." The same paper chronicles the publication of new books of poems by Clifford Lanier, Holman F. Day, and Frank L. Stanton.

Biography is well represented in the literature of 1902. *The Independent* mentions Belloc's "Robespierre," Hensman's "Cecil Rhodes," and Curtis's "Jefferson." It continues:

"Far the greater number of real biographies are devoted to names famous in literature; and this might be expected, for it is easier to transmute a writer's life into writing than any other man's. The first place among these biographies ought probably to be given to the late Mr. Scudder's semi-official life of Lowell, which had the benefit of being written by a man in close touch and sympathy with Lowell's surroundings. Of a more critical nature is Professor Woodberry's study of Hawthorne in the American Men of Letters Series, the most adequate account of that romancer yet given. Full of enthusiasm, sometimes misplaced, but in general justified, is Professor Harrison's Life of Poe in the new elaborate edition of Poe's works; and some mention should be made of Colonel Higginson's 'Longfellow,' if only for the new material in it. Other American authors whose biographies have been published are Eugene Field, a good subject, and Philip Freneau, another good subject, but unfortunately treated with little literary skill.

"Perhaps no biography of the year was looked for more eagerly than Mr. Balfour's Life of Stevenson; but it must be confessed that somehow the charming personality of Stevenson did not entirely appear from the pages of that book. The historian Green was far better portrayed in the volumes edited and written by Sir Leslie Stephen; and the brief sketch of Kinglake, by the Rev. W. Tuckwell, was a most delightful piece of writing. Among English novelists must be mentioned the interesting life of Black by his friend, Sir Wemyss Reid, the autobiography of

Sir Walter Besant, and the charming story of Jane Austen's homes. In German literature we have Professor Thomas's elaborate study of Schiller; in French St. Cyr's unusually interesting and penetrating volume of Fénelon, and the first volume of Taine's correspondence."

Woodrow Wilson's important "History of the American People," the first three volumes of Dodd, Mead & Co.'s "New International Encyclopedia," and the second and third volumes of Funk & Wagnalls's "Jewish Encyclopedia" have been published during 1902. The most important books of essays and criticism are named by *The Independent* as follows:

"The Earlier Renaissance." By George Saintsbury.
"A History of English Romanticism in the Nineteenth Century." By Henry A. Beers.
"Shakespeare as a Dramatic Artist." By Thomas R. Lounsbury.
"The Beginnings of Poetry." By Francis B. Gummere.
"Chapters on Greek Metric." By Thomas Dwight Goodell.
"The Poetry of Robert Browning." By Stopford A. Brooke.
'Introduction to the Scientific Study of English Poetry." By Mark H. Liddell.
"George Eliot." By Leslie Stephen.
"William Hazlitt." By Augustine Birrell.
"Facts and Comments." By Herbert Spencer.
"Essays Theological and Literary." By Charles Carroll Everett.

The year 1902 has an impressive death-roll. France has lost Emile Zola. England has seen the passing of two great poets, Aubrey de Vere and Philip James Bailey; two great historians, Samuel Rawson Gardiner and Lord Acton; and three minor novelists, G. A. Henty, Mrs. Alexander, and George Douglas Brown. America has lost Bret Harte, Frank R. Stockton, E. L. Godkin, Paul Leicester Ford, and Frank Norris. "In Mr. Brown and Mr. Norris," observes the London *Academy and Literature*, "Great Britain and America had two young writers who were surely marked for greatness had they been spared."

MUSIC AS A FACTOR IN AMERICAN LIFE.

MR. DAVID BISPHAM, the well-known opera- and concert-singer, is far from being ready to share the pessimistic views of America's artistic condition which so often find expression in the magazines and reviews. He thinks, on the contrary, that "it may fairly be said that America stands at the head of the nations in its appreciation of the art of music to-day," and he paints a roseate picture of artistic prospects in this country. "Nowhere in the world," he declares (in *The North American Review*, December), "since the inception of Christendom, when civilization in its ceaseless swing about the globe was at one of its flood tides, has such a gathering of possibilities taken place as upon the shores of this land—so astounding in its achievements, so bewildering in its probabilities." We quote further:

"Each emigrant has had—or he never would have reached us—courage if not wealth, Pluck with Poverty, and the precious Perhaps in the pocket; and in the joy of a wider life he sang—even the slave in his chains sang louder than the rest—in the natural recreative outpouring that simple music can give the simple mind in the sound body. When we consider upon how many Old World nations, the height of whose culture is an earnest of their musical advancement, we have drawn for our population, and, further, when we reflect that the character even of the peasants of nearly every one of these lands is, from some remote source beyond a doubt more prolific of tune than that of the average Anglo-Saxon, what wonder that the sowing of a few of Fafner's dragon-teeth should bring up bands of ready-equipped musicians and armies of listeners who would dance to their piping or march to their trumpeting, to the death if need be, but more readily, and more likely as time goes on, to the peaceful and infinitely ampler state of existence to which, to a degree as yet unimagined, the world shall attain, largely through the direct influence of music."

Mr. Bispham proceeds to call attention to the remarkable development of musical feeling in the United States. The organizations for the study and cultivation of music now number about one thousand, three-fourths of them having sprung into existence since 1890, their active membership aggregating a total of about 70,000. Mr. Bispham refers to the wonderfully varied work being done by Frank Damrosch as follows:

"What admirable work is being done by Frank Damrosch in the People's Choral Union, which teaches masterpieces of choral art to thousands of wage-earners, who are thus not only made to know and love their beauty, but are kept out of mischief and induced instead to associate themselves with thoughts infinitely above the cares of their none too interesting existence. The same pioneer, through the medium of the Symphony Concerts for Young People, is placing before children, young and old, the great works that all should know, while in the Oratorio Society he is keeping up the study and knowledge of the recognized works of that special repertoire, besides introducing the best among modern compositions; and in the Musical Art Society he is laboring with a body of picked and paid singers in the field of madrigals and the less known and more intimate compositions intended to be rendered by a smaller body of voices for a class of amateurs whose interests and tastes are highly cultivated.

MR. DAVID BISPHAM.
He thinks that "America stands at the head of the nations in its appreciation of the art of music to-day."

"The name of Walter Damrosch is too well known to need more than passing mention, but as the Director of the Philharmonic Society, and through the other orchestral bodies which have come under his direction since his father bequeathed his baton to his keeping, he has been an educator of public taste; while to his zeal for Wagner we owe a large part of our acquaintance with the works of that master, and the introduction of many of the most noted foreign singers of the day. To these two enthusiasts, who desire to do nothing else and could perform no greater service, the profound thanks of the community are due, for their influence has always been of the best and their work of the highest."

The Boston Symphony Orchestra is characterized by Mr. Bispham as "probably the finest body of instrumentalists in existence"—"a splendid example of what good may be done by the philanthropists in music." It was founded and is sustained by Henry L. Higginson, and the service that Mr. Higginson has rendered Boston Mr. Carnegie has rendered Pittsburg. "But of all living men, Theodore Thomas it is to whose labor of love we owe most, for to him we have looked, more than to any other, for our introduction into the mysteries and beauties of the enormous mass of instrumental literature, and for our education in the symphonic works of the great masters."

Mr. Bispham refers briefly to the musical festivals held annually in Worcester, Mass., Cincinnati, and other cities throughout the country, and says, in conclusion:

"There is an untrodden field for some benefactor yet to come, in founding what might be called the University of Music, which,

having affiliations with all schools previously existing among us, could extend its influence throughout the country, by discovering, fostering, and importing the best talent, and publishing and supplying the best music of all schools to the public; by opening circulating libraries where all the compositions of noted composers of all times might be obtained; and by superintending, if not actually carrying on, the general instruction, not only of individuals, but of the masses. Such an institution, in order to make its work known and universally felt, would maintain a staff of singers and instrumentalists who might tour the country, or whose services could be obtained to perform at concerts and recitals the music of various kinds and countries, making it known historically before the countless audiences which would be only too glad to receive such enlightenment. From the Gregorian chant to the compositions of Palestrina and the masses of Beethoven; from the lays of troubadours and minnesingers to the art songs of Germany; from the operas of Handel to those of Wagner, every phase of vocal art would be traversed. From the lyre to the harpsichord and the piano, from the viol to the string quartet, from 'the instrument of ten strings' to the modern orchestra, the growth of music would be clearly demonstrated, its permanence as one of the most lofty, tho most evanescent, of the liberal arts would be assured, the influence of the charlatan would be kept within bounds, and even the least attentive class of the population, unconsciously to themselves, attracted, cultivated, raised from the sordid affairs of the moment, soothed, cheered, ennobled, and inspired with fresh courage to face the problem of life.

"To the mind awake to music in a land like ours its permanent value as a profound factor in social science can not long remain hidden; for it is a civilizing influence of the most potent character."

A NEW POETIC PRINCIPLE.

NO topic in polite literature, as Edgar Allan Poe once observed, has been more pertinaciously discussed than the question of the nature of poetic form. To his mind the subject was "exceedingly simple; one-tenth of it, possibly, may be called ethical; nine-tenths, however, appertain to mathematics; and the whole is included within the limits of common sense." So he finds the essential elements of poetic form in a nursery rime practically devoid of any idea.

A theory of poetic form in direct conflict with this idea is propounded by Mr. Mark H. Liddell, recently professor of English in the University of Texas, who contends in his newly published "Introduction to the Scientific Study of English Poetry" that English poetry is not rhythm of sound, but rhythm of thought and emotion. His book has evoked an unusual storm of criticism both in this country and in England, not only because of the author's theory, but because of his aggressive manner of advocating it. The New York *Outlook*, which calls the book "an independent, able, and original monograph," adds that it is "phrased with pedantry and written with the zeal of a tactless iconoclast." And the London *Athenæum* says: "Professor Liddell's treatise contains so much clear and sound thinking . . . that it is a pity that he should prejudice his hearing by a rather arrogant claim to be taken as a four-and-twentieth leader of revolt." Professor Liddell's conclusions may be summarized as follows:

The fundamental element in shaping our English verse-form is what may be termed "Attention-Stress." This stress material is the very warp of the poet's verse. It is the punctuating material which divides the poetry into varying rhythm-figures of ever-changing beauty and harmony. Its workings are neither accidental nor capricious, but as definite and as formulable as are the phenomena of physical science or of economics.

If one takes an ordinary thought and pronounces it to himself merely as a group of vocal impulses, not thinking of the significance of the impulses themselves, but treating them merely as successive sounds, and gives the stressed impulses an exaggerated emphasis, the effect will be a staccato utterance exceedingly unpleasant to an English ear. But if we think of the impulses as impulses of thought, not of sound, and then give those which are stressed an exaggerated emphasis, the effect will be that continuous wavelike movement of sound which is the normal accompaniment of English speech. Those accesses of impulse which we call "accent" and "emphasis" are but vocal reflections of a mental energy.

This principle is very strikingly illustrated in Shakespeare's poetry. His pulsing rhythms vibrate with the quick energy of his thought till they fairly tingle with emotion. Take almost any passage—Hamlet's soliloquy, Lear's outburst of passion during the storm, Macbeth's defiant challenge to the impending ruin he has brought on himself—there is not a word whose impulse is not definite and certain. The rhythm moves with clearness and sureness; it is not a question of poetry or of prose, but of the fullest, clearest, most adequate expression human thought is capable of. The reader does not realize that he is reading poetry—he is too intent on reading the souls of men. The poet's idea forges its own rhythm, and with it battles its way through the gates of speech to the inmost core of human experience. And so it is with all our English poetry.

PROF. MARK H. LIDDELL.

His new book on poetic form has evoked an unusual storm of criticism

He who could think of it as a pleasing arrangement of vocal sounds has missed all chance of ever understanding its meaning. There await him only the barren generalities of a foreign prosody, tedious, pedantic, fruitless, and he will flounder ceaselessly amid the scattered timbers of its iambices, spondees, dactyls, tribrachs, never reaching the firm ground of truth.

The Edinburgh *Scotsman* regards Professor Liddell's work as an interesting attempt to reduce the study of poetry to a scientific principle. "In spite of its toughness," it says, "the book is carefully thought out, and will prove especially suggestive to students of the formal side of poetry." The London *Daily Chronicle* goes so far as to say that the volume is "more likely to interest and serve the student of English poetry than any we have ever seen before." In contrast to such flattering estimates is the comment of the Chicago *Dial*:

"We can not see that Professor Liddell has added anything to the excellent work which has already been done in the study of English prosody. His methods and his style are for the most part unsatisfactory, and his theories may most safely be regarded —to use the words of Francis B. Gummere in his admirable 'Handbook of Poetics'—as among 'those sweeping changes of recent writers which are in so many cases merely destructive of old theory without offering solid basis for new rules.'"

The critics who most thoroughly and joyfully disagree with Professor Liddell are a reviewer in the New York *Evening Post* and Paul Elmer More, a writer in the *Sewanee Review*. Both stand upon the theory of Lanier, which is practically that of Poe, that rhythm is wholly a matter of acoustics. *The Evening Post* reviewer declares:

"Sidney Lanier, in his 'Science of English Verse,' set forth that when we recite poetry we utter sounds; when we listen to poetry, we hear sounds; when we read poetry the letters recall sounds to our mind; when we remember or conceive poetry we

imagine sounds. This is good physics, good physiology, and good psychology. . . . . .

"The book before us is an attempt to take the study of verse-form out of the safe province of acoustics, an attempt to argue the facts of verse-form altogether out of the category of objective realities, and to banish them into the nebulous realm of subjective phenomena."

TWO INTERPRETATIONS OF "HAMLET."

THE simultaneous appearance of Mr. E. H. Sothern and Herr Ferdinand Bonn in the rôle of "Hamlet" has created considerable interest in New York dramatic circles, and affords a basis for an interesting comparison between the interpretation of a famous American actor and that of a famous German.

It was Mr. Sothern's boyhood dream, we are informed by *The Times*, to portray "Hamlet," and the impression made upon him by a visit in his youth to "Hamlet's Castle," at Elsinore, Denmark, in company with his father, was so vivid that he was able to sketch for his scenic artists the details, surroundings, and interior of the great Danish castle. He first appeared in the part of "Hamlet" in New York two years ago, but met with an unfortunate accident that compelled him to withdraw the production. Of Mr. Sothern's present performance, Mr. John Corbin, of *The Times*, writes:

"Mr. Sothern has emphasized, more than we have ever before seen emphasized, the vigor and the fervor that inhere in this stirring drama. The ardor of Hamlet's love for his dead father, the awe of the ghostly apparition, and the excitement of his resolve upon revenge are brought out with ringing effect. His denunciation of his mother is vehement and thrilling. He carries off the sword scene with sinister power. Even in the famous soliloquies one feels rather the fever of forced inaction than the self-communings of a spirit that (as some actors have conceived with dubious wisdom) is rendered lax by philosophy and unnerved by doubt. This interpretation carries one breathlessly from scene to scene. . . . Sometimes, as in the passage in which he calls the majesty of Buried Denmark 'truepenny' and 'old mole,' as also in that in which he records his uncle's knavery in his notebook, it is the sheer force and dignity of his bearing that carry us over dangerous ground. Sometimes it is by dint of interpolating action for which there is no warrant in the text, as when, having bidden the 'rash, intruding fool,' Polonius, Hamlet's unsympathetic farewell, Mr. Sothern simulates an excess of inarticulate remorse. There need be no objection to taking Hamlet in this stirring, romantic vein. The whole nature of the piece cries out for it. These are the tones of the drama as Shakespeare passes it on to us. What he added are properly to be taken as the overtones. And one has not the heart to demur at the means by which the unsympathetic incidents in the story are slurred over. If ever it is admissible to 'improve' upon Shakespeare it is here. There is little room, in fact, for anything but rejoicing at so intelligent and stirring a performance."

The Evening Post, on the other hand, finds Mr. Sothern's rendering "deficient in some of the most vital elements of the part, in the sweet courtesy of the prince, the philosophic reflection of the scholar, and the natural restraint of dignified and refined habit." And Mr. William Winter, of *The Tribune*, says:

"Mr. Sothern is an earnest and conscientious actor—now, after upward of twenty years of professional service, at the meridian of his career—and his endeavor to play Hamlet, while it can not be much extolled, should, at least, be recognized as creditable to his ambition. It is a worthy endeavor, but not a victorious one. . . . At certain pivotal moments of the tragedy—such as Hamlet's first meeting with the Ghost, his parting with Ophelia, his delirium at the climax of the 'mouse-trap' play, and his frenzied joy and horror at the killing of Polonius—he conspicuously lacks the passion that should be electrical and the tragic power that should carry all before it. Of the corrosive misery of Hamlet—misery that has sapped the foundations of his mind and life, and which steadily, mercilessly, inexorably, and irresistibly burns out his heart and propels him onward to ruin and death—he gives no denotement."

HERR FERDINAND BONN, MR. E. H. SOTHERN,

As they appear in the rôle of "Hamlet."

Herr Bonn's performance is characterized by *The Times* as "interesting, but on the whole disappointing." The same paper says further:

"He has followed the questionable practise of making Hamlet a blond, and has made him a very German blond at that. His yellow mop of unkempt hair (orange-tawny Shakespeare would have called it) forestalled all possibility of regarding him as the Englishman the poet undoubtedly conceived him to be, or even as a Dane—a type which is still somewhat removed from the Teuton of Herr Bonn's embodiment.

"The insuperable difficulty was in the matter of the convention in which Herr Bonn acted—a convention which, at least to an English-speaking public, seems at once childlike and old-fashioned. In Germany, to be sure, this convention has still its partizans. Its citadel is the Royal Playhouse of Berlin, of the company of which Herr Bonn is a member. When Herr Matkowsky plays Macbeth and Frau Poppe his lady for the Kaiser, the stage trembles and shakes beneath their rages even as does the stage of the Yiddish Theater in the Bowery beneath those of Herr Joseph Adler.

"And so it does beneath the Hamlet of Herr Bonn. Excitement is denoted by stamping and striding, terror by shuddering and staggering. When any emotion reaches its climax Herr Bonn falls prostrate on a chair, a table, a flight of steps, and very often on the floor. These gross movements of the body are made the chief means of utterance, and they preclude most of the finer traits of expression, which depend upon the subtlest

shadings of light and shade in the features, the beam in the eye, the modulations of the voice, a delicate poise of the body, even the little, undistinguishable movements of the fingers."

In this judgment *The Tribune* concurs. *The Evening Post*, however, is more laudatory in its criticism, and concedes "the general power of Mr. Bonn's portrayal, as well as the richness of his histrionic work in detail."

JOHN FISKE'S TRIBUTE TO MILTON.

AT the outset of an address on Milton which was written by Mr. John Fiske shortly before his death and is now printed in *The Cosmopolitan*, we are told that "to bring a sketch of John Milton within the compass of a single hour seems much like attempting the feat, described by Jules Verne, of making the journey around the world in eighty days." Mr. Fiske says further:

"In the dimensions of that human personality there is a cosmic vastness which one can no more comprehend in a few general statements than one could sum up in one brief formula the surface of our planet, with all its varied configuration, all its rich and marvelous life. There have been other men, indeed, more multifarious in their work than Milton, men whose achievements have been more diversified. Doubtless the genius of Michelangelo was more universal, Shakespeare touched a greater number of springs in the human heart; and such a spectacle as that of Goethe, making profound and startling discoveries in botany and comparative anatomy while busy with the composition of Faust, we do not find in the life of Milton. A mere catalog, dealing with the Puritan poet and his works, would be shorter than many another catalog. But when we seek words in which to convey a critical estimate of the man and what he did, we find that we have a world upon our hands. Professor Masson, of the University of Edinburgh, has written the 'Life of Milton' in six large octavos; he has given as much space to the subject as Gibbon gave to the 'Decline and Fall of the Roman Empire'; yet we do not feel that he has treated it at undue length."

Milton's first important work was "Comus," a dramatic poem performed at Ludlow Castle in 1634. Mr. Fiske deems it "a piece of poetry more exquisite than had ever before been written in England save by Shakespeare." He continues:

"There is an ethereal delicacy about it that reminds one of the quality of mind shown in such plays as 'The Tempest' and 'A Midsummer-Night's Dream.' The late Mark Pattison has observed that 'it was a strange caprice of fortune that made the future poet of the Puritan epic the last composer of a cavalier mask.' But in truth, while Milton was a typical Puritan for earnestness and strength of purpose, he was far from sharing the bigoted and narrow whims of Puritanism. He had no sympathy whatever with the spirit that condemned the theater and tore the organs out of churches and defaced noble works of art and frowned upon the love of beauty as a device of Satan. He was independent even of Puritan fashions, as is shown by his always wearing his long auburn locks when a cropped head was one of the distinguishing marks of a Puritan. With the same proud independence he approved the drama, and kept up his passion for music. In his seriousness there was no sourness. A lover of truth and righteousness, he also worshiped the beautiful. In his mind there was no antagonism between art and religion; art was part of religion; the artist, like the saint, was inspired by God's grace. Listen to what he says of the power of poetic creation: 'This is not to be obtained but by devout prayer to that Eternal Spirit that can enrich with all utterance and knowledge, and sends out his seraphim with the hallowed fire of his altar, to touch and purify the life of whom He pleases.' There is the Puritan doctrine of grace applied in a manner which few Puritans would have thought of."

The blithe and sunny temper of Milton is illustrated in the two next poems that he wrote, "L'Allegro," or "The Cheerful Man," and "Il Penseroso," or "The Thoughtful Man." "Nothing more beautiful," in Mr. Fiske's judgment, "has come from human pen." These twin poems are pastorals, and were followed in 1637 by "Lycidas," a poem of similar construction. Milton's masterpieces, "Paradise Lost," "Paradise Regained," and "Samson Agonistes," were not written until more than twenty years later. Says Mr. Fiske:

"'Paradise Lost,' like Dante's great poem, the only one with which it can be compared, was the outcome of many years of meditation. As a young man Milton thought of writing an epic poem, and he took much time in selecting a subject. For a while the legends of King Arthur attracted him, as they have fascinated Tennyson and so many other poets. In the course of his studies of early British history and legend, he was led to write a history of England to the year 1066, in one volume. After a while he abandoned this idea. The subject of an epic poem must be one of wide interest. Homer and Vergil dealt with the legendary beginnings of national history. If a national subject, like the Arthur legends, were not adopted, something of equal or wider interest must be preferred; and the choice of the Puritan poet naturally fell upon the story of the Creation and Fall of Man. The range of such a subject was limited only by that of the poet's own vast stores of knowledge. No theme could be loftier, none could afford greater scope for gorgeous description, none could sound the depths of human experience more deeply, none could appeal more directly to the common intelligence of all readers in Christendom. Of all these advantages Milton made the most, and 'Paradise Lost' has been the epic of the Christian world, the household book in many a family and many a land where Puritanism has not otherwise been honored. As Huxley once remarked, the popular theory of creation, which Lyell and Darwin overthrew, was founded more upon 'Paradise Lost' than upon the Bible."

By common consent of educated mankind three poets—Homer, Dante, and Shakespeare—stand above all others. "For the fourth place," declares Mr. Fiske, "there are competitors: two Greeks, Æschylus and Sophocles; two Romans, Lucretius and Vergil; one German, Goethe. In this high company belongs John Milton, and there are many who would rank him first after the unequaled three."

NOTES.

A *Journal of Comparative Literature*, edited by Professors George E. Woodberry, J. B. Fletcher, and Mr. J. E. Spingarn, made its first appearance on January 1, and will be published quarterly in New York.

KIPLING'S new poem, "The Rowers," has naturally created great indignation in Germany. Herr Ernest von Wildenbruch, the well-known novelist, in a poem replying to Kipling and conspicuously printed by newspapers of every political hue, intimates that everything Kipling has heretofore written is wiped out by the Germans by his latest verses, and that his name shall never again be heard in Germany.

THE QUESTION IN FUTURE WARS: "WHO IS KIPLING WITH?"
—*The Chicago News.*

SCIENCE AND INVENTION.

IS OUR CLIMATE CHANGING?

WE are continually being told by the "Oldest Inhabitant" that the winters are not so cold as when he was a boy; and the belief is a common one that the climate of North America is growing warmer. Statistics give no support to this belief, which is based on psychological rather than meteorological conditions; but the words of science fall on unwilling ears and the public will not be persuaded. A writer in the Boston *Transcript* makes one more attempt. He says (December 6):

"The climate is not undergoing any permanent change. Of course, noticeable fluctuations occur. The average climate for one decade may, and often does vary from that of another; but, looking back as far as human records extend, any unusual 'spell of weather' in one century can be matched by an equally unusual spell in any other century. It is the Oldest Inhabitant or his immediate environment that changes, not the climate. Once when he was a boy it really did snow in November quite heavily, so that the fields and hillocks about the farm turned white all in an hour. His mittens and heavy coat were at home, of course, hadn't used them for a year; and the sudden penetrating cold bit him so cruelly that the memory of the day clung to him years after. Then there was a time when he received a sound thrashing for skating on Thanksgiving Day instead of going to church. That also he remembers clearly. The times when he didn't skate on Thanksgiving and didn't meet with a snow-storm are so frequent he has forgotten them. Therefore, as he looks back, the exceptions that remain fixed in his mind become the rule. . . . .

"'But all the same,' he will still maintain, 'records or no records, I remember perfectly well the time when we used to go sleighing on Boston harbor just as often as winter came. We wouldn't have felt Christmassy without it.' Now here he may be perfectly correct in his reminiscences, but how many sewers emptied their greasy contents into the harbor at the time of which he speaks; how many gas and oil-refineries spilled coal-tar over its surface? And have not the wharves since then pushed out into deeper water, obliterating the shallower, stiller inlets of the bay and making the main tide channels run swifter? There is no doubt that a city, in growing, changes the climatic conditions of the immediate spot upon which it is built. The climate of the lower end of Manhattan island is probably not the same now that it is buried under twenty stories of hot bricks as when Henry Hudson first looked upon it in its green, wooded loveliness. The sleighing isn't so good there as it used to be—not with the millions of house furnaces radiating their heat out upon the snow. . . . . .

"There are more reliable witnesses in the world in this matter of weather than old inhabitants. The trees that have stood in the very same spot for five hundred summers and winters testify that it could not have been so very much hotter or colder when they were young, for if we were to take their own seedlings and plant them where the climatic conditions were different from where they stand, they would die. More than that, if we cut into the forest patriarchs, we see by the growth of their rings as compared to that of their young offsprings that the same amount of sun in summer, the same amount of moisture in spring must have occurred during their youth as now.

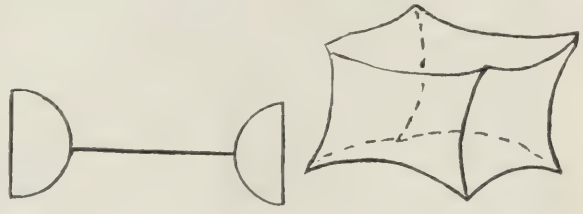
"Glaciers also are very sensitive climatic tell-tales. They depend at one end on snow to supply them and upon sunlight at the other to melt them away. When there comes a succession of years stormier and colder than the average, the glacier advances at its lower end, pushing its pile of débris ahead of it down the valley. When the years average warmer and drier, the glacier melts away faster than it can be supplied from above, leaving its cast-off burden of stones behind it. The glaciers of Switzerland have been watched very carefully for a long time. During the periods 1760–86, 1811–22, 1840–55, and from 1880 on to the present they have been extending on account of greater supply from above and more intense cold. During the periods, 1750–67, 1800–12, 1822–44, 1855–80, they have retreated; but they have indicated no permanent weather change during that long time."

Doubtless climatic changes have taken place and will take place again during long geologic periods. There was a time, the writer reminds us, when semi-tropical plants grew in Greenland, and another when huge glaciers covered the northern United States. To bring about such changes as these, however, continents were reconstructed, winds and ocean currents were altered. According to some astronomers we must even invoke an alteration of the earth's orbit to account for them. To quote again:

"With such engulfing, continent-destroying changes as these, the oldest inhabitant has no concern. Let us hope so, at least; for as far as humanity was concerned, they would be the end of the world. Meanwhile, as long as the thin crust of this planet continues to sustain us as it has done for so many centuries, and our track through the starlit space remains what it has been for so many uncounted eons, despite the little forests which we cut down and the little specks of cities we locate on the map, if we but go far enough afield for it, we shall find that same old rigorous winter that our fathers knew."

THE UNIVERSE AND ITS FORCES—A NEW THEORY.

OF the various motions whose sum makes up the activities of the universe, those have always been most puzzling that seem to be brought about by action at a distance, such as those of gravitation or magnetic attraction. The modern tendency is to regard such action as distant only in appearance, and to explain it by supposing that some invisible agency is really pushing or pulling the moving body directly. Long ago, a Russian philosopher, Boscovich, supposed gravitation to be due to the impact of myriads of swiftly moving corpuscles that were always flying through the universe in a constant storm, coming



SHAPES OF ATOMS BENDING TOWARD ZONES OF GREATEST VIBRATION.

from nowhere and going nowhere—a cruel waste of energy. Nowadays the effort is to avoid such a waste in hypotheses, and to frame them so that they will account not only for gravitation, but for all other forces of the same class. One of the latest is described by M. E. de Camas in an article in the *Revue Scientifique* entitled "An Attempt to Explain Action at a Distance." Says M. de Camas:

"It may be noted that natural phenomena are of two sorts. Some appear due to the dissipation of a certain energy emanating from a certain domain of space, whence it is transmitted by means of the ether; such are the phenomena of light, heat, and electric oscillation. Others are phenomena of action at a distance; it does not appear that there is dissipation of energy here, altho we may believe with Faraday that the presence of material bodies modifies the state of the ether. Thus an electric current A, in a permanent state, acts on another current B, and is not a source of electric energy that is dissipated in the ether. But since A acts on B, it would seem logical to think that A is the source of something, and this can only be energy. Now this emission of energy is not apparent. It must be, therefore, that between matter and space there are equal exchanges of energy, becoming apparent only when the state of the matter is modified and then being attributed to the matter alone.

"We are thus led naturally, when we wish to explain forces at a distance by vibrating movements of the ether, to make the following hypothesis:

"The ether is traversed in all directions by a great number of plane vibrations of very different phases and of determinate

periods. These vibrations are reflected (at least partly) on the surface of atoms, the ultimate particles of matter, and these atoms thus give rise in their vicinity to a certain order of nodal and ventral surfaces [surfaces of minimum and maximum vibration, such as are always produced by the interference of a reflected with a direct wave]."

Without following the argument of M. de Camas step by step, we may simply state he finds that in general the ether-waves will drive a spherical atom toward a surface of least vibration, just as sound-waves in air have been found to do. The atom, however, may be so shaped that it will be driven instead toward a surface of least vibration. This would happen if it were formed like two hemispheres connected by their convex sides. The surface of the atom itself is a surface of least or greatest vibration, according to whether it changes the sign of the wave in reflecting it. By making appropriate hypotheses regarding the shape and properties of the different atoms, therefore, M. de Camas explains all kinds of attraction and repulsion, electric, gravitational, cohesive, etc. He even builds upon it a theory which explains also chemical and vital phenomena. According to him, to quote further:

"The formation of chemical atoms, biological cells, and cosmic systems takes place in similar ways. The chemical atom, in particular, seems to us stable only because it is in medium where its conservation is possible—a medium defined by the number, nature, and speed of the ions, as well as by the vibrations that traverse it.

"The fundamental hypothesis on which this theory has been built is unfortunately somewhat vague and incomplete—that is to say, the existence of vibrations of different phases traversing the ether in all directions. This we can take for granted if the ether is finite; for the vibrations of the universe would then be reflected at its free surface and return toward the interior. If we further assert, with Lord Kelvin and Helmholtz, that the ions of different kinds are only vortical modifications of the ether, we shall conclude that matter can not leave the ether. Then energy can not be dissipated and will remain constant in a finite universe.

"Now the configuration of the universe at a given instant is the result of vibrations capable of being enumerated and defined; that, at least, is our conception of it. But every vibration that emanates from a certain region returns, after reflection from the free surface of the ether, toward another region, and this keeps up indefinitely. According to this way of looking at things, all that exists has existed before and will exist again.

"The universe, in a word, will have at the end of a sufficiently long time, and during a given interval, a configuration differing as little as we like from that which it had during a corresponding interval of time previously determined."—*Translation made for* THE LITERARY DIGEST.

THE CHILDREN OF ALCOHOLIC PARENTS.

WHAT shall be done with the drunkard's children in order that they shall not fall as he fell? The question is an important one. Here is some advice given on the subject by an editorial writer in *The Hospital* (December 20). He says:

"That a good many alcoholic parents have children who themselves become alcoholic can hardly be denied. Whether they suffer because of their parents' fault is another matter; probably when heredity has anything to do with it parent and offspring alike are the victims of some old taint of nervous instability which has come down through many generations. But however it happens, we can not, in the bringing up of a child, ignore its tendencies as shown by those of its progenitors. Hence it becomes a very important question to decide, from quite early days, what sort of a régime such a child should be subjected to. Such children are often liable to exhibit extremes of activity and prostration. In work, in study, and equally in play, they show enormous energy and 'go' for a short time, and this is followed by periods of exhaustion. As these children grow up they are neurotic, often brilliant in certain ways, but very impatient of suffering, and it is to relieve their phases of depression that later on alcohol is so often taken. In the rearing of such children then nothing should be done to increase their inherent tendency to sudden outbursts of energy. Stimulants should be absolutely avoided, and one must not confine the term to alcoholic stimulants alone. Our object should be to produce a slow and passive growth rather than a sudden evolution of nerve force, hence alcohol, tea, coffee, and even meat broths should be forbidden. In the daily diet also meat should be given in very limited quantities, or is perhaps better avoided altogether, the diet being made to consist of milk and vegetables, fruit and farinaceous foods. The meals should be administered at regular times, and under no circumstances should such children be allowed to relieve any sense of emptiness or faintness by intermediate snacks. This habit of immediately relieving every internal discomfort by putting something into the stomach is at the root of the evil. In childhood it leads to biscuits and sweets, but in manhood it too often leads to unlimited 'nips' and 'pegs' and other easy means of relieving depression. The origin of tippling may sometimes be traced back to nursery habits."

BECQUEREL'S WONDERFUL RADIATION.

IT is a curious commentary on human interest that while the discovery of the Roentgen rays set the world agog, that of the Becquerel rays, which are still more remarkable, was scarcely noticed. The *x*-rays require powerful electrical excitement, but the Becquerel rays, whose properties are the same, "only more so," are given off continuously by certain rare substances, which appear, therefore, to be unfailing sources of energy—something whose existence modern physics does not acknowledge. The Becquerel rays and their explanation have therefore inspired the keenest interest in the scientific world. The latest state of our knowledge about them is set forth in an article in *Harper's Magazine* (January) by Prof. J. J. Thomson, of Cambridge University, one of the greatest living authorities in physics, who has just accepted a call to Columbia University, New York. Professor Thomson reminds us that uranium, the substance first recognized as a source of the rays, has long been known as a brightly phosphorescent substance, but it was reserved for M. Becquerel, third in a line of illustrious French physicists, to show that it gave off continuously, even when not visibly shining, rays resembling the newly discovered Roentgen rays. In fact, Professor Thomson tells us, the new radiation is a mixture of Roentgen rays and cathode rays, and must therefore, if current theories are correct, consist, not of etheric waves like light, but of swiftly moving corpuscles, the fragments of atoms. Says Professor Thomson:

"The speed of the cathode rays depends upon the extent to which the air has been removed from the vessel. The highest velocity recorded for rays produced in this way is about 70,000 miles per second. Large as the velocity is, it is greatly exceeded by the velocity of the cathode rays spontaneously given out by uranium; while another substance, radium, emits rays moving at a still greater speed, velocities of over 120,000 miles per second having been recorded by Becquerel for the cathode rays given out by radium; a particle traveling with this velocity, and starting from the earth, would reach the moon in two seconds. Among all the mysteries associated with matter, few, if any, are more striking than that afforded by these substances, in no way remarkable in appearance, which, without provocation and without intermission, emit projectiles which travel at a rate compared with which that of the fastest bullet is absolutely insignificant.

"After the discovery of the peculiar property possessed by uranium, all the known chemical elements were tested to see whether there were any others which possessed similar powers; one and only one was found to do so; this is thorium, a substance largely used in the manufacture of incandescent gas-mantles."

Altho these were the only radio-active elements known at that time, research brought to light wholly new ones, which have been named radium, polonium, and actinium. All are extremely rare,

but the first, when sufficiently purified, is a hundred thousand times more active than uranium. Says Professor Thomson:

"The radium is self-luminous, shining with a bluish light; it, like Roentgen rays, makes a sensitive screen phosphoresce; it shows the bones in the hand, and is so vigorous that it has produced sores on those who have incautiously carried it about their persons. The radium emits negatively electrified particles with a velocity in some cases approaching that of light. This continued emission of particles from the radium of course implies that the radium is losing mass and energy. The loss of mass is exceedingly small; from the results given by Curie for the amount of negative electricity emitted by the radium it follows that the loss of mass would only amount to about one-thousandth of a milligram in a million years for each square centimeter of surface. In consequence of the tremendous velocity with which the particles are projected, the amount of energy radiated is quite an appreciable amount, being sufficient, if converted into heat, to melt in a million years a layer of ice of the same area of the radium and more than a quarter of a mile thick. This loss of energy goes on without intermission, and has been going on —as far as we know—for whatever number of million of years the radium may have existed.

"There must have been some very considerable store of energy at the disposal of the radium to enable it to keep up this rate of radiation, and the very interesting question arises, What is the nature of this energy, and how is it stored? A satisfactory answer to this question has, I think, been given by some quite recent researches made by Professors Rutherford and Soddy of Montreal."

The discovery of these gentlemen, to condense Professor Thomson's explanation, is that, in the case of one radioactive substance, thorium, the activity is confined to a very small fraction of the mass, which continuously changes. Ordinary inactive thorium is continually turning into the active form, and this again changes into a third form, which is also inactive. The substance thus keeps on losing energy by its radiation and will presumably in the course of millions of years become entirely inactive. Professor Thomson believes that all radioactive substances pass through this cycle. As the change occurs in a very small fraction of the substance at a time, some part of it is always in the active state and hence the peculiar properties of the substance appear to be constant. One of the most wonderful properties of radioactive substances yet remains to be told. They give off a gaseous emanation which is not only radioactive itself, but communicates this activity to other substances by contact. Says Professor Thomson:

"The intensity of this induced radioactivity does not depend to any great extent on the nature of the substance. A piece of paper can be made as strongly radioactive as a piece of metal. This induced radioactivity only lasts for a few hours—the induced radioactivity due to the emanation from thorium lasting longer than that due to radium, altho the activity of the emanation from thorium is much less durable.

"Elster and Geitel made the very remarkable discovery that substances could be made radioactive without the aid of thorium or radium; all that is necessary is to hang them up in the open air, or in a very large room, and change them strongly with negative electricity; after a few hours they become radioactive. Elster and Geitel have taken photographs with the scrapings of a copper rod, which had been treated in this way. The earth itself is negatively electrified, and the natural electrification on pointed conductors connected with the earth is sufficient to make them radioactive without further electrification. Thus the points of lightning-conductors, the pointed leaves and spines of trees, are always radioactive, and C. T. R. Wilson has lately shown that freshly fallen rain is so too, and that it retains this property for about an hour. Elster and Geitel thought that this induced radioactivity indicated the presence of yet another constituent in that already very mixed body the air, the new constituent being, like thorium or radium, radioactive.

"The writer has, however, recently made some experiments which show that we can account for this induced radioactivity without having recourse to such an hypothesis, and that . . . to make a body radioactive all that is necessary is to get a layer containing a large quantity of positive electricity close to the surface of the body. We can, in this way, make radioactive substances without the use of any material that is intrinsically radioactive.

"It is thus, I think, that the leaves of trees and the countless objects on the surface of the earth which are radioactive acquire this property; they are, in fact, cathodes, discharging cathode rays into the air. Thus cathode rays, which have only comparatively recently been discovered, and then by the help of most elaborate apparatus, are in all probability so widely distributed and occur so frequently that there is hardly a patch of ground on the earth's surface which does not contain an active source of these rays."

PAINTING BY PNEUMATIC POWER.

THE use of a pneumatic spraying-machine for painting was first brought prominently before the public at the time of the World's Fair in Chicago, when the exhibition buildings were coated with paint by this means. Since that time pneumatic painting has developed a great importance, having proved itself a cheap, speedy, and efficient substitute for the slow brush in many cases. In *The Scientific American* (December 26), a correspondent thus describes one of the devices now in use for this purpose. He says:

PAINTING A FREIGHT CAR WITH THE PNEUMATIC COATING MACHINE.

"The machine . . . comprises a self-contained air and liquid pump, fitted with a special expansive plunger, and an eight-inch boiler-tube receptacle in which the liquid and air are compressed.

The apparatus thus comprised is mounted upon a substantial platform. Attached beneath the receptacle are two valves, located one above the other at one side of the pump in a special valve-chamber, and playing in removable brass seats and cages. The suction-opening at the under side of this valve-chamber is L-shaped. Into the L thus formed is screwed a piece of one-inch pipe to which the wire-wound suction-hose is attached. The suction-opening leading into the pumping-cylinder is placed about one and one-half inches above the bottom of the cylinder, and is connected with the lower valve-chamber. It is the object of this construction to allow the plunger to close the suction-opening on each down stroke, thereby crowding every drop of liquid or air through the upper valve into the receptacle. From this construction, it follows that the liquid can never come in contact with the packing of the plunger. Indeed, the liquid does not enter the cylinder at all, because on the upper stroke of the cylinder the lower valve is opened and the liquid is drawn through into the lower valve-chamber. The down stroke, whereby the lower valve is closed and the upper valve opened, forces the liquid through the upper valve into the receptacle. . . .

"Any length of pneumatic air-hose can be used; for when the discharge-valve is open the hose becomes a part of the receptacle, increasing its capacity to the extent of the additional volume of the hose. By means of an eight-foot extension-rod or tube the liquid can be spread fourteen to sixteen feet overhead without a scaffold or ladder. Within this extension-rod is another valve, which gives the operator complete control of the discharge, even tho he is working one hundred feet away from the machine. A specially designed nozle at the end of the extension-rod gives to the liquid a whirling motion, so that there is no possibility of clogging the outlet. This special nozle, in connection with the compressed air, atomizes the liquid so that a fine, filmy mist is formed which penetrate everywhere.

"The merits of the construction of the machine are obvious. The pump has simply to compress the liquid and air, and is not used as a means of discharging the liquid. The air, confined above the liquid, forces the liquid out through the discharge-hose and nozle, so that if the machine is charged with liquid and air, it is not necessary to operate the pump-handle in order to empty the receptacle. The chemicals in the liquid can not reach or destroy the plunger-packing; for they do not pass through the plunger. Since the valves are located at one side of the plunger, they can not become clogged with sediment. By providing concave seats and giving the valves a rolling motion, each stroke of the handle cleans the valves. The air pumped in while the receptacle is full of liquid passes to the top of the receptacle, thereby stirring or agitating the liquid constantly. By spreading the liquid into a thin mist through the medium of a special nozle it is possible to apply a coat more evenly than otherwise, and without the streaky appearance given by the brush.

Contrary to the prevalent opinion, the pneumatic coating-machine is clean. If the filmy mist falls to the floor, it is hardly noticeable. In painting by brush, huge drops often fall to the floor. The application of the machine is wide, but has found its chief use in warehouses, factories, and for painting large surfaces of any kind, whether they be rough or smooth. In painting rough surfaces the saving in time and labor is particularly marked; for the fine spray permeates every crevice, and the work is far better done than it could be by hand and brush."

A New Wireless Telegraph System.—A new system of wireless telegraphy, which, while not possessing some advantages of the present systems, has valuable features when small distances are concerned, is described in *The Electrical World and Engineer* from an account in the *Physikalische Zeitung*. The inventor, Herr Blockmann, calls it "ray telegraphy," its distinctive characteristic being that lenses are substituted for the antennæ. Says the paper referred to above:

"The material of the lenses must have a high dielectric constant, and may consist of resin, glass, paraffin, and the like. An important observation made is that the lenses, to be effective in concentrating the electromagnetic rays upon a distant object, need not be very large in comparison with the wave-length used. Thus mirrors 80 centimeters [32 inches] in diameter suffice for waves 20 centimeters [8 inches] long, and signals can be exchanged over several miles. At the receiving-station a similar lens is used; in fact, the apparatus is practically a heliograph employing invisible instead of visible light. The dark rays have the advantage of secrecy and of not being intercepted by fog or by non-conducting solids. Mountains are an obstacle; but this can be overcome by a series of relays. The direction of the arriving waves can be clearly distinguished to within a degree, and many simultaneous messages may thus be received and separated. Messages may also be sent out simultaneously in various directions. It appears that a clear path through the air without intervening bodies is necessary, just as in heliography."

Simultaneous Inventions.—The same thing sometimes pops into the heads of two entirely different inventors at once. This phenomenon, says *The American Inventor*, is one of the strangest and often one of the most inconvenient happenings in patentdom. It goes on to say:

"A case in point is found in the much-talked-of non-refillable bottle. For years inventors have been trying to invent corks which would allow liquid to flow one way only, and in so doing have produced many curious and weird devices. A little more than a year ago a man walked into *The American Inventor* office with a model of one of his inventions in his hand. At first sight, it appeared to be an ordinary bottle, but on close inspection it was found to have blown in one side of it a small cavity, in which was what appeared to be a small piece of tinfoil. The inventor explained his device as follows: 'The manufacturer who uses this bottle for any purpose must advertise that every bottle contains, blown in its side, a small piece of folded metal foil on which is stamped a number. These numbers run from one to one thousand. Every month a drawing of numbers will be made at the factory, and the first number drawn will win a prize of twenty-five dollars. The idea is that every purchaser of a bottle will break it open to get at the number which may win him a prize, and in so doing will destroy the bottle, so that it can never be refilled with the product of any one else.' This was an entirely new feature in non-refillable bottles, but the most obvious and simple manner of using this solution did not occur to the inventor in question. It has remained for a New Haven man to improve upon the plan by blowing a small coin, say a five- or ten-cent piece, into the side of the bottle, in such a manner that it can be plainly seen and yet not extracted without breaking the bottle. There is no doubt whatever that either of these two methods would succeed in preventing the bottles being refilled. It is a little doubtful whether Uncle Sam would care to have such liberties taken with the coin of his making as would be necessary in the latter-named method; but, successful or not, the two inventions illustrate the point mentioned above."

SCIENCE BREVITIES.

"ALL briquettes which have hitherto been manufactured by means of soluble cements (such as dextrin, molasses, lixiviated cellulose, oxidized lignin, resinate of ammonia, etc.) dissolve in water," says United States Consul B. H. Warner in a report from Leipsic. "Richard Böck, an engineer of Merseburg, Saxony, has discovered a method for making briquettes which are entirely waterproof. He heats the finished briquettes until the cement is wholly or partly carbonized, which makes them indissoluble. In case the ignition temperature of the cement is likely to be attained, the heating must take place in an air-tight case or by means of hot gases."

"A inventor of Pittsburg, Pa.," says *The Scientific American*, "has just perfected a wrapping-machine which will handle with great rapidity a piece of any size from a cracker to a cake of soap, and wrap it in a faultless manner. A company has been formed, and will soon be engaged in the manufacture of the machines to meet the requirements of various industries. The machine performs about forty different operations, including the cutting of the paper from a roll. A machine has been constructed which is worked by hand, and the inventor says the capacity of this is 175 pieces per hour, but this would be greatly increased by driving it with an engine."

THAT a polished metallic surface is always positively electrified with regard to an unpolished surface of the same substance has been shown by Hesehus, a Russian experimenter, according to the *Revue Scientifique* (December 13). "The same rule," it says, "applies to other substances; for instance, of two slabs of wood cut from the same piece, one cut parallel to the fibers is always positive to one cut crosswise. Of two plates of various metals the softest is positive, while non-metallic bodies are more positive as they become harder. Sticky substances and those that give off dust are always positive. . . . Generally speaking, positive electrification appears to increase directly as superficial density." It is hoped that these results may lead to a rational theory of contact-electricity.—*Translation made for* THE LITERARY DIGEST

THE RELIGIOUS WORLD.

RELIGIOUS TENDENCIES DURING THE PAST YEAR.

THE religious progress of the past year denotes, in the eyes of the Boston *Transcript*, "a growth all around that will compare favorably with the past." Financially the year has been one of great significance. Nearly $40,000,000 has been collected in America and in England by Methodists, Wesleyans, Presbyterians, Congregationalists, and Baptists. Says *The Transcript:*

"Church interests, maintenance, and betterments are now costing the people of the United States $260,000,000 a year. And this vast sum does not include $70,000,000 which is given in benevolence, outside of government charity, and in sums above $5,000 each gift. Of this benevolence $3 in every $4 comes from members of churches. It cost to maintain all Baptist churches in the United States last year $14,138,195, all Episcopal churches $15,184,926, and all Congregational churches $10,276,105. Figures for Reformed Churches (Dutch) last year are $1,622,696, and for Presbyterian (North) $17,080,191. To maintain all Methodist churches, South and North, cost last year $24,552,800. These figures in every case include betterments. They also include contributions to missions, both home and foreign. Financial figures for Roman Catholic churches are unobtainable, in great part because Catholic officials do not themselves collect them. As indicating the prosperous times, and how prosperity affects the churches, the average church-member last year gave a larger sum of money for all purposes than in any previous year. Curiously, it is to be noted that most of the large bodies —large in membership—are the ones whose members give largest individual contributions. There are exceptions to this rule in both directions. One is the Roman Catholic, a large body that raises a vast sum of money each year, but whose members give each quite small sums. Another exception are Baptists, because of the large colored membership in the South. A third is the Universalist, a small body whose members average high per member. The highest of all, per member, is the Episcopal, each communicant in which gave last year $19.82."

The Transcript points out that church-membership growth during the year has been steady. The bodies that show the largest actual figures are the Disciples of Christ and the Lutherans. Presbyterians gained about 32,000, Methodists 61,000, Baptists 36,000, Episcopalians 14,000, and Congregationalists 12,000. We quote further:

"Some controversies developed during the year, and one was settled. Church leaders do not look upon them as unmixed evils, however, for during the year just passed, as formerly, disagreements that looked portentous at their inception demonstrated their economic usefulness. Baptists conclude the year with a discussion whether baptism is essential to church-membership. The matter was precipitated by Mr. Rockefeller's pastor, and has now reached the South, whence are coming condemnatory expressions in large as well as strong numbers. The International Sunday-School Lesson committee split over the matter of uniform lessons. At a convention in Denver uniformity of these lessons was broken, and so was the convention and the committee, the former by a division, and the latter by the loss of its secretary through failure to be reelected. Discussion is still on. Money matters of Methodists South came into the General Conference at Dallas, and on the surface a settlement was effected of them. The settlement has not, however, healed everything. The history of the trouble is interesting. A publishing agent deceived United States Senators concerning a claim for damages sustained by the publishing house at Nashville during the Civil War. The deception consisted of the point whether any commission was to be paid to a lobbyist. Methodist leaders, largely of the laity, demanded that the entire amount be returned to the Government. The General Conference repudiated the deception, but did not return the money because the Senate said there was no one authorized to receive it. English Lutherans have difficulty separating from their German brethren. After a disagreement the New York Ministerium divided last summer and an English synod resulted. Episcopalians started out to found an autonomous Episcopal Church in Mexico. A storm arose, and the three bishops nominated were not consecrated. One of their number has been designated to look after things till the row blows over. Christian Science readers were making good things financially out of their positions, by reason of healing arts which they practised. Mrs. Eddy put a limit to their tenure, and a new set of readers came in, the old ones meanwhile trying with fair success to hold on to their healing practise."

Regarding the personalities prominent in the religious world during 1902 *The Transcript* says:

"Hardly the usual number of new men came to the front last year. An example of official progress is shown by Episcopalians, who consecrated a larger number of new bishops last year than during any previous twelvemonth, and five of the twelve did not represent new men for old places merely, but were both new men and new places. Mr. John Willis Baer, long general secretary of Christian Endeavor, quitted an unofficial position for an official one, and became a secretary of a Presbyterian board. A new force came into Presbyterian evangelistic work in Rev. Dr. J. Wilbur Chapman, new in that he now represents an official bureau. With him, but representing the intellectual side, altho in sympathy with the evangelistic, is Rev. Dr. Henry Van Dyke, no longer a local pastor, but a national leader as moderator of the General Assembly. Close beside him is Rev. Dr. A. E. Kittredge, this year's president of the Reformed General Synod and head of that body's evangelistic committee. Among Baptists Rev. Dr. E. E. Chivers is new as field secretary of their Home Mission Society, and among Congregationalists Mr. Don O. Shelton is new as a secretary of their Home Missionary Society. Among Roman Catholics the most significant change was the entrance into a position of the first grade of Archbishop Farley of New York. Various other Catholic promotions are talked of, among them positions in Chicago and San Francisco, but Archbishop Farley's promotion is important in that it replaced Archbishop Corrigan, a reactionary official of the old school, with a liberal-minded, progressive, and spiritual man of the new school. And the replacing was done, not by the triumph of one party and the defeat of another, but by the unanimous voice of all elements. Americanism, as the term is employed by Catholics, gained much by the change. Archbishop Guidi was sent as apostolic delegate to Manila and Monsignor Falconio came to Washington in the same capacity."

Religious work among the young has been vigorously prosecuted, and has been marked, according to *The Transcript*, by "less conventions and more hard work within the churches." We quote, in conclusion:

"Educationally the feature of the year was the founding of the general educational board, and its recent incorporation in the District of Columbia. The general secretary of it is Rev. Dr. Wallace Buttrick, a Baptist minister, and the chief promoter of it is Mr. John D. Rockefeller, also a Baptist. . . . Methodists started some years since an institute for the instruction of unordained workers in the use of the Bible for soul-winning. During the year this institute idea has become national. There was an advance in mission study, and several theological seminaries received heavy endowments, chiefly by legacies. There was, however, no material increase in the number of students in theological seminaries, long strangely low, with no great numbers in sight from the college classes. Jews brought over from Cambridge, England, the greatest living Hebrew scholar [Dr. Solomon Schechter], to be president of the Jewish Theological Seminary of New York, the rabbinical school of progressive American Judaism, altho classed theologically as conservative. The new president stands for much more, however, than rabbinical instruction, and, in cooperation with B'nai B'rith, will undertake a Jewish renaissance. The preliminary work was done during the year, and the entire work consists of the conversion, if possible, of Jews to Judaism. It is, in short, a Jewish forward movement. Zionism as a movement made marked progress during the year, but its promoters did not succeed in getting anything tangible in the shape of political promises from the Sultan of Turkey."

THE NEW ARCHBISHOP OF CANTERBURY.

THE Right Rev. Randall Thomas Davidson, D.D., Bishop of Winchester, has been appointed Archbishop of Canterbury to succeed the late Archbishop Temple. The archbishopric was offered to him six years ago, on the death of Archbishop Benson, but he declined the post on account of ill-health. His health, it is said, has greatly improved since that time. From the New York *Tribune* we quote the following account of Archbishop Davidson's career:

"The new Primate of all England, the Right Rev. Dr. Randall Thomas Davidson, is in his fifty-fifth year. He was born on April 7, 1848, in Edinburgh, and received his education at Harrow and Oxford, being graduated at Trinity College in 1871. He was ordained in 1874, and, after serving three years as a curate, he became chaplain and private secretary to Archbishop Tait, of Canterbury, remaining with him until the Archbishop's death in 1882. He made the principal arrangements for the great Lambeth Conference of one hundred bishops in 1878. He was made an honorary chaplain to the Queen in 1882, and a year later she made him Dean of Windsor and Resident Chaplain in Ordinary and Registrar of the Order of the Garter. In 1884 he became one of the trustees of the British Museum, an office he still holds. He was the honorary secretary of the third Lambeth Conference, in 1888, and he afterward published a history of the conferences.

THE RIGHT REV. RANDALL THOMAS DAVIDSON, D.D.,

The New Primate of All England.

"In April, 1891, Dr. Davidson was consecrated Bishop of Rochester, and in the same year he became Clerk of the Closet to the Queen. He was appointed to the see of Winchester on the death of Bishop Thorold, in 1895, and he was chief episcopal secretary to the fourth Lambeth Conference, in 1897. He was married in 1878 to the daughter of Archbishop Tait, and he has published a biography of his father-in-law.

"He is now Clerk of the Closet in Ordinary to the King and a prelate of the Order of the Garter."

THE ENGLISH CHURCH PRESS ON THE EDUCATION ACT.

ONE remarkable fact is revealed in the flood of English comment evoked by the passage of the Education bill, namely, that its provisions, which were presumably intended to increase the power of the state church, are as distasteful to many Anglicans as to the non-conformists themselves. The London *Church Gazette*, an Anglican paper with "High-Church" sympathies, declares:

"The discussion of the bill, both in the House of Lords and in the House of Commons, served to make it clear that some of the most objectionable provisions of the bill are admittedly aimed against that section of the clergy somewhat loosely termed 'Ritualists.' . . . It is specifically aimed against those priests who hold and would desire to teach in their schools the full Catholic faith. It is as well that we should realize this fact without delay."

The London *Pilot*, another Anglican journal, is dissatisfied with the act for quite different reasons. It observes:

"When we turn to the religious provisions of the act, we can only wonder at the perverse cleverness which has made them equally hateful to non-conformists and churchmen. A law which directs that denominationally managed schools shall be maintained out of the rates, and then violates a fundamental principle of the denomination principally concerned, is a masterpiece of misdirected ingenuity. Lord Hugh Cecil struck the right note for churchmen who believe in their church when he urged them not to rest until they have persuaded Parliament to relinquish the disastrous policy which, as we now see, was inherent in the management clauses from the very first. That Mr. Balfour made this clear, at all events as early as the 21st July, he has proved triumphantly. Nothing, we fully admit, can be plainer than his words on that day: 'The religious education will be under the control not of one man, and that man the parson of the parish, but of a board of six.'

The London *Guardian* (Anglican), while not entirely pleased with the details of the act, believes that the new educational system will be a great improvement over the old. The denominational schools, it claims, are not unfairly dealt with, since they retain the majority of managers. Furthermore, non-conformists may be admitted to representation in the management of Anglican schools in the same way that Anglicans may be admitted to representation in the management of non-conformist schools. (According to the provisions of the act, the authorities of denominational schools are allowed to appoint four of their managers, the remaining two being appointed by the popularly elected local educational body.) The London *Tablet* (Rom. Cath.) says:

"The old bad system of inequality and positive discrimination against definite religious teaching in the schools was one which could not have been consciously invented by the legislature—the nation drifted into it unawares. It was only gradually that the board schools built at the common cost of all the people came to be a national system for the endowment of dissent. People whose religious convictions were not of the sort to lead to pecuniary sacrifices managed quietly to take possession of the board schools and to treat them as their own. Public elementary schools, built at the expense of the community, were allowed to become so many little seminaries of non-conformist principles. . . . All these things are now part of the past, and tho the goal of equality is not yet reached, we have reached a position never touched before and hardly hoped for. We have still to keep our [Roman Catholic] schools in structural repair, but otherwise the advantages of the board [public] schools almost disappear. In efficiency of equipment and inadequacy of salaries henceforth both sets of schools ought to be on a footing of perfect equality. There is something still left to win, but it is nothing compared to what we have won aready."

The objections everywhere formulated against the act by non-conformists may be summarized under two main heads. They claim (1) that the act compels the public to pay for denominational schools that are outside of public control; and (2) that it enormously increases the Anglican control over religious education. The case against the act is thus emphatically stated (in the London *British Weekly*) by the Rev. J. H. Shakespeare, secretary of the Baptist Union:

"It is opposed to the religious convictions of half the nation; it was introduced without a mandate, and has been closured through in compartments; it throws the cost of the schools (apart from the rent of the buildings) upon the public purse without giving public control; it drives Free-Church children in single school districts into a Romanizing atmosphere; it excludes Free-Church teachers from state schools in which the full share of all teachers' salaries is paid by Free Churchmen; it affronts even the conscience of the man of the world; it is a measure which barters away our birthright of a truly national education."

Public indignation against the act runs so high in some parts of the country that a "passive resistance committee" has been organized for the purpose of persuading the opponents of the measure to refuse to pay church-rates. This committee is backed by Dr. Robertson Nicoll, the editor of *The British*

Weekly, and numbers among its members the Rev. Dr. John Clifford, of London; the Rev. Dr. Townsend, president of the National Free Church Council; the Rev. R. J. Campbell, of Brighton; the Rev. Dr. C. F. Aked, of Liverpool, and other eminent non-conformist ministers. The course of these "extremists" is disapproved by the more conservative non-conformists. The London *Christian World* (non-conformist) says:

"Where is the inducement to alienate the support of friends, invite the recrimination of opponents, and generally to prejudice our cause, by resort to a method which, its advocates being witness, is a practical confession that we abandon hope of winning the country to our side by any other means? There lies the great trial of non-conformity at this hour. It is fronted with the danger of marring, or even throwing away, one of the supreme opportunities of its history. Its straight and productive course is to appeal to the people; if it falls back on refusal of rates it will lay itself open to the suspicion, however ill-founded, that it dare not challenge the popular judgment."

The passage of the act has undoubtedly given a new impulse to the agitation for the disestablishment of the English Church. Says the London *Christian Commonwealth* (non-conformist):

"The Liberation Society has held in London a special conference of its supporters, for the purpose of inaugurating a new campaign for the disestablishment of the church. In an important circular reasons are given for adopting this course. The public are reminded that the Education bill is based on policy which has for its declared object the perpetuation and strengthening of the Established Church, to which it practically gives fresh endowments. It is not surprising to those who have watched recent events that Liberationists should take this step. Even from the Government side of the House of Commons ominous warnings have come, addressed to Mr. Balfour, that the bill might prove in the end to be fatal to the interests of the church, in which, says the circular, 'sacerdotalism grows unchecked, and there is a demand for reforms which can not be effected without an alteration in the present relations of church and state.'"

"A Brand of Dishonor" upon Our Naval Chaplains.—The emphatic language quoted is used by the Rev. Dr. J. G. Van Slyke in an article in *The Christian Intelligencer* (New York), and the "dishonor" to which he refers is implied in an act of Congress passed in 1899 and known as the "Navy Personnel bill." He writes:

"The facts are simply these: Navy officers, previous to the Spanish-American war, had been receiving, rank for rank, a lower rate of pay than those of the army. With a view to rectifying this inequality, Congress enacted a law making the pay of officers of the army and navy, rank for rank, substantially the same. As passed by the Senate, this bill included the chaplains, but, whether by oversight or through some refraction in the instinct of justice, when it passed the House in the closing hours of Congress, the chaplains were omitted from its provisions, and virtually treated as not deserving the consideration which the others enjoyed."

"It is not merely a question of pay," declares the Rev. Dr. Henry Van Dyke, who takes up the chaplains' grievance in the pages of *The Interior* (Chicago); "that question plays a minor part. It is preeminently a question of honor and self-respect." He continues:

"The spirit of the American navy has always valued honor above pay. The chaplains of the navy feel the slur of being passed over in an act of justice done to their comrades. The exception seems to cast contempt upon their work and to lower the dignity of their position. Surely a generous country can not consistently put a slight upon the men whom it calls and commissions to preach the Christian Gospel, to comfort the sick and wounded, to console the dying, and to bury the dead, among its sailors."

Both writers unite in pleading that Congress at its present session shall pass a bill giving chaplains the same pay as their brother officers of the same rank.

FATHER McGRADY AND THE ROMAN CATHOLIC CHURCH.

THE resignation of the well-known Socialist priest, Father Thomas McGrady, from his pastorate in Bellevue, Ky., affords a new illustration of the irreconcilable conflict that is developing in this country between Socialism and Roman Catholicism. Ever since the appearance, two years ago, of Pope Leo's Encyclical directed against Socialism, this subject has been a prominent one in Roman Catholic circles, and the utterances of the late Archbishop Corrigan, and of Bishops Quigley and Spalding, have left no doubt as to the "official" attitude of the church. Father McGrady was reprimanded in November last by Bishop Maes, of the Covington diocese, but refused to retract his public utterances and writings on Socialism. He has now severed his connection with the church, and declares his intention of devoting his life to the Socialist propaganda.

FATHER THOMAS McGRADY.

He has been compelled to resign from the Roman Catholic Church on account of his Socialist views.

The principle at issue, namely, whether a man can be at once a Roman Catholic priest and a Socialist, elicits some interesting comment. The San Francisco *Monitor* (Rom. Cath.) thinks that "the priest who faithfully discharges the spiritual functions of his office, together with the parochial business and incidental works of benevolence inseparable from the calling, finds little time to spare for other things. He is content to leave questions of practical politics and economics to the laity, who are quite competent to deal with them." The Chicago *New World* (Rom. Cath.) comments:

"His [Father McGrady's] going out will not hurt the church; neither do we think it will help Socialism. It, at least, is developing beyond his theories, as we meet it daily here. It has taken the bit in its mouth and is moving toward a darkness into which he will scarcely care to go. In a few years he will be a 'man without a country,' and then the reaction will begin. It is bound to come sooner or later.

"In that hour may God pity him! God pity every soul that believes herself advancing toward light and later finds herself surrounded by impenetrable shadow! Even should he succeed in leading astray a few impulsive spirits like his own, the greater bitterness shall be his when at last the awakening comes. Try however he may, no man can find in Socialism a heart-satisfying, soul-uplifting religion. The 'religion of humanity' must always be less than a religion founded by God for the purpose of leading men's souls to God. Let us hope that, some day, when the flavor of the new wine palls, Father McGrady shall return as thousands of others have returned."

The Socialist press recognize in Father McGrady a distinguished convert. The *Social Democratic Herald* (Milwaukee) remarks that Bishop Maes "is behind the times if he thinks he can hinder the onward march of Socialism by trying to silence so conscientious a man as Father McGrady. Other priests will talk Socialism just the same, for Catholics feel the economic pressure, the blighting touch of a wrong system, as well as people of other faiths, or non-faiths." *The Appeal to Reason* (Girard, Kans.) says:

"A high official of the Catholic Church has once again affirmed

that his office gives him authority to speak with infallibility on economic and political matters as well as on religion and morals. He has renewed the declaration of war, long grown old in Europe, between hierarchy and Socialism. Another brave mind has come to the parting of the ways, and has been forced to choose between intellectual freedom and hierarchic despotism. The bishop declares, with the full force of his official authority, that the church is opposed to the emancipation of humanity from wage-slavery. A subordinate priest, differing from him on a matter outside of the jurisdiction of the church, has been told in plain language that the church stands for capitalism and will fight Socialism.

"What have the great mass of the members of the church to say on this question? If they will continue to declare with manly courage, 'My religion from Rome, but my politics from no man,' they, too, will come to the parting of the ways, and will have to choose between economic freedom and the church. What will they choose?"

It is noteworthy that Father Thomas J. Hagerty, now resident in Arkansas, is also prominently identified with the Socialist movement. He is a priest in good standing, but has given up parish work.

THE CHRISTIAN OPPORTUNITY IN CHINA.

WHY is it that Christianity seems to be making so little progress in the great Chinese empire? Mr. Francis H. Nichols, an American traveler who has had exceptional opportunities for observing Chinese life at close quarters, is responsible for this question, and he endeavors to deal with it in *The Atlantic Monthly* (December). He writes:

"Perhaps in the higher sense, that 'no power is lost that ever wrought for God,' it is not wholly correct to say that efforts to introduce Christianity into China have failed. But humanly speaking, in proportion to the amount of money, lives, and effort expended, they have apparently not met with great success. The small number of converts after one century of Protestant and three centuries of Roman Catholic endeavor is the least part of the failure of missions in China. All over the empire to-day there prevails a spirit of hatred and antagonism to Christianity so intense and so peculiar that a certain brilliant missionary in describing it has had to coin a new word. He has called the feeling of the provincial authorities of Shantung toward Christianity 'Christophobia.' Usually it is specially stipulated when foreign teachers are engaged for recently organized government schools that they shall make no reference even in the remotest way to the Bible or to anything connected with it. In the gradual subsiding of the Boxer storm the one kind of foreigners warned to keep away from a troubled district are always missionaries. Except in the few places where they are numerous enough to form a community by themselves, Christian converts are ostracized, boycotted, and sometimes persecuted."

Mr. Nichols is not ready to take the view that the aversion to Christianity among the Chinese is due to their hatred of foreigners. Islam is essentially a foreign religion, and yet in some provinces one-third of the population are Mohammedans, and no reproach attaches to this fact. Buddhism is one of the three great religions of China, yet Buddhism is also a foreign religion. The chief obstacle to the spread of Christianity in China, declares Mr. Nichols, is not any dislike of it as an imported religion, but "a fear and an objection to certain foreign concomitants which, because of a mistaken point of view, are regarded by missionaries as essentials." He continues:

"The conversion of a heathen to Christianity means much more than it would in the case of an American. A Chinaman must not only experience a change of heart, he must also undergo a complete revolution of opinions and sentiments. He can no longer venerate his ancestors and pray before their tablets that he may keep unsullied the honored name they have left him. It is not permitted to him to take pride in the traditional glories of palaces and gray-walled cities; he must learn the history of his country over again; he must discover that all the great sages and rulers of his country's past are eternally lost; he must experience a constant feeling of pity if not of contempt for the civilization and government of China and for his friends and relatives who persist in remaining heathen. In other words, in order to become a Christian according to missionary standards, a Chinaman must be denationalized. In sentiment he must become a foreigner. And naturally enough his 'heathen' countrymen who still love their country and reverence their ancestors do not like the denationalizing process."

That China "needs the Gospel" Mr. Nichols makes no attempt to dispute. He thinks "she needs it far more than she needs anything else," and that "until she is truly converted to Christianity, she can never take the place among the nations of the earth to which her great resources, her vast population, the age and civilization of her people, entitle her." We quote further:

"Whatever opinions a traveler through the interior provinces may hold on the question of whether or not religion is no longer essential for his own *fin-de-siècle* nation of the West, he must, it seems to me, admit that Christianity is a necessity for China. Twenty-five hundred years ago Confucius drew a complete and elaborate chart for the guidance of the race to which he belonged. The chart was intended to provide for every possible contingency that might ever arise in the life of the individual or the nation. Confucius fastened his chart on the wall and said, 'Follow that.' It was a wonderfully made chart, more nearly perfect than any chart that modern altruist or student of ethics has ever devised. As the chart was supposed to describe every course that could be sailed with safety, the Chinese have never thought it possible to discover new continents. They have never looked at the stars or the horizon, always at the chart. It made no pretensions to the supernatural. It was essentially human and matter-of-fact. The chart related to the known, not to the unknown. It took little account of hopes or inclinations. It made no provision for a change of conditions either in the state or in the individual. As a result Chinese civilization has never changed. It is restrained from drifting or turning aside into dangerous channels by the Confucian chart, but it can not and will not go forward until it recognizes a soul, until it has ideals that are not earth-made, until it 'seeks a country' that is not like Shensi, eternal on earth, 'but eternal in the heavens.'"

The Boston *Watchman* (Baptist) has the following to say in regard to Mr. Nichols's conclusions:

"Of course there are great differences in missions and missionaries, and we could point Mr. Nichols to some missions where his conclusions would not at all apply. But we fear there is too much truth in his statements as to missions, not only in China, but elsewhere. Mr. Nichols cites illustrations in support of his views, and any one familiar with missionary periodicals will readily recall others. The practise of teaching the pupils in mission-schools to eat and dress and sleep in American or European fashion is especially referred to as one which separates the pupils from their people and creates a prejudice against Christianity. The pressure brought upon converts and churches to conduct their services and affairs in a manner foreign to their native ideas also has a tendency to emphasize and keep Christianity as a foreign religion. Above all, a contempt on the part of a missionary for the people among whom he labors and for their long-established customs is sure to be a bar to his usefulness and success. It is a striking fact that all the great successful missions have been those in which the missionaries have come into closest touch with the life of the people and have called for the least change in their habits of life, except so far as they were tinged with pagan superstitions. Abbott and the Vintons among the Karens of Burma, Clough among the Telugus, Paton in the New Hebrides, and a multitude of others have respected the feelings, the customs, and the character of the peoples among whom they labored, and introduced Christianity merely as a purifying element in the national life. This has been the way of success in missions, and indeed it must be the way of working, if ever the religion of Jesus Christ is to become naturalized in every nation. Some minor peoples may be transformed by the personal influence of the missionaries, but peoples of the stability and character of the Chinese can only be won to Christ on condition of retaining all the essential features of their national life."

FOREIGN TOPICS.

THE HUMAN SIDE OF ROYALTY.

HER royal highness the Crown Princess of Saxony had a husband who did not understand her, and she had a French tutor for her children who is an idealist of the most pronounced type. So the Crown Princess and the idealist eloped.

The lady may find herself Queen of Saxony at any moment, for her father-in-law, King George, is aged and ill. His son, her husband, Crown Prince Frederick, is thirty-seven, and she is thirty-two. They married "for love" about eleven years ago. There are several children, and the Crown Princess will again become a mother, it is anticipated, in May. The French tutor with whom she ran away is a Monsieur Giron, "divinely handsome," and aged about twenty-three. He "admits paternity" of the sixth child.

THE CROWN PRINCESS OF SAXONY,
Told to choose between mad-house and convent, she eloped.

The highest royalty in Europe is involved in this scandal, for Crown Princess Louise Antoinette is the daughter of Ferdinand, formerly Grand Duke of Tuscany and now an archduke of Austria. Her mother was a princess of the house of Bourbon-Parma. For a long time past her relations with her husband, the Crown Prince, have been unhappy. The *Sächsische Arbeiter Zeitung* (Dresden), a Socialist paper, goes into the matter with particularity:

"The Crown Princess has long been dealt with as if she were a wicked child. She was given ladies-of-honor whom she detested, whose business it was to watch her. Even when she made trifling purchases, she had to give an account to some lady-of-honor. She confided her humiliation to the tutor of her children, Monsieur Giron, and thus an intimacy sprang up which developed during her husband's absence. The King, enlightened by the ladies-of-honor, dismissed Monsieur Giron and ordered the Crown Princess confined in her room. Her fate was to be settled when the Crown Prince returned. A family council finally decided that the Crown Princess must retire to a convent or a sanatorium pending an application for annulment of her marriage. The Crown Princess refused to submit, and fled to Salzburg. Her family persisted in the intention to imprison her. Then it was that she joined Monsieur Giron. Last November the Crown Princess visited a painter's studio and said to him in a tone of melancholy: 'How I wish I had a villa like yours in which I could be alone!' To the painter's wife she complained of the tyranny of royal etiquette, which often forced her to change her toilette six times a day."

The Viennese journals give many particulars concerning the personality of this original Crown Princess. She is "lively, petulant, at once gay and sentimental, and above all incapable of repressing the words she wants to say. Her Viennese blood was responsible for her unrestrained behavior, notwithstanding her rigorous and very religious Roman Catholic education, against which she was ever in rebellion. She once summarily dismissed a Jesuit father who had been appointed her religious preceptor. She was very fond of reading authors of advanced ideas." She talked freely with all classes of people, and scandalized the court by her affability to persons of "low rank." The Crown Prince was of a very different character—"a military man from head to foot." As heir to the throne, he had conservative and old-fashioned ideas. His only diversion was the chase. The domestic atmosphere was not harmonious in consequence of all these circumstances. The brother of the Crown Princess, Archduke Leopold Ferdinand, took her part in the divisions that ensued. When the lady fled, the Archduke fled likewise. We quote the London *Standard*:

"The Archduke Leopold Ferdinand, already mentioned, who is now thirty-four, has renounced his rights as a member of the imperial family. He made the acquaintance of a lady of non-aristocratic birth some time ago, and proposed to conclude a morganatic marriage with her. The Emperor, however, forbade it, and the Archduke first went to a sanatorium at Bonn, on the Rhine, and afterward lived in Salzburg with his parents. A short time ago he took a step similar to that of 'Johann Orth.' He addressed a letter to the Emperor, in which he informed his Majesty that he renounced all his rights and privileges; he sent back all his orders, and informed the Minister of War that he resigned his colonelship in the army. The *Allgemeine* hears that the Archduke will adopt the name of Leopold Wölfling, and that his wish to leave the imperial family has already been complied with. The paper expects that he will now marry the lady, whom he met at Munich when accompanying his sister on her flight. He is described as a man of very liberal, not to say radical, views, and as a trifle eccentric."

Emperor Francis Joseph of Austria is stunned by the proceedings of his young relatives. The *Neue Freie Presse* (Vienna), which is in a position to speak with authority of the imperial attitude, says in the course of an elaborate editorial article:

"There has occurred an event which is so extraordinary of its kind that the memory can be searched in vain to find its parallel. The Crown Princess Louise of Saxony has fled. . . . If such a thing happened in an ordinary family, the matter would be kept secret and the true state of affairs would be concealed as long as possible. But here we have to do with the wife of a King's son who is heir to a throne. A crown princess has duties of a higher kind than those of an ordinary wife. The lofty height upon which she stands affords no shelter if she herself does not shrink from sensation, and in breaking the marriage bond she severs the courtly ties that make her one with the royal dynasty and the royal throne. But taste for a freedom incompatible with her station caused her to obey her heart's promptings in a manner that destroyed not only her wedded life but also the pride of place which invests woman when on a throne with a kind of halo. . . . How amply protected behind the shield of courtly etiquette were once the heart romances of women connected with princely and royal houses! How openly such matters are now revealed in the broad light of day! Were we to describe the period in which we live in the light of its most typical characteristic, we could not overlook the promptings or rather the emancipation of royal hearts which now leads to such dramatic tragedies. Such is the irresistible force of passion-birth. We have all the elements of sentimental romance in these situations. The psychology of the well-born is not, of course, essentially

THE CROWN PRINCE OF SAXONY.
He forbade his wife to read Nietzsche, Tolstoy, and Zola.

different from that of the lowly. But with the lowly happiness is subject to less artificial restraints and the passion of the heart has more freedom in its assertion. The human in its most natural aspect has never been banished from royal palaces, but its range is narrower. The restraint put upon it is greater than in the case of ordinary human beings. But this state of affairs seems to be passing away."

This development of the human side of royalty has proceeded so far, continues the Vienna organ, that the world has almost ceased to wonder at "mesalliances." There seem to be no longer gulfs separating the children of royalty from the other children of men. But this escapade of the Crown Princess has gone further than anything of the sort even in this advanced age:

KING GEORGE OF SAXONY

"So radical and unrestrained a rupture between passion and tradition has never been seen in a royal house. The Crown Princess Louise of Saxony is none the less subject to the spirit of our time because it was her destiny to wear a crown. She evidently renounced all to fly out into the world in pursuit of her heart's romance. Yet there is something in such a renunciation as hers that forbids either sympathy or surprise. The splendor of the crown will not be dimmed merely because one individual has proved unworthy to wear it. It is but a symptom of the struggle between the old ideas and the new. A woman is lost. Altho wife, mother, and destined to be Queen, she preferred the impulse of her inclination to the promptings of royal pride. Down below, where 'free love' boasts its followers, such cases are not rare. On the heights of life examples are less frequent. No instance so flagrant as the present one has previously come to light."

The one real scandal in the affair is the flight of the Crown Princess, who abandons her five children at a time when she is awaiting a sixth, says the *Journal des Débats* (Paris). The case of her brother is on a different footing in the opinion of this paper. "Renouncing a royal crown that she need not have waited very long for, she fled from Saxony and again from Austria, her family's native soil, and rushes abroad to an unknown fate which must prove one of bitterness and sorrow. Had the fugitive Princess been guilty of this headstrong act merely as a result of incompatibilities of temper that made life with her husband insupportable, her case would be serious enough. The lofty station of sovereigns and future sovereigns is counterbalanced by certain restraints of deportment and respectability from which ordinary mortals are exempt. But in the case before us we have features that add to its gravity. A preceptor in the service of a princely family seems to have taken advantage of the discord between husband and wife to make court to the royal princess so assiduously that he became the companion of her flight. This is the scandal, the gravity of which it would be idle to palliate. The utmost that can be done is to plead extenuating circumstances in favor of the Princess who, Archduchess of Austria, Crown Princess, and future Queen of Saxony tho she be, was none the less a human being, and as such subject to impulse."

From the dynastic and political point of view the episode should not have any great importance, thinks the Paris paper—which is suspected, by the way, of royalist leanings. True, it will supply the advanced press with an opportunity for attacks upon princely families and the wearers of crowns in general. "But there is reason to believe that any such campaign will not be prolonged and that it will have no appreciable results. It is an established fact that in Anglo-Saxon and German countries dynastic loyalty is proof against attacks which in other lands have been powerful as a result of unfortunate domestic events. No doubt the blow to the Saxon people will be a severe one. Last June they lost their aged King Albert, who was succeeded by his brother of seventy. All his hopes for the future were centered in the princely couple now so rudely severed." The future of the family is a gloomy one, infers the French daily, which had not been apprised, when it thus commented, of the rumor that the Crown Prince may forgive his unfortunate wife and restore her to throne and home.—*Translations made for* THE LITERARY DIGEST.

"IMPERTINENCE" OF THE MONROE DOCTRINE.

THERE is one newspaper in Europe which has set itself forward as the foe of the Monroe Doctrine. The name of that paper is the *Hamburger Nachrichten*, which was long identified with the policy of the late Prince Bismarck. The Hamburg daily not only publishes emphatic editorials of its own in opposition to the Monroe Doctrine, but it manages to find space for much other matter antagonistic to "the cardinal principle of American foreign policy." The recent events in Venezuela have provided the German organ—a rather conservative, dynastic, and pro-military sheet—with a fresh stock of texts on its favorite theme. It even reproduces, as evidence of its consistent opposition to "the so-called Monroe Doctrine," one of its utterances of six years ago. "We are of opinion," said the *Hamburger Nachrichten* at that time, "that this Doctrine, as presented by the American republic, is an incredible impertinence," and this view it still adheres to, giving the credit of its inspiration to Bismarck himself. Further:

"It is necessary only to glance at the aspects of the Monroe Doctrine to perceive how utterly inadmissible are the inferences drawn from it, which are in effect that the United States may exercise a sort of supervision over the foreign affairs of the various American nations. It must also be noted that the Monroe Doctrine is in nature and origin but the personal opinion of the chief magistrate of the United States in 1823. It remains a personal opinion and has never attained the force of law. With far less show of reason can it be accorded the binding power of international law so far as the civilized countries of Europe are concerned."

There is much more to the same effect concerning the "pretensions" of this country, the *Hamburger Nachrichten* actually asserting that the saying "America for the Americans" has long been altered into the idea that "America belongs to the North Americans—the Yankees." It would be a work of supererogation to observe that these views are thoroughly in tune with those of that other consistent opponent of the Monroe Doctrine, the London *Saturday Review*. This weekly, whose opinions on the subject have been freely quoted in these columns, continues with all its old-time ingenuity to discover objections to the Monroe Doctrine. According to its most recent effusion "it is highly desirable that Germany should have a recognized position in South American policy":

"The worst feature of the free hand we have seemed at times to accord to the Monroe Doctrine is that we have discouraged the South American states from looking to Europe for protection and have led them to believe that we are ready to abandon them to the tender mercies of their too effusive friends, the United States. The more progressive South Americans have a very

proper dread of the United States and their 'protection.' For this reason we regret that our first opportunity of working along with Germany has been brought about by antagonism to a South American state; but if our newspapers can be led to speak a little more civilly of the South American peoples, we need not incur their permanent hostility. They are not the least severe judges of their own politicians, and it is to our interest to distinguish the people from those in office. . . . One can not but rejoice to see Europe in general bestirring itself over South American affairs. Common action by the great Powers is what we urged when the discussions over the Nicaragua Canal were in progress, and a coalition to enforce the rights of Europe in the New World would have our hearty approval."—*Translations made for* THE LITERARY DIGEST.

"THE GREATEST SWINDLE OF THE AGE."

"AMONG the strangest mysteries of which there is any historical record," according to the London *Times*, is the Humbert case, which has now made a spectacular entry into French politics. The fate of the ministry is thought to be trembling in the balance, and there are even those who assert that President Loubet himself will have to go, to be replaced by M. Waldeck-Rousseau, some time Premier. Madame Humbert, the arch-swindler in the case, is under arrest, having been captured with all her family in Madrid. Her story is once more on the tip of every tongue. The temptation to tell it not once but many times is irresistible enough, for it comprises, in the words of the London *Standard*, "a romance interminable enough to have pleased Dumas and intricate enough to have presented brilliant opportunities to a Gaboriau." But no attempt to tell this "romance" exceeds in clearness that of the London *Spectator*, which eight months ago rehearsed the whole edifying tale. As it may not be out of place to refresh the memory with circumstances so portentous to the present political destiny of the French republic, we offer no apology for resurrecting the following from *The Spectator's* files:

"Madame Humbert was born rather more than fifty years ago at Toulouse. Her maiden name was Daurignac, and her mother kept a linen-shop. She married the son of a M. Humbert, who lived in the house in which the linen-shop was, and, apparently, shortly after her marriage managed—presumably with her husband's money, for her father-in-law was minister of justice—to buy a mansion in the Avenue de la Grande Armée and two country estates. These were, so to speak, her capital. Possessing these—having, that is, the necessary position in society—she was able to begin to work on her big idea, namely, the borrowing of money on the security of a fictitious will. This will she produced. It purported to be the last testament of one Robert Henry Crawford, an American, and in it the said Robert Henry Crawford left his property to be divided into three parts—'one to go to Maire Daurignac' (Madame Humbert's sister under age); 'one to my nephew Henry Crawford; one to my nephew, Robert Crawford'; with the provision that these persons invest in France a capital sufficient to secure to Thérèse Daurignac (Madame Humbert) 'an annuity of 30,000 francs [about $6,000] per month.' This is the first mention which appears of Robert and Henry Crawford. Shortly after producing this will, Madame Humbert showed to those with whom she was dealing another document, by which 'all title-deeds and securities constituting the assets of Mr. Crawford's estate are sequestered and placed in the charge of M. and Madame Humbert, until at Mademoiselle Daurignac's attaining her majority all the heirs mentioned shall be able to come to an amicable agreement for an equitable transaction, or until, in default of such a transaction, the courts shall have pronounced finally as to the rights of each.' This was the great stroke of business. Madame Humbert got a safe, and in it she said that the Crawford securities were locked up. She might not take them out of the safe, nor give them into anybody else's hands; but there the securities were in the safe, and on the understanding that they were there she borrowed money. She borrowed altogether about two and a half million pounds [about $12,500,000], in sums ranging from a quarter of a million downward. But to be able to do this she saw that she must keep on driving home in the minds of the public the notion that the securities actually did exist. Therefore she conceived the idea of having her possession of them disputed. Actions were brought against her by Robert and Henry Crawford. Nobody saw either Robert or Henry Crawford; but still the actions were brought, and she engaged the best counsel procurable to defend her, and paid them handsomely in cash for doing so. Judgments were disputed, the litigation went on, the defendant's lawyers were always paid; everything seemed to point to the fact that Madame Humbert actually had an enormous sum of money, and on the strength of that supposed fact Madame Humbert borrowed more. Yet all the while the safe was empty; there was no will; there never had been a will, nor a millionaire named Crawford, nor disputants of the will, nor anything, indeed, save the inventive genius of Madame Humbert. This went on for twenty years."

MADAME HUMBERT.
Whose great swindle threatens to unseat the French ministry.

M. HUMBERT.
He and his wife borrowed $12,500,000 on an empty safe.

Such is the story which the leading organs of Europe are now going over again. The further marvel is how Madame contrived to implicate so many people of prominence in her swindle. The London *Times* does not think the French statesmen are so deeply involved in the affair as has been charged:

"It is to be noted that a comparatively small amount of property in cash, securities, and jewels—only something over £3,000 [about $15,000] worth—was in possession of the accused at the time of their arrest. What has become of the balance of the millions which were advanced by the dupes will be an interesting branch of the inquiry. It is not improbable that the expenditure of the Humberts during twenty years, together with the drain upon them by intermediaries and bribery agents, had left very little, as the French say, 'at the bottom of the sack' when the blow fell at last. There is no reason to believe that the charges of complicity in this disgraceful business which the Nationalists have brought against the Cabinet and the Republican majority, and which the Minister of Justice repelled with vigor a couple of weeks ago, have any foundation in fact. But it is quite conceivable that some of the minor officials connected with the police had reasons of their own for not too keenly pursuing the track of the fugitives."

The deplorable feature of the affair, according to the *Journal des Débats* (Paris), is the way in which it has been made use of to hurl accusations against public men. These accusations it deems absurd, and it thinks the trial will vindicate every member of the ministry whose name has been dragged into the scandal:

"This swindle has been likened to the affair of the Diamond Necklace. But the necklace affair was of the clearest kind from a legal point of view. What complicated it and made it impossible for contemporaries and posterity alike to understand the riddle was the way in which it was dragged into politics. The guilty derived the only advantage resulting from this course. Judging merely from appearances, it is to be feared that the

Humbert affair will be given a similar turn. At a recent session of the chamber there was actually a battle to decide the political group to which a member of the Humbert family belonged. All this in no way tends to the establishment of the truth. . . . The essential nature of the Humbert affair, which is one of swindle pure and simple, should not be overlooked in the interest of any political cause or group."

This kind of argument is merely evasion, says the *Intransigeant* (Paris), which declares that the police finally consented to Madame Humbert's arrest because every incriminating document had at last been destroyed. The Combes ministry it calls a "Humbert ministry," and it looks for the downfall of the Government when the trial is well under way. The *Temps* (Paris) calls attention to Madame Humbert's claim that she will "tell all" at her trial and "ruin men in high places." The lady is not at all unsettled by the turn affairs have taken, and if her hints are worth anything the Dreyfus affair will be eclipsed. She spends much of her time in the perusal of books of devotion.—*Translations made for* THE LITERARY DIGEST.

TRANSFORMATION OF THE MOROCCAN PRETENDER'S PERSONALITY.

A SULTAN of Morocco must have a grand vizier, courtiers, followers, belief in the one true God, led horses, and an imperial umbrella. But a pretender having set up shop with all these things, he has hit upon the plan of calling himself the Sultan's elder brother. This elder brother, however, happens to be under lock and key in Fez; but the pretender is enabled to pass himself off as the genuine article by effecting a transformation of his personality. He has, in short, proved to be a pretender within a pretender, and the London *Times* thus unfolds the mystery:

"He still calls himself Bu Hamára, and he still pretends to be Mulai Mohammed, the Sultan's elder brother; but he is no longer the Bu Hamára who advanced the same pretension a few weeks ago. The original Bu Hamára was formerly known as Omar Zarhuni, and had got into various scrapes before he took to piety as a profession. He has now humbly subsided into the vizier of the mysterious personage who has assumed the first place in the rebellion, and he hints, if he does not directly assert, that this personage is the Mahdi, whose precursor he had proclaimed himself to be. The new head of the insurrection was undisputed ruler of all the eastern portion of the kingdom a fortnight ago, and it was said that he was governing it well. Our well-informed correspondent declared that even then the situation was 'undoubtedly serious,' tho he evidently expected that the rebellion would soon collapse or be crushed. The victory of the pretender, which we report to-day, can hardly have failed to make it much more serious. Nothing succeeds like success, and the saying is especially true in the case of Oriental impostors of a religious type."

The pretender has marched from victory to victory, and the situation in Morocco to-day has certain vague resemblances to that which prevailed in Kentucky some time ago when two gentlemen claimed to be governor of that great State. The Powers are contemplating Morocco with dismay. The international jealousies she inspired were never more acute, as may be seen from this utterance in the *Revue Algerienne* (Algiers):

"Several months ago the *Lectura* (Madrid) published a series of articles attributed to Señor Silvela, in which was advocated an understanding with France for the annexation by Spain of the Moroccan territory surrounding Ceuta and Melilla, the two Spanish settlements opposite Gibraltar. The compensation France was to receive from this so-called understanding was not made clear, unless Señor Silvela meant that Spain, by consolidating her position in Morocco, would weaken the position of England in Gibraltar. The same paper stated at that time that it was the duty of Spain to occupy the small island of Perijil, which is located about two miles from Tangiers, and to establish at that point a coaling-station. 'Perijil,' asserted the *Lectura*, 'has been Spanish since the Hispano-Moroccan treaty of 1861, and we should gain possession of it.' More recently another paper, the *Evangelista*, has asserted that England intends to land troops at Perijil, the occupation of which by the Spaniards is a direct menace to Gibraltar. Indeed, the British are suspected of intending to land troops on the slightest pretense at Archen de Sukal on Moroccan territory, near Ceuta. Their object in doing this would be to strengthen Gibraltar, which could be bombarded with ease from La Sierra by the Spaniards. La Sierra, however, should be fortified first."

Whatever may be the intentions of Spain and England concerning Morocco, the *Revue Algerienne* thinks that "France should at least insist upon the maintenance of the *status quo*," particularly at this time when Morocco and France are trying to adjust their common frontier. We quote further:

"Since 1845, when Marechal Bugeaud accepted through ignorance the Moulouia as a frontier between Morocco and our Algerian possessions, this frontier has been nothing else than a fictitious line of separation, leaving large openings to the pilfering tribes of Morocco, particularly at Marnia and Ouldja; a commission has been appointed to obtain the rectification of this frontier from Morocco. Meanwhile we should not lose sight of the danger which our Algerian colony would incur in case of an international conflict, should Morocco be annexed by a European Power. What would be the position of our Nineteenth Army Corps [crack troops garrisoned in Algeria and Tunis], upon which we rely so much in case of war?"

From the *Revue des Sciences Militaires* (Paris) it appears that the French have been repeatedly trying to rectify their own Moroccan frontier proceeding from the south. The stumbling-block in their way is the great oasis of El Figuig, midway between In-Salah and Timbuctu, concerning which there is a legend believed by many to be true. According to this legend El-Figuig has been fortified since some fifty years ago by a company of deserters from a regiment of military engineers. Whatever may be the case, the oasis is protected by an immense entrenched camp, the walls of which are composed of sand, accumulating year by year, and is therefore impregnable. General de Wimefen in 1870, General de Gallifet in 1873, and last year Colonel D'Eu attempted to capture the Figuig, but never came nearer than ten or fifteen miles of the oasis, only to recognize that they had to retire. El Figuig is the meeting-ground of the Touaregs, who levy tribute on the caravans, and when hard pressed by French troops either escape to the oasis or to Moroccan territory. As they practically control the Touat region, claimed by the French since the completion of their railway to In-Salah, they are particularly obnoxious.

The Touat, altho geographically within the limits of Morocco, is claimed and even partly occupied by the French, who intend to organize it as a part of their Algerian dominions. The *Petit Journal* (Paris), which has devoted several long articles to this idea of dominion, insists particularly upon the autonomic organization of the large territories south of Morocco. It indorses the project of law presented by M. Revoil, governor-general of Algeria, who advocates the establishment of an independent dominion comprising all the territories south of Algeria and Tunis. The Touat, as a matter of course, is included, it being the intention of France to compel Morocco formally to relinquish it. No difficulty is expected in the matter, unless the present rebellion should bring another European power into the conflict, "a fact which can not be tolerated," according to the *Revue Algerienne*, which has for months past discussed this question. The latest reports from the scene of war in Morocco indicate that the young Sultan may find it necessary to abandon his capital to the pretender. Should this happen, there is likely to be united action by the Powers. Spain has notified Europe that she considers his claim upon Morocco "indefeasible," in which attitude she would probably be sustained by France.—*Translations made for* THE LITERARY DIGEST.

NOTABLE BOOKS OF THE DAY.

PLEASANT BUT SENTIMENTAL.

GLENGARRY SCHOOL DAYS. By Ralph Connor. Cloth, 5 x 7½ in., 340 pp. Price, $1.25. Fleming H. Revell Company.

PENELOPE'S EXPERIENCES IN IRELAND. By Kate Douglas Wiggin. Illustrated by C. E. Brock. Cloth, 5 x 7½ in., 415 pp. Price, $2. Houghton, Mifflin & Company.

AT first sight these two books seem so different as to give no excuse for grouping them in one review. In what might be called their outward and visible signs, they are far enough apart; but in their inward and spiritual traits it does not take much imagination to see a resemblance. One is the modern development of the old stereotyped book of travels, the heroine, Penelope, having already in previous books conducted a sort of Cook's tour of charming but thoroughly sophisticated ladies through England and Scotland. The other is the modern version of the good old religious story, giving the spiritual struggles and victories of lads in the backwoods of Canada. Each book displays the author's canny eye to the main chance: they steer a careful course between the book that is evidently intended for grown people only, and the too obvious juvenile tale. The young person of fifteen might get amusement from Penelope, and the man of fifty be amused by "Glengarry School Days." Both authors, too, have permitted sentiment to get the better of them. There are a great many elevating thoughts and noble reflections that the reader must take on faith, for they apparently do not bear putting into print. Only the very great writers may dare to touch on certain themes without making the lofty thought appear cheap and tawdry. In Penelope, it is that young woman's praiseworthy love for her husband that is publicly flaunted before the reader. There is a sort of mental modesty which keeps delicately minded people from proclaiming their intimate emotions; and so it makes many readers wince when a young married women—even if she is only a creature in a book—talks in this fashion of her newly wedded husband: "Dull! with two dear, bright, sunny letters every week, letters throbbing with manly tenderness, letters breathing the sure, steadfast, protecting care that a strong man gives to the woman he has chosen! . . . Lonely! when the vision of the beloved is so poignantly real in absence that his bodily presence only adds a final touch of joy!" There are pages of this sort of thing scattered through a not unamusing account of travels. In "Glengarry School Days," one of the prominent characters is a certain Craven, a wild young man who is converted by the "pure influence of a good woman." His letters to his chum give one the same unpleasant feelings that Penelope's raptures give. In fact, two pleasant, if commonplace, books are spoiled by this kind of bad taste. There is a public which revels in such exhibitions, there are readers who like to have the people they meet in books talk in this "heart-to-heart" fashion; but certain marital modesty is desirable even in books; even the little wooden book people have a right to some reserves, and the author who can strip the souls of his characters bare to the public gaze in this way, without seeming guilty almost of an indecency, must be a master of the art.

RALPH CONNOR.

A SCOTCH TERRIER ONE OUGHT TO KNOW.

DANNY. By Alfred Ollivant, author of "Bob, Son of Battle." 5½ x 8 in., 225 pp. Price, $1.50. Doubleday, Page & Co.

THE present widespread interest in animal life, together with the ever-increasing love of outdoor nature would alone secure readers for this latest work from the pen of Alfred Ollivant, which with such remarkable detail lays bare the love, the courage, the almost human intelligence and more than human devotion of a Scotch terrier. But tho Danny, the dog, is the hero *par excellence*, the human interest lays hold on the reader at once and does not let him free from start to finish.

The story is told in the narrative conversational method. The characters are all local and sufficiently numerous to bring out a varied local flavor—that is, the grim, intense, narrow range of provincial Scottish feeling, with its intensely racial note and the human warmth that underlies it all.

The Laird of Hepburn, a Scot of the Scots, who uses all his ingenuity to conceal the fact that he is the possessor of a heart which when wrung can break, is a type whose crotchets and tempers are studied to the life. The country people, Deborah Anne, the servant, Robin Crabbe, Simon Ogg, and the others, are capitally handled; the reader not only feels their habits of thought, their limited range of vision, their semi-pagan religiosity, intensity of friendships and hatred of the *Sassanach*, but even the very *aura* which surrounds such time-ingrained instincts. Indeed, the reader whose mental pores are open may inhale the very atmosphere of the hills, moors, and sea mists which breed such people. Another point of interest is the idiomatic talk, so different from the sloppy "dialect" which has done duty in so much of the so-called "kailyard literature" of recent date. Scotch as well as Irish speech is one of the things that every quilldriver fancies he can write; but the writer who strikes a true racial note in either is nearly as rare as a cuckoo note in winter. In short, the workmanship of "Danny" shows distinctly that of a literary stylist, a distinction which hardly comes to one by grace of God unsupplemented by much labor grafted upon innate knowledge.

A BRILLIANT HISTORICAL SKETCH.

A HISTORY OF THE AMERICAN PEOPLE. By Woodrow Wilson, Ph.D., Litt.D., LL.D. Illustrated. In 5 vols. Cloth, 6 x 9 in., 1,748 pp. Price, $17.50. Harper & Brothers.

THE most striking feature of this work, as one first looks into its sumptuous pages, is the wealth of illustrations—portraits, facsimiles of manuscripts and title-pages, diagrams, and more or less imaginative reproductions of battles and other historic scenes. Nearly one-half (two-fifths) of the entire space of these five volumes is devoted to illustrations, and while a goodly number add little to the real value of the history, all of them are of interest and most of them aid the reader materially in his effort to project himself into the scenes of the past. Those of us who have printed on our memories the old wooden-faced portraits of Captain John Smith, Sir Walter Raleigh, and the rest, that most of our histories have perpetuated, will be surprised to find the same gentlemen here with such life-like faces, as if some modern photographer had invaded the land of shades and brought back first-class negatives.

It is not a history that lives up altogether to its name, for it is not "a history of the American people," as Green and McMasters have taught us to interpret such a title. It deals, as most histories deal, chiefly with political and governmental changes, and touches but lightly, tho skilfully, upon the deep formative influences that make a people what they are. A "comprehensive" history of the American people could not be written in less than twenty volumes of the size of President Wilson's. Moses Coit Tyler took two volumes (containing as much reading matter as President Wilson's five) in telling of the literature of the American Revolution, and he did not take too much space for the story. Woodrow Wilson's work contains about 320,000 words, all told—a little more than are in one volume the size of "Quo Vadis." It is manifestly absurd to expect him in that space to give a comprehensive history. What he has done is to give us a brilliant, sane, accurate, comprehensive *historical sketch*, covering the whole period of our history down to McKinley. How inadequate it is when judged as a comprehensive history may be seen by haphazard reference to the Index. There is but one entry for the subject "Ohio," and that refers to the bare statement of the year when Ohio was admitted as a State. There is one entry of the subject "William Lloyd Garrison," the reference being to a passage of four lines. Wendell Phillips does not appear at all. One of the most famous families in America has been the Field family: David Dudley, the jurist; Cyrus W., of Atlantic cable fame; Stephen J., of the United States Supreme Court; Henry M., the editor. But the name Field does not appear in the index. Neither do the names of Morse and Howe, the inventors. All of which omissions do not materially impair the value of the work as an historical sketch, but would be serious omissions in a comprehensive history of the American people.

WOODROW WILSON.

The author's style is flowing and lucid. His reading has been of the widest, and even his slightest references indicate carefulness of statement and an all-round view. His judgments of men and events, so far as we are able to test them, are remarkably sound, and, while reasonably positive, are neither dogmatic nor partizan. One would look to find a biased view, if anywhere, in the passages referring to Grover Cleveland, because of the intimate relations between Mr. Cleveland and Princeton University, of which Dr. Wilson became president on the day this work was published. But the same careful balance of judgment is maintained there as elsewhere. The work lacks the glow and fire of a partizan history; but it will stand very high as an authority,

and when it is issued, as it probably will be in years to come, in one volume, it will supersede all other single-volume histories of the United States thus far written.

DISSECTING A WOMAN'S SOUL.

THE DEEPS OF DELIVERANCE. By Frederick Van Eeden. Translated from the Dutch by Margaret Robinson. With an introduction by Will H. Dircks. Cloth, 5 x 7½ in., 424 pp. Price, $1.50. G. P. Putnam's Sons.

FREDERICK VAN EEDEN ranks as the most distinguished of living Dutch writers, and this, as one of his most notable works, just done into English, must be taken with due respect. It belongs, however, to that class of novels sure to raise conflicting emotions in the mind of readers bred to English standards and traditions. To some it may even raise the question, Is the present fiction of the English-speaking race in touch with this age, or behind it, or in advance of it; and why will English readers have none of this sort of thing from their own writers, yet so eagerly devour it when it is given them by a foreigner? Certainly no prominent writer of our own, on either side of the water, would be likely to attempt a story like this. One doubts whether any could possess just that primitive simplicity of mind needed to conceive it, even if he knew a public waited to welcome it.

It is common enough for writers of English to put forth novels much more peccable than this from the moral point of view, and even to be more baldly plain of speech. Thomas Hardy may stand for one example, and Kipling for another, and even George Meredith for a third, after his own involved but fascinating style. But where is the writer in our tongue who would undertake the minute and laborious dissection of the growth of a human soul, and in doing so rend the veil from the most intimate thoughts and desires, even laying bare embryonic impulses before they had yet passed into conscious thought, as does this Dutchman? For it is the soul growth, the spiritual history, of Hedwig Marga de Fontayne from birth to death that Van Eeden gives us.

George Moore, more than any other author writing in our own language, touches this sort of thing in his "Sister Theresa" and other works; but the Irishman is by far a finer literary artist than the Dutchman. Van Eeden lacks esthetic quality, in that he leaves nothing to the imagination. The Dutchman is a moralist; the Irishman an artist. Van Eeden is in the same category with Tolstoy, Górky, and others of the Slavic school.

In "The Deeps of Deliverance" we have the story of a well-born young Dutchwoman of the upper middle class. She is dowered with beauty and with that more potent quality—charm. Brought up in such ignorance of natural facts that at the dawning of womanhood she does not know even the processes of human birth, she yet from childhood has had to struggle with strange moods, sensuous impulses, and obsessions of the imagination, all intermingled with the most exalted spiritual aspirations. Her whole youth is a tangle of spiritual emotions and emotions of sex. She neither understands herself nor is understood by those about her; but unconsciously she inspires regard of one sort or another in those of the other sex with whom she comes in contact. She finally marries an idealist, who fondly believes he can live a purely platonic life in marriage, and who essays to carry out his theories. A series of tragic comedies is the result, up to the period when the inevitable happens. The woman meets the man who looses her from her unnatural moorings. She confesses. The husband casts her off and remains implacable. The woman's career henceforth is made up of the oddest yet most natural of fallen fortunes. Yet, through all, her spiritual aspirations remain with her, until finally out of the veriest deeps she is released. The whole forms a curious study in temperamental tragedy. The moral scrupulosity of the work is such that at times it reminds one of a medieval religious manual put into the hands of a penitent before going to confession. But the doubtful moral that persists in haunting the reader is that only through this Magdalen career could the woman's higher and eternal ego be redeemed!

THE CITY OF CONTRADICTIONS.

BOSTON DAYS. By Lilian Whiting. Cloth, 7½ x 5 in., 422 pp. Price, $1.50. Little, Brown & Co.

THERE is a city in America whose foundation was the desire of religious liberty, yet which later persecuted religions other than its own; a city which was one of the cradles of our political independence, but which has cried to heaven whenever the territory of this country has been added to; a city whose inhabitants have always deprecated improvements of any sort, and yet at the same time welcomed any heterodox theory which was picturesque; a city which bred some of the greatest people of this country, and which worshiped its great men and its great charlatans with a touching lack of discrimination; a city full of shrines to false gods and true, for its inhabitants have the need of worship, but have not always cared much what the object was; a city finally, self-conscious, full of the pride of intellect, narrow, constantly vaunting its own superiority, and, on the other hand, simple, clever, open-minded—the natural refuge of the cranks who ultimately turn out to be geniuses and of those who do not.

Of course the name of this city is Boston. A great many books of description, reminiscence, ridicule, and appreciation have been written about it. It is doubtful if ever a book has appeared which so faithfully reproduces a certain peculiar and contradictory spirit of the town as does Miss Lilian Whiting's "Boston Days." It is one of those books in which the author has builded better than she knew. Perhaps it is that she herself shares the spirit, for it is a book full of superlatives, with little sense of proportion, with indiscriminate enthusiasms for what Boston has turned out of the good and great, and for what it has given birth to of fads and intellectual absurdities.

In form, the book is a rambling series of sketches and anecdotes of Boston's great men and great fakirs. It is divided into four parts: "The City of Beautiful Ideals," "Concord and its Famous Authors," "The Golden Age of Genius," and "The Dawn of the Twentieth Century." The anecdotes are told without the intrusion of the personal element; but the rapturous attitude of the author shines through this whole fabric of the book. "Never was there so interesting a town, never such men and women of genius," she cries as she passes in review the various celebrities and notorieties. There is rarely a gleam of any critical spirit. Miss Whiting has swallowed her Boston whole. Both those readers who take their Boston with and those who take it without a grain of salt will find pleasure in it, and both will find their pleasure enhanced by the author's enthusiasm.

A TALE OF THE NOBLE HORSE.

THOROUGHBREDS. By W. A. Frazer. Cloth, 5 x 7½ in., 400 pp. Price, $1.50. McClure, Phillips & Co., New York.

THE horse has frequently coursed into literature. There are several of him enshrined in box-stalls fashioned by the pens of enthusiastic writers. There is "Black Beauty," and if "John Brent," that long-ago novel of Theodore Winthrop, be recalled to-day, Don Fulano, the superb horse who lost his life in saving a slave, will stand forth as its strongest feature.

Mr. Frazer, the author of "Thoroughbreds," may not be a more ardent admirer of the race-horse than are tens of thousands of men whose idea of a real interesting conversation is "horse-talk." Kings and stable-boys are alike swayed by passion for the race-horse. But there are few of those who pack their "roll" and hurry to Morris Park or Sheepshead for the "events" who could write four hundred pages about these swift quadrupeds. Mr. Frazer has done that, and there is not a dull page in the four hundred.

W. A. FRAZER.

Of course, the "human interest," which should never be allowed to lapse in a good novel, may account for the thoughtful introduction of men and women with as varied and almost as interesting qualities as the horses. In fact, that Mr. Frazer does not permit his devotion to the latter to obscure a just appreciation of the former is clear from his dedication of the book: "Dedicated to a Thoroughbred, My Wife." It is a reasonable inference that the lady is fond of horses herself." As the husband is, the wife is." But Mr. Frazer shows by his portrayal of human love in the story and the noble characters of Allis Porter and George Mortimer that he is no "Locksley Hall" husband who thinks a man's wife should be only "a little dearer than his horse."

In Brookfield, a village of New York, John Porter, known as "Honest John," keeps a training-stable. His father had raced horses in old Kentucky, and so to the son, in consequence, has come little beyond a not-to-be-eradicated love of thoroughbreds. "To race squarely, honestly, and to the glory of high-couraged horses was to him as much a matter of religion as the consistent guardianship of parish morals was to the Reverend George Dolman."

Mrs. Porter has a horror of "horse-racing," but Allis is her father's own daughter. In the action of the story, horses are the pivotal factors. Crane, a banker in Brookfield, is also a racing-man with a stable. But Crane is lucky right along, and "Honest John" Porter constantly "comes croppers" with his horses." Finally, thanks to Miss Allis and the most despised horse in his string, the whole family is lifted into prosperity.

It is an interesting story even to those who can look at a horse without "sizing him up." Miss Allis is a physical heroine and George Mortimer a moral hero. To save the family from ruin, the girl disguises herself as a jockey and pilots Sauzanne to victory, without whip or spur, at the Brooklyn Handicap. George, for love of her, subjects himself to the imputation of being a thief, even tho it involved, for all he knew, the girl's own faith in him.

The character drawing, whether of horse or man, is one of the best points in Mr. Frazer's work.

BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

"The Austin-Haas Debate." Andrew C. Austin, Hudson, S. D., $0.20.

"The Grounds of Theistic and Christian Belief."—Charles Park Fisher. (Charles Scribner's Sons.)

"The Proofs of Life After Death."—Edited and Compiled by Robert J. Thompson, 1604 Wellington Avenue, Chicago, $2 net.)

"History of the Five Indian Nations of Canada."—Cadwallader Colden. (New Amsterdam Book Co., New York, 2 vols.)

"A Great Part."—George Henry Payne. (Continental Publishing Company, New York.)

"Bethlehem. — A Nativity Play."—Lawrence Housman. (The Macmillan Company, $1.25 net.)

"Mental Guide to Health."—DeWitt Talmage Van Doren. (The Abbey Press, $1.50.)

"Two Thousand Years in Eternity."—B. Bywaters, Von Ormy, Bexar County, Texas, $2.15.

"Father Tom of Connemara." — Elizabeth O'Reilly Neville. (Rand, McNally & Co.)

"The Lover's World."—Alice B. Stockham. (Stockham Publishing Co., Chicago.)

"Addresses and Proceedings of the Forty-first Annual Meeting of the National Educational Association held at Minneapolis, 1902."—Published by the Association at Winona, Minn.

"Mont Pelée and the Tragedy of Martinique."—Angelo Heilprin. (J. B. Lippincott Company, $3 net.)

"The Life and Letters of James Martineau."—James Drummond. (Dodd, Mead & Co., $8 net.)

CURRENT POETRY.

Icelandic Lyrics.

By BLISS CARMAN.

VI

The lily said to the rose,
"What will become of our pride
When Yvonne comes down the path?"
And the crimson rose replied,

"Our beauty and pride must wane,
Yet shall we endure to stir
The fancy of lovers unborn
In metaphors of her."

VIII

I do not long for fame,
Nor triumph, nor trumpets of praise;
I only wish my name
To endure in the coming days,

When men say, musing at times,
With smiling speech and slow,
"He was a maker of rimes
Yvonne loved long ago!"

South America and Her Vast Resources

By JACK ST. ARMONT

DID it ever occur to you how little we know about the South American continent? Have you stopped to consider the vastness of this "better half" of ours, trailing on at the other end of the isthmus?

Recent events have concentrated public attention upon that vast section of country lying between the Caribbean Sea and the watershed of the great Amazon, containing but about 2,750,000 souls, and yet powerful enough to embroil in controversy the three greatest nations of the world. There must be some reason for this interest which has sent into the Caribbean Sea a portion of the war fleets of five nations. There certainly is a reason, and Germany, with her merchants scattered throughout Venezuela, would feel the loss of that trade keenly. Great Britain, with her money tied up in various ways in enterprises which have paid heavy dividends in times gone by, does not care particularly to have her revenues from this quarter cut off. Even little Italy would miss some revenue, Belgium considerably more, while the United States would feel the loss of commerce most heavily. But these are not the reasons for this controversy.

The United States will soon have thousands of men digging a canal not very far from the present seat of operations, which she will control (naturally), and will be looked upon to strictly maintain the Monroe Doctrine in a country in which millions of good American dollars are invested annually—for big returns.

Germany and Great Britain are keenly alive to this contingency, and cognizant of the fact that sixty years behind the times is this South American country, and only waiting for the aggressive American, with his experience and foresight, to open up the possibilities that now lie unworked, uncared for, and not generally known. Those who do know are making the best of the knowledge, but a few men cannot take advantage of a continentful of golden opportunities.

The seaports of Venezuela are open to the world; the harbors sheltered, anchorage unexcelled; the mountains full of precious metals; the forests, of almost priceless woods, stand in their primeval vastness, and the soil will produce two to three crops per year of any cereal or vegetable plantage. The republic offers all the advantages of the temperate zone for health and agriculture, and the still greater advantages of the torrid zone.

THE WORLD-FAMOUS AMAZONAS.

The Amazon River through Brazil, its great tributaries Rio Negro and the Casiquiare, and its connection with the Rio Orinoco, form the greatest watershed in the world, and drain an area equal in extent to the entire United States. This famous belt is the Mecca toward which the commercial world is turning. In this region grow wild and luxuriant the banana palm, the breadfruit, pineapple, rosewood, teak, mahogany, and valuable dye woods; cacao, tonka, vanilla, cinchona, and various other trees producing essentials for pharmaceutical preparations. Here grows also, in its native element, a tree indigenous to the soil and zone, a tree in the cultivation of which, by transplanting, millions of dollars have been and are being expended, but so far without commercial success, if we are to believe so high an authority as Mr. O. F. Cook, botanical expert in charge of investigations in tropical agriculture (found in the "Year Book of the United States," Department of Agriculture, 1901).

Men of learning and erudition have variously named this tree *syringa*, *Symphonia elastica*, and *Hevea Brazilliensis*,—but commonly and correctly this wonderful tree is known as rubber.

The uses of rubber are wellnigh infinite, since the genius of Goodyear discovered a scientific treatment of the milk which gave to the world a commercial product of extraordinary value in the arts of modern civilization. In its soft vulcanized form it is used for elastics, air cushions, boots and shoes, clothing for man and horse, belting, etc. The hard vulcanized rubber, or vulcanite, is used in the manufacture of penholders, buttons, statuary, jewelry, and thousands of other articles of daily utility. Rubber as an insulator for electrical appliances has made possible the application of this wonderful power to daily and common use, and chroniclers now write of this as the "electrical age"; but historians will write of the "rubber age," which this truly is. Were the Pacific cable to be manufactured this year it would require the entire visible supply of rubber in the United States to-day for insulation. The rubber factories of the United States use annually 60,000,000 pounds of crude material, and the imports of rubber into this country are exceeded in value and quantity by sugar and coffee alone, and no duty is imposed on its importation.

Some two hundred years ago certain wise men of India, given to research and investigation, discovered that a useful and marketable product could be made from the cream arising from the milk of the rubber tree,—hence the name "India rubber" still clings.

PARA THE GATEWAY.

For nearly one hundred years the Amazonas belt has furnished the finest quality of rubber produced in the world, commercially known as Para, on account of the shipments being made through the port of Para, near the mouth of the Amazon, in Brazil. Most of the rubber used in the world to-day still comes from equatorial South America, and the up-river forests, where the Indians gather the "hule," are as dense to-day and as little known as in the time of Cortez.

Para is a rather pretty city of about 100,000 people, and a regular call port for seven lines of ocean-going steamers. The public buildings are well built and picturesque. The streets are fairly wide, and are equipped with car lines, electric lights, and all modern conveniences. Hotel accommodations are good, and in the markets one can purchase wares from all parts of the world, though to do so advantageously one must be a good "trader." Portuguese is the language spoken, though one can get along very nicely with the more liquid Spanish.

Leaving Para on the full tide, which rolls in from the ocean with a roar and raises the water at the wharf 60 feet, we steam away on an ocean liner of from 4,000 to 6,000 tons, passing through the inner channel by beautifully wooded islands and into the majestic Amazon, which at this point is three miles wide. The banks are covered with tropical verdure, from the Macao, with its wide beautifully marked leaves, and the wild rice gracefully waving in the morning breeze, to the majestic rosewood, mahogany, teak, and ironwood, while the banana palm, the breadfruit, and the banyan trees add their plumes and undulating foliage to the brilliant sea of green. From the trunks and branches of the larger trees cling, depend, and gracefully droop delicate vines whose darker greens, beautiful flowers, and berries add a lacelike tracery to the picture. Through the branches of the forest flit birds of paradise, cockatoos, parrots, and hundreds of others of beautiful plumage, while monkeys, sloths, ant-eaters, and others of the animal kingdom give an air of native life and activity to the scene which is only occasionally marred by the appearance of a cobra, anaconda, crocodile, or lizard.

MANAOS, THE RUBBER CENTER.

After two delightful nights and two days of languid siesta upon the broad decks of our steamer, we tie up at the wharf used by the Para Company at Manaos, just as the sun rises over the gilded spire of the cathedral, bathing this picturesque half Spanish, half Portuguese city in a flood of

light. The most prominent feature of this city of 60,000 people is the shipment of rubber, just as the shipment of tobacco is the prominent feature of Havana. All the exporting section of the city is occupied by packing-houses, where the rubber is boxed for shipment. The well-paved streets are given over to stores of varied merchandise collected from the marts of the world. Electric cars, arc lights, telephones, and all the comforts of home abound under most intelligent management. The streets are wide, and lined with tropical trees, and, with their little tables for refreshment, they remind one somewhat of Paris.

In this city, in magnificent style, live the owners of many of the rubber properties in the Amazonas, and officials representing companies that have capitals of millions, who manage their rubber enterprises after modern business methods. Here also reside merchants who have grown rich in the handling of the commodities and merchandise used by the "men in the woods." Since the almost complete and ruthless devastation of the rubber forests below Manaos the traders have moved from Para, and created in Manaos to-day the rubber center of the world. From these ports, last year, was shipped fifty million dollars' worth of the crude product.

The social life is divided into three distinct castes, or classes,—the high, middle, and low class, from the two lower of which it is impossible to rise after once being established. Theaters, churches, beautiful drives, and yachting on river, together with varied social functions, afford ample amusement and relaxation in this languid environment. From 11 A.M. to 3 P.M. the stores are closed, the streets being practically deserted during these hours of siesta.

UP THE RIO NEGRO.

Taking one of the steamers of the Para Rubber Plantation Company at 9:30 P.M., we leave the glittering lights of the city behind, sail out on the Amazon, and so on into the Rio Negro, where the banks are closer together, the overhanging trees occasionally almost shutting out the moonlight entirely. From this point the scenery is too wildly interesting and tropical for description,—most beautiful, enchanting.

THE RIO CASIQUIARE.

Arriving at San Carlos, the head trading station of the Para Rubber Plantation Company, a town mainly controlled by this great company, situated at the mouth of the Rio Casiquiare, where it empties into the Rio Negro, we find a typical jungle trading station,—the streets irregular, the houses built mainly of bamboo, thatched and walled with palm leaves. We are royally entertained by Mr. Kenneth Rose, the general manager for the company, and sleep the sleep of the just upon a bed of matting and cocoa silk. Early in the morning we take the launch for a trip up the Rio Casiquiare, a winding river running for 175 miles through an open jungle of tropical trees: all the valuable woods seen on the Amazon and more, acres and miles of them, for the company owns 1,000,000 acres, or 1,400 square miles of territory running the entire length of the Casiquiare River, from the Rio Orinoco to the Rio Negro, passing the mouths of thirty-six creeks which drain the country into this river. The most noticeable tree in this jungle, however, is the thick, dark-green leaved *rubber*, whose rich foliage is seen on every hand, and we are told that a careful cruising of the property has figured six trees to the acre, or 6,000,000 rubber trees over fifteen years old, besides countless numbers of younger plants rapidly growing to maturity. The tree grows in families, somewhat like the famed banyan tree; the roots of the parent trunk sprout and grow independent trunks, while the branches send creepers downward to, in turn, take root. Station No. 3, at the confluence of the Danano Creek, is reached about noontime, and after a lunch of tinned delicacies and native wine, made from a species of the palm, we take to the "tracks," as the paths or routes followed by the sap gatherers on their daily rounds,—carefully mapped out for them by the foreman of the station each season,—are called. These tracks oftentimes extend to the confines of the company's property, five miles on one side and three miles on the other side of the river throughout its entire length.

IN THE "TRACKS."

The natives of this tract are Indians,—peaceable, quiet, and semi-industrious, docile and capable of being easily managed by one understanding their temperament. They are formed into squads of from twenty to fifty men and women, each bearing six to ten metal bowls holding about a pint, and a "carrina," or earthen jug, of a capacity of perhaps two gallons. The overseer marches his band into one of the "tracks," dropping a gatherer here and there, with instructions to take from five to ten bowls of milk from such a tree. It is a fact known to science that if a rubber tree is not abused it will produce milk in abundance for thirty or forty years,—all the trees of this company are scrupulously cared for. With a machete having a blade about two inches wide, a small gash is made through the outer bark, beneath which is pinned a bowl, into which the clear, milky sap soon begins to drip. This process is continued until all the bowls are in commission. Lighting a cigarette, the native then sits or lies in a soft spot for two or three hours, then commences the collection of his day's output by going from tree to tree, emptying his little bowls into his carrina, and when all are attended to the march for home is begun, joined on the way by his companions of the morning.

The contents of the carrina are then emptied into a sort of vat, and soon the cream rises to the top like cream on milk, forming a thick, grayish-white scum. A fire is built beside the vat; on a paddle is collected a little of the cream, which is held over the fire and turned over and over constantly until the moisture evaporates and the mass hardens, when the process is repeated until a ball about the size of a small ham is formed, weighing perhaps 20 pounds. This is known to commerce as a "ham," and in such shape, cured in this manner, free from sticks, stones, and other foreign matter, it is ready for the weigher, who credits up its weight to the gatherer, or immediately pays for it;—so many yards of bright calico, rice, coffee, sugar, maize, so many beads, small mirrors, other showy trinkets, or tobacco, which comprise the only medium of barter in this primitive paradise. The cost of rubber to the company is figured at about 35 cents per pound packed for shipment, and sells in New York for 88 cents per pound.

AN ELASTIC SOLUTION.

This vast tract of the most valuable rubber-producing land in the world has been bought and is owned and held in fee simple, without bond or debt, by the Para Rubber Plantation Company, a United States corporation. They have organized and are operating the property on the lines adopted and carried out, through long years of successful effort, by the well-known Hudson's Bay Company in the gathering of furs, and by John Jacob Astor, the founder of the Astor fortune.

A head station has been established at San Carlos commanding the mouth of the river, so that it is an impossibility for goods to be taken in or rubber smuggled out without the knowledge of the factor in charge. Up the river, at convenient points, are located other stations, each under a competent manager or overseer, where are carried all the merchandise used or needed by the hunters, and where is collected the result of their labors, to be stored until called for by one of the company's steamers, for shipment to the main packing station. This is, beyond all doubt, one of the world's greatest enterprises, giving promise of large returns upon the money expended, with great possibilities for future developments along the most diversified lines; but were rubber alone the only source of income, the profits would be enormous.

As already stated, the company owns about 6,000,000 wild trees,—not a nursery for transplanted stock, which has never proved a success. Each tree produces about 5 pounds of rubber, which would make for the entire property 30,000,000 pounds a year,—all of which facts convey some idea of the future for all who are interested in rubber, and especially so when that interest comes through a company whose plans are on lines similar to those of the great companies above mentioned.

For markets, even if the demand of American manufacturers should be entirely supplied at a given time, the manufacturers of Europe would at once outbid each other to secure the raw material. And as for the profits on rubber made through European channels, there is no better-known instance of a fortune made than that accumulated by the King of the Belgians through his ownership of rubber forests in his Congo region in Africa.

With the foregoing outline of what the rubber industry is, and what relation the Para Rubber Plantation Company bears to the rubber industry, it is the purpose of this article to inform the readers of the LITERARY DIGEST that a fortune has been spent in preliminary operations by the company. This money has been expended in acquiring the property and in the establishment of camps and trading posts, and it is now the purpose of the company to sell a limited amount of its treasury stock for further exploitation.

The Para Rubber Plantation Company has an authorized capital of $5,000,000, divided into 500,000 shares of common stock, of a value of $10 per share. There is but one kind of stock, and no bond issue; the officers are all well-known financiers and men of affairs, who have made a signal success in their own enterprises, outside of which their names have rarely appeared, which guarantees honorable, energetic management, and a financial interest with this class of men affords an opportunity seldom offered the public.

The stock will be sold at its par value of $10 a share, and there are no bonds or preferred stock. In view of the foregoing, the officers of the company feel that they are very conservative in assuring investors that present prospects warrant their looking forward to a dividend of 6 per cent. from the first year's earnings, and it will be seen at a glance that the natural and available resources of the company are such that this dividend will be immediately and largely increased.

We desire to emphasize that the above calculation of a 6-per-cent. dividend is based on the employment of but 2,000 laborers, and this company owns sufficient territory to give employment to the 40,000 who are available. It is unnecessary to say more. The great immediate and prospective value of the stock is apparent at a glance.

For further particulars and illustrated booklet, giving full information relative to the company, call on or address Para Rubber Plantation Company, Dept. E, Exchange Court, New York City. Canadian office, 64 Canada Life, Montreal.

Mark Twain's Birthday.*

A Poem Jointly Composed by Mr. William Dean Howells.

I

FIRST BARREL.

The man whose birthday we to-day [illegible]
Unites all heads and hearts in one acclaim
As [illegible]
The missionary may not love him quite,
The imperialist may not think him wholly right,
The predatory cabman free from blame,
The moralist consider it the same
To teach by joke as with a text in sight,
Some as a scientist may not prize him much;
Some may deny him the true lyric leaven
As poet; some the fine old Bewick touch
As wood engraver; but, none under heaven,
Of all his critics, or those who pose as such,
Gainsay him the glory of being sixty-seven.

II

SECOND BARREL.

"Oh, no! Hold on!" I hear his voice implore,
"You are mistaken; it is not the case.
The Colonel, to save the Sabbath from disgrace,
Calls this my birthday. But, in fact, before
The thirtieth—and there still are two days more—
You can not make me more than sixty-six."
"In vain!" the inexorable Muse replies.
"It may be so; but as the executrix
Of your own theory of convenient lies,
I must insist upon the Colonel's date.
Besides, what matter whether soon or late
Your birthday comes whose fame all dates defies?
Still, to have everything beyond cavil right,
We will dine with you here till Sunday night."

[*Born November 30, 1835.]

Dr. Henry Van Dyke's Toast to Mark Twain.

Good friends, whose hearts to-night have heard
The welcome of our host,
At his request I bring you here
The best provision of good cheer;
A rare, delightful, juicy bird,
Alive,—yet on a toast.
This bird,—how shall I tell you half
The wonders of his worth?
He's full of wit, and knows the way
To sing a new song every day
That makes you smile within, or laugh
In full, side-shaking mirth.

His six-and-sixtieth year they say
This very night departs;
So let us leave this talk of birds,
And speak in simple Saxon words,—
Before the moment flies away,—
The love that fills our hearts.
With memories old, with wishes new
We crown our cups again:
And here's to you, and here's to you!
With love that ne'er shall wane!

And may you keep, as sixty-seven,
The joy of earth, the hope of heaven,
And fame well earned, and friendship true,
And peace that comforts every pain,
And faith that fights the battle through,
And all your heart's unbounded wealth,
And all your strength and all your health,—
Yes, here's a hearty health to you,
And here's to you, and here's to you,
A health to you, Mark Twain.

—*Harper's Weekly.*

PERSONALS.

A Compliment to Dr. Mitchell.—Dr. S. Weir Mitchell, in *The Pilgrim*, tells this story of an experience which he had in Europe:

"While in Austria I was taken suddenly ill, and fearing my sickness to be a case of 'aggravated nerves,' I had summoned quite the most famous nerve specialist in Vienna. After making the necessary examination, he said to me, 'I see that you are an American.' I confessed that I was, fearing at the same time he might regret having answered the call that had been made on him. 'It is quite extraordinary that an American should consult a Viennese physician when troubled with nerves. From what part of the country do you come?' he inquired. I informed him that my home was in Philadelphia. At that his eyebrows lifted strangely, and he fairly gasped. 'Philadelphia!' he exclaimed. 'Came to Vienna to be cured of a nerve trouble when you live in Philadelphia!' He made no effort to conceal his amazement, the cause of which I could not imagine. 'Why not?' I asked. 'Because,' he replied, 'you have in Philadelphia the greatest and most famous nerve specialist in the world.' 'And who is he, pray?' I asked. Much to my surprise—and you can imagine the blush that mounted to my cheek—he replied: 'His name is Dr. S. Weir Mitchell—he is the most famous.' I concluded then that he had not been informed of his American patient's name, and I consider the compliment he so unwittingly paid me quite the most delightful experience of that European trip."

Mary Mannering's Sweet Romance.—When Miss Mannering was a small girl in London, says Eleanor Franklin in *Leslie's Weekly*, she and a young friend one day discovered a photograph in a shop window which they, girl-like, began to gush over:

"Isn't he handsome?" said Miss Mannering.

"What a face!" exclaimed her friend.

"Is he an actor or a clergyman?" mused Miss Mannering.

"He is St. Anthony," said her friend, and can't you just imagine the accompanying girlish giggles and grimaces? Well, after this the two girls stopped before the picture nearly every day and began to call it "our face in the window," and Miss Mannering says it stamped itself so plainly in her memory that she could never forget it. Time wore on, and the bit of a girl grew into a bit more of a girl with ambitions. She went on the stage and pretty soon we allured her over here. It was surely fate, for such a short time after her arrival in America she met Mr. Hackett. She knew she had met him somewhere before, but where? Looking at him, and wondering where, may have had somewhat to do with her surrender to the fascination of his strong manly personality; but be that as it may, she surrendered, and then came the announcement of their marriage engagement. A short time after this, and before her marriage, she was visiting at his mother's one day and was looking with him over some old albums of photo-

PRAYERS For Public Worship, Private Devotion and Personal Ministry.

By Abbie C. Morrow. A New and Priceless Help to Spiritual Life. Invaluable to Christians everywhere. "Macey" SECTIONAL BOOKCASE { Patented / Other Patents Pending }

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL. There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval," subject to return at our expense if not found at our **factory price** 40 to 50 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION. **Do not be misled** by the deceiving advertisements of **Imitators. No other** sectional bookcase has **a self-receding door** that is **absolutely non-binding** and **automatic**—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace these same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered **a sweeping decision in our favor.**

Memory Training

New Practical System for Developing and Perfecting the Memory Discovered by an Indiana Student-Business Man. Is Rapidly Becoming the Wonder of Twentieth Century Progress.

Needed by All, Possessed by So Few, a Good Reliable Memory is the Key to Success. Anywhere, Everywhere the Person Having the Best Memory Rises to the Top.

PARTICULARS FREE TO ALL WHO WRITE.

D. F. Urbahns.

For years the world has been waiting for some one to discover, a system of memory training which might be of actual benefit. Not a theoretical method requiring months or years of hard study, but a simple practical system which accomplishes the most in the least time. It has remained for Mr. D. F. Urbahns' a student-business man of Fort Wayne, Ind., to bring out such a system. It is so easy that even a child cannot fail to understand. It is so plain and attractive that one can hardly help becoming interested in it, and above all it is so intensely practical that it helps one over the rough rocks of life to success, where without its aid absolute failure would be the result. Let the reader recall his or her own experience; has there ever been a time in your life when you lost money by forgetting a set of figures or a business appointment? Did you ever lose a friend by forgetting a name or face which you most wished to remember? Did your friends ever do you an injustice by forgetting you when you should have been remembered? Did you ever forget anything which, remembered, would have been valuable to you in any way? These are questions worthy of careful thought, and when one stops to consider that a system is now being used which will overcome all these serious obstacles to success what need is there to hesitate? Any bank, business house or minister of the Gospel in Fort Wayne will be glad to tell what they know of Mr. Urbahns. His integrity and honesty of purpose is unquestioned. He is prepared to furnish plenty of evidence as to the value of his method among those who have used it, and it does seem that anyone who feels the need of a better memory cannot do a wiser thing than to investigate this new system thoroughly, coming as it does from a source entirely trustworthy. Simply send your name and address to MR. D. F. URBAHNS, 102 Bass Block, Fort Wayne, Indiana, and the full information and particulars will be forwarded to you free by return mail.

Readers are requested to write without delay.

The SATURDAY EVENING POST

Old Gorgon Graham

Readers of The Saturday Evening Post need no introduction to Old Man Graham. They know him as Pierrepont's father and the central figure in Letters from a Self-Made Merchant to His Son. In a new series, by the same author, Old Man Graham delivers more of the business philosophy and shrewd humor that have made him famous.

By F. Hopkinson Smith

A Point of Honor, soon to appear, is an unusually readable tale in which are set forth some of the humors of the French duel.

William Allen White's Washington Papers

The country boasts of three or four political writers as shrewd and clever as Mr. White; but not one of them possesses his fresh, keen humor or his striking, forceful way of saying things. Mr. White will write a weekly Washington letter for the magazine during the winter.

Owen Wister's New Tale

Mr. Wister's next contribution to the magazine introduces the reader to the author's old friends, Mr. Skookum Smith and Mr. Frisco Baldy.

MONT PELÉE

and the Tragedy of Martinique

By PROFESSOR ANGELO HEILPRIN, F. R. G. S.

President of the Geographical Society of Philadelphia

THIS work, almost unique in the class of exploration and scientific research, presents the first complete account of the catastrophic events of the island whose misfortunes have so roused the sympathies of the world, and added a chapter to history as interesting as that of the fall of Pompeii and Herculaneum. Prof. Heilprin's early visit to Martinique permitted him to study the scene of the major disaster very soon after its happening, while his experiences on the still burning volcano, whose crater he was the first to visit after the tragic eighth of May, and during the great eruption of August 30, of which he was a direct observer, were such as to make the narrative describing them one of thrilling interest.

The author's qualifications as an investigator, geologist, and geographer give to the work its stamp of scientific authority, and it can safely be said that it will remain the standard work on the subject of which it treats for many years in the future.

The book, in large octavo, contains three hundred and thirty-five pages in text, and there are nearly forty full-page plates, made up in greater part of reproductions from photographs taken by Prof. Heilprin himself. Many of these reveal the volcano in its climax of eruption and in rapidly following successive stages of activity. No such record is to be found elsewhere.

The Literary Digest

VOL. XXVI., NO. 4 NEW YORK, JANUARY 24, 1903. WHOLE NUMBER, 666

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

PUBLISHER'S NOTE.

Owing to fire this week in a building adjoining that in which THE LITERARY DIGEST is usually printed, arrangements have been made for printing this number elsewhere. We anticipate no delay in issue, and if any defects in printing are manifest, they must be attributed to the sudden change rendered necessary.

TOPICS OF THE DAY.

MINERS' RESTRICTION OF COAL OUTPUT.

THE main point made by the operators last week, in the presentation of their side of the case before the strike commission in Philadelphia, related to the limitation of the coal output by the men, under orders from the union. Mine superintendents and foremen were brought on from the coal region to tell how the harmonious relations between operators and men had been turned into hostility since the strike of 1900, when the union entered the anthracite field; and how the miners had, under union orders, decreased the amount of coal mined. Even now, when the whole country is suffering for coal, the commission was told, the men are idling and shirking, and taking an unreasonable number of holidays. David Davis, a foreman, said that before the 1900 strike a miner loaded eight cars a day; now he will load only six. H. T. Hughes, another foreman, said that his men will load but five. General Superintendent May, of the Hillside and Pennsylvania companies, "criticized sharply the action of union miners at present in not working more than four hours a day," and "said that many miners never stayed in the mines after ten o'clock in the morning." William Allen, an Ontario and Western superintendent, said he had often seen his men leave the mines at nine o'clock in the morning, and he made the interesting statement that "at the Ontario and Raymond collieries, taken together, the output could be increased a thousand tons a day if the men would work full time."

The critics of the union allege that President Mitchell has practically admitted the truth of these charges in a proclamation which he issued to the miners on Monday of last week, in which he said:

"To relieve the situation and alleviate, as far as possible, the suffering now being endured is the duty of every one connected with the production of coal. With this end in view, we are prompted to address this communication to all members of our union, and request that they cooperate with the management of the mines in an effort to increase the production of coal. The gravity of the situation is such as to require that every mine worker shall exert himself and use every means at his command to this end.

"Upon reading this communication in the columns of the daily papers, local unions should hold meetings and devise means whereby the daily output of the mines may be increased. These efforts should be continued until the weather moderates and the great necessity for fuel shall have passed."

And the Scranton *Tribune*, which is familiar with the conditions in the anthracite field, says:

"That it is the policy and purpose of the United Mine Workers of America to hold back the efficiency of its better qualified members by placing arbitrary limits upon the amount of their daily production is not only evident in practise, but has been frankly admitted by John Mitchell himself. We can not see in this anything but a mistake. The better plan would be to encourage every mine worker to do his level best and to earn as much as he possibly could; and then, if there are members who do not get along well, let their more fortunate colleagues extend a helping hand. . . . . .

"It is not true that it aids the poorer worker to hold the better worker back. The worker who is held back is injured; his personal independence is sacrificed and his personal pride and incentive are weakened, but the laggard is not helped forward."

No comment on the other side of the question has come to our notice. President Mitchell alleges that if the better miners used more cars, there would not be enough for the rest; but the operators declare there are plenty of cars for all.

EFFECT OF THE FREE COAL LAW.

APPROVAL, tempered by doubt of its remedial effect, marks the comment of the daily press on the law putting anthracite coal on the free list and providing for a rebate of the duty on all other coal for one year. "The removal of the tariff on coal will, it is said, bring large quantities from Canada and Nova Scotia," says the Scranton *Truth;* but "so long as the present demand continues, this will not make much difference." The bill, as prepared on Tuesday of last week by the Ways and Means committee and passed by the House on Wednesday, provided for the refunding of duties collected on coal for one year. The Senate amended it so as to put anthracite permanently on the free list. That amendment was agreed to by the House, and on Thursday the President signed the bill. Congress "has served notice on the coal operators and the coal roads," declares the Baltimore *American*, "that they can not look to the United States Government for any indorsement of the policy they have pursued and which has resulted in a fuel famine that has entailed suffering on thousands of people." The Philadelphia *Public Ledger* remarks:

"It is foolish to imagine that the abolition or suspension of the import duty on coal can afford an immediate relief to the existing scarcity. Had there been no such duty, the present extreme scarcity would probably have been mitigated. The strike in Pennsylvania would immediately have stimulated an increased production of coal in Great Britain and in the provinces for this market. But our market has been long closed to foreign coal and no provision had been made for supplying it. There is no such accumulated surplus at Newcastle as can in any large degree counterbalance the exhaustion of the supply in Pennsylvania. . . . But this duty has been quite sufficient, in a normal

state of the market, to make the country generally dependent upon the home mines exclusively, and its repeal in time of actual scarcity can not give the relief that the unrestricted operation of trade laws would have provided in advance. The duty ought never to have been imposed."

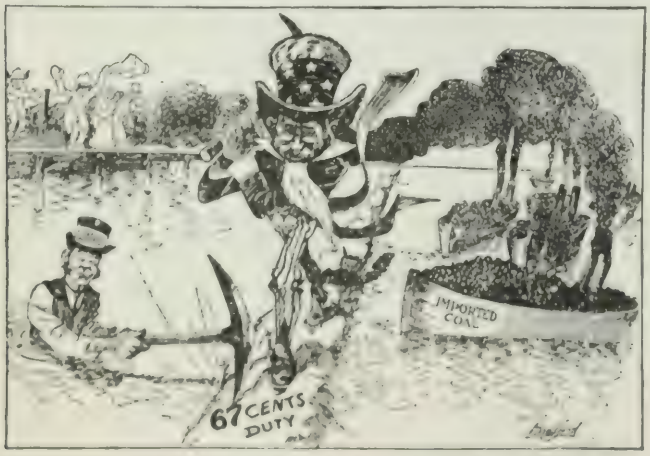
The passage of the bill is, in the opinion of the New York *World*, "an admission that the tariff is a tax that is paid by consumers, and that as regards coal it is not needed for either protection or revenue, but is a tariff for monopoly only"; and the Boston *Herald* remarks that "even the Republican Party can be brought to realize the weakness of the protection system," and

"NECESSITY KNOWS NO LAW."
—*The Brooklyn Eagle.*

that "every day that goes by makes it evident that the time can not long be delayed for taking up for definite action the subject of tariff revision."

The New York *Press*, probably the strongest protection paper in the country, says, in an editorial two days after the President signed the bill:

"Well, the coal rebate being in effect, where are the hundreds of thousands of tons of anthracite which foreign nations were ready to dump into our empty coal-bins? Where are the argosies freighted with the precious cargoes which only a greedy and brutal tariff kept from our famished public? Whence are they coming, and when? The enemies of the American tariff system have snarled and whined and howled about the tariff wall behind which people were freezing to death for lack of the anthracite which might be had for the mere battering of a hole in the wall.



DOWN WITH THE BEEF; WE NEED THE COAL.
—*The Baltimore Herald.*

There is no duty now even on soft coal. Will they provide the anthracite now from abroad, or next week, or next year, or ever? And when they have not done so—for they will not and can not do it—will the American people go into convulsions at the next Democratic cry of 'Wolf!'

"This coal rebate is likely to be one of the best things that ever happened to this blessed land; for not only will it prove that the Dingley law had nothing to do and could have nothing to do with the supply and price of anthracite in the United States, but it will send some lying and canting public leaders in disgrace to the whipping-post, instead of into offices of high honor, at the next national assize at the polls."

FEATURES OF THE COAL FAMINE.

THE newspapers are presenting day by day a series of news items from all over the country showing an extraordinary state of affairs due to the scarcity of coal. The Chicago health department makes the striking statement that "fully ten per cent., or nearly 200,000, of the residents of Chicago are to-day suffering from ailments of a grave character caused by privation and exposure resulting from the coal famine," and says that there has been an alarming increase in the number of deaths of persons under five years and over sixty. In Philadelphia the hospital and almshouse population has greatly increased, and several street-car passengers have been overcome by cold. Steamers have been delayed and manufacturing plants have been compelled to shut down for lack of coal, and one concern has gone into the hands of a receiver on account of the increased prices. The same condition has cut deeply into manufacturing profits all over the country.

At the same time the alert reporters claim to have discovered miles of loaded coal-cars in the vicinity of the suffering cities, and the camera has been used to reinforce the personal testimony of the newspaper scouts. A New York *Herald* reporter found 35,000 tons of coal standing on side-tracks near the metropolis while the dealers in the city were unable to supply their customers, and a Chicago *Record-Herald* man found twice as much sidetracked at a small town a few miles out of that city. In Detroit the city government has gone into the coal business in an effort to relieve the distress; while the people of Arcola, Ill., and Bellevue, O., led by prominent citizens, have seized coal-trains and confiscated the precious freight, carefully weighing it and reimbursing the railroad company at what they considered a fair price. In Bellevue, we are told, "the fire-bell was rung, and the mayor and councilmen, followed by a small army of citizens with shovels, marched to the railway-yards and unloaded the cars in record-breaking time. The mayor issued orders with the village seal, and the coal was distributed to citizens through the local dealers at the rate of $8 a ton." In the suburbs of Boston a crowd attacked a coal-train and made off with five or ten tons before the police could prevent it, and in Minneapolis burglars broke into the house of a wealthy family and stole 400 pounds of anthracite, leaving the jewelry and plate untouched. In several cities the justices have refused to hold poor people accused of stealing small quantities of coal. Lastly, to turn from small seizures to large, a resolution has been introduced into Congress looking toward an investigation of the power of the Government to seize and operate the mines.

The blame for the coal scarcity is variously placed by various journals. The New York *American*, in the course of an editorial 8 x 15 inches, in four styles of type, with ornamental trimmings, says: "THE PEOPLE ARE BEING ROBBED, AND THE ROBBER IS THE COAL TRUST!" And the New York *Sun* informs us, on the other hand, that "we are in need of coal to-day because the United Mine Workers, led by John Mitchell, aided and abetted by no small portion of the community, fought from the middle of May to October with bludgeons and guns and dynamite, to prevent employees of the coal companies from mining coal." Others blame the independent operators. The New York *Journal of Commerce* says:

"There are reports backed by photographic evidence that miles of loaded coal-cars containing many thousands of tons are standing on railroad sidings in New Jersey, while the people of this

WILLIAM R. DAY,
Who is to be appointed an Associate Justice of the Supreme Court.

WILLIAM H. TAFT,
Who declines a place on the Supreme Court to remain Governor of the Phiilippines.

GEN. LEONARD WOOD,
Assigned to duty in the Philippines.

city are clamoring for coal and paying exorbitant prices for what is doled out to them. If this is due to the independent operators in Pennsylvania, in league with speculative dealers in this city to keep up the price while the people suffer, they should understand that they are playing an exceedingly dangerous game. There could be no more effectual way of promoting the Socialistic spirit and encouraging the demand that the Government take control of the sources of supply and the means of transportation. It is calculated to inflame public feeling even to the point of not waiting for an exercise of public authority. Already a proposal of inquiry has been introduced in Congress which would be startling but for this unprecedented situation. It may not go beyond the stage of inquiry, but it behooves the coal men responsible for the situation, whoever they may be to consider that if they try the public patience much further they are liable to bring upon themselves consequences which will far outweigh any profit they may make from the present necessities of the people."

GOVERNOR TAFT, THE SUPREME COURT, AND THE PHILIPPINES.

THE legend, "We Want Taft," blazoned in large letters in English, Spanish, and Tagalog all over Manila a few days ago, so the despatches tell us, indicated the feeling of the Filipinos toward the governor, who had been notified of the President's intention to appoint him successor to Justice Shiras on the United States Supreme Court. The native feeling was made even more evident on the 11th, when six thousand Filipinos, "including all the political and religious parties," with brass bands, floats, and transparencies, marched to the governor's palace and begged him to remain. His departure would be destructive of established order, said their speakers; and the crowds "remained about the palace for hours cheering the governor enthusiastically." The demonstration, we are assured further, "was the sincerest in the history of Manila." And the prominent Filipinos have besieged the President with cablegrams of protest against the removal of the governor. In consequence Governor Taft has declined the Supreme Court position to remain where he is, and the appointment is to go to Judge Day, formerly Secretary of State, and Peace Commissioner at the end of the war with Spain. "Mr. Taft was on the verge of being chosen president of Yale University" when President McKinley induced him to go to the Philippines as governor, we are told by the Brooklyn *Eagle;* and when he went back last year, it was in ill-health and with the conviction that the climate would prove fatal.

This is an "admirable example" of "an unselfish devotion to duty all too rare among public man," says the New York *Evening Post*, and the other daily papers seem to agree. "There is nothing finer or more chivalrous in the records of public life," declares the Philadelphia *Press;* and the Hartford *Courant* says: "He is a brave, unselfish American gentleman, and we are all proud of him." The New York *Commercial Advertiser* says:

"If ever a man was animated by the true missionary spirit, he is. When he was in this country a year ago he impressed this fact upon everybody who met him. He was not only saturated with knowledge of the Filipino people and of their needs, but he was dominated thoroughly by the wish and determination to make American control of the islands a help and a blessing to them by showing them the pathway to civilization and leading them in it. During the three years that he has been in the islands he has not only mastered all phases of the problem, as no one man has ever mastered them before, but he has visited personally nearly every district of them, something no white man had done before him, and had made himself known personally to the great body of the inhabitants.

"It has come about, therefore, that he has now the confidence and affection of the Filipinos as no other foreigner has ever won them. As a people they know him and trust him. He personifies in their simple and thoroughly childlike minds American government and civilization."

Some criticism of Governor Taft, however, appears in the Roman Catholic papers. "He is charged with having lent the influence of his office to furthering the plans of a certain renegrade priest named Aglipay, who has started a brand-new church," says *The Irish World* (New York), and "on more than one occasion he has gone out of his way to show his sympathy with the anti-Catholic movement in the Philippines." The same paper proceeds:

"Is the government established in the Philippines an agent for the propagation of Protestantism? This question is suggested by the policy which has been adopted at Manila ever since the occupation of the Philippines. The anti-Catholic propaganda was inaugurated by appointing Protestant teachers to schools in which every pupil was a child of Catholic parents.

This was followed up by placing in the hands of the scholars a history of the United States in Spanish, compiled by a rabid anti-Catholic bigot who injected his own prejudices into this school-book. Filipino children are taught that the moral and religious condition of their native country was as bad as bad could be before the arrival of American troops.

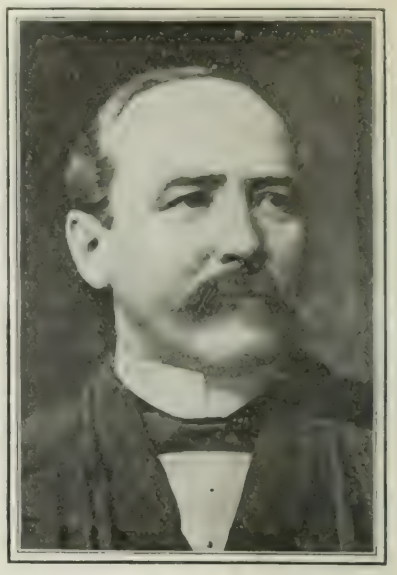
"The compiler of this venomous school-book had a well-defined purpose. He deliberately set about poisoning the minds of the Filipino children in the expectation that the early impressions thus made will in the coming years lessen the hold of the Catholic Church upon the next generation and thus contribute to the spread of Protestantism.

"While this sort of work is going on in the school, the civil government, with the approval and cooperation of Governor Taft, is doing its best to antagonize the Catholic Church."

Simultaneously with the news about Governor Taft and Judge Day come the announcements that General Leonard Wood has been assigned to duty in the Philippines, and that General James F. Wade is to have supreme command of the military forces in the islands, to succeed General George W. Davis, who will retire for age in July.

JUDGE PARKER AS A PRESIDENTIAL POSSIBILITY.

OUT of a group of ten or more who have been "mentioned" for the Democratic nomination for President next year, Judge Alton B. Parker, of New York, has been, of late, attracting the most attention. Senator Carmack, of Tennessee, an earnest and energetic supporter of Mr. Bryan, has indorsed Parker, and, according to the correspondent of the Philadelphia *Public Ledger* (Ind.), "most of the Democratic statesmen who have been interviewed recently about the party's candidate in 1904 have come out for Parker." This is only the "outward manifestation," he says, "of a sentiment which, according to all reports, seems to have gained complete possession of the South." Prior to the New York State convention, last year, the same correspondent informs us, the majority of Democrats of the Senate and the House, thinking Parker would be nominated for governor, started a Presidential "boom" in their home districts. His failure to be chosen governor did not check this movement. Instead, it was strengthened, and its promoters declare that if Parker had been nominated for governor he would have been elected. Senator Carmack says that "Judge Parker would be a most excellent candidate" and one under whom the Democratic party "could march on to victory." He is sure that neither Mr. Byran nor any of his followers can object to him on financial grounds, since the money question will not "cut much of a figure during the next campaign." "In order to win," the Senator adds, "we must select a man from the State of New York. Therefore, I am favorably inclined to the reported candidacy of Judge Parker. The probability is he could carry New York State."



JUDGE ALTON B. PARKER.
Mentioned for the Democratic Presidential Nomination.

The papers of Judge Parker's own party hesitate to announce their attitude. The Columbus (O.) *Dispatch* (Ind.) declares that Judge Parker "has no protruding record on any of the issues that have split the party, and not one in a thousand voters in the country could tell what his attitude on any of the present issues is"; but "an absence of record is often a presence of strength." It will be remembered that in 1897, a year after Mr. McKinley had had a plurality of some 280,000, Judge Parker ran for chief justice of New York and carried the State by a plurality of over 60,000. "This surely is a fair basis of calculation for next year," remarks the New York *Times* (Ind. Dem.). The New York *Commercial Advertiser* (Rep.), however, says that the Democratic editors of New York have examined the figures of that election and that "the result of their examination is not favorable to the Judge as a candidate before the people." It adds that these editors have found that "Parker's total vote was a hundred thousand or so smaller than the normal Demo-

SENATOR HOAR: "This might keep him from jumping the fence, but how am I going to put it on?" —*The Cleveland Plain Dealer.*

"HERE, BOYS, YOU CAN TAKE IT." —*The St. Paul Pioneer Press.*

THE REPUBLICAN TRUST PREDICAMENT.

cratic vote of the State." The Philadelphia *Press* (Rep.) says:

"It having become well understood that David B. Hill did not want Judge Alton B. Parker nominated by the Democrats for governor of New York in the last election, the members of that party in various sections of the country are just now talking of Parker as their next candidate for President. His chief recommendation appears to be that Hill was afraid that his candidacy for President might be blocked by Parker. Hence the favor shown Parker is largely due to dislike of Hill, which is not much of a record for a Democratic Presidential candidate. . . . . .

"Parker was a Bryan Democrat and took the pains to let it be known that he subscribed to the crude and anarchistic 'isms' advocated by Bryan. Perhaps that is a good record for a Democratic Presidential candidate. It probably would be in the South, where the Democratic party is chiefly found, and that accounts for the advocacy of Parker by Carmack, of Tennessee, and others who were proved by the last election returns to be the most unsafe counselors the Democratic party ever had.

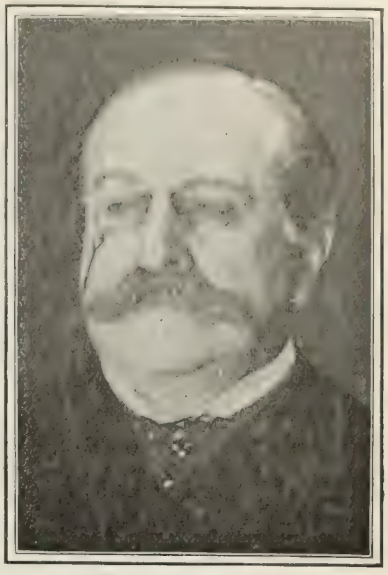
"Parker's opinions on public questions are not known, but, judging from his financial views, that is an advantage to Parker. But he will need the delegates from New York State, and at present there is little probability of his getting them."

BLAME FOR BRITISH AND AMERICAN FEELING TOWARD GERMANY.

EMPEROR WILLIAM has had a yacht built in the United States, he has sent his brother here for a spectacular tour, and he has given us a statue of Frederick the Great, yet there still seems to be a kind of an "edgewise" feeling in this country toward Germany; he has frequently visited England in person, has formed an alliance with Great Britain in the Venezuelan affair, and sent a telegram of sympathy to Mrs. Kipling during her husband's illness, yet the British in general, and Mr. Kipling in particular, appear to put the Kaiser in something like the same class with the Turk. This disappointing failure of the British and American people to warm up to his friendly advances puzzled the Kaiser not a little, the newspapers say, until it suddenly occurred to him a few days ago that Dr. von Holleben, German ambassador at Washington, is the cause of all the coldness. So the ambassador has been withdrawn under cover of a plea of illness (*vide* the press despatches from Berlin), and Baron Speck von Sternberg, former secretary of the German legation at Washington, an old friend of President Roosevelt, is to come as special ambassador, and later, when von Holleben's absence becomes permanent, as ambassador.

BARON SPECK VON STERNBERG.

His appointment to represent Germany at Washington is interpreted by some as an effort to conciliate American feeling toward Germany.



DR. VON HOLLEBEN.

His return home "on account of illness" is considered a ruse to cover his permanent withdrawal from the post of German Ambassador at Wsshington.

The American press ridicule the idea that Ambassador von Holleben had the slightest influence on American feeling toward Germany. The Chicago *Evening Post* says of the ambassador:

"Poor man! He is to suffer because he has not achieved the impossible. What did the strenuous and preternaturally active Kaiser expect of us, or of his ambassador? Did he entertain the hope of inducing us to modify the Monroe Doctrine in his special interest? Did he expect to 'stampede' us by the yacht-christening affair and the Henry tour? 'Jollying' is a fine art in this country, and William had nothing to teach us in that direction. We gave Prince Henry a 'royal' time, but sentiment and civility did not interfere with business.

"It is said that the Emperor deeply regrets his telegram to Mrs. Kipling, the sending of which von Holleben is supposed to have counseled and instigated. Well, that *was* an amusing and

JOHN BULL'S UNENVIABLE POSITION.

—*The Pittsburg Post.*

silly performance, and one must sympathize with the Emperor in his chagrin and sense of humiliation, especially since the publication of 'The Rowers,' one of the most brutal and vulgar pieces of alleged poetry ever inflicted on a jingo-ridden empire. But we feel sure that von Holleben did not conceive the brilliant idea of the telegram. Perhaps he held his peace and refrained from discouraging the execution of the idea, but if William knows himself he can easily understand why his ambassador deemed discretion the better part of valor.

"Americans are free, frank, and unceremonious. They have the manners of liberty and democracy. When they don't like a thing—the sinking of ships or the bombardment of a port as part of a 'pacific blockade'—they say so with unpleasant bluntness. A thousand von Hollebens can not make the mailed fist attractive to American eyes. The ambassador who is to leave us has commanded the respect of the American people. He is now made to suffer for the blunders of his superiors."

The connection between Dr. von Holleben and British feeling toward Germany is told by the Boston *Advertiser*:

"What did von Holleben do to earn British dislike? Why, he most undiplomatically told the truth about what happened in Washington in the early spring of 1898. He revealed the secret that Lord Pauncefote, British ambassador at Washington and dean of the diplomatic corps, took the lead in calling a meeting of the ambassadors of the great Powers of Europe at Washington secretly to formulate a simultaneous note, to send to their several home governments, urging them to interfere, forcibly if needful, to restrain the United States from championing the cause of Cuba against Spain.

"Von Holleben revealed this secret in a despatch to his own Government directly after Lord Lansdowne, British Secretary of State, had told the world that in the spring of 1898 Great Britain was the only friend which the United States had, when all the other Powers of Europe were plotting against her and in favor of Spain.

"It is needless to say, perhaps, that ever since Ambassador von Holleben told the truth, and thereby exploded finally the British Tory pretense in question, he has been cordially hated by British Torydom. We shall see whether making him now a sacrifice on the altar of jingoism serves to cement the somewhat shattered Anglo-German alliance, formed for the purpose of bullying a feeble South American country and, incidentally, finding out how much backbone there is left in the Monroe Doctrine."

UTAH VIEWS OF THE SMOOT CASE.

"WITH a mighty shout," Reed Smoot was nominated for United States Senator from Utah by the caucus of the Republican members of the legislature last week, and it seems likely that before this paper reaches its readers he will be elected. Mr. Smoot is one of the twelve apostles of the Church of Jesus Christ of Latter-Day Saints, commonly known as the Mormon Church, an organization that has aroused such strong opposition that President Roosevelt about six weeks ago sent word to Mr. Smoot by Senator Kearns of Utah that he thought "the election to the United States Senate of an apostle would work great harm to the State," and "would certainly lead to contentions and strife and bitterness here [in Washington], if not in Utah." "I desire you to place me on record," the President added, "as kindly, but firmly, advising against the election of any apostle to a United States senatorship." It is said that President Cleveland and President McKinley gave similar advice to the Mormon leaders, altho this statement is denied by the Mormon daily. On this occasion, however, the Smoot campaign continued, and on January 8 the President permitted, or requested, Senator Kearns to make his views public. The publication of them made a great stir in Salt Lake City, but did not stop the campaign, and four days later the apostle was nominated in the manner noted above.

Most of the Salt Lake papers seem to think that the legislature would have done well to heed the President's advice. Thus the Salt Lake *Telegram* (Rep.) says:

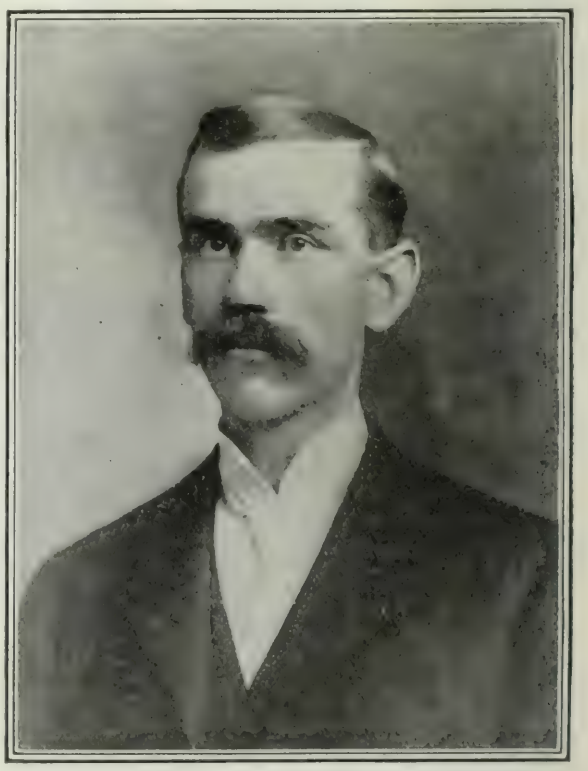
"It is not a theory, but a condition that confronts us. Of what earthly use will it be for Utah to send a Senator to Washington who runs the risk of being *persona non grata* to the President, to the Senate, and to the whole administration forces? It is not a question of a man's right to go to the Senate—every eligible citizen of this State, even the female citizen—has that right. It is a question of advisability."

And the Salt Lake *Herald* (Dem.) observes:

"Merely as a disinterested spectator of a lovely family row, *The Herald* advises Mr. Smoot to proceed on the theory that he has the President, Mr. Hanna, Senator Kearns, and the whole influence of the national Republican organization against him. Then if he is run over by the ice-wagon when he reaches Washington, he will know what has happened to him."

The Salt Lake *Tribune* (Rep.) expresses much the same views in the following paragraph:

"What sort of a standing would an apostle have in Washington, as Senator, in view of the opposition to him at the national



MR. REED SMOOT.

capital, which the President has very courteously and frankly explained? The counsel was given to save the self-respect of a person who might be mistakenly elected. It was given also so that the legislature might send as Senator a man who would be of the utmost possible usefulness to the State. To pronounce that friendly act 'interference' or an attempt to dictate, is as if one should be denounced who should seek to rescue another who was in danger of falling over a precipice, or tumbling into a ditch. The difference is precisely that between a dictatorial act, which this one was not, and a saving act, which it was."

"Astonishment and regret" are felt by *The Deseret Evening News*, the official organ of the Mormon Church, at the "remarkable and unprecedented" interference by the President, and it has advised the continuance of the campaign in disregard of his advice. Mr. Smoot himself is quoted in newspaper interviews as saying:

"There is no reason in the world why I should not be seated, I am obeying the laws of my country and am loyal to it. I am not a polygamist. As a Mormon and as an apostle, I have

never been asked to practise polygamy or preach it or advise others to practise. If I am elected Senator my first duty will be to my country, whose laws and institutions I love, honor, and respect. Positively it is not true that I have taken any oath as an apostle which makes me a church man first and an American citizen afterward."

NEGLECT OF LINCOLN'S BIRTHPLACE.

THE farm where Abraham Lincoln was born about to be sold for taxes; a Chicago man planning to buy it and build there an institution for drunkards and morphin fiends; the cabin where Lincoln was born carried around the country from one exposition to another as one of the features of the show—such are the features of a situation presented by Mr. Clifton Johnson in *The Woman's Home Companion* for February. He says:

"Where is our national bump of reverence, that the generosity of American subscribers has made possible the preservation of the birthplaces of Shakespeare and Burns, and yet lets pass into shameful ruin the land upon which was born and bred a man whom all nations have accepted as statesman, hero, and martyr?

"This is preeminently the day of 'patriotism' in America. Our lawmakers declaim of it, and patriotic societies collect and expend vast sums of money in perpetuating memories and building monuments to many who deserve them, and perhaps a good many who do not. And yet, while all this is going on, the home place of the unique man of American history is being overlooked, forgotten, permitted to pass into the hands of the irreverent, and is now about to have heaped upon it an indignity which it is safe to say could occur in no other country in the world.

"To say double indignity would perhaps better convey an idea of the fate that seems to await the old farm where Abraham Lincoln was born, for not only has it been advertised for sale to satisfy the claim of a few paltry dollars that the State of Kentucky has against it for unpaid taxes, but an enterprising individual from Chicago has his plans perfected whereby he proposes to bid it in, and to build an institution for the treatment of drunkards and morphin fiends upon the exact spot where the great martyr was born. This may be all very well from strictly the business standpoint of this busy and aggressive age, but the idea that the birthplace of the man to whom this country owes its greatest debt of gratitude should fall into the hands of speculators who will use its historic associations for advertising purposes, and who will convert the haunts of the childhood of the great liberator into promenades for a lot of helpless unfortunates, is not a pleasant one for the patriotic American to contemplate.

"The old Lincoln farm, consisting of one hundred and ten acres, is in Larue County, Kentucky. It is located three miles out of the quaint old village of Hodgensville, on the Lincoln and Magnolia highway, which is only called a road by courtesy, as for eight months out of the year it is almost impassable. A poorer country perhaps does not exist in the world, and this farm is in all probability the most sterile, barren, and forlorn spot in it. As one approaches it through a lane obstructed by fallen fences, the stunted and broken cedars, the tangle of sassafras and briers, all proclaim that they are emissaries to warn the unsuspecting of the utter worthlessness of the soil. A more desolate scene could not well be imagined. Near the highway an old weather-boarded log shanty stands. It is now the only house upon the place, and in it a mountaineer by the name of Burton lives, rent free, with his family. He does not even know who owns the place, and merely occupies it because no one else wants it. He has been there for three years, but how he has managed to live is altogether beyond my comprehension, for during this time, and probably much longer, no attempt at tillage, not even to the extent of a garden, has been made. This, however, may have been wisdom, for I could find no hopeful indications that even grass would grow upon the rocky hillsides of the worn-out land.

"The little log cabin in which Abraham Lincoln was born is no longer upon the place. During the Nashville Exposition it was carried down there, and since that time it has been a regular feature at all the affairs of this kind. Its latest journey was to Buffalo in 1901, and I understand that it is still there. The place where it originally stood is a high, barren hilltop, and the exact spot is now marked by a rude flagpole."

LETTERS AND ART.

THE NEGRO AS LITERARY MATERIAL.

CONSIDERING the negro's unique position in society, his picturesque relationships, his primitive sentiment, it is surprising that he has not been more exploited in fiction. His artistic worth, as is pointed out by the Rev. W. H. H. Joyce in *Things and Thoughts* (Winchester, Va.), is "almost incalculable"; and yet for several years after the Civil War he was practically ignored by novel-writers. Says Mr. Joyce:

"There was about him an odor of war-charged controversy that made the Southerner chary of approach, while the Northerner has only made himself ridiculous whenever he has attempted the subject. The negro himself, the bewildered bone of contention, after being tossed to and fro between the two passion-made sections, seems to have been left alone in his helplessness, except as he was disturbed and used for malignant ends. Much was written—may oblivion claim it—but his value as purely art material seems, for a space, to have been overlooked. It is well that this is so. Those who actually participated in the titanic conflict were incapacitated for dealing broadly and sanely with the subject. It remained for the younger generation, not far removed, it is true, with the fond old days as mellow memories in their hearts, but with clear-eyed discrimination and keen sense of historic perspective, to embalm and preserve life-like representations of this unique but passing phase of racial development."

The first Southern writer to discover and to realize the possibilities of negro character as literary studies was Irwin Russell, "the unfortunate lad who by his endowments, his waywardness, his sufferings, and his untimely death could well be designated the Thomas Chatterton of the South." Mr. Joyce writes further:

"The race is wary, and like nature will not cut its capers before unappreciative eyes. Russell grew up among them, long association broke down their reserve, and the obscure operations of the negro mind seem to have been opened up to him. He interpreted their habits, mastered their motives, and transcribed their vehicle of thought. In one point alone he exhibits deficiency: his failure to realize the negro's profound emotional potentialities. That doubtless would have come had he lived longer.

"But he gives us the genuine negro — happy-go-lucky — now grumbling, now singing at his work, the abandonment of his revels, his weird intimacies with the denizens of the forest, his fondness for a story, his queer superstitions, his sententiousness, his quaint philosophies, his pride of family, his doglike fidelity, his shiftlessness, his shrewd piety. All of these traits are exhibited in 'Christmas Night in the Quarters,' far and away the most realistic delineation of negro character yet published."

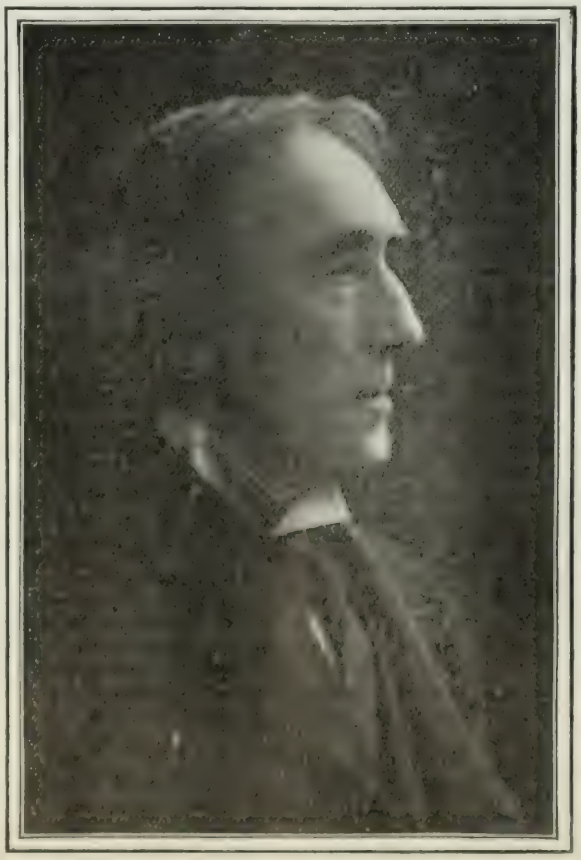
Thomas Nelson Page's portrayal of the negro Mr. Joyce finds unconvincing. "The ideal negro that Mr. Page gives us," he declares, "reveals but too plainly the *purpose* that inspires him. With the possible exception of 'Unc Edinburg' and 'George Washington,' his goody-goody creations err as widely, on the one hand, from the real darkey as do, on the other, the grotesque caricatures of the minstrel troupe." We quote again:

"The ideal worker in this field is found in Joel Chandler Harris. His sketches are transparent media for revealing the negro as he is, 'wrinkles and all.' He has the ease and poise and mastery of the true artist, and the work is to him a serious calling. In 'Free Joe' he has fathomed the depths of the negro's capacity for dumb suffering and has given us a picture which for exquisite pathos deserves to rank with the best that Dickens produced. In 'Uncle Remus' he has created a type that will take place by the side of Tom Jones, Jack Falstaff, Sir Roger de Coverly, Wilkins Micawber, and other of our old friends who dwell immortal on high Olympus. He has written much—some things that are commonplace, a great deal that is of unusual value. The above two are his finest things, the latter the most notable terary achievement of the past quarter of a century."

Mr. Joyce concludes that the place of the negro in literature is secure, but that the day of his opportunity is already passing. "Never again," he says, "will a medium of enlightening sympathy invest him with the old-time interest and romance. The old negro—the genuine product of the old patrician régime—is rapidly disappearing. His successor has been elevated or lowered just as he graduated himself into the grim conditions of liberty—in either case he has become uninteresting and commonplace. The literary artist has no more need of him. He has been turned over to the tender mercies of the sociologist."

SIR HENRY IRVING AND SARAH BERNHARDT ON THE MISSION OF THE THEATER.

IT is not often that one gets the opportunity to compare the views of two such eminent "experts" as Sir Henry Irving and Madame Sarah Bernhardt. The former contributes a paper on "The Mission of the Stage and the Actor" to *Collier's Weekly* (December 13); the latter has written what is said to be the first article she has ever had published, for *The Cornhill Magazine* (January), on "The Moral Influence of the Theater." Both writers endeavor to establish the essential worth and dignity of the stage, and both articles are characterized by a glowing enthusiasm for the actor's career.



SIR HENRY IRVING.

Sir Henry Irving maintains that the drama furnishes "the most intellectual recreation the mind of man has yet conceived." To those critics of the stage who insist that the efforts of the actor are but mimetic and ephemeral and pass away "as a tale that is told," he replies:

"All art is mimetic, and even life itself, the highest and last gift of God to His people, is fleeting. Marble crumbles, and the very names of great cities become buried in the dust of ages. Who then would dare to arrogate to any art an unchanging place from the scheme of the world's development, or would condemn it because its efforts fade and pass? Nay, more, has even the tale that is told no significance in after-years? Can such not stir, when it is worth the telling, the hearts of men, to whom it comes as an echo from the past? Have not more tales remained vital and most widely known, which are told and told again and again, face to face, and heart to heart, when the teller and the listener are add-

ing, coming down the ages, strength to one current, of a mighty thought or a mighty deed, and its record?

"Surely the record that lives in the minds of men is still a record, tho it be not graven on brass or wrought in marble. And it were a poor conception of the value of any art if, in considering it, we were to keep our eyes fixed on some dark spot, some imperfection, and shut our eyes to its aim, its power, its beauty. Poetry, painting, sculpture, music, architecture, all have a bearing on their time and—ay—beyond it. The actor, tho his knowledge may be and must be limited by the knowledge of his age, so long as he sounds the note of human passion has something which is common to all the ages, and if he can smite water from the rock of one hardened human heart—if he can bring light to the eye or wholesome color to the faded cheek—if he can bring or restore in ever so slight a degree the sunshine of hope, of pleasure, of gayety, surely he can not have worked in vain."

MADAME SARAH BERNHARDT.

Sir Henry Irving concedes that the theater is primarily a place of amusement, but he thinks that this fact does not lessen the serious responsibilities that lie on the shoulders of playwrights, managers, and actors alike. We quote again:

"For the consideration of the art of acting, it must never be forgotten that its ultimate aim is beauty. Truth itself is only an element of beauty, and merely to reproduce things vile and squalid and mean is a debasement of art. There is apt to be such a tendency in an age of peace, and men should carefully watch its manifestations. A morose and hopeless dissatisfaction is not a part of a true national life. This is hopeful and earnest, and, if need be, militant. It is a bad sign for any nation to yearn for or even to tolerate pessimism in their enjoyment, and how can pessimism be otherwise than antagonistic to beauty?

"Life with all its pains and sorrows is a beautiful and precious gift, and the actor's art is to reproduce this beautiful thing, giving due emphasis to those virtues and those stormy passions which sway the destinies of men. Thus, the lessons given by experience, by the certain punishment of ill-doing, and by the rewards that follow upon bravery, forbearance, and self-sacrifice are in the mimic stage conveyed to men. And thus every actor who is more than a mere machine and who has an ideal of any kind has a duty which lies beyond the scope of his personal ambition. His art must be to him something to hold in reverence, if he wishes others to hold it in esteem. There is nothing of chance about his work. All, actors and audience alike, must bear in mind that the whole scheme of the higher drama is not to be regarded as a game in life which can be played with varying success. The present intention may be to interest and amuse, but its deeper purpose is earnest, intense, and sincere."

Madame Sarah Bernhardt regards the theater as "the temple of all the arts which beautify life." "Whereas a library, a picture-gallery, or a concert-hall, each enthroning its respective art, has each its particular admirers," she says, "the theater by the service of literature, the fine arts, and music, has a stronger claim upon human sympathy, and thus obtains a wider hearing." In the dramatic art she discovers "the supplement of history and philosophy, and a powerful aid to the development of the love of the good and the beautiful to which history and philosophy introduce us." She writes further:

"The theater has been instructive from all time, and it is ever the scene of progress, revolutionary, artistic, and poetic. The theater is the most direct and simple medium of fresh ideas on philosophy, morality, religion, and society.

"I believe that this century, which seems to be the era of liberty, has many surprises in store for us, and the theater will be the medium of such surprises. When the time is ready for the fruition of an idea which has been slowly and silently circulating in the hearts of reformers, it is the stage which is the scene of its exhibition to the world.

"'C'est le ridicule qui tue,' and this power of presenting the ridiculous as well as the baneful side of a system is a sure means of gaining the support of the public for its reform. Victor Hugo said: 'Never should the people leave the theater without taking away with them some profound moral lesson.' This thought is the inspiration of all idealists, for the stage should be the great school of morality in which the lessons of life appeal to all.

"If writers were more in accord with Victor Hugo's ideal, we should not see so many pieces which do so much harm, as they familiarize the mind with vice without showing its immorality.

"The immorality does not, in my mind, consist in what it represents, but in the confusion of ideas which it causes. When any young man says at the close of a piece, 'I end by not being able to distinguish vice from virtue,' you can be sure that it is a bad piece, for is it not the duty of art to show the moral teaching?"

The theater, declares Madame Bernhardt, is "a need of all nations, of all races, of all beings." She adds:

"One must love the theater. All young and vigorous races love it. Look at young America—she adores the theater and the theater loves her. All celebrated artists, all *littérateurs* and interpreters of art drift to that land of liberty, beauty, and life. I know many people say that when there we pick up more dollars than laurels; but they are mistaken, it is quite a false idea. The Americans are good judges and reckoners, and they do not cast away their money recklessly upon *littérateurs*, musicians, and dramatists without an adequate return for their money; and they are devoted to the theater. They are the ever-rejuvenating public. They form endless audiences. The great cities are countless, the small towns are larger than our great towns—and they represent the youth, the enthusiasm, and the force of fresh blood. They never hesitate to rush at a new emotion—they never weigh the 'for' and the 'against.' The fact is everything—they see first and judge afterward; and they return constantly, or never come back again, according to whether they have been pleased or not."

Passing on to a consideration of the influence of the drama over the English people, Madame Bernhardt says:

"Nothing is more touching than the proud and ardent affection of the English for Shakespeare. This fine race never hesitate to class their poet with all the great men of all nations; and doubtless they are right, and I myself am one of his greatest admirers, for was he not the great initiator of the present power of the stage? 'Shakespeare is often felt to be an invisible and latent link between us and other lands,' said a well-known Englishman to me one day, and I think that this superior man was right. It is sad, very sad to have to say that the Latin races are those who have the least love for the theater, and it may be due to the indisputable fact that these same races are struggling against decadence.

"The Spanish, French, and Italians do not take the theater

seriously enough. . . . The French seem to like going to the theater merely to amuse themselves, if it is not a question of going elsewhere. They go to see each other, to admire the actors, to see the dresses, to chat with their friends, but as to a real passion for the theater they are destitute of it. They do not concern themselves seriously with the quality of a drama or a piece, at least, unless they have some purely personal interest in it.

"Nevertheless, France retains the place of honor for literary works, albeit the sowers of fresh ideas have often to seek the fruit of their seed in other lands."

A PROFESSOR OF CHINESE IN COLUMBIA UNIVERSITY.

UNDETERRED by Harvard's unsuccessful attempt, twenty-three years ago, to offer a course in Chinese, Columbia University has recently established a new department of Chinese, and appointed Prof. Friedrich Hirth to the chair. The courses presented are divided into three groups: (A) Studies in the written language for the purpose of introducing future official interpreters to the modern documentary language. (B) Speaking, which will include the Peking dialect, followed by the Cantonese and others. It is hoped in this course to secure native instructors as assistants. (C) Lectures dealing with the relation of China to Europe, the history of commerce in China, social life of the Chinese, the geography of the Chinese empire, and all phases of religion and folklore.

FRIEDRICH HIRTH.
The new professor of Chinese in Columbia University.

Professor Hirth has made the following statement (to a New York *Herald* reporter), embodying his view of the growing importance of Chinese study:

"It need scarcely be said that the Chinese language abounds in the greatest interest to every one concerned in national life, while Chinese literature is the principal—and in some cases the only—source of information for the history, ethnography, and language of all the Asiatic nations east of Persia and north of India which have come in contact with the Chinese themselves.

"From Chinese records we learn, or are led to draw conclusions with regard to, numerous facts concerning the ancient and medieval history of commerce between Western and Eastern Asia, facts which we look for in vain in contemporaneous records of Western Asiatic literature.

"The migration of nations, commencing with the irruption of the Huns, which represents an important period in history, is an interesting and stimulating subject for greater and deeper historical research. Europe still abounds in the greatest historical problems as yet to be solved.

"Who were the Huns, the Avars, and all that host of wandering hordes who came from the heart of Asia to make themselves felt in the remotest parts of Western Europe? The origin of the Turks and all their kin—such as Uigurs and Bulgars, as well as the history of their migrations—is, to a certain extent, buried in the contemporaneous histories or records of Chinese literature.

"Very little proof is required to show that the history and geography of India would represent a blank during centuries of its development but for the industry of Chinese Buddhist pilgrims who traveled through Central Asia to the Holy Land of Buddhism, and, coming back to China, wrote elaborate accounts of what they saw and heard.

"It is well known that Indo-Scythian rulers held sway over India for centuries. Their origin, migration, and early history would be unknown to us but for the explicit accounts left to us by Chinese historians.

"Recent discoveries made by Russian, English, and Swedish travelers in Eastern Turkestan have created a new branch of scientific research. Accounts of cities buried in the flying sands of the Tarim Desert for centuries, if not a thousand years or more, have been placed before the astonished eyes of European scholars interested in the history of Asia. . . . . .

"It need not be said that Chinese history itself is worth a careful study, and that it will repay every one who is able to view it from the standpoint of a man who is not satisfied with the enumeration of emperors and dates, but looks upon the development of that most ancient culture as the product of spontaneous growth and foreign influences.

"This culture deserves to be studied for more than one reason. The most recent phases of our own art and industry show that certain branches of our decorative art have been borrowed from the Japanese. But few have hitherto thought of analyzing the styles, whether applying to works of art or industry, which were first practised in far Japan. The civilization of this intelligent people, whether we talk of philosophy, of works of art, or general culture, rests to a great extent on the shoulders of Chinese predecessors."

Professor Hirth was born in Gotha, Germany, in 1845. In 1870 he was appointed to the Chinese customs service, under Sir Robert Hart, and, with the exception of the usual leaves of absence, his whole life has been spent in China. He was recently invited by the Russian Academy to do some important work on Chinese books and manuscripts in the Asiatic Museum at St. Petersburg, but he preferred to accept the Columbia position. He has brought with him his entire library and collection, which will be at the service of advanced students in Chinese.

AN ATTEMPT TO "MORALIZE" THE GERMAN MUSIC-HALL.

IN both Germany and France an active campaign is just now being prosecuted against the music-halls; but while the French are merely discussing ways and means of suppressing the more objectionable of their "cafés concerts" and "cafés chantants," the Germans are attempting, with some success, to displace the "variété theatre" by substituting artistic productions of a higher order. M. Louis Lumet, a French writer who has been studying this phase of German life, gives his impressions in the *Magasin Pittoresque* (Paris). He finds the performances in the majority of the German concert-halls commonplace and trivial. "The most important part of the entertainments," he declares, "is that furnished by gymnasts, clowns, and mimics; a few 'suggestive' songs are also thrown in." He writes further:

"The artists and literary men of Munich and Berlin are

endeavoring to undermine the influence of such performances. The German poet, Otto Julius Bierbaum, in his novel, 'Stilpe,' voiced the hope of an 'Ueberbrett'l' or 'higher stage,' freed from vulgar plays and ridiculous clownery. His ideal was partly realized by Baron von Wolzogen, who established in January, 1901, the Buntes Theater in Berlin. This 'Ueberbrett'l,' tho constituted in harmony with Bierbaum's ideas, has conceded too much to the music-hall spirit. It has exerted, however, a wide influence, and has been taken as a model by other reform theaters."

The most interesting of all the experiments thus far made with a view to "moralizing" the German variety stage is being worked out in Munich. Says M. Lumet:

"Several months after the organization of the Buntes Theater in Berlin, a group of young artists established in Munich a 'Ueberbrett'l' called 'Die Elf Scharfrichter' (The Eleven Executioners). The poets Vedekind and Falkenberg, the composer Richard, the architect Langeinrich, and the sculptor Husken, are among the eleven cooperating in this effort. They contribute all the talent necessary to design the stage fittings and scenery, and plan the programs; and Herr Richard conducts the orchestra. Performances are given in the main hall of a brewery in the Turkenstrasse, and are attracting large audiences of the best people in Munich."

The stage of this new music-hall is described as "a marvel of ingenuity"; and the auditorium is artistically decorated. Everything which science can furnish is utilized in order to achieve unusual effects. Weird and picturesque illusions, suggesting the heavens, the sea, the far-away horizon, are produced by means of white, gray, and blue draperies reflecting electric lights. From a literary point of view the performances are excellent. The music and songs are sometimes of a classical nature. Keen satire is a feature of these entertainments, and old prejudices and conventions are wittily assailed. At the entrance of the hall is the figure of a man guillotined, symbolizing the "execution" of obsolete customs, hypocrisy, and bigotry.—*Translation made for* THE LITERARY DIGEST.

EXHIBITION OF THE NATIONAL ACADEMY OF DESIGN.

THE current exhibition in New York of the National Academy of Design is pronounced by *Harper's Weekly* "one of the most successful ever held" in showing the advance in the productions of the younger American painters. This is the seventy-eighth annual display arranged by the National Academy, and some four hundred pictures are exhibited. Greatest interest centers in the painting, "The Sacred Hecatomb," by Mrs. Amanda Brewster Sewell, to whom is awarded the Thomas B. Clarke prize of $300 offered every year for the best figure-picture painted in the United States by an American. *The Sun* discerns real "vigor of invention" in this decorative panel, which shows a concourse of youths and maidens as they lead a string of bulls through the woodland. It says:

"The late afternoon sun strikes atwhart the leafy ground in bars of yellow, dappling the nude bodies and melting into translucence a rose-colored drapery and a tamborine that are held aloft by some of the band. The quality and accidents of the light ar erendered with truth and effectiveness, and in the animation of the figures there is an excellent reserve, which keeps the whole subject within the limits of plastic decoration."

Three Hallgarten prizes, of $300, $200, and $100, offered to

painters under thirty-five years of age, are awarded respectively to H. M. Walcott, William Fair Kline, and Miss Belle Haven. Mr. Walcott's picture is entitled "At the Party," and shows groups of happy children seated on a lawn. The Inness gold medal is bestowed this year upon Leonard Ochtman for his landscape, "A Gray Morning." Says *The Sun*:

"It is one of those studies, in which this painter delights, of the country near his home at Greenwich, Conn., a scene of grassy foreground, sloping gradually up as it recedes, with a view of distant woods, blue with atmosphere. It is severely uneventful, monotonous if you will, yet represented with intimate knowledge and affection and with a suggestion of appeal to the heart, such as that of a plaintive, lyrical poem. And over this stretch of country is a large sky, in which the gray clouds lie in diagonal strata, lined like the whitish surface of a heaving sea; an effect of soft counter-currents of air, that we may never remember to have seen in a picture before and yet recognize as very true to nature. For the aerial phenomenon is the main feature of this picture, and it is interesting to note how it affects the color of the landscape, forming a lovely harmony of tranquil tone."

The exhibition is notable for several interesting portraits. Among these are included William M. Chase's "Emil Paur," John F. Weir's "Elihu Vedder," Frederic P. Vinton's "Judge Henry E. Howland," and Frank Fowler's "President Hadley."

VIEWS OF REVIEWERS ON REVIEWING.

"THE criticism of a book should seek to account for it, to analyze it, to indicate its salient characteristics, and to assign it to a place among the works of its class." This statement in regard to the function of the book reviewer is made by Mr. William Morton Payne, of the Chicago *Dial*, and was called forth by an inquiry addressed to him and to other literary critics by Mr. George Sands Goodwin, a Philadelphia journalist. Questioned further as to his view of the conscientiousness or lack of conscientiousness in modern book reviewing, Mr. Payne replied (as quoted in *The Critic*):

"It is not so much a question of conscience as it is of knowledge. A man might conscientiously enough operate an automobile or vote for free silver, but if he knows nothing of the mechanism of the automobile on the one hand or of the principles of monetary science on the other, his act is likely to bring both himself and others to grief. I am inclined to think that even newspaper reviewers do the best they can; the trouble is that they are given an absolutely impossible task. The average 'literary editor' of a daily paper, who is expected to review all the books that come to his table, can not possibly write of nine-tenths of them in other than a perfunctory manner. What he will do, if he is honest with himself, will be to maintain a sharp distinction between his reviews of books about which he really knows something and his notices of books of whose subjects he is ignorant. Where he has no right to an opinion of his own, he will remain frankly descriptive and expository."

Harry Thurston Peck, editor of *The Bookman*, thinks that it is harder to review a novel than any other kind of a book. "The book that begins well and then becomes absolutely asinine," he adds, "is the most distressing sort of book that I know of. . . . These betwixt-and-between productions waste the reader's time and also the reviewer's." He continues:

"With reference to the custom of sending prepared notices with books intended for review, I think it a most impudent and insulting custom, in so far as it assumes that these prepared notices are to be used by the reviewer as a substitute for his own opinions or as an easy way of shirking the plain duty for which he is paid. It implies that the reviewer is a sneak and a cheat, and it tries to encourage him in sneaking and in cheating. I speak only of 'prepared notices' and not of summaries of the contents of books. These last are useful in helping a reviewer to determine whether or not he cares to review the book. But 'prepared notices' are the 'green goods' of literature. . . . .

"A book reviewer and a critic are not necessarily identical. I don't believe that there are a dozen men in the United States to-day who deserve to be called literary critics, tho there are many very competent book reviewers. A literary critic needs much more in the way of equipment than a pleasant style and a perception of what is interesting. He should be saturated with a knowledge of what is best in the literature of all time, and he should have the power of searching analysis, the capacity for apt comparison, a sense of humor, and an absolutely impartial attitude. Such a critic will have at once authority, suggestiveness, and charm. Whatever book he writes of—whether it be a novel of the day or an epoch-making masterpiece—he will find in it a theme upon which he may shower the riches of a full mind—an inexhaustible wealth of allusion, illustration, and comparison, so luminous and so convincing that when the reader has laid down the criticism he feels that a final judgment has been given and that the very last word has been said."

Mr. Francis W. Halsey, until recently editor of the New York *Times Saturday Review*, is entirely out of sympathy with Professor Peck's extreme views in regard to publishers' notices. He thinks it a "wise thing" for the publisher to send out a prepared notice with his books to newspapers or periodicals of the second or third class. "Did he not do so," says Mr. Halsey, "his books would either fail of notice altogether, or he would get something that was meaningless and useless, both to him and to the public." In regard to the oft-repeated statement that modern book-reviewing is incompetent, he says:

"This criticism of current reviewing is probably true as applied to newspapers and periodicals of the second or third class, which seldom can employ trained men or women to write reviews But it is distinctly not true of newspapers and periodicals of the first class, where the best talent that can be had is constantly brought into service. The average reader, however, does not understand this. Even with the facts before him he often fails to do so. More than one instance has come to my knowledge where men of exceptional intelligence and large knowledge of the world have assumed that the publisher of a book actually paid money to a newspaper for printing an article for which the newspaper itself had already paid a writer fifteen or twenty dollars."

Mr. Edward Bok, the editor of *The Ladies' Home Journal*, expresses the following opinion:

"I am sufficiently interested in book reviewing as a general proposition to say that so far as my opinion is concerned I do not believe in critical reviews of books. I think the tendency of the times is to guide people rather than to preach to them, and to my mind the model book review is one that tells what there is in the particular book reviewed, leaving all opinions to be formed by the reader of the review. In other words, a review should tell about a book, but not tell what any particular person thinks about it. That would entirely do away with the prepared notices sent out by publishers, which is a thing to be desired.

"When so-called 'literary criticism' becomes a help to people, then its value, to my mind, will be greatly enhanced. That sort of work would entail just as conscientious reading as an expression of opinion about a book, so that it would call for just as much honesty on the part of the reviewer. And so far as the honesty of the reviewer is concerned, I think it is in that line as it is in all other lines: if a man can't be honest in what he tries to do, he ought not to try to do it. He is wasting his time and the time of others."

The application of Mr. Bok's views could only result in the total elimination of the book-reviewer; "what would become of the Saint-Beuves, the Hazlitts, the Brunetières, the Gosses, the Saintsburys of the future?" asks Mr. Goodwin, in comment; "I doubt if there would be any such, for their usefulness would have departed. Surely literature and the world would be the loser."

INDIAN music is receiving new attention as a result of the efforts of Mr Arthur Farwell, the young American composer. The "Wa-Wan Press," which he established in Newton Center, Mass., a year ago, has issued during recent months a series of notable compositions based on Indian melodies and folk-lore.

SCIENCE AND INVENTION.

IS THE SUSPENSION BRIDGE A BACK NUMBER?

AT intervals we see statements in the public press, especially from English engineers, that the cantilever design has superseded the suspension bridge in the best practise, and that the bridges of the latter type now under construction will be out of date long before they are finished. A correspondent of one of the New York daily newspapers, says *Cassier's Magazine*, recently wrote as follows:

"When the problem of really consolidating the city of New York with its great neighboring cities, to the east and west, is really taken in hand, it will not be solved by suspension bridges, typical of the engineering of the early years of the last century, but rather by tunnels or by great steel tubular and girder structures, which will link the railroad systems, as well as the thoroughfares of the cities."

To this the magazine named above takes exception. In the editorial pages of its January issue it says:

"It is proper to point out that the old form of suspension bridge is an antiquated, superseded structure in exactly the same way that all old designs are antiquated and superseded. It is not the principle that is wrong; it is that the details are behind the modern methods of construction. To eliminate the suspension bridge from modern work is to deprive engineers of a form of construction which has special adaptations and which modern science can not afford to give up. Six years ago Mr. George S. Morison, in a paper presented to the American Society of Civil Engineers, stated that fifty years previous to that date the suspension bridge was regarded as the one class of structure adapted to spans of unusual length. Highway suspension bridges were built in almost all parts of the world; several railroad suspension bridges were proposed, and the one actually built across the Niagara River has done service for nearly forty years. Fifty years ago metallic bridge construction was in its infancy, and anything beyond the limit which could well be built of wood was considered an exceptional span. Altho there were a few striking exceptions, 200 feet was practically the limit of wooden truss bridge spans.

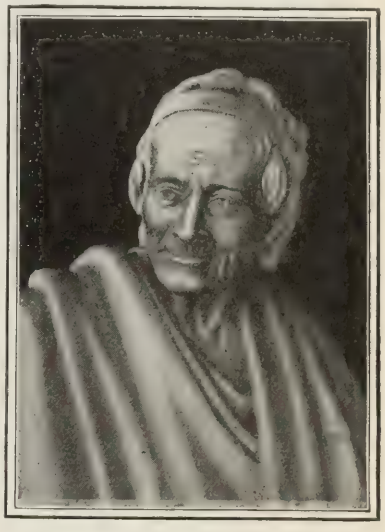
"The introduction of iron bridges changed these conditions, and a 400-foot iron span was as readily built as a 200-foot Howe truss. . . . The cheapening of the price of iron, the increased capacity of rolling-mills, and the new methods of making steel have rendered it an easier task to build a truss of 600-foot span now than it was to build a 400-foot span then. The result of this development has been that trusses have superseded suspension bridges, and where a suspension bridge would have been built forty years ago, a steel truss is now put up. Furthermore, the old suspension bridges were highway bridges, and highway traffic does not enter upon a bridge as a concentrated load, while it is generally light in proportion to the dead weight of the bridge. Important modern bridges are generally railroad bridges, and the suspension bridge has not been considered stiff enough to serve this purpose, this want of stiffness being largely due to the fact that on a single-track railroad bridge the whole moving load comes on as a concentrated load, and that on railroad bridges of modern span the moving load is large in proportion to the dead load.

"No important suspension bridge has been built since the East River bridge, connecting New York and Brooklyn, the design of which was shaped by the elder Roebling before his death in 1869. Since then great advances have been made in all other forms of bridge construction. While it is admitted that there is no field for suspension bridges of the dimensions of which they were formerly built, a new field is opening in structures of enormous size. If, at the present day, an 800-foot span is to be built, a truss on the beam or cantilever principle would be used; but a 2,000- or 3,000-foot span would be used; but a 2,000- or 3,000-foot span would be a case for a suspension bridge. Two things must be remembered. In a suspension bridge of any such enormous size the dead weight would be large in proportion to the live load, and the distortion due to the passage of trains would be comparatively small. Such a bridge would be built for two or more railroad tracks, its length would be much greater than that of a single train, and the condition under which a concentrated maximum load would advance as a whole upon the bridge would be rare. In the manner of the passage of loads such a bridge would resemble a highway bridge more than a short-span railroad bridge. Before, however, a suspension bridge is built which will bear the same relation to the modern steel truss that the old suspension bridge did to the wooden truss, the same advance in details must be made in suspension bridges that has been made in truss bridges. If such a bridge is to be built now, the designer must concentrate in the work of a single design all the improvements corresponding to those which truss bridge builders have spent many years in developing."

WRINKLES, AND HOW TO AVOID THEM.

IF you object to wrinkles, do not make them—this is the sum and substance of the advice given by Dr. Félix Regnault in an article in *La Nature* (Paris, December 27). Most of us are continually throwing the skin of our faces into ridges by muscular movement; this results in little harm in youth; but as soon as age begins to stiffen the skin, these ridges become permanent. Says Dr. Regnault:

"The facial muscles are the essential agents in the production of wrinkles. In a sufferer from paralysis of the face the wrinkles disappear on the side attacked, while they persist on the other, so that there are two profiles, one recalling the subject's youth, the other his real age. Death, it is said, improves the looks of some people; this is because it relaxes the muscles of the face.



BUST OF VOLTAIRE BY HOUDON.
Showing wrinkles due to old age.

"The muscles, in fact, are in a state of permanent contraction, or, in scientific parlance, of tonicity. The intensity of this contraction varies with the subject. Simple external excitement is sufficient to increase it: thus, sailors exposed to the weather contract permanently the orbicular muscles that encircle the eyes, to protect these organs, and, as is noted by Exner, wrinkles form early around the orbits.

"But generally the excitation originates in the brain. We know that the passions are indicated externally by contractions of the facial muscles, which produce temporary furrows and folds. These become precocious wrinkles in those subjects whose preoccupations are lasting. . . . Thus, constant reflection forms deep vertical wrinkles between the eyebrows. The malicious and aggressive person has little horizontal wrinkles at the beginning of the nose. . . . . .

"How do the muscles of expression form wrinkles? The muscles are fastened to the skin of the face of both extremities; by contracting they bring together these points, and thus wrinkle the skin. When, on the contrary, the muscles are fastened to the bones, they form in the aged protuberances resembling cords, which raise the skin. . . . Nothing of this kind is seen in youth. . . . . .

"Muscles produce wrinkles only in subjects somewhat advanced in age; this is because they act on a senile skin. In youth, the skin is perfectly elastic; it flies back as soon as released from stretching. We all have in a slight degree the faculty of Barnum's india-rubber man, of stretching the skin and then seeing it return to its proper dimensions.

"In the old, on the contrary, the skin loses its elasticity and hangs loosely. The muscles act on it as on inert cloth. . . . The degree of this alteration is not in constant ratio with the

age. The skin of one subject aged forty years may sometimes have degenerated more than that of another of sixty years. This may come from exposure, for these peculiarities are always accentuated on exposed parts such as the face, neck, and hands. But it may also arise from difference of temperament, from heredity or manner of life.

"It is a curious fact that certain races seem to be exempt. The American Indians show no wrinkles at the most advanced age; therefore they are much astonished at the appearance presented by Europeans, and when they wish to caricature the Spanish priests they exaggerate the wrinkles, as is shown in the accompanying design reproduced in Wiene's 'Travels in South America.'

INDIAN VASE OF SOUTH AMERICA CARICATURING THE WRINKLED FACE OF A SPANISH PRIEST.

"Certain subjects have numerous premature wrinkles; this is due to a special and little known malady described under the name of gerontiasis. . . . . .

"The formation of wrinkles, as we have seen, depends on both the state of the skin and the muscular tonicity. This double cause furnishes a double indication regarding the treatment of h trouble.

"To prevent alteration of the skin it should be kept in perfect condition by means of douches, massage, and perspiration due to physical exercise. We should bear in mind that a good general hygiene keeps the skin from growing old as it does the other organs.

"On the other hand, contraction of the facial muscles should be diminished as much as possible. Violent feelings should be avoided, and calmness and serenity of mind should be sought; for the passions cause us to grow old.

"This is the cause of the success of the rest-cures established in America. The patient is secluded from all noise and excitement; he is told to banish every preoccupation, in order to obtain calmness of mind. While making allowance for the exaggeration that has its part in all theories that come to us from America, we must admit that this cure is based on scientific principles."—*Translation made for* THE LITERARY DIGEST.

PROFESSOR BELL'S EXPERIMENTS IN AEROSTATION.

IT has been announced in the daily press that Alexander Graham Bell, the inventor of the telephone, having become interested in flying-machines, has devised and built one on a new plan. Professor Bell, in a published interview, now denies this, but he states that he has succeeded in demonstrating a principle that has an important bearing on the development of aeronautics. Says Professor Bell:

"The newspapers have been premature in announcing that I have been at work upon a flying-machine. I haven't any flying-machine at all and have not been trying to make one.

"I am, of course, interested in the problem and have come to the conclusion that a properly constructed flying-machine should be capable of being flown as a kite, if anchored to the ground; and that, conversely, a properly constructed kite should be capable of use as a flying-machine if provided with suitable means of propulsion.

"My experiments have had as their object the building of a kite of solid construction capable of carrying up in a moderate breeze a weight equivalent to that of a man and engine, and so formed that it would be suitable for use as the body of a flying-machine—and with supporting surfaces so arranged that when the kite is cut loose it will come down gently and steadily and land uninjured.

"I have successfully accomplished this, but do not care at the present time to make public the details of construction."

Commenting on this statement, *Electricity* (January 7) has the following to say:

"For years Professor Bell has been greatly interested in Professor Langley's experiments, which have been made near Washington, principally from a boat on the Potomac River. During last summer Professor Bell instituted a series of kite-flying experiments at his summer home on Cape Breton Island, and continued them until about a month ago.

"The results of these experiments he does not care to discuss in detail, but the announcement that he has made, coming from a scientist of his standing, proves that important progress has been made in one of the greatest problems of modern times.

"This does not necessarily mean that in a year or two kite-flying machines will be floating over our cities, but it does mean that the information that has been obtained and tabulated will probably contribute, at some future day, to the turning out of a flying-machine that will be the initial step to a new method of locomotion."

THE SLEEPING-SICKNESS IN AFRICA.

THE news that a terrible and mysterious epidemic is carrying off its tens of thousands in Central Africa excites but mild curiosity in a land so far away as this; yet in these days of rapid transit infection travels quickly, and it is possible that at some future time the "African lethargy" may inspire terror in other lands than that of its birth. The conditions now existing in Uganda, where the disease is raging with special violence, have induced the British Foreign Office to send out a royal commission to investigate, under the direction of Dr. Low of the London School of Tropical Medicine. Says *The Hospital* (December 27):

"Dr. Low, who has just returned to England, leaving the bacteriologist of the commission to pursue further inquiries, brings back with him a narrative for which it would be hard to find parallels even among the histories of the epidemics of the Middle Ages. He estimates that the disease, which first made its appearance in the Protectorate a 'few years' ago, has since that time destroyed the lives of from twenty to thirty thousand people; and he tells us that it has produced a depopulation under which great tracts of land have passed out of cultivation, and which already seriously affects the financial resources of the country. . . . . .

"The so-called 'sleeping-sickness' has been known for many years as an endemic disease of the west coast of Africa, usually confined to the belt lying between Senegambia on the north of the equator, and Loadna on the south, but extending into the Kongo at least as far as to Stanley Falls; and it was formerly occasionally imported into the West Indies, but has not been seen there since the abolition of the slave trade. Between Uganda and the Kongo there is no trade route, and the precise time and manner of the introduction into Uganda are unknown. The attendant phenomena have been seized upon by one or two writers of fiction, but, until lately, have hardly been made the subjects of serious scientific inquiry. The results of such inquiry appear to show that the malady is essentially a chronic form of meningitis, that it is produced by the presence of a 'germ' presumably bacterial, and that it is communicable from person to person through channels which have not as yet been clearly demonstrated, the general fact of infectiveness not being doubtful. It seems to differ widely from the only form of epidemic meningitis known in Europe, the so-called 'cerebrospinal,' in its chronic character, as well as in its almost invariably fatal issue, recovery or cure being practically unknown. The early symptoms are so slight that they would easily escape the notice of an unpractised observer; but the natives of Uganda have become thoroughly acquainted with them, and have brought to the hospital of the commission many commencing cases in which their diagnosis has been only too surely justified by the event The duration varies from one month to six, and the disease is described by Dr. Low as being capable of being classed with hydrophobia as one of the most fatal that is known to mankind. More or less slowly, the early listlessness passes into coma, and the coma into death, with occasional deceptive periods of appar-

ent improvement. No treatment appears to exert any definite influence upon either the march or the termination of the malady. A precise statement of the results obtained by the commission will, we understand, be laid before the Royal Society as soon as possible, and prior to publication elsewhere; but, in the mean time, the commissioner of the state, Colonel Sadler, is doing whatever is possible to check the advance of the disease by the enforcement of isolation; the great fear being that it may ultimately reach the railway, and may thus be carried out of the country by the way of Mombasa. So far, the only cases observed have been in people of negro race; but there can be no confidence that Europeans would be exempt if they were continuously exposed to the presumed infection."

It is noted by *The Lancet* that the disease has recently spread most rapidly eastward, on which it remarks:

"The importance of this eastward spread could not be overestimated, because, with railway communication now existing between the lake and the coast, the disease might readily at any time be carried there and find a suitable field for its spread, and then the question of transmission to India would have to be considered. Its extension north might be a menace to Egypt, as the communication via the Nile is now becoming a more frequent one."

PHYSIOLOGICAL BASIS OF MUSICAL FEELING.

THE curious result of recent experiments is that every one has an "ear" for music, altho many people do not know it, and some probably never will know it. In other words, the influence of music on the organism is the same with all. Certain combinations stimulate, others depress. The musician is simply he who is able either naturally or by education to realize these reactions and their relationship to musical art. The experiments alluded to, which were made by C. Féré and Marie Jaëll, are described by them in the *Revue Scientifique* (December 20). Parts of their account are translated below. They say:

"The musical sentiment has been attributed to an unconscious perception of rhythmic waves. However this may be, our experiments establish the existence of an unconscious reaction under the influence of such waves. The experimental demonstration of the fact that the potential energy [of the recipient] is modified with remarkable precision under the influence of the different musical intervals has a different meaning according to whether the subject is incapable of perceiving the difference between these intervals, or whether he can perceive it intuitively or from education. It is only when the man who undergoes the changes of potentiality caused by the alternation of major and minor seconds or of a note and its octave is incapable of perceiving any difference between them, that acquired culture, imagination, the emotivity of memory may be put entirely aside in searching for the cause of the effects obtained.

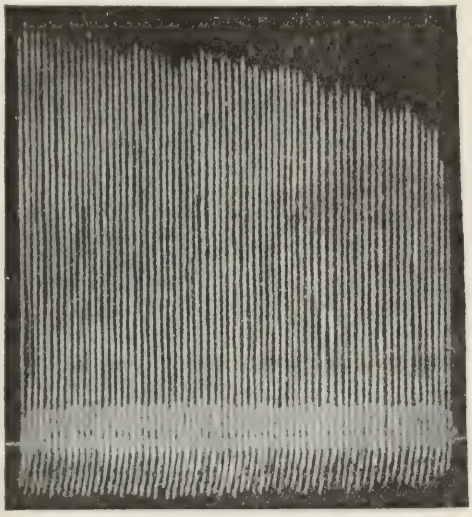
"In this case we find ourselves really face to face with primordial phenomena, which show that before any conscious artistic adaptation the release of our energy may be adapted by the most diverse proportional gradations to the multiple rhythmic combinations of the waves of the musical system."

The experiments of Féré and Jaëll have been carried on by means of Mosso's ergograph, a device that enables the experimenter to register the number and height of the finger-movements of the subject, while the finger is raising a weight in regular rhythm. The record of the instrument is called an "ergogram," and from it the work done during the time of the experiment can be absolutely measured.

"The first fact brought out by the use of this device is that certain musical intervals are exciting in their physiologic action while others are depressing. Among the former are the major third, the fourth, fifth, major and minor sixths, and the octave. The latter include the seconds, the minor third, and the diminished fifth and seventh. Say the authors:

"With the exception of the minor third, which is classed as consonant in our modern musical system, all the intervals given here as depressive are regarded as dissonant. The most lowering is the diminished fifth. The major second is the least so at first, but it becomes clearly depressive in the second series. . . . The major third, also, does not act like the other consonant intervals; following strong exciting action in the two first series it produces a sudden and abnormal depression. . . . The major sixth is the consonant interval that stimulates the energy most. The degree of excitation may vary from one day to another, but its form remains invariable. . . . . .

"In case intervals are played not separately but successively, it is shown that all may be in turn depressive or exciting; a dissonant interval may even be exciting when following a consonant interval. . . . When intervals are experimented upon alternately there are powerful oscillations of different degrees."



ERGOGRAM OF A MAJOR KEY.

ERGOGRAM OF A MINOR KEY.

The experiments seem to show that the energy is not awakened so much by the change of rhythmic waves as by their relations. One interval will even affect the result of a second after a considerable period of silence, the mind seeming to retain an acoustic image, as it were, of the first. This phenomenon has even been noticed by the authors after an hour's interruption. The experiments in general support the theory that joy and grief are connected with feelings respectively of power and weakness, since consonances determine a release of energy and dissonances arrest action and cause weakness. An interesting fact is that musical combinations that are depressing to a person at rest may be exciting to one who is fatigued, and vice versa. The authors say, in conclusion:

"These experiments seem to prove that our musical culture makes more and more perceptible to us the unconscious relations that exist between musical art and the organism. Those persons that we regard as most richly endowed have simply superior powers of penetrating the phenomena that take place within them; they feel more deeply this marvelous relation of the reactions of our organism to the principles of music. They feel more strongly that art is within them."

The illustrations show clearly the different physiological effects of music in a major and a minor key. The former sustains the strength, while with the latter it falls off rapidly.—*Translation made for* THE LITERARY DIGEST.

What the Aurora is Made of.—Recent investigations tend to show that the peculiar color of the auroral display is due to one of the newly found constituents of the atmosphere, krypton, and that the localization of the display at the poles may be due to the concentration there of the new element. The *Revue Scientifique* prints the following abstract of a lecture delivered recently on this subject before the Swiss Society of Natural

Sciences at Geneva, by Professor Ramsay, of London, who has taken so active a part in the discovery of the new constituents of the atmosphere. Says the writer:

"At the outset he [Ramsay] recalled how after the discovery of argon by Lord Rayleigh, and the study of this gas made by him in collaboration with this scientist, he had isolated helium. From an investigation of the properties of these two gases, made specially from the point of view of the periodic classification of the elements, he concluded that there ought to exist three other simple bodies, of similar properties and of higher atomic weight. After having searched everywhere for these elements, he succeeded in finding them in the air and in isolating them by methods described elsewhere. These gases are neon, krypton, and xenon. Pursuing these investigations, the study of the specific heats of these gases has proved in the first place that they are monatomic; that of their spectra has shown among other things that the characteristic lines of krypton remain visible in the greatest dilutions in the air, which is not the case with other gases of the argon group. Going further, Professor Ramsay discovered that the characteristic green lines of krypton coincide with those of the aurora borealis in the same region of the spectrum, whence he concluded that the well-known green coloration of the aurora is due to the presence of krypton in the polar regions of the atmosphere, and in fact, with the aid of an arrangement that he describes, Ramsay has produced with krypton alone a phenomenon that is a reproduction of the aurora borealis on a small scale. It remains to explain how the krypton tends to accumulate near the poles. This the London professor has done by a very ingenious theoretical calculation based on the difference of the ratio of the two specific heats, as observed in the monatomic and biatomic gases that make up the earth's atmosphere."—*Translation made for* THE LITERARY DIGEST.

COMBUSTIBLE STEAMBOATS.

A PROTEST against the construction of costly decorated fire-traps in the form of steamboats is made in *The Engineering News*, which claims that some of the newest and supposedly finest examples of American marine architecture are being built in this way. It says:

"A number of years ago a passenger steamer of the Fall River Line took fire while lying at the wharf, and, notwithstanding the utmost efforts of those on board, she burned so rapidly that the few persons who happened to be on board barely escaped with their lives. We said in comment at the time that the occurrence was an object-lesson which ought to be heeded as to the certainty of a great holocaust should one of these floating fire-traps take fire during a trip when crowded with passengers.

"But object-lessons go too often unheeded, even by those who most ought to profit by them. As stated in another column, a new million-dollar passenger steamer is to be built for the Fall River Line, and we learn that its interior finish will be 'particularly elaborate, the woodwork being pine, decorated with carving, particolor frescoes, and heavy gilding.' In other words, so far as at present appears, the new vessel will be another floating fire-trap. If any one doubts the accuracy of this term, we invite their attention to the records of the terrible fire which destroyed the docks and several vessels of the North German Lloyd Steamship Company at Hoboken in the summer of 1900. That fire took place on board ocean steamers, which in comparison to a typical American river or Sound steamboat are like a building of slow-burning construction compared to a typical 'balloon frame' structure. That fire occurred, moreover, in a harbor where the most perfect fire-fighting facilities in the world were at command; yet it was not until the lapse of many hours and the sacrifice of many lives that the fires on these steamers were finally quenched.

"Why should not the Fall River Line managers heed such lessons as these in the construction of their new vessel? Instead of lavishing money on a mass of 'pine decorated with carving and heavy gilding,' why not devote a little expenditure to safeguarding the lives of passengers? It is to be noted that even the poor excuse of economy, which used to be given in defense of fire-trap construction, does not now hold. The soft and readily inflammable woods like pine are now almost as high-priced and costly as the hard woods. It is true that the latter are more expensive to work with carvers and jig-saws; but 'floating palaces' can be built without the use of these forms of decoration, and with no loss in artistic effect.

"We believe it is entirely within the resources of engineers and marine architects to build a river or Sound steamer in which passengers' lives will be fairly secure against danger from fire. A large part of the upper works and interior finish could be made of incombustible materials, and where the use of wood is necessary it could be treated by some fire-retardent process."

Lemon Juice and Typhoid.—The daily press has been giving considerable prominence to a statement credited to Dr. Asa Ferguson of London that lemon-juice kills the typhoid bacillus in drinking-water. Says *The Medical Record*, commenting on this:

"Altho it has long been known that citric acid is a powerful germicide, Dr. Ferguson is apparently the first one to popularize lemonade on such a basis. The wholesale and effective manner in which a teaspoonful of lemon-juice will destroy the pathogenic micro-organisms in a glass of water is certainly astonishing if not spectacular. It is from both of these points of view that the experiment appeals to the public. The Chicago board of health hastens in its disinterested and public-spirited way to confirm the conclusion, and the boon is launched accordingly. Something more than this confirmation will be needed by the profession before the adaptability of this wonderful discovery can be demonstrated. If in the end, however, it can be proven that lemon-juice or citric acid can do all that has been promised, Dr. Ferguson will deserve all due credit for practically applying a new principle of typhoid prevention. In the mean time it may be somewhat comforting for the people to believe that they are protected from infection by the use of this new drink, but it is hardly fair to encourage them to feel any safety against the infected oyster merely because a few drops of lemon-juice are sprinkled over its surface."

SCIENCE BREVITIES.

"IN the practise of telegraphy," says *Cassier's Magazine* (December), "it is an easy matter to transmit messages automatically from one wire into another by means of what are termed repeaters, the current strength employed in that art being of sufficient strength to operate apparatus that virtually takes the place of the operator's ear and hand, at a repeating-station. By the use of the repeater it is feasible to operate circuits extending over several thousand miles without human intervention. In telephony, however, the current available is so exceeding weak that attempts to operate automatic telephone-repeaters, or relays, analogous to those used in telegraphy over unlimited distances have been futile. . . . The value of a practical device of this nature in telephony is obvious, and as an incentive to inventors the president of one of the largest American telephone companies a few years ago offered a prize of $1,000,000 for a practical telephone relay, but without a successful claimant."

"A test has been made at Montreal," says *The Marine Review* (Cleveland, December 11), "of a device to check the speed of vessels in an emergency. . . . The vessel's speed is checked by means of fins, controlled from the wheel-house, which open at right angles to the vessel's side. The experiments were made with the Government steamer *Eureka*, 103 feet long, 22 feet wide, and of 200 tons capacity. The fins were 10 feet long and 3½ feet wide, made of ⅜-inch boiler-plate. To hold the fins at right angles there are water-cushions worked by rods and pistons from the fin. The cylinders in which the pistons work are four in number, each 13 inches long with 5 inches of water pressure, and when the boat was running 11 knots there was no jar when the apparatus was applied. By using one fin only a vessel may be swung upon her own axis. Under a speed of 7 miles an hour the *Eureka* was brought to a full stop in her own length when the fins only were used, and in half her length when her engines were reversed."

"IGNOBLE uses of electricity have sometimes the attraction of novelty, and an interest of this kind attaches to a recent surreptitious use of the electric current discovered by the Society for the Prevention of Cruelty to Animals in New Jersey," says *The Western Electrician* (November 29). "It seems that in a show recently put on in a Jersey City theater it was the part of a caged lion to roar on several occasions on the approach of the heroine of the drama, which was entitled 'The Lion's Bride.' An animal expert who saw the show informed an officer of the society that the lion's roars were caused by pain and not by anger or a desire to eat the bride. He also said that he believed the pain was due to electricity. The officer visited the theater and found that the bottom of the lion's cage, which was of iron, was connected with electric wires and made the lion roar whenever the current was turned on. He notified the manager that the electricity must be omitted, even if the lion refused to roar without it. The order was obeyed, and the cruelty and deception were stopped at once.

THE RELIGIOUS WORLD.

A PROPOSED LITERARY CRUSADE ON BEHALF OF ROMAN CATHOLICISM.

FATHER P. A. SHEEHAN, the author of "My New Curate" and "Luke Delmege," has been urging Roman Catholic young men to train themselves in literary and intellectual study. In a letter to the London *Catholic Times*, he voices the hope that in this way there may be developed "a number of strong masculine thinkers whose example and influence will be of immeasurable importance to the interests of the Church in England." The Chicago *New World* (Rom. Cath.) applies his advice to American conditions in a spirited editorial (December 27.) It declares:

"If we take up our leading American Catholic periodicals and examine them critically, we have some cause to feel startled at the absence of men as contributors. Man, with his reason, his courage, his alleged superiority, is not very greatly in evidence as literary producer. The Christmas numbers of our Catholic exchanges—intended to be the best of the year—show woman's hand more than they do man's. With two or three notable exceptions even the few men who do contribute to them say little that is worth saying, except in poetry. Woman is managing to say a good deal in every way. She is not discussing theology to any great extent, but she is saying much with regard to science, art, literature, sociology, political economy, and a number of other things about which men are keeping silent. Everybody knows that the American woman, whether Catholic or non-Catholic, is producing most of our fiction.

"We are not censuring her because of her literary activity; far from it. As we see it, woman is doing right in going forward if God has given her strength to do so. But what are our men doing? Why are they silent with regard to so many questions that are vital? Have they not ability to think? Are they too indolent to put their thoughts on paper? Are they so wedded to business that they consider all things else trivial? Clergymen occasionally contribute articles to the Catholic press, but even they appear too rarely. Considering the training they receive they are capable of helping immeasurably in this. Look at the vast number of vital subjects waiting discussion. A living journal is made by discussing issues that are really vital. It is the cold, unadorned truth that, in this day and place, we do not need long dissertations, however able, on the meaning of Dante's poetry, or the symbolism of Raffael's work, so much as we do clear statements with regard to living questions. Here in Chicago Socialism is being sowed broadcast. What priest or layman is saying aught of it in any Catholic journal? Christian Science, we are informed, numbers thousands of followers. We are told, furthermore, that not a few Catholics have accepted it. Who, familiar with the facts, is showing up its evil tendency in the pages of the Catholic press? Theosophy, too, has its votaries, even among our people. Who is showing it blasphemous, as it is? The New-Thought movement is a fad? Yes; but it is seductive, dangerous, deathly, and hundreds of thousands of souls that ought to be Christian—many of them Catholic—are being led into it, and no one is saying a word. A pretentious New-Thought magazine is published in Chicago, Ella Wheeler Wilcox associate editor, and it is being read by Catholics (many of us have a habit of reading everything that comes along), and no one, apparently, thinks it necessary to show that the New Thought is a jumble of practically all the heresies condemned by the church, and something peculiarly dangerous. Sunday after Sunday *The Record Herald* of this city, in a department entitled 'The Battleground of Modern Thought,' presents articles by atheists, spiritists, infidels, 'higher' critics, and a rout of other frowsies; yet no one sees in that department a devil's-brew and a peril. Why? We do not know. We do know that many Catholics read *The Record Herald*.

"Now, here is work for our Catholic thinkers if they will do it. It is necessary those deathly influences should be counteracted. As we see it the battle is over between Protestantism and the church. Protestantism as a force is all but spent. We are face to face with paganism revived, with pantheism, atheism, Socialism, and black naturalism. Those are vital questions; and there are others. Clear analysis of these, showing their real character, would save many souls from going astray."

The Baltimore *Catholic Mirror* adds:

"If the zealous members of the church's laity, if the clear-sighted men of the clergy would prepare the way in their own day and time for the safeguarding and the advancement of the church's interests and those of religion and morality in the future, they must do so by present advocacy of the claims of the Catholic press to support.

"Within the past few years there has been a steady upward movement of Catholic journals. Few there are which are not better conducted than a decade of years ago; few in which there is not evidence of honest industry and intelligent effort. On the whole, proportionate to their support and beyond it, editors and managers are doing their part, and their success in the production of a great press is limited only by the indifference and even antagonism of those who should be their most willing colaborers."

THE ENDURING INFLUENCE OF THE BIBLE.

BEHIND all the debates of the Biblical critics lie the potency of the Bible's appeal to the human heart and its permanent value as literature and history. In an address delivered before a Bible-study rally in Chapel Hill, N. C., and printed in *The University of North Carolina Magazine* (December), Dr. C. Alphonso Smith endeavors to estimate the enduring influence of the Bible as a factor in the world's life. He says:

"The Bible is a part of world-literature. The Koran is literature, but the Bible is a literature. With the exception of the novel and the editorial, both of which arose in the eighteenth century, there is hardly a type of modern literature or form of modern discourse that may not be found in the Bible. Throughout your college course you will come in contact with no book whose purely literary claims equal those of the Bible. I yield to no one in my admiration of the classical literatures, of the modern literatures, and of the more technical literature of scientific achievement. But in vividness and intensity, in elevation of appeal, in the extent of her literary empire, and in the duration of her sovereignty, the Bible takes easy and secure precedence. The most advanced nations of the world are the children of her fireside; the centuries themselves have been but handmaidens in her service. There is no modern literature worthy the name that has not felt her influence; there is no regnant people whose strivings she has not shepherded.

"Not only is the Bible a literature in itself, but it is a literature that has peculiarly influenced the literature of which our own is a part. From Cædmon to Kipling English literature is permeated by Bible thought and Bible diction. The first coherent words of English speech that have come down to us are Cædmon's hymn, a hymn which is not only Biblical in its phraseology but which is itself a paraphrase of the first verse of Genesis. Of Shakespeare's use of the Bible, Bishop Charles Wordsworth says: 'Take the entire range of English literature, put together our best authors who have written upon subjects not professedly religious or theological, and we shall not find, I believe, in them all united, so much evidence of the Bible having been read and used, as we have found in Shakespeare alone.'

"'Bacon's acquaintance with Holy Writ,' says Prof. J. Scott Clark, in his 'Study of English Prose Writers,' 'is almost equal to that of Shakespeare, and the works of both unite with many modern masterpieces in testifying to the value of the English Bible as a literary model.' Professor Corson thinks that Chaucer made greater use of the Bible than did even Shakespeare. 'Given any thousand consecutive lines,' he says, 'taken at random from Shakespeare and from Chaucer, and it will be found, I think, that the proportion of allusions in those of the latter will be greater than in those of the former.'

"Are the more modern writers equally indebted to the Bible? 'I have found,' says Dr. Henry Van Dyke, in 'The Poetry of Tennyson,' 'more than four hundred direct references to the Bible in the poems of Tennyson.' It may be confidently stated that Browning draws far more themes from the Bible than does Tennyson. 'Intense study of the Bible,' says Coleridge, 'will

keep any writer from being vulgar in point of style.' Ruskin tells us that in his childhood, as a part of his home education, his mother required him to commit to memory select chapters from the Bible. 'And truly,' says this master of English prose, 'tho I have picked up the elements of a little further knowledge . . . and owe not a little to the teaching of many people, this maternal installation of my mind in that property of chapters, I count very confidently the most precious, and, on the whole, the one *essential* part of all my education.'

"When Kipling's 'Recessional' appeared, in June of 1897, readers seemed surprised at the Hebraic note that runs through it. They need not have been. Kipling's 'Seven Seas' (1896) is as Hebraic in mood and diction as is any single play of Shakespeare or any equal number of pages from the 'Canterbury Tales.' Indeed, a recent French critic, M. le Viscomte Robert d'Humieres, goes so far as to complain that Kipling is 'yet entangled with Christianity,' and that 'the evangelical shroud wraps him even to the heart.' "

Passing on to a consideration of the Bible as a source of inspiration to the public speaker, Dr. Smith says:

"The Greek and Latin rhetoricians urge upon the speaker the desirability of putting himself in touch with his hearers by utilizing some incident, illustration, or allusion that will establish a bond of sympathy between the orator and his auditors. They urge him to appeal to a fund of common memories and common associations; for an allusion wins half its power from its relation to the hearer's own life and experience. Did it ever occur to you how perfectly the English Bible meets this need? The same book lies open upon the desk of the scholar and the pine table of the peasant. 'If you touch upon one of its narratives,' says Dr. Van Dyke, 'every one knows what you mean. If you allude to one of its characters or scenes, your reader's memory supplies an instant picture to illuminate your point.'

"No one who was present at the National Democratic convention held in Chicago six years ago can forget the scene that followed these words: 'You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold.' A study of Mr. Bryan's speeches will show that much of his power is due to his familiarity with the Bible and to his readiness of citation. A distinguished lawyer of this State won a hopeless case, so he told me, by reading to the jury with appropriate (?) comment the story of Joseph. He wished to impress upon the jurymen the insufficiency and untrustworthiness of circumstantial evidence; and for this purpose he dwelt eloquently upon the episode of the bloody coat, the garment shown by Potiphar's wife, the piece of money in each sack, and the silver cup in Benjamin's sack. The prisoner was promptly acquitted, tho the revenue officers had found several barrels of newly made whisky concealed in his barn.

"The telling use made of the Bible by Burke and Webster and Lincoln in their greatest speeches is too well known to need more than a passing mention. Senator Vance had so communed with the Bible that his style, especially in passages of heightened emotion, as in his best perorations, became almost as Biblical as that of Bunyan. . . . 'The Bible,' says Arnold in a letter to his mother, 'is the only book well enough known to quote as the Greeks quoted Homer, sure that the quotation would go home to every reader, and it is quite astonishing how a Bible sentence clinches and sums up an argument.' "

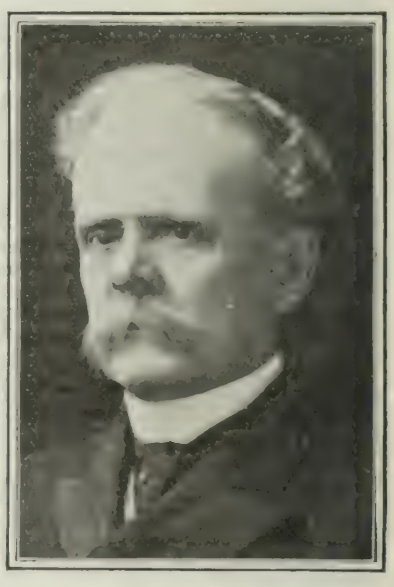
In conclusion, Dr. Smith observes that the year just closed has witnessed not only a diminution of sectarian bitterness and of denominational bigotry, but also an increased interest in the Bible:

"Never before has the Bible been studied by so many persons or with such patient scrutiny of its minutest details. The first paragraph of the famous address recently delivered by Dr. Delitzsch before the German Emperor contains this tribute to the world-wide interest that is now being taken in Bible study: 'To what end this toil and trouble, in distant, inhospitable, and danger-ridden lands? Why all this expense in ransacking to their utmost depths the rubbish heaps of forgotten centuries? Why this zealous emulation on the part of the nations to secure the greatest number of mounds for excavation? And whence, too, that constantly increasing interest, that burning enthusiasm, born of generous sacrifice, now being bestowed on both sides of the Atlantic on the excavations of Babylonia and Assyria? One answer echoes to all these questions—*the Bible*.'

"Of President Roosevelt's recent address on the Bible 80,000 English copies were circulated, and 10,000 Spanish copies. On July 4 of this year the 1,700 teachers attending the Summer School Conference rose to a man to second the resolution favoring 'the recognition of the Bible in our public schools.' The same stand was taken by the National Educational Association in annual meeting at Minneapolis. The American Bible Society declare that their receipts for the last year exhibit 'increase in every department,' and that now 'seven-tenths of the population of the world have the Bible in their own language.' A century ago just one-fifth of the population of the world had the Bible in their own language."

THE CONGREGATIONALISM OF TO-MORROW.

RECENT happenings within the ranks of Congregationalism would seem to indicate that this denomination is on the eve of several important departures from its traditional policy. Expressions of dissatisfaction with present Congregationalist progress are frequent. The Boston *Congregationalist* notes the increasing number of ministers from other denominations — such as Drs. Crane, Cadman, Jefferson, and Gunsaulus —who are occupying prominent places in the Congregationalist pulpit. "A denomination which has not life in itself to furnish its own ablest leaders," observes *The Congregationalist*, "can not grow—can not maintain its best traditions, nor inspire faith in its own men, nor foster enthusiasms to carry on its own work." And the Rev. Dr. Amory H. Bradford, moderator of the National Council, declares, in a lately issued statement to the churches, that Congregationalism is "marking time rather than moving forward." "Our membership," he adds, "is not increasing as swiftly as it should, altho in the decade from 1890 to 1900 our growth more than kept pace with that of the population." Dr. Bradford suggests:



THE REV. AMORY H. BRADFORD, D.D., Moderator to the Congregationalist churches of the United States.

(1) That the time has come for a general unification of missionary and benevolent activities according to methods now prevailing in the business world. One great missionary meeting should be held annually at which all phases of missionary activity should be presented and discussed.

(2) That some plan should be devised for bringing ministers and churches together. There are now more than a thousand Congregationalist churches without any regular pastoral service. Each local conference or state association should appoint a committee on the pastorate which should mediate between vacant churches and ministers wishing fields of service.

(3) That a more vital fellowship be established between the Congregationalist churches. This need not interfere with the entire liberty of each local church.

(4) That the coming Lenten season be devoted to special meditation, sermons, and meetings, for the purpose of promoting the "realization of God" and considering the special problems of Congregationalism.

The Congregationalist heartily indorses Dr. Bradford's suggestions. It says:

"Some churches are beginning the year with special efforts during the week of prayer to realize afresh the presence of God, and bring before the community the necessity of cultivating the religious spirit. Others, probably an increasing number, find the associations of the Lenten season more helpful in directing public attention to the life of the soul with God. Every day this year will be marked by prayer of every one who loves the welfare of American Congregationalism and longs to see it do its part toward making the whole Christian society a habitation of God through the spirit. . . . . .

"Our churches have business on hand of vital importance. Are they alive to it? The years of the new century are moving forward rapidly. It is hardly excusable for the churches to hold annual meetings merely for pleasant reunions of ministers and delegates, or to discuss abstract themes which are as well treated elsewhere. A grave responsibility rests on the committees who prepare the programs for the local and state conferences of churches. We second Dr. Bradford's suggestions and supplement them by urging those who plan for assemblies to see that themes of greatest importance have such consideration as will lead to practical results in the growing of the spiritual power and the enrichment of the service of Congregational churches throughout the whole country."

The Chicago *Advance* (Congregationalist) is more critical. It comments:

"Many other 'outlooks' are telling also what they see and what needs to be done; that we ought to get together, and instead of Congregational churches have a Congregational Church, which should have power over ministers and churches to say, 'You stay here or you go there.' But about every ecclesiastical plan has been tried in the course of the centuries, and every one has its drawbacks. It is an open question whether or not we should be any happier or gain so very much if we had a polity as ecclesiastically iron-bound and closely riveted as that of the Catholic Church. It is also a debatable question whether or not we should gain very much by changing or reducing our creed to the minimum; churches which have done this have not found the people thronging their doors.

"The truth is that Jesus Christ came to save sinners, and the Christian church was organized to do this work with him. If it has come to that point where we do not believe that men have done any evil, or that Jesus Christ can save them, or that they need salvation, then our mission as a church or churches is gone. When the spiritual life ceases, the ecclesiastical organization and the house of worship will go in spite of all efforts to save them. It is the spiritual life in believers also that needs to be strengthened; when this has power in it, many other things take care of themselves. Men are not in sympathy with the church until they are in sympathy and accord with Jesus Christ. Men do not love their fellow men rightly until they first love God. It is a union of hearts that is needed first, and then the union of churches is easy. The Congregationalism of to-morrow will depend upon what we are steering for."

The New York *Observer* (Presb.) says:

"The issue is clearly this, Will the Congregationalism of the future be of an historic or a hybrid type? By historic we do not mean anchored slavishly to the past, but rooted in the past while blossoming in the present and bearing fruit in the future. If the Congregational Church in the twentieth century is to be simply an Adullam's Cave, into which every one who is disgruntled or out of sorts with his neighbors runneth, it will have small reason for continuing to be; but if, as we believe and hope, the evangelical content will be preserved, whether expressed with an emphasis on the Calvinistic or the Arminian side, a great work both at home and abroad will be accomplished by this honorable body of believers in the coming age. There is room for all Christian workers in this broad land who love the Lord Jesus Christ in sincerity and in truth, and the Presbyterian Church may well afford to say to its Congregational neighbor in the words of Abraham to Lot: 'If thou wilt take the left hand, then I will go to the right, or if thou depart to the right hand, then I will go to the left.'"

THE "NEW EVANGELISM" AND ITS DANGERS.

THE so-called "passing" of the religious revival has been used as a text for many disquisitions in the religious press of late. It seems more difficult than ever before to stir the religious consciousness of great masses of men and women. The Rev. Dr. Teunis S. Hamlin, of Washington, who notes this fact in *The Christian Work and Evangelist* (January 3), indicates that while men have been looking for spectacular results, an unobtrusive, but none the less influential, revival of the evangelistic spirit has "assumed a definite form and is moving on to a definite result." He writes:

THE REV. TEUNIS S. HAMLIN, D.D., of Washington, D. C.

"Mr. Moody's work was marked by great union meetings, covering entire cities, for which the largest halls were scarcely adequate. Dr. Finney preached in the churches, but to vast crowds, and amid deep excitement that stirred communities to their depths. So did Whitefield and Wesley. The present movement is within the local congregations. There is no special change in preaching, unless it be an access of unction and directness. There is little demand for professional evangelists, especially in the larger cities. There is some concerted action in presbyteries, but chiefly by way of mutual assistance among neighboring pastors. The whole movement is 'without observation'; the churches have simply awakened to find, in some fresh and unusual sense, 'the kingdom of God among them.'

"The chief note of this movement is emphasis upon personal work. This, not in organized methods, as the Sunday-schools, young people's societies and the like, but in an individual way for individuals. It is not a city evangelism that is now current; nor a denominational. It is not the work of some great leader. No famous name, no startling method, marks it. It is therefore little spoken of in the daily press; it may be existent and vital where the public does not recognize it. For it means just that Christian men and women are freshly and deeply moved to bring the Gospel into saving contact with the non-Christian men and women nearest them."

Now every type of revival, or evangelism, declares Dr. Hamlin, has its perils. Dr. Finney preached with heart-searching power, but "so indiscriminately as to lead to many morbid experiences and to the cruel wounding of many tender consciences." Mr. Moody failed to "gather into the organized life of the churches the converts of his great meetings." The average evangelist "finds it difficult to work in due subordination to pastors and their plans; his labors, even when apparently fruitful, are too often unsettling, and in the end almost disastrous." We quote further:

"None of these perils attend the present movement, or will attach to it if it pursues its present course. But it has perils distinctively its own; and as the movement is spreading—has already spread to several of the larger denominations—it seems important for the cause of Christ that the situation should be clearly and frankly recognized.

"Pastors are urging their people to be evangelists within their own congregations and their circles of business and social life. They are exhorted to commend Christ to individuals and urge him upon their acceptance. This work is no doubt as important as it is sadly neglected by the average Christian. But it is also

extremely delicate, requiring the best sanctified tact. There is real danger that zeal may outrun knowledge. In pastors, who realize what might be done, and want to set all their people at work. In the people, who feel the call to be of God, can not wait to ascertain their fitness, or to get the requisite training; but imagine that they have only to accost the first man or woman that they meet."

The first requisite, observes Dr. Hamlin, of a tactful and hopeful approach to any one on the subject of religion is a clear recognition that "nothing is so intensely personal and sacred as the relation of a man to his God."

"This fact is often overlooked; and is particularly liable to be overlooked in times of revival. Jesus himself, however, does not overlook it. 'Behold!' he says; 'I stand at the door and knock!' That knock asks for admission; hence, of course, concedes the right of him within to open or not as he will. Too often, in excess of zeal, we ignore that right and want to put men into the 'kingdom of God' by force and arms. Such zeal, no doubt, springs from a keen sense of their peril outside—of what they are losing; of how wickedly they are disregarding and dishonoring the Savior. Still, if he respects their personality, will not invade it, will be content with using persuasion and entreaty, we certainly should follow his example."

Another imminent peril is that of "misleading men as to their dependence upon the personal approach for their own salvation." We quote again:

"Incidents are very commonly told of men who have spent their lives in Christian communities, and in attendance upon Christian churches, saying: 'I have lived fifty or sixty years here and no one has ever spoken to me about my salvation.' Now, this is no doubt a serious indictment of the Christian people among whom they have lived, but it is no excuse whatever for themselves. The salvation of Christ has been many times explained to them from the pulpit; offered to them and pressed upon their acceptance. They have always known that such offers were meant for them; that Jesus longs for their salvation. Their duty has always been to accept him, and can be neither increased nor diminished by the faithfulness or unfaithfulness of their neighbors; zeal should not blind us to the truth at this point, nor lead us to even imply that any excuse based on the failure of others can be accepted by God."

This note of warning, concludes Dr. Hamlin, is raised "in the first stages of a movement which promises to be protracted and widespread, and which can not fail to be immeasurably useful."

MODERN RELIGIOUS THOUGHT IN GREECE.

THE current notion that the religious thought of the Greek Church and people is marked by stagnation and dead formalism will evidently require some modification in the light of the new "History of the Oriental Churches from 1453–1898," by Prof. A. Diomedes Kyriakos, of the University of Athens. The work has been promptly translated into German by Dr. E. Rausch, and from his translation we glean the following particulars:

In recent decades, it has been the constant endeavor of the theological and religious leaders of the Orthodox Church of Greece to keep in constant touch with religious movements in the churches of Western Europe. Greece has by no means been isolated in its church life, but has to a greater or less extent reflected the various schools that have come to the front in Germany, France, and Italy. Even the extreme radical thought has found enthusiastic followers among the Hellenes. One of these radical champions was the popular philosopher and lay-preacher Makrikis, who even claimed to be the son of the Mother of God and a brother of Jesus Christ, and asserted that the predictions concerning the two witnesses in Rev. xi. 11–13 were fulfilled in him. He was condemned by a synod held in Athens, and, after an imprisonment of two years, died in prison. His followers still number thousands.

The Deismos of the French Theophilanthropists was reflected in a type of religious advanced philosophy in Greece called Theosebismus, the chief representative of which was Kairis, who had been educated in France. His leading work, expounding his system, is entitled "Gnostike," or "Science of Knowledge." In addition, there have been advocates of modern rationalistic, positivistic, and materialistic philosophies among the advanced religious thinkers of Greece, while the strictly modern type of the German skeptical school has an enthusiastic representative in the satirical writer Laskaritos and the dramatic poet Kleon Rhangubas, whose "Julian the Apostate" is an older companion piece to Isbeni's "Emperor and Galileans." The tendency of this school is largely negative and destructive. Darwinism has most devoted followers in a number of professors in the University of Athens, who have been so pronounced in declaring that this philosophy is absolute truth that they thereby called forth the opposition of the Holy Synod and of the Cultus Ministry. Books like Buchner's "Kraft und Stoff" have appeared in several Greek translations, while the skeptical naturalism of Comte and Littré has been spread through the works of Papadiamantopulos, and, in the modified form of a new mysticism, by Plato Drakulis in his work "Light from Within," in which the woman cultus and altruism of Comte appear in combination with ancient Christian Gnostic and Buddhistic doctrines.

Quite naturally the spread of such neological thought has aroused the concern of those more conservatively inclined, who began to look around for material to counteract the influences of the liberal agitators. They found what they wanted chiefly in the apologetical writings of German and French theologians, and of these a large number have been translated, even where on subordinate matters they conflicted with the peculiar tenets of the Orthodox Church. Both Protestant and Roman Catholic writers were selected. Luthardt's apologetical lectures were done in modern Greek shortly after their first appearance, and of French works the chief contribution was Guizot's "Meditations sur la Religion Chrétienne," as also Flammarion's "Dieu dans la Nature." The "Philosophical Studies" of Nicolas were translated by Vrailoz, the representative of the Greek Government in St. Petersburg and Paris. The leading Roman Catholic work translated was Scheidemacher's "The Life of the Soul."

In addition to these translations, Greek theologians have done a fair amount of independent work in this direction, and Kyriakos praises the writers of this school for the width of their vision, their researches dealing with philosophical as well as theological problems. Vrailoz himself is the author of several good works, among them one entitled "God and the Ethical Laws." The pious jurist Johannes Skaltzunis is, however, the leading author of positive writings, especially of an apologetical character, among the modern Greeks, the titles being such as "Religion and Science," "Psychological Studies," "The Harmony of Science and Christianity," and in the *Anaplesis* (*Reform*), the best of modern theological journals in Greece, he has published thorough discussions on "Christology" and related topics. In all of these writings Skaltzunis shows that he is perfectly at home in modern science and theology.—*Translation made for* THE LITERARY DIGEST.

RELIGIOUS NOTES.

THE REV. DR. NEWELL DWIGHT HILLIS is taking the lead in a movement to erect, within the shadow of Plymouth Church, Brooklyn, a Henry Ward Beecher memorial building, in which Mr. Beecher's remains shall rest. Several thousand dollars have already been subscribed toward this project.

THE second Sunday in February has been appointed a day of special prayer for students in all institutions of learning and in all lands. The committee which issues the call for its observance represents the World's Student Christian Federation, as organized in Australia, Belgium, Canada, Ceylon, China, Denmark, Finland, France, Germany, Great Britain, Holland, India, Japan, Norway, South Africa, Sweden, Switzerland, the United States, and other lands.

THE REV. DR. WILLIAM S. RAINSFORD has just celebrated the twentieth anniversary of his installation as rector of St. George's Church, New York. A reception was held on New Year's Day, attended by Bishop Potter, Mayor Low, and many others whose names are known far beyond the borders of the city. On the following Sunday, at a special anniversary service arranged by a committee of the vestry, with Mr. J. Pierpont Morgan, chairman, the principal addresses were made by Bishop Doane, of Albany, and by Mr. R. Fulton Cutting.

FOREIGN TOPICS.

AN ALLIANCE OF CHINA AND JAPAN.

CHINA and Japan, it is thought, are destined to become the United States of Asia. They are drawing closer to each other every day. The absorption of the celestial empire by that of the Mikado is the form which the union is assuming. The matter is presented in an interesting way by the *Journal des Débats* (Paris), which says that a close union between China and Japan is written in the book of fate. No one can doubt "the speedy formation of a new federation, the United States of Asia, whose motto will be: the Far East for the Asiatics." The aggressive part in all this will be played by the Japanese:

"Students of things political, whose interest has been aroused by the recent displays of Chinese-Japanese sympathy, are following this movement with attention. They foresee a counterpart in the Far East of the Franco-Russian alliance of Europe—a force that will balance the military and commercial influence of the civilized nations in China. May one not go even further and prophesy the continual absorption of the apathetic and corrupt middle kingdom by the empire of the rising sun? . . . . There certainly exists a real understanding between China and Japan. The middle kingdom offers but a passive resistance to those who would possess it by force. Its peaceful conquest need present no difficulties to the Mikado's subjects. All the authorities in Peking favor the idea."

These two powerful nations of the Far East have every inducement, it is added, to form a close alliance. The realization of this possibility is but a question of time. Thus will the great problem of China be solved. What European Power would be bold enough to involve itself with the political or commercial interests of two allied countries, of which one disposed of the brute force of numbers and the other of limitless energy and vitality? The formidable strength of these United States of Asia would revive the famous theory of the yellow peril, which has as yet been assigned to the distant future.

There is confirmation of these ideas in the views expressed by Chinese native papers. These sheets take pains to lay before their readers the perils of China and the power of Japan. Thus the *Sin Wan Pao* (Shanghai) says that Russia is bound to expand in Asia at the expense of China owing to "the bigoted conservatism" of the Chinese, and it hints at the necessity of "brilliant diplomacy" to save the middle kingdom. It moralizes on this theme and then makes flattering references to Japan. We are indebted to *The Celestial Empire* (Shanghai) for the following translation of the Chinese paper's remarks:

"A country can not avoid the danger of being absorbed by other countries, so long as it depends upon them for support and is not able to act independently. Of all the countries in Asia, Japan is the only one that may be called independent in the full sense of the word. All the other countries have lost their independence either wholly or partially. For instance, Annam has been annexed by France; Burma has been taken possession of by Great Britain. Lying between Burma and Annam we find a small country, named Siam, which appears to be still retaining its independence. That Siam has been able to preserve its independence is ascribed by many people to the fact that the King of Siam is a very enlightened and progressive ruler, who has set about introducing Western civilization into his country sufficiently early to save it from becoming a dependency of some other country more powerful than itself. In fact the King of Siam has been pursuing a course of reform somewhat similar to that taken by the Emperor of Japan. But the results of the actions of the enlightened rulers of the two countries are very different. Since the beginning of its career of reform, Japan seems to have progressed by leaps and bounds, and to-day it has gained a high position in the family of nations. . . . Both Japan and Siam have practically followed the same course of reform and the rulers of both countries are equally enlightened and progressive. Yet Japan has become powerful and fully independent, while Siam remains weak and only nominally independent. How do we account for this difference? The secret is that in Japan the common people are as much in favor of reform as their Emperor is, and they possess all the qualities necessary to independence; while in Siam, altho the King hails every measure of reform with delight, the common people do not seem to care much about it, and behave as if they were prepared to become the slaves of other races at any moment."

There is one native Chinese paper, the *Sin Pao* (Peking), which denounces Japan and Japanese ideas. The only true liberty is that of China and the Chinese. Let there be no Chinese adoption of Japan and the Japanese. We rely once more upon *The Celestial Empire*, which translates this old-fashioned Chinese organ thus:

"The Chinese enjoy the greatest liberty, and the Japanese and Westerners are under the greatest bondage. There may be a great many people who hold a different opinion from ours and say 'popular liberty originated in the West and afterward flew into Japan, but is unknown in China up to this day. What absurdity you utter when you say that the Chinese enjoy more liberty than the Westerners!' Our answer would be as follows: The laws in Japan and in the West are both too numerous and too severe. All the people are bound to serve in the army for a certain number of years, during which they are liable to be transferred to any place at any time by their general and are not permitted to disobey the order. This is one instance of bondage. All the children in the country are bound to attend school at a certain age. This is another instance of bondage. When an author wants to print a book, he has to ask for copyright. This is a third instance of bondage. Before a man can establish a newspaper, he must apply for a certificate from his Government, sanctioning him to do so. This is a fourth instance of bondage. Furthermore, there are fixed regulations, governing all companies and firms. Thus the merchants and tradesmen are deprived of their liberty. All marriages must be reported to a certain department for registration. Thus, there is no liberty between husband and wife. Besides, there are such taxes as the stamp-tax, which curtails the liberty of selling goods; the limited-company tax, which interferes with the liberty of establishing companies; and the cattle tax, which limits the liberty of rearing animals. Even the members of Parliament in constitutional monarchies and the presidents of republics are not given sufficient liberty to rule over the people, as is evidenced by the fact that these high functionaries are elected by the people themselves. Judging by the above facts, can any impartial person say that the Japanese and Westerns are not under bondage?"

POETRY IN WORLD-POLITICS.

ANGLO-GERMAN animosities have been embittered—if that were possible—through the instrumentality of verse. The ball was set rolling by Rudyard Kipling, who brought out in the London *Times* a piece dealing with certain individuals who are discovered rowing. As they row, they sing. It is aside from the present purpose to consider the exact words sung. Their political and not their poetical value is what has stirred the German people and the German press. The situation has been further complicated by German poems replying to the British poem. Paul Block, Ernst von Wildenbruch, and other poets write verses in reply. Mr. Kipling is called "an Indian drummer" and the German people are urged to "contemptuously ignore" his lines. But the newspapers are not ignoring them—quite the contrary. The *Vossische Zeitung* (Berlin) feels called upon to say a good deal about "Rudyard Kipling's poem of scorn, charged with hatred":

"What intense feeling against Germany must animate the English since they are unable to refrain from stabbing the German people in the back with insults at the very time that their respective governments are cooperating for a common purpose! The saddest outcome of this frame of mind is Kipling's poem. It pronounces the Germans to be the open enemies of

England and laments that the men of the British isles must work with Goths and shameless Huns. The English have not just now any special reason for national animosity against Germany. Hence Kipling's insulting expressions must be regarded as the genuine feeling of a certain element in England against Germany. Thus it is that the anti-Germanism of the Jingoes is more intense than the anti-English feeling that has sometimes made itself manifest in Germany."

The entire "outburst" from Kipling, pursues the German organ, suggests the envy with which the British Jingoes regard the growth of Germany's might and importance in the world. Germany is Britain's most pressing competitor in the strife of to-day for economic supremacy, and we are invited to view the Kipling verse in this light. The *Hamburger Nachrichten* thinks the poetry in question may be "dismissed with a smile," but it points out the international misunderstandings it may create. The English newspapers are disposed to view the injections of Kipling verse into world-politics with some uneasiness. *The Daily News* (London) defends the Germans against some of Mr. Kipling's severities of expression, and *The Westminster Gazette* (London) likewise takes the poet sternly to task. But he has his champions, too, and among them is *The Spectator* (London) which says:

"Mr. Kipling has been blamed for the too great fierceness of his poem, and men have feared its tendency to embroil us still further with Germany. In ordinary circumstances we should have agreed that it was wrong to increase national animosity, but we fear that in the case of Germany nothing could increase the animosity of the dominant public opinion. Here there is a real need for speaking out plainly and strongly. Only by such speech can we hope to convince the Government that we can not, and will not, become the allies of Germany, and that the control of our foreign policy must not be placed even for an hour in the hands of the Kaiser and his Chancellor."—*Translations made for* THE LITERARY DIGEST.

IMPERIALISM IN CHILE.

IT is often said that the South American nations regard the United States with apprehension as a power that is aiming at the absorption of this whole hemisphere under cover of the Monroe Doctrine. But this notion finds more favor in the European press than in the press of South America. Newspapers in the great continent to the south of us seem to dread Chile far more than they dread the United States. The rise of the Andean republic from insignificance to a commanding position on the Pacific, her vigorous foreign policy, involving disputes with Peru, Bolivia, Argentina, and other countries, and the care she lavishes upon her army and navy are held to be symptoms of imperialism. The *Prensa* (Buenos Ayres) is never weary of warning South America against Chile, and this paper is a serious organ whose opinions carry weight. It says:

"Chile's grand aim is control of the Pacific so far as that control would exclude other South American nations from it. To this end Chile has not kept faith with Bolivia or Peru in her treaties with those Powers. There are no wars in consequence simply because Chile, being the stronger, is able to apply the law of conquest. For this reason there exists a fatal *status quo* on the Pacific coast answering to all the conditions of an armed peace. It is false to say that this Pacific problem is regulated according to treaty. Chile refuses to be bound by any treaty whatever, feeling herself too powerful to submit to such restraint. She conforms in her international relations only to such conditions as suit herself. She adheres neither to the letter nor to the spirit of any compact. She proposes new treaties to the weak, but such treaties are but subterfuges for the enlargement of her territory. This is the plain truth in regard to Chile."

Sentiments of this nature are a source of intense disgust to the newspapers of Chile. The *Lei* (Santiago) repudiates these insinuations vehemently and says the Argentine press is perpetually trying to poison the South American mind against Chile. "Chile," says the Santiago sheet, "has for many years been the object of a campaign of detraction. She is regarded by many in consequence as a robber and predatory state, but the truth will be vindicated in the end and Chile may rest assured of the ultimate respect of the world." And *The South American Journal* (London), organ of the British investor, is prompted to defend Chile in these terms:

"In our opinion, the idea that the Chilians keep steadily before them a policy of conquest is erroneous, or at least largely exaggerated. We believe that they will be able to find within the limits of their own country ample scope for their energies for many years to come, and that the most influential part of the nation has no desire for war. This is what the Government ought to make manifest to the world. They could do so by publishing widely a descriptive account of the country's resources and possibilities of development, and the opportunities which it offers for immigrants and the employment of capital. This ought to be drawn up in a systematic and practical manner, not on such merely general and superficial lines as have usually been adopted in such works; and it ought to be supplemented by establishing properly organized information-offices in Chile and in the principal countries of Europe. If properly carried out, such a system of publicity would bring immediate and great benefits to the republic. It would, as we have said, tend to dissipate the idea that the Chilians must perforce seek to make their living outside their own country, and that there is

room for a large increase of population of industrious foreigners who could prosper there."—*Translations made for* THE LITERARY DIGEST.

WHY THE FRENCH REPUBLIC ENDURES.

THE French republic has lasted because it is anti-Clerical. So says a leading Clerical organ in Paris, which even asserts that "war on religion" is the only thing on which the contending Republican factions can unite. The *Correspondant* (Paris), the Clerical paper from which these views emanate, thus pursues the subject:

"Religious war is the only basis upon which the combination of Republicans can exist. It affords it both an end to pursue and a means of enduring. The Republican element combined only to engage in this war and the combination can be maintained only by continuing it. On every other question the Republican groups are divided. If they tried to settle other questions, they would fall into dispute and the combination would go to pieces. . . . Hence everything is subordinated to the war against the religious idea. Let France perish if only the church dies too! This being the design, which threatens—alas!—more harm to France than to the church, which is assured of her future by infallible promises, the combination of conspirators will attempt neither the establishment of a reform nor the suppression of an abuse. Otherwise they would incur the risk of disagreeing among themselves and their work of destruction might be hindered."

As a result of this "rage against Christian faith," proceeds the Clerical paper, everything in the country is going to ruin:

"Finances, industry, commerce, national defense, justice, public security, the influence of France abroad—everything is abandoned or in peril or attacked. But the religious war goes on."

A sufficiently striking contrast to this opinion is to be found in the utterances of the *Intransigéant* (Paris), a daily of the popular class, which asserts that the republic is "a sham" because "the priests are in power." This paper says, too, that a mock warfare is maintained between the Clerical element and the ministry, but in reality the two Powers are on cordial terms. This, however, is very fanciful. The *Pester Lloyd* (Budapest), which has no Clerical sympathies, asserts that the anti-Clericalism of the French republic has certainly much to do with its survival of many crises. Time and again the downfall of the republic has seemed inevitable, but it has been saved by its inherent strength. We are led to infer that this strength has consisted primarily in a conviction among the French that the republic stands for opposition to the reactionary elements, among which Clericalism is the chief.—*Translations made for* THE LITERARY DIGEST.

GERMAN DOUBT OF GERMAN CAPACITY FOR SELF-GOVERNMENT.

GERMANY has shown her incapacity for self-government in unmistakable fashion recently, if we may accept the pessimistic utterances inspired by the forcing of the tariff bill through the Reichstag. German Liberal organs generally agree that parliamentary institutions in the empire have suffered a breakdown. The imperial constitution is workable enough, but the Germans do not know how to work it. They have not yet enough experience in the art of governing themselves. All Germany, therefore, is threatened with a collapse of Liberal ideas. Such is the trend of thought among many democratically inclined sheets, while the *Vossische Zeitung* (Berlin) thinks the situation so desperate that the Liberals should act with the Socialists to stave off the evil of reaction:

"At the same time a general political alliance of Liberals with the Social Democrats is not to be thought of. . . . The grand watchword for all Liberals is unity among themselves, unity in the desperate struggle against the reactionary majority. . . . If

this idea be borne in mind, the future of Liberalism may be awaited with confidence."

The perils of the situation are not to be lightly regarded, however, as this same authority notes, and the Liberals hold the only hope for Germany in their hands. The collapse of the parliamentary system is beyond remedy, notwithstanding, thinks the eminent Prof. Frederick Paulsen, of Berlin, writing in the *Neue Freie Presse* (Vienna). The German people are not fitted for it. In fact they distrust a popular representative body on general principles and would prefer to look to some dynasty or other for the protection of their rights:

"We Germans are really without any Reichstag that is capable of aiding in the work of government. This circumstance reacts upon the parliamentary system itself. Party differences are so profound that any parliamentary government amongst us is out of the question. Party government is possible only when party differences do not go to the length of actual enmity, when there exists a certain unity of conception regarding the aims of politics and the nature of the constitution, and when the governing classes have an appreciable amount of political understanding and self-discipline. But when conditions are such that every party prefers the overthrow of the whole parliamentary system to the rule of any one of the rival parties, it stands to reason that the Government can not proceed from the parliament."

The German people are disgusted with the whole affair, concludes the learned professor, and would gladly be relieved of the Reichstag altogether. Self-government on the representative plan has disappointed them.—*Translations made for* THE LITERARY DIGEST.

RUSSIA AND THE BALKAN TROUBLES.

INSURRECTION has lately been attempted in Macedonia, as is well known, and Turkey has suppressed it with extreme rigor. According to reports, a more formidable uprising is being planned for next spring, and the situation is considered so grave that the Russian Foreign Office has published a strong statement on the subject, in the nature of a warning to all parties directly or indirectly concerned — the Macedonian agitators, Turkey, Bulgaria, Servia, and other Balkan nationalities. At the same time Russia has addressed a separate note to Turkey urging a program of reform for Macedonia and declaring that the present condition of things has become intolerable. Count Lamsdorff, the Russian Minister of Foreign Affairs, has visited the capitals of Austria, Servia, and Bulgaria for the purpose (it is understood) of securing harmonious action in the premises and preventing a resort to armed insurrection in Macedonia itself. Turkey has repeatedly promised reform, but her proposals are dismissed as wholly inadequate by the press of Russia and Austria. The St. Petersburg *Novosti* thus writes on the question:

"There is reason for thinking that the Macedonian question has now been advanced in a manner which will force a real settlement in the near future. If the reforms offered by the Porte are insufficient, it is necessary to formulate more substantial ones and prevail upon Turkey to put them in effect at once. In our judgment, there is but one way to avert the danger of a rebellion—to give Macedonia complete autonomy, with a Christian prince or governor-general at the head of the local government and with the explicit recognition of the sovereignty of Turkey over the province. It will not be easy to induce the Porte to grant this measure of reform, as we may infer from the experience of Crete. But in the end the Sultan must realize that this is the best solution of the problem from the viewpoint of his own permanent interests."

The paper goes on to say that it is the duty of Russia and Austria, who are bound by treaty to preserve the Balkan *status quo* and prevent the reopening of the Near Eastern question, to exert severe pressure upon Bulgaria, which is encouraging the Macedonian insurgents and permitting committees and revolutionary bands to organize resistance to Turkey and make preparations for a war of independence.

Meantime the Porte, in a circular issued to the European Powers, explains the ferment in Macedonia as follows:

"The chief cause of the unrest in the provinces in question is the agitation of the Macedonian revolutionary committees having their centers in Bulgaria. This agitation should be suppressed, not only in the interest of order, but also for the sake of the Christian population of Macedonia, for it leads to violence and murder. It is unjust to hold the Porte responsible for the troubles apprehended in several quarters. Complications are to be feared solely in consequence of the action of the bands operating in Bulgaria with the connivance of the Government of that nation. The present condition is due to Bulgarian ambition and covetousness."

This is interpreted to mean that Bulgaria hopes to profit by a war for Macedonian independence, and perhaps to annex that Turkish province. The *Novoye Vremya* takes the same view as the *Novosti* and holds that the treaty of 1897 between Russia and Austria, which was intended to preserve the *status quo* in the Balkan peninsula is as vital and logical to-day as it ever was. The semi-official *Fremden-Blatt*, which represents the Austrian Foreign Office, agrees with the Russian papers and tells the independent Balkan nationalities that they must not count upon any support from the Vienna Government, and that the international compact with regard to the Christian provinces of Turkey must not be violated. Macedonia must rely on the moral influence of Russia and Austria and await the compliance of Turkey with the request of those Powers for substantial reform in that province.—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

JAPAN FOR THE JAPANESE.—Foreign capitalists are given too many facilities for investment in Japan, intimates the *Mainichi* (Osaka). Japan's men of means must step in and thus keep large sums from being sent out of the country every year.

DUELING.—The league against the duel is growing powerful throughout Europe, writes Filippo Crispolti in the *Nuova Antologia* (Rome). The movement has become international and must in time eradicate from the continent of Europe an evil that disgraces civilization.

RUSSIAN EXPANSION.—A remarkable and portentous phenomenon, according to the *Grande France* (Paris), is the growth of Russia's influence in the Balkans and in central Asia. It is also implied that this expansion will not be arrested, but will lead to developments of a far-reaching character.

GERMANY IN AFRICA.—"German East Africa is an impressive region on the maps," says *The Japan Weekly Advertiser* (Yokohama), "but it does not do much business. Very little traffic passes over the fine, broad roads the German Government has built. Germans obstinately refuse to go thither and grow up with the country; and Zanzibar, in British possession, skims the trade headed toward the German possessions."

THE DUAL ALLIANCE.—Russia did not form her alliance with France because she feared a land war, says the *Novoye Vremya* (St. Petersburg). Russia would certainly emerge victorious from any war on land. What she aimed at was the protection of the powerful French navy. But recent French utterances indicate a modification of French naval policy. If there be any such modification, says the St. Petersburg paper, then Russia must revise her ideas of the utility of the existing dual alliance.

A CARDINAL'S HAT.—Many years ago there was a "scene" in the Vatican and the Roman Catholic *Correspodannt* (Paris) tells about it. It was when the aged Cardinal Albani was dean of the sacred college. He had made Pius VI. Pope in spite of the candidate of the house of Bourbon and Cardinal Bernis, to whom he addressed a keen rebuke. Taking his beretta from his head he held it out at arm's length to Cardinal Bernis, who was Madame de Pompadour's protégé, and exclaimed: "I would have your eminence know that it was not a courtezan who placed this hat on my head!"

IS GERMAN FAITH BAD?—That eminent British economist, Sir Robert Giffen, has written to the London *Times* to say that not the slightest reliance is to be placed upon Germany's assurances that she does not intend to make territorial acquisitions in South America. Of the Venezuelan affair he says: "German protestations that no territory is desired are worthless. In the economic condition of Germany territory is very much a *desideratum* if it is not actually desired, and especially territory like that of Venezuela, where in spite of its situation at the equator there is, by reason of the mountainous nature of the country, much fertile land suitable for European settlement, while there are rich mining districts calling for expert exploitation. Given a suitable opportunity, Germany has every motive to convert a temporary into a permanent occupation of such territory, and the hostility of the United States, especially if Germany had England for a partner, would not prevent the attempt to do so."

NOTABLE BOOKS OF THE DAY.

A STUDY OF NEW WOMEN.

A Woman's Ventures. By David Graham Phillips. Cloth, 5 x 7½ in., 331 pp. Price, $1.50. Frederick Stokes.

THIS book is a somewhat curious study of the women of the present day. In some ways it is one of the most "modern" books ever published. In the most daring books which discuss the new order of things, whose heroines are made to break away from cherished traditions, both heroine and author have a self-conscious air. The author appears to be thinking "Ha! this will make the public sit up!" The heroines, therefore, have a sort of challenging air as they make known their free-born theories or explain the purity of their indiscretions. There is none of this atmosphere in Mr. Phillips's book. Unusual things happen in a matter-of-course fashion as in real life.

DAVID GRAHAM PHILLIPS.

In an unassuming way, Mr. Phillips has painted the new social and economic condition of the modern woman—a social condition different from the old, because women may do things without loss of caste, which a few years ago would have made them socially impossible; a new economic condition because women need no longer be dependent on men, but they have their own pursuits and interests. This book would have been a difficult one for a woman of twenty years ago to understand. Of course, many women who earn their bread lead as conventional lives as their grandmothers could desire; but their attitude toward men and toward society is different almost in spite of themselves, and it is this new attitude which Mr. Phillips has described so well.

As a picture of this new attitude toward life, the book is excellent; as a picture of the life of a newspaper woman, it is not so good. Few women without any previous literary training "get on" as does this heroine. The temptation seems common to all authors to make their heroines above life-size in ability and charm,—to draw the exception rather than the type. It is doubtful if any young woman in Park Row ever had the brilliant experience that Mr. Phillips's heroine had. The young and unknown woman reporter seldom has the managing editor, the Sunday editor, and other editors fall promptly in love with her. The situation is a little like that depicted in the family story paper, where the young and efficient type-writer strikes the great financier blind with her beauty. But if the author has made his heroine a too important personage in the newspaper world, the rest of the picture is vivid and true, and the book is, as a whole, a more significant picture of modern tendencies than one will often find.

THREE WOMEN OF GENIUS.

Charlotte Bronte, George Eliot, Jane Austen. Studies in Their Works. By Henry H. Bonnell. Cloth, 5½ x 8 in., 475 pp. Price, $2.00. Longmans, Green, & Co.

WHOEVER is interested in the three women most famous in English letters can not fail to hail with pleasure a volume like this. The critics who have already left on record their opinions of the great feminine trio would, to be sure, make up a small army, and some men who have won a big reputation in the critical field have embalmed their opinions after a fashion that reflects little credit on their own acumen. Take, for example, Saintsbury's remarks upon the nature and characteristics of Charlotte Bronte's genius, and what does all he say amount to in effect, more than to dismiss her after a patronizing sneer, and, with an air of masculine superiority, to intimate that she was without creative faculty, as men possess it, and had merely developed a knack of putting her own experiences into vivid form? But even while Saintsbury was penning his cavalier estimates of the Bronte sisters, George Eliot, and other women who presumed to divide honors with men, other men of more liberal mold and eclectic mentality were gleaning new facts concerning Thackeray, whom Mr. Saintsbury upheld as a type of veriest creative genius, all of which went to show that even Thackeray wrote from closest reportorial observation, watching even the talk at clubs and coffee-house, in order to reproduce it again after passing it through the alembic of his own mind; and that even his most famous creations were copied from life—even Colonel Newcome being a well-known member of his own family.

This bit of digression is indulged in here merely for the sake of contrasting the very different critical methods of Mr. Bonnell. After quoting from Renan's biographer, who says there are three principal influences which go to shape human character: that of heredity, that of locality, and that of every-day association," Mr. Bonnell proceedsto dwell upon how far the possibilities of all three, so peculiar in her case, influenced the rare and powerful bent of Charlotte Bronte. The strength that has kept her power alive, and causes it to increase with the lapse of time he divides into three parts: "Her realism; her attitude toward nature; her passion." Of all three he has many fine and subtle things to say, pointing out how the woman's truth, purity, and high purpose dominated all she saw, felt, and depicted, and in closing he sums up thus:

"There are many greater novelists, there are some greater women novelists. But even because of this, Charlotte Bronte's place is all the more secure as the greatest writer of pure passion in the English tongue. And it may be that this has more undying fame in it than to be the greatest writer of fiction. Certain it is that we shall never have anything like the Brontes again until like genius mates with like loveliness and like innocence."

With equal skill and insight he divides George Eliot's power into a trinity of parts, dealing with her religion and philosophy; her art, her sympathy, and showing that while she lacked in nothing, either intellectual grasp, passion, humor, or sympathy, her hold upon the hearts of her readers was often loosened through the very breadth and range of her erudition. Her sympathy with humanity was sometimes so deep and far-reaching as to befog those who could not attained her mental vision. Says Mr. Bonnell:

"Charlotte Bronte was a voice crying in the wilderness,—crying for pain, crying unrestrained. It was the first note of pure personality—pure in every sense—heard in our literature; and it was the more startling because it was a woman's voice. George Eliot felt this passionate emotion in a larger way. The sympathetic tendencies of her thought were gradually developed until the personality of emotion was absorbed into a generalized sympathy, and the passion passed into compassion. She thus became the first (if not in time at least in power) of altruists in fiction—the first to give the fullest expression to that throbbing sense of the painful pressure of universal life upon the individual conscience which is now felt by all upon whom her message has fallen."

Mr. Bonnell's estimate of Jane Austen carries the reader to more even ground and into a more serene atmosphere. She is made to rank behind the other two. Mr. Bonnell enters into the life of the eighteenth century in order to show that Miss Austin was as new a voice, for her time, as were the two famous women who succeeded her.

SOME MUSICAL ESSAYS.

From Grieg to Brahms. Studies of Some Modern Composers and Their Art. By Daniel Gregory Mason. Cloth, 5½ x 8¾ in., 225 pp. Price, $1.50 net. The Outlook Company.

WHILE for all cultured people a certain knowledge of art and its history is considered essential, a total ignorance of the history of music is considered quite pardonable. Probably one reason for this is the fact that much of the writing on musical subjects has been so technical as to be incomprehensible to the layman. Of late years, however, considerable literature on musical subjects has been produced that presupposes little or no previous knowledge on the part of the reader, and ignorance of musical history is no longer excusable.

DANIEL GREGORY MASON.

Mr. Mason's book belongs to this class of popular books. The title itself, however, requires explanation, and Mr. Mason gives it in his preface: "If we arrange them [the six musicians whom he considers] in the order of their influence on art . . we must pass from Grieg to Brahms." The six musicians are considered in the following order: Grieg, Dvorák, Saint-Saëns, Franck, Tschaikowsky, and Brahms,—forming an ascending scale. That Brahms is the highest and Tschaikowsky second in this sextette might be denied by a few, but not by many, musical critics of the present day; but the relative positions of the other four are not so easily determined, nor can Mr. Mason be said to have settled the matter. That Saint-Saëns, for instance, with his superficiality, brilliant and fascinating as he is, outranks Grieg and Dvorák, who at least write from the heart, is doubtful.

But one soon loses sight of this debatable point. Mr. Mason himself seems to lose sight of it in the interest of his sketches. Each composer is treated with the utmost delicacy and understanding. The author's power to portray a personality clearly is unusual. There is no vagueness of outline, no maudlin sentimentality and no lack of insight. It is impossible after reading the essay on César Franck, for instance, to confuse the latter's personality with that of another musician, and equally impossible, we may add, to withhold your affection from him.

Charming as are the personal sketches, the prolog and epilog will

probably prove more instructive, the one on "The Appreciation of Music,"—it might almost as well be called the "Evolution of Muisc"—and the other on "The Meaning of Music." The prolog is scientific without being technical, and simple without being too elementary. You may differ with the author, in the matter of psychology, say, but you are never irritated by him. The epilog is a clear disquisition on the meaning of art in general and on the superiority of music over her sister arts. It is the most educative piece of work in the book. The book is valuable for its sympathetic spirit, its lucidity, and its sanity.

AN INGENUOUS AND STRENUOUS SAINT.

THE SONS OF FRANCIS. By Anne Macdonnell. Illustrated. Cloth, 6¼ x 9 in. 430 pp. Putnam's Sons, New York; J. M. Dent & Co., London.

GOOD Francis of Assisi, around whose name these "sons" are grouped, was by nature and inevitably a reckless adventurer and a knight-errant. He had been nurtured upon tales of chivalry and the songs of troubadours; his favorite pastime was the recovering of lost causes. He loved and glorified common things, and scorned the commonplace. "There was nothing reasonable or sensible about him." He refused to grow old or even middle-aged, and was always and only a boisterous, panting boy. His lusty nature was forever rejoicing, even in his own pains and slights and mockings.

The exaltation of Francis appears to have been not detached incidents, but flashes of his mystery. Instinctively, as well as by constraint of gratitude, he loved all things in nature—birds, and reptiles, and ravening wolves, "and stones and trees, and robber men," and lepers, and Lazarus and the rich man, with an ever-serviceable love. "Because he had eyes," says his scholar, "other men saw the world's fairness; because he had ears, other men heard its harmonies; because he became himself a part of the love of the world, and heard living hearts beat in beast, and bird, and tree, and stone, other men grew tenderer, and counted common things not vile." The author quotes the following passage from Vovagine in "The Golden Legend":

"He [St. Francis] went honorably upon the stones for the worship of Him who was called a stone. He gadryd the small wormes out of the wayes, by cause they should not be troden with the feete of them that passed by. He commanded in winter, to gyve honey unto the bees, that they might not perysshe for hunger. He called alle beestes hys brethren."

A most sweet and infantile Pantheist!

As for his attitude toward art and intellectual matters, he can not be said to have had any "attitude" at all. If he could spell out the Latin of his mass-book, he could do little more. As for erudition, he had none himself, and he distrusted the scholastic learning of his day. "Sometimes," says Macdonnell, "he speaks respectfully of theology, but his Knights of the Round Table had no use for the fine-spun theories of the schools." Tho he delighted in music, he was familiar only with Giles's flute.

Among the sons of Francis were several who interpreted his self-abnegation by grotesque exaggerations; and these are perhaps the most conspicuous: Jacopone, for example,—the mad Jacopone, "Laureate of Folly," and improvisatore, who sang to his congregation as often as he preached; and Junipero, a very buffoon in his exaltations, who found his joy "in making a fool of himself, to the glory of God"; and Giles the "ecstatic," cavalier, gentleman, basket-maker, water-carrier, tramp—often taken for a rogue or a madmen, once for a gamester, finding his occasional luxury in "some leisure for communion in a lonely place"; so that the country folk wondered if Paradise could even be worth all that it cost Brother Giles. The Pope might have said to Francis, "*O simplicem!* (*One mad!*)"

The story of these big babies is a fascinating story, and Mr. Macdonnell tells it in a way of his own, which is at once frank and sympathetic, lucid and alluring. The book is a quaintly comfortable book "to get away to,"—out of the sordid greeds, the brutal rattlings and roarings of these uncomfortable days.

THE DEEP DESIGNS OF PLUTOCRACY.

OUR BENEVOLENT FEUDALISM. By W. J. Ghent. Cloth, 4 x 7½ in., 202 pp. Paper, 50 cts. net. The Macmillan Company.

THIS book is an enlargement of an article which appeared in the New York *Independent*, and whose content is already familiar (see The Literary Digest, July 26, 1902).

The article was an ideal specimen of magazine journalism, and as such instantly recognized by the press of the country. It was startling, suggestive, and logical. But just as the weakness of Bellamy became apparent when he was led by the popularity of his novel to further elaborate his economic views, so it has been damaging to Mr. Ghent's theory to write it large in book form.

The argument of the article is not materially increased in the book. The advocates of free competition are cavilierly, tho cleverly, turned over to the psychologist as men whose brains are deluded with phantasms of an age forever past. Socialism is assumed to represent a possible order of society, but one that, because of the lukewarm conviction of the people, will never be obtained. So only the rule of plutocracy is left. This is shown to be benevolent from deep design. The conspiracy of capital, either conscious or unconscious, is seen in all our institutions. The fact that our rich philanthropists never endow socialistic movements, but rather give the sap of charity to the people in the form of hospitals and libraries, is considered so significant of a selfish purpose to allay discontent, that it is reiterated throughout the book.

Mr. Ghent also searches for a cause of the present output of worthless literature with the following result: "On all sides is poured forth a flood of print which deludes the hope or flatters the vanity of the mass, and which insures a state of mental subserviency—the necessary requisite of the economic subserviency imposed by the ruling class."

As a critic of present conditions, Mr. Ghent, while not original, is brilliant; as an investigator of causes and a prophet of results, he is startlingly original; but so weak in his conclusions that the reader has the uncomfortable feeling that he is being taken in by a clever burlesque.

HORSE SENSE IN A KINDLY FATHER.

LETTERS FROM A SELF-MADE MERCHANT TO HIS SON. By George Horace Lorimer. Cloth, 5 x 7½ in., 312 pp. Small, Maynard & Co.

A THOROUGHLY American book is this in theme, humor, and general characteristics. A self-made man is not always as admirable a product to the world at large as he is to himself; but "John Graham, head of the house of Graham & Co., pork packers in Chicago, familiarly known on 'Change as 'Old Gordon Graham,' is quite a model of what the self-made man should be to win eulogy from his fellow men. He writes twenty letters to his son, from the time that young man is in Harvard until he falls in love with a girl of whom his devoted parent thoroughly approves. Then Mr. John Graham concludes his course of epistolary instruction to his son with these words which are good commendation of himself both as father and adviser. "I'm going to raise your salary to seventy-five dollars a week when you marry Helen, and I'm going to quit writing these letters—I'm simply going to turn you over to her, and let her keep you in order. I'll bet she'll do a better job than I have."

GEORGE H. LORIMER.

Giving advice is usually a thankless as well as a hopeless function. Certainly few young men receive it gratefully or profitably from their sires unless their own judgment and experience indorse it. The best advice of the ages has crystallized into aphorisms, and if Mr. Graham's letters of counsel to his son had no merit except the nuggets of precept which any sensible man of forty can give to one who has not attained his majority, they would not be the amusing reading that they are. But Graham Père is philosophic, epigrammatic, and as fresh in his humor as David Harum. If he has not a single new view, he hasn't one that is not sound. His style is trenchantly simple. The keynote of the man and the father is in the opening sentence of the first letter, which is to Pierrepont as a Harvard freshman. He says: "Your ma got back safe this morning and she wants me to tell you not to overstudy, and I want to tell you to be sure not to understudy."

Apropos of education, and as an example of Mr. Graham's way of "putting a thing," there is this: "Some men learn the value of truth by having to do business with liars; and some by going to Sunday-school. Some men learn the cussedness of whisky by having a drunken father; and some by having a good mother. Some men get an education from other men and newspapers and public libraries; and some get it from professors and parchments—it doesn't make any special difference how you get a half-nelson on the right thing, just so you get it and freeze on to it."

Some of his remarks about women are exceedingly worthy: "I've had dealing with a good many of them, first and last, and it's been my experience that when they've got a weak case they add their sex to it and win; and that when they've got a strong case, they subtract their sex from it and deal with you harder than a man. They're simply bound to win either way. I don't like to play a game where I haven't any show."

Mr. Graham did not like to have women in business. "I like a woman's ways too much at home to care for them at the office. Instead of hiring women, I try to hire their husbands, and then I usually have them both working for me. There's nothing like a woman at home to spur on a man at the office."

This volume of letters may be of profit to many a young man just entering into business, especially if he has no father to guide him. What Mr. Graham doesn't know about the ups and downs of an employee's position is very little indeed. He knows what they feel and think, and why they do so, and he can substantiate a "Don't" with the most convincing and amiable reasons.

THOMAS B. REED, Editor-in-Chief

COMMENTS OF
PRESS and PEOPLE

Resolutions adopted by the *House of Representatives*: "A distinguished statesman, a lofty patriot, a cultured scholar and incisive writer, a unique orator, an unmatched debater, master of logic, wit and satire, the most famous of the world's parliamentarians, the great and representative citizen of the American Republic, has gone into history."

Senator Morgan, of Alabama—"There is none other like him. Because of his combined personal characteristics his death leaves a vacancy in the world that no other man can fill. He was a credit to the American people."

Secretary Moody—"I have never known any man for whom I had greater admiration than for Mr. Reed. No one has seemed to be his equal in pure intellectual force, which, joined to an undaunted courage, made him the great figure in our national life which he has been."

Senator Hoar, of Massachusetts—"Mr. Reed had a very tender and affectionate heart, as well as a very clear and cool head. He could state the point of a debate, in which the whole country seemed engaged, with wonderful felicity and persuasive power. His proverbs and shrewd bits of wisdom will have an enduring place in literature."

Robert P. Potter—"His wit was not only spontaneous and flashing, but was epigrammatic. No other man had so great a power of condensing a whole argument into a few striking words."

Philadelphia North American—"Honesty of purpose — relentless and unswerving — distinguished Thomas Brackett Reed. He towered oak-like above his contemporaries as a publicist and as a politician. He was a type of American citizenship that is our boast. In point of influence he was for some space 'the greatest living American.'"

The Dallas News—"Prominent among his labors since resigning the Speakership of the House of Representatives, has been the great literary enterprise that has resulted in MODERN ELOQUENCE. Though ably assisted by an editorial corps of eighteen well-known literati, the burden of the task rested on the Editor-in-Chief, and so well did he acquit himself that MODERN ELOQUENCE may be considered as one of the imperishable monuments to his many-sided genius."

Chicago Tribune—"The greatest mind ever known in America."

New York Journal of Commerce—"Those least in sympathy with his political views could hardly fail to find a keen intellectual pleasure in the skill with which he was able to disentangle the raveled skein of a confused debate, and, in the course of a ten-minutes' speech, extract from a mass of rather windy rhetoric all that could be deemed worthy of consideration."

Representative Hopkins, of Illinois—"Intellectually, I think Mr. Reed was the biggest man I ever knew."

Boston Post—"He was unquestionably one of the strongest men this generation has known in public life. He was the representative of the intellectually 'strenuous' as Theodore Roosevelt is of exuberant and strenuous physical vitality."

Ex-Speaker Reed's Monumental Achievement in Literature

"Modern Eloquence"

A Library of Best After-Dinner Speeches of the Century, Classic and Popular Lectures, Famous Addresses, Reminiscence, Repartee Illustration and Story. Ten Handsome Library Volumes.

When the Honorable Thomas B. Reed took up the self-assigned task of making a library which should honestly and adequately represent the best of the modern world's eloquence, he had voluntarily relinquished all political ambitions and was therefore in a better position than ever to view men and things in their proper light. His brilliant intellect was exercised not only for the present good, but also for that of future generations.

It is probable that in no work undertaken by Mr. Reed were his foresight, his judgment, his knowledge of affairs, so nobly used as in the preparation and personal editorship of MODERN ELOQUENCE. This unique work, complete in ten volumes, stands to-day an emblem of the man and his methods, a fitting monument to his efforts, and a precious legacy to posterity.

WHY SO UNIVERSALLY POPULAR?

What is the reason for the unprecedented sale of Ex-Speaker Reed's literary achievement, MODERN ELOQUENCE?

It may not have been brought to your attention before, but it is a fact that the first year's sale of MODERN ELOQUENCE has exceeded, by at least 5,000 sets, that of any other set of books published in the history of the World.

To what is this universal favor attributable? Is it the prestige of the Honorable Thomas B. Reed, the Editor-in-Chief, or his distinguished Associate Editors? Is it the valuable contents—the rich gift of 600 contributors—or the matchless beauty of the volumes?

Why are these books in the libraries of most of the prominent professional and business men of America and Europe?

Why is MODERN ELOQUENCE so popular in that all-important place—the home?

Why are scores of sets being sold in single villages of less than 1,000 inhabitants?

Why are so many ambitious young men among its subscribers?

The entire satisfaction which the work gives, and the enthusiasm of subscribers in recommending it, are largely responsible for the constantly increasing sale which is now taxing the capacity of the two largest binderies in New York. But why this manifestation of such unusual interest by subscribers?

Do you not wish to know more of this set of books?

Would you not like to see what substantial reasons exist for the sales of this work aggregating more than $1,000,000 a year?

Your interest in the broad subject of American literature will be sufficient to make these facts and questions of more than passing moment.

Upon receipt of the attached coupon indicating your interest, and giving address which will insure proper delivery, we will be pleased to send you a portfolio containing specimen pages and handsome illustrations (including a fine photogravure of Mr. Reed), and to submit a special proposition which will place in your possession a set of MODERN ELOQUENCE.

CURRENT POETRY.

"Later Lyrics."

By JOHN B. TABB.

(A new book of verses with the above title has just been issued by John Lane. We have had occasion to quote in this column of THE LITERARY DIGEST many pieces written by Father Tabb. The volume recently published is a pleasing example of the delicacy and grace which are the chief characteristics of this poet's work. From it we quote the following:)

ASPIRATION.

I envy not the sun
His lavish light;
But O to be the one
Pale orb of night,
In silence and alone
Communing with mine own!

I envy not the rain
That freshens all
The parching hill and plain;
But O the small
Night-dew drop now to be,
My noonday flower, for thee!

TO A STAR.

Am I the only child awake
Beneath thy midnight beams?
If so, for gentle Slumber's sake,
The brighter be their dreams!

Every Man Who Wishes to Shave

with ease and pleasure owes it to himself to be fully informed about the excellence and smooth-cutting quality of our ***MASTERPIECE RAZOR,*** which we sell in pairs for $5.00 or a single razor for $2.50, ready to put on the face, with round or square end. They are all a man can want; rightly named, stand the test on any beard, leave the skin like velvet.

suitable for a tender skin or wiry beard; shave with the greatest possible ease, possess every degree of comfort; carefully selected and absolutely necessary to a man who wants sterling quality. We sell razors exclusively; we make them, we grind them, we hone them, put them in cutting order ready for use—that has been our specialty. We have no agents, we deliver free, we sell direct to the consumer, we warrant every razor to be precisely what we say it is, and have but one price. Our pamphlet, "All About Good Razors," mailed anywhere free.

Burpee's Seeds Grow

Probably you have heard of this famous motto for many years but have *you* proved for yourself that Burpee's Seeds are the

BEST that Grow?

If not, write to-day for Burpee's Farm Annual for 1903—so well-known as "The Leading American Seed Catalogue." It is an elegant book of 184 pages, with beautiful colored plates and will be sent **FREE to planters** everywhere; —to others upon receipt of 10 cents, which is less than cost per copy in quarter million editions. **Write TO-DAY. Do not delay!** It is sufficient to address simply

BURPEE, Philadelphia

But shouldst thou, traveling the deep,
The silent angel see
That puts the little ones to sleep,
Bright star, remember me.

THE WIND.

Now, in his joy,
A whistling Boy;
Now, somber and defiant,
His every breath
A threat of death,
A blind, demented Giant.

AUTUMN WIND.

It sings, and every flower and weed
Bestows a tributary seed
Of life again to live.
I listen, but a sterile tear,
Alas! no recompense to bear!
Is all I have to give.

ICE.

I once was water, and again
My former self shall be,
No keep of Cold
May captives hold
A spirit of the Sea.
Beyond this prison wall of Pain,
So echoless and chill,
Despite his guardsmen Frost and Snow,
Anon through Dimple-gate I go,
To wander where I will.

TWILIGHT.

Like Ruth, she follows when the reaper Day
Lets fall the slender shadows in her way;
Then—winnowing the darkness—home again,
She counts her golden grain.

PERSONALS.

Homeopathy and Sausages.—The following anecdote of Heinrich Heine is reprinted from Ughetti's "Physician and Patient," by the New York *Staats-Zeitung*.

Heine, returning from a tour in the south of France, met in Lyons a German violinist of his acquaintance who, on parting, entrusted to his care a rather peculiar present for a mutual friend, a homeopathic physician in Paris. The gift was a large Lyonnaise "salami" or sausage. But the way was long, the post-chaise slow, and ennui and hunger the only traveling companions of Heine and his wife; and so it came to pass that they tasted of the sausage, which they liked so

"Macey" SECTIONAL BOOKCASE {Patented—Other Patents Pending}

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL—There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval," subject to return at our expense if not found at our **factory price** 40 to 100 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal the highest award at both the Pan-American and Charleston Expositions.

CAUTION—**Do not be misled** by the deceiving advertisements of **imitators. No other** sectional bookcase has a **self-receding door** that is **absolutely non-binding** and **automatic**—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered a **sweeping decision in our favor.**

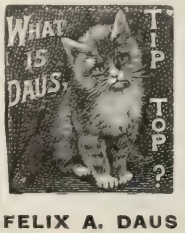
243-245 Ryerson St., Brooklyn, N. Y.

WANTED—Educated men of business ability to represent us. Weekly salary, or definite time guaranty with commission privileges paid. Give age, qualifications, references. Dodd, Mead & Company, New York.



TO PROVE THAT EVERY BUSINESS OFFICE

Needs Daus' Tip Top Duplicator, a complete apparatus will be sent (without deposit) on 10 days' trial. Price, complete, $7.50, subject to a special discount of 33⅓% or $5 *net*—if satisfactory. It is the best, simplest, and cheapest device for making **100 copies from Pen-written** and **50 copies from Type-written original.** No mechanism to get out of order, no washing, no press, no printers' ink. The product of 22 years' experience in Duplicators.

Send for circulars and samples of work.

FELIX A. DAUS DUPLICATOR CO., Daus Building, 111 John Street, NEW YORK

well that little was left of it when they reached Paris. The remnant was too small to send as a present, and yet too large, perhaps, to part with without reluctance, so Heine shaved off a thin and small slice, like a section for the microscope, wrapped it carefully in vellum, and forwarded it to the physician with the following note:

"Dear Doctor: It appears from your scientific investigations that the millionth part of a grain of certain substances is capable of producing very great effects. I therefore beg you to accept the enclosed millionth part of a Lyons salami which — gave me for you. If there is truth in homeopathy, this fragment will do you as much good as the whole sausage."—*Translation made for* THE LITERARY DIGEST.

Senator Tillman Informs a Reporter.—Just before the closing of the last session of Congress, says the New York *Times*, Senator Benjamin R. Tillman was stopped by a reporter, who informed the Senator that he represented a newspaper which was about to publish an article on the favorite authors and favorite recreations of the members of the Senate. Senator Tillman hesitated for a moment and said:

Every one in Washington knows my favorite recreation—having fun with McLaurin. My favorite book is 'If Christ Came to Congress.'"

The reporter thanked the Senator, and then asked if the latter could tell where Senator Depew might be found.

"Why," Senator Tillman replied, "Chauncey is in Europe. But," he added, in a look in which malice and humor struggled for the mastery, "I can give you the information you seek, for I know Senator Depew's habits and tastes thoroughly. His favorite recreation is playing pinochle, and his favorite author is E. P. Roe."

"Can you tell me his favorite work?"

"Certainly," was the reply, delivered in the blandest of tones. "Senator Depew's favorite work is 'The Opening of a Chestnut Burr.'"

LANGUAGE PHONE METHOD
Combined with
The Rosenthal Common Sense Method of Practical Linguistry
The Latest and Best Work of Dr. Richard S. Rosenthal

No longer unnecessary memorizing or weary hours spent over verbs, declensions, elaborate rules, and other waste of time over antiquated methods. It requires but a few minutes' practice several times a day at spare moments to acquire a thorough mastery of conversational French, German, or Spanish. College professors all over this and other countries, and the press generally, endorse this perfect and natural system of teaching languages.

Send for testimonials, booklet, and letter telling all about this 20th-century scientific marvel. A postal will do.

INTERNATIONAL COLLEGE OF LANGUAGES, 18 Park Row, New York

MARIE JEANNE DU BARRY

SPECIAL OFFER

French Court Memoirs

FROM Henry of Navarre to and through the reign of Du Barry (whose personal memoirs occupy four of the volumes) this set of books covers the back-stairs-and-kitchen-gossip side of French Court history, much as Guizot covers its outward manifestations. And where so much was set afoot with secret and obscure design, where so little was open and above-board, where boudoir councils dictated treaties and the wounded vanity of favorites instigated campaigns, where a low-born woman's caprice could send forth the torch to lay waste the half of Europe, it is impossible to comprehend the curious events of history without knowing the intimate details of those underlying causes. It is a characteristic of these Memoirs that in dealing with the peculiar affairs which are associated in everyone's mind with French Court history of the period, their very simplicity and frankness purges them of all offense.

The undersigned controls a few sets of these personal French Court Memoirs (translated with fidelity into English) which can be secured, in complete sets only, at a very low price and on small monthly payments, if preferred, provided application be made at once.

These few copies are from a limited numbered and registered *de luxe* edition, bound up to sell at $10 a volume. But through a binder's error the leather of the volumes is imperfectly matched; consequently it becomes advisable to dispose of them outside of regular subscription channels, and at a price about equal to the value of the unbound sheets.

A booklet fully describing the edition will be sent, together with price particulars, if you sign and send the inquiry slip below *at once.* Address

J. B. Chadbourne, 11 East 16th St., New York

"Facts About the South"

By Richard H. Edmonds

Editor Manufacturers Record, Baltimore, Md.

Gen. Stephen D. Lee, the distinguished Confederate General, now president of the Mississippi Agricultural and Mechanical College, in a letter referring to the pamphlet "Facts About the South," says:

"I regard your pamphlet as the most condensed presentation of the condition of the South industrially before and since the war I have ever seen. By consulting the census of 1860, it brought out the fact that at the time the war began the South as a section was the richest and most progressive part of the Union; that its white population (one-fourth of the entire white population of the Union) was the most enterprising, progressive and wealth-developing part of the entire population; that at that time the assessed value of the entire property of the United States was $12,000,000,000, and that the South had an assessed value of property of $5,200,000,000, or 44 per cent. of the entire amount; that, although she had for many years put most of her capital in agriculture, still at that time she was progressing more rapidly than any other section of the Union in the manufacture of iron, coal, lumber, building, railroading, manufacturing generally, than almost any other section, showing that in politics and in every line where pluck, push and intelligence were required she was fully abreast with any other section of the country; that the war almost destroyed her, and that the losses incident to the war and to the reconstruction period amounted in assessed value to $2,400,000,000 in property, etc.

"The pamphlet shows that from this ruin, as soon as she got control of her own affairs, she made the most marvelous progress in wealth, enterprise and accumulation of property of any people in the same length of time. Your facile presentation of statistics is almost incredible in this direction, and brings out the fact that the resources of the South in agriculture, in her iron and coal beds, in her development of manufactures, in her lumber production and in every other line, shows the possibility of wealth development which puts the South far ahead of almost any other equal section in the world. The wealth-producing elements are almost in juxtaposition and are found in inexhaustible quantities.

"I repeat, I consider your pamphlet the most important issued since the war in demonstrating by indisputable facts the condition of the South before, during and since the war, and removing false and untrue impressions as to the South and her people, showing also her marvelous recuperation from ruin and her present wonderful prosperity.

"Your pamphlet should be put in the hands of all leading business men, bankers and others in the South, the North, and generally distributed in every direction. It should be scattered broadcast. It was a revelation to me, and I have used its contents more freely in the interest of the South than any publication in my reach. It is the best pamphlet to induce immigration and a flow of money for investment in the South."

PRICE 10 CENTS A COPY.

Published by Manufacturers Record Pub. Co., Baltimore, Md. The Manufacturers Record, the exponent of the industrial railroad and financial interests of the South, is the most widely quoted industrial paper in the world.

789: "Better than it seems to the casual observer"—M. W. H.; "Rather difficult'—M. M.; "Has some good points and some serious faults"—G. D.; "A tough proposition. Has more 'tries' than any problem I have seen" F. S. F.; "Difficultness seems to be the main feature. It is like picking the lock of an empty jewel-casket"—J. C. J. W.

In addition to those reported, O. C. P. got 779, 786; W. G. H., 783–786; R. G. Eyrich, New Orleans, 784.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box.

THE CITY OF NEW YORK,
DEPARTMENT OF TAXES AND ASSESSMENTS,
MAIN OFFICE, BOROUGH OF MANHATTAN,
NO. 280 BROADWAY, STEWART BUILDING.

January 12, 1903.

NOTICE IS HEREBY GIVEN, AS REQUIRED by the Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday, when all applications must be made between 10 A. M. and 12 noon.

JAMES L. WELLS, President,
WILLIAM S. COGSWELL, GEORGE J. GILLESPIE,
SAMUEL STRASBOURGER, RUFUS L. SCOTT,
Commissioners of Taxes and Assessments.

Chimney with nobody's name on it.

Who's responsible for it?

Not MACBETH.

If you'll send your address, I'll send you the Index to Lamps and their Chimneys, to tell you what number to get for your lamp.

MACBETH, Pittsburgh.

BUFFALO LITHIA WATER

What the Medical Profession thinks of it as a Remedy in Bright's Disease, Albuminuria, Calculi, Gout, Rheumatism, and all Uric Acid Troubles. "The Most Valuable Mineral Water in Use."

Dr. Graeme M. Hammond, *of New York, Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School and Hospital:* "In all cases of BRIGHT'S DISEASE I have found **BUFFALO LITHIA WATER** of the greatest service in increasing the quantity of urine and in ELIMINATING the ALBUMEN. In GOUT and RHEUMATISM it is highly beneficial. I have long regarded **BUFFALO LITHIA WATER** as the most valuable mineral water in use."

Dr. William Doughty, *former Professor of Materia Medica and Therapeutics, Medical College of Georgia, Augusta:* "**BUFFALO LITHIA WATER** is the only reliable treatment known to me for the permanent relief of gravel, and the antecedent conditions that determine it."

Dr. J. T. LeBlanchard, *Professor Montreal Clinic, SM., SN., V. U.:* "I have used **BUFFALO LITHIA WATER** in most obstinate cases of Chronic Inflammation of the Bladder, in Stone of the Bladder, in Uric Acid Gravel, with the most efficacious results."

Dr. P. B. Barringer, *Chairman of Faculty and Professor of Physiology, University of Virginia.:* "After an experience of more than twenty years, I have no hesitancy in stating that for prompt results I have found nothing to compare with **BUFFALO LITHIA WATER** in preventing Uric Acid deposits in the body."

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally.

Testimonials which defy all imputation or questions sent to any address.

PROPRIETOR BUFFALO LITHIA SPRINGS, VIRGINIA.

THIN WOMEN

who wish to increase their weight thus perfecting symmetry of person, should read Dr. Rivard's Treatise on the Causes of Thinness or Emaciation, the Prevention and Cure of this distressing condition, and how the weight can be increased fifty pounds quickly, surely, safely at very moderate cost. Booklet sent to any address in plain, sealed envelope for 6 cents postage.

VOL. XXVI., No. 5 NEW YORK, JANUARY 31, 1903. WHOLE NUMBER, 667

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

FEELINGS AROUSED BY THE SAN CARLOS BOMBARDMENT.

THE great majority of the American press voice the feeling that the German bombardment of the fort and village of San Carlos, on the Venezuelan coast, was unjustified and untimely. The Baltimore *American* calls it "wantonly reckless" and "outrageous," and the Pittsburg *Gazette* calls it "brutal and unwarranted." It showed "a brutal indifference to the claims of humanity and to the good opinion of the civilized world," in the view of the Detroit *Journal*; and it "has managed in a day," so the Philadelphia *Press* declares, "to destroy whatever effect in public approval and popular good feeling Prince Henry won in six weeks of arduous effort." The Philadelphia *North American* is beginning to believe Lord Beresford's declaration that Germany is really testing the Monroe Doctrine, and the Columbus *Citizen* begins to suspect that "the Berlin Government is bent on the destruction of the Venezuelan republic." Says the Philadelphia *Evening Telegraph*: "The course pursued by Germany, taken altogether, is gradually arousing a sentiment in this country which is akin to that which was created by the destruction of the *Maine* in the harbor of Havana barely four years ago. If the Germans desire to reawaken the American people as they were aroused by that terrible tragedy, they are going about the business in a promising way."

Various explanations of the bombardment have been made. One is that the German cruiser *Panther* wanted to enter the lagoon which the fort guarded, to look for a Venezuelan gunboat hiding there, and another is that trade between Venezuela and Colombia was being carried on through the lagoon and adjoining waters, which the blockading fleet determined to stop. In either of these cases, say the American critics, the Germans would have done well to have considered the results of their action on American feeling, and would also have done well to remember that the whole matter is in process of negotiation, and that such a bombardment might seriously interfere with a peaceful settlement. The New York *Times* says, for example:

"Worse international manners than Germany has exhibited from the beginning of this wretched Venezuela business have rarely come under the observation of civilized men. . . . Venezuela's peace commissioner was on his way to Washington, was almost at his destination, when the *Panther* opened fire. The Venezuelan Government had assented to a plan of peaceful settlement. The allies in this disgraceful war had assented to it. The preliminary negotiations were about to begin at Washington, in quarters provided and under arrangements made by our Government. This is the moment chosen by the commander of a German gunboat to renew hostilities. Beaten off in his first attempt, he summons other German gunboats to his aid and opens a furious bombardment.

"Rudeness is not dignity, says Chancellor von Bülow. That these proceedings in the Caribbean are either dignified or decent

MRS. BOWEN, PRES. CASTRO, MRS. CASTRO, MR. BOWEN (U. S. Minister).

on the part of the German empire can not be successfully maintained by anybody on the basis of present information. The officials of the German Foreign Office predict that the incident will 'renew anti-German agitation in the United States.' Agitation, perhaps not; but indignation, certainly. We are accustomed to show resentment when occasion makes its concealment impossible.

"The British Government is in the dark about this bombardment, and the English people regard it as they have regarded the entire transaction in which Germany has entangled them—with disgust.

"Unless it be officially explained and disavowed from Berlin, this wanton renewal of hostilities at a time when peace negotiations, favored and aided by us, are in progress will wear in the eyes of the world the aspect of an affront to our Government. We are in a position to ask what it means."

The Boston *Herald*, however, fails to find that "the mind of the average American has been particularly ruffled by the various events that have transpired," and remarks that "the intense excitement, said by European newspapers to prevail in the United States, is a state of mind much more apparent to observers 3,000 miles or more away than it is to those living on the

spot." The Philadelphia *Record* accepts the explanation that the reduction of Fort San Carlos was necessary to the complete blockade of Maracaibo, as mentioned above. It says:

"The action of the German captains from the viewpoint of a naval commander on blockade duty was entirely regular. A blockade must be effectively maintained, else it becomes invalid. The captains were bound either to make the isolation of Maracaibo sure or abandon the attempt to keep the port closed. President Castro would have been quick to avail himself of any flaw to challenge the legality of the blockade. As to the negotiations for a settlement, they do not operate as a stay of hostilities; that is specifically declared by the treaty of The Hague, which contains the latest expression of the law of nations on the subject. The wisdom of the proceedings at Maracaibo, however, is more than doubtful. Even assuming that the naval commanders had no discretion in the matter and that it was their duty to maintain a close blockade, it would have been good policy on the part of the Government at Berlin under existing circumstances to instruct its naval representatives not to go to the extreme limit in the exercise of the rights of war."

THE PANAMA CANAL TREATY.

SPEEDY ratification is expected for the treaty signed in Washington last week by Secretary Hay and Dr. Herran, Colombia's representative, providing the terms for the construction of the Panama Canal. By this treaty the United States leases a strip of land six miles wide across the isthmus for one hundred years, with the privilege of renewing the lease for another century. Colombia is to receive $10,000,000 down for the right to build the canal, the transfer of her interest in the Panama Railroad, the lease of the territory, and for all privileges granted during the first ten years; and is to receive $250,000 a year for the eleventh and all subsequent years. The French company, it will be recalled, is to receive $40,000,000 for its charter and property and the work it has done on the canal. In addition to these payments, it is estimated that the canal will cost about $150,000,000, perhaps much more.

The Boston *Transcript* voices the sentiment of the great majority of the American press in the following comment:

"The American public will experience a sense of profound satisfaction over the favorable turn that this matter has taken. The Panama route has appealed from the outset to all unprejudiced minds as so incomparably superior to any other that was possible, that to have been balked when negotiations were so far advanced and compelled to adopt an inferior alternative would have been not merely a national but an international misfortune. A great deal of underhand work has undoubtedly been done in the hope of accomplishing the defeat of this measure. Signs of it may have been visible at a number of points, and had it succeeded it would have involved the country in humiliation as well as in loss. Any other plan, even if it could have been worked out, would have taken a good deal more time and cost a good deal more money, only to render an inferior service when consummated.

"Since the canal commission pronounced so strongly in favor of the Panama scheme, and Congress, on the strength of its recommendation and its own more rational consideration of the practical features of this great work, invested the President with authority to proceed to the acquisition of the French company's property and the completion, there has been little discussion of the comparative merits of that route and any other. The country was satisfied, convinced, and even pleased with the outcome. The fire of the opposition was effectually drawn, and the only warfare since maintained against the enterprise has been of a guerilla character only. . . . . .

"We have now reached a point where no steps backward need be taken. The future history of this enterprise should be one of uninterrupted progress. The American people want the canal and have long wanted it. Now that the way is open to build it on the best terms and under the best conditions, we have an opportunity that is not likely to knock twice."

An opinion that is interesting because almost solitary is expressed in the following paragraphs from the New York *Herald:*

"In defiance of popular sentiment and common sense President Roosevelt has rejected the American canal across the isthmus and elected to take over the discredited scheme for completing the ditch of death in Panama.

"It is a stupendous blunder. *Herald* readers are familiar with the fatal objections to the Panama route, climatic, engineering, and technical, capped by the fact that the climate is deadly, the canal unavailable for sailing-vessels, and the steaming distance between our North Atlantic and North Pacific ports is three days longer than by the Nicaragua route.

"By the terms of the act passed by Congress last June the President, it is true, was directed to give preference to the Panama route, provided a good title could be obtained to the property of the French speculators and a satisfactory treaty negotiated with Colombia, giving us perpetual control over a six-mile strip of territory from sea to sea. How can the treaty sent to the Senate yesterday be regarded as satisfactory?

"While the text is not yet made public its general provisions are known, and they are sufficient to condemn it, while over and above there lies the impressive fact that the existing Colombia authorities are not competent to make a binding treaty. The country has long been in a state of political upheaval, the treasury is empty, and no congress has met for three years. It is proposed to call one to ratify the action of the Executive, but this body can not be created and brought together until after our own Congress shall have departed from Washington.

"Therefore if the Senate ratifies the treaty it must be sent to take its chances, with all that this phrase implies, in that turbulent land. If it should be rejected, in what a humiliating position would the United States be placed—and Señor Concha,

recently Colombian Minister at Washington, has gone home proclaiming that he will do all he can to prevent his people from accepting the treaty. The Panama scheme, nurtured in scandal, seems destined to remain tainted until the end."

THE SENATORIAL ELECTIONS.

COLORADO, Delaware, and Utah have furnished the chief political subjects for newspaper comment during the past few days, in their senatorial elections; and the general opinion appears to be that the situations in Colorado and Delaware would have been prevented by the popular election of Senators, a reform that seems to be favored by nearly everybody outside of the Senate itself. Utah, as expected, has replaced Senator Joseph L. Rawlins (Dem.) with Reed Smoot (Rep.), whose portrait, with an article on his case, appeared in these columns last week. Delaware is still without Senators; Mr. Addicks lacks six votes of election, and has apparently little prospect of getting them. In Colorado, one party being in control of the House and the other of the Senate, the election started with an effort by each party to unseat enough opponents to enable it to carry the election. Finally, the Democrats held a "rump" session, composed of Democrats, and reelected Mr. Teller. The election, under the circumstances, will, it is thought, be disputed.

The papers of each party in Colorado arraign the members of the other party as evil incarnate. The Denver *Republican* (Rep.) reports that the Democrats who were unseated, and some who were not, obtained their seats "by the most colossal, audacious, and transparent frauds that ever disgraced an election in Colorado"; but it refers to the Democratic attempt to unseat Republicans as "a high-handed act of usurpation and oppression for a parallel to which one must look to those periods of the world's history when law was set aside that unscrupulous power might prevail." It remarks further:

"No Republican representative with an honest drop of blood in his veins can fail to resent this infamous attempt on the part of the Democratic majority in the Senate, which owes its own official existence to the very same frauds it is endeavoring to protect in the House—to prevent the decision of the House contests on their merits regardless of all considerations.

"Coercion is absolutely incompatible with freedom, and any Republican who helps, either directly or indirectly, in making this Democratic bluff good, by failing to aid in the unseating of the Democratic representatives whose title to office rests upon fraud, must wear the collar of the opposition and must be regarded as false to his own party."

Turning to the Denver *News* (Dem.), one learns what villains the other fellows are:

"Revolution and disregard of the law and the Constitution marked the proceedings of the Republicans in both Houses yesterday. In the Senate Lieutenant-Governor Haggott and the minority of eleven Republicans went through a ridiculous imitation of unseating eight Democratic senators. The lieutenant-governor in the chair refused to entertain motions made by Democrats, declared carried motions made by Republicans and which were voted for by only eleven of the thirty-five senators.

"After the pretended unseating of Democrats had been gone through with, Senator Adams asked the lieutenant-governor if he declined to entertain a motion by a Democratic senator, and on his reply that he did so decline, Senator Adams took the gavel and the session proceeded with its business. The Republican senators present declined to vote on any motion, and all that were made were carried by the unanimous vote of the Democratic majority. The Senate then unseated Senators Dick and McDonald, thus restoring a Democratic majority of two on joint ballot of the two houses.

"No more disgraceful proceeding than that of the lieutenant-governor ever was seen in a deliberative assembly. His actions were utterly absurd, and the course which he followed could have been outlined only by desperate and conscienceless men.

FRANCIS G. NEWLANDS (DEM.), of Nevada.

NEW DEMOCRATIC SENATORS.

A FAIR PRICE, BUT NO TAX TO TYRANNY.
—*The Chicago News.*

In the lieutenant-governor's room was gathered a gang of toughs and thugs, brought there for the purpose of entering the senate chamber and forcibly ejecting Democratic senators and the officers of the senate. Fortunately the precaution had been taken to secure the presence of a number of policemen in plain clothes in the corridors of the building. When the leaders of the thugs looked them over the plan to use physical force was abandoned.

"The majority of the senate remained in session and declined to adjourn. The lieutenant-governor then sent a message to Governor Peabody, asking him to call out the militia and break the doors and adjourn the senate by force.

"When it is remembered that during all these proceedings there were present in the senate twenty-four duly elected and seated Democratic senators and only eleven Republican senators, the anarchical character of the program which Haggott, under orders from Walcott, attempted to carry out will be realized. If such a thing were possible in this State, then might it be said that law and order indeed had taken their flight and that Colorado had been given over to the rule of creatures of the slums, gathered to override constitutional government by brute force. The proper punishment for such violation of law and decency would be a lengthy term in the penitentiary for all concerned in it."

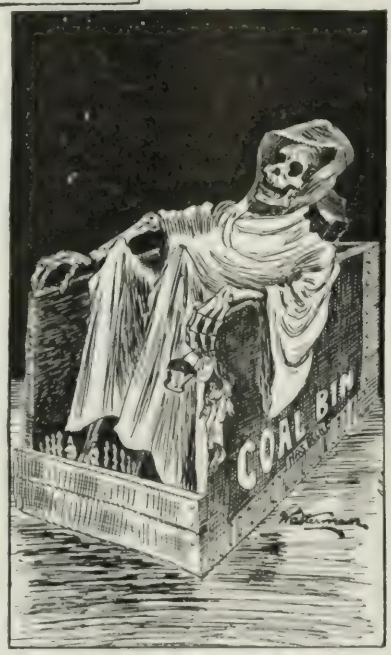
Many new faces will appear in the next Senate as a result of the recent elections. Ex-Governor James P. Clarke (Dem.), of Arkansas, will succeed James K. Jones, chairman of the Democratic National committee; ex-Governor William J. Stone (Dem.), of Missouri, will succeed George Graham Vest (Dem.); Francis G. Newlands (Dem.) will succeed William M. Stewart from Nevada; Albert J. Hopkins (Rep.) will succeed William E. Mason (Rep.) from Illinois; Chester I. Long (Rep.) will succeed W. A. Harris (Dem.) from Kansas; Judge Weldon Heyburn (Rep.) will succeed Henry Heitfeld (Dem.) from Idaho, and Senators Alger, of Michigan, and Kittridge, of South Dakota, who have been filling unexpired terms by gubernatorial appointment, have been regularly elected.

ANTHRACITE coal is cut \$1 a ton in New York. That seems cheap enough, but the New Yorkers are looking for the price to be \$1, they can't buy any for less than \$10.—*The Chicago News.*

SOUTH DAKOTA DIVORCES AGAIN.

A SUPREME COURT decision that, in the opinion of the Chicago *Journal*, "will bring consternation to thousands of people who have resorted to the Western courts to obtain easy divorces," was handed down on the 19th, and has stirred up a good deal of remark. About 320,000 divorces have been granted in this country in the last twenty years, the New York *World* informs us, and the number is increasing with alarming rapidity. South Dakota has the reputation of being the easiest place in the country for obtaining the severance of the marriage tie, and it is a South Dakota divorce that the Supreme Court declares invalid. The case is stated as follows by the Brooklyn *Times*:

"The Supreme Court's most recent decision on the Dakota divorce question is that a State may regulate the grounds for divorce of its citizens. The decision is by a divided court—five to three—Justices Brewer, Shiras, and Peckham dissenting. Justice Holmes took no part in the case, having delivered the opinion in the case when it was decided in the supreme court of Massachusetts. Charles H. Andrews, of Boston, by will devised certain property to the wife of his son, Charles S. Andrews, and Kate Jackson Andrews, from whom the latter had obtained a divorce in South Dakota, brought suit for the property, on the ground that that divorce and his subsequent marriage to Annie Andrews were invalid. This claim was sustained by the probate court of Suffolk county and the supreme court of Massachusetts, which held that the divorce was of no force and effect in the Commonwealth of Massachusetts. Justice White, in delivering the opinion of the Supreme Court of the United States, said there was nothing in the Constitution of the United States which deprived the State of Massachusetts of the power to legislate for its own citizens. It being shown that Andrews' domicile was in Massachusetts, and his residence in South Dakota a fraud made for the express purpose of obtaining the divorce, it was not necessary that the State of Massachusetts should give 'faith and credit' to the decree granted by the South Dakota court, and the law of Massachusetts providing against just such cases is upheld."



PRESENT OCCUPANT OF THE COAL BIN.
—*The Ohio State Journal.*

STRIKERS ARE STILL DENIED WORK.—MITCHELL.
—*The Philadelphia North American.*

COAL FAMINE SKETCHES.

The Chicago *Record-Herald* makes the following comment on this decision:

"In a question of this kind vitally affecting the basis of orderly and organized society, the people are not disposed to patiently tolerate any quibbling over legal technicalities. A Massachusetts divorcee may have become legally a 'citizen of South Dakota' under the law of that State defining citizenship by residing there six months, but the law of South Dakota can not destroy his citizenship in Massachusetts, especially when he has returned to that State to reside. Under the demoralizing and disintegrating complications growing out of such scandalous State enactments, which threaten the fabric of decent and well-ordered society, the sentiment in favor of a national divorce law is rapidly gathering irresistible force."

The Springfield *Republican* says:

"This decision of the United States Supreme Court is of great importance in the way of breaking down the easy-divorce machinery of certain of the States. No citizen of any other State, going to South Dakota or elsewhere for a divorce, can be sure that he stands divorced when he returns to the State of his regular domicile with a decree in his pocket. He is likely to find himself as much married as ever, and to find the courts of his own State standing by the partner in his earlier marriage in the contention that he is still legally bound thereto and responsible. Such a decision accordingly tends to injure very materially the divorce industry of such States as South Dakota, and remove the obstacles in the way of voluntary action on the part of all the States in securing uniformity of marriage and divorce laws. This movement has been making good progress in recent years and must receive a decided stimulus from this decision."

TAXING FRANCHISES IN NEW YORK STATE.

WHAT the Baltimore *News* calls "an outrage on the people, as well as an act of knavery," has come to light in the litigation over the franchise taxation law in New York State. When the law was passed, four years ago, classifying franchises with real estate for purposes of taxation, the corporations affected by it persuaded Governor Roosevelt to call an extra session of the legislature to amend it so as to put the power of assessing the franchises into the hands of the state tax commission. No sooner was this done, and the assessments made, than the same corporations resisted payment on the ground that assessment by the state commission was unconstitutional; and their contention was upheld last week by a decision of the appellate division of the state supreme court of the third department, sitting in Albany. "In every-day life, this sort of thing would be called a swindle," says the paper quoted above, and the New York *Tribune* observes that the victory of the corporations "is one which reflects gravely upon their honor and good faith in dealing with the people." The case is to be carried to the court of appeals, and perhaps to the United States Supreme Court; but the important feature of the situation is the evident determination of the newspapers and public men of the State that the privileged corporations shall not escape the taxation of their franchises. Controller Grout, of New York city, claims that the decision does not affect the principle of the law, but only the method of assessment; Governor Odell wants to reach the corporations in another way, by a tax on their gross receipts, and the original Ford bill, without the unconstitutional amendment, has been again introduced into the legislature. The newspapers seem to be pretty nearly unanimous in the opinion that the corporations should be brought to book in some manner. "The public mind," says the New York *Herald*, "is in no mood to tolerate or countenance legislative action that will enable these privileged corporations to escape just taxation on immensely valuable franchises which they have contrived to get for a mere song." And the New York *Press* says:

"The corporations which have set out to rob the public by robbing the tax treasury are due now to pay the full pound of flesh due the public. If it is not paid it will be nobody's fault but the legislature's. And unless we have greatly mistaken the temper of the public and its determination to make the franchise tax a fixed principle of government, not to be tampered with by anybody, every member of the legislature who flies in the face of public opinion on this question and every servant of the people whatsoever will take his official life in his hands. We have come to a point in the development of representative institutions where it must be determined whether government is solely a commercial asset of lobby agents and corporation corruptionists or whether it is the instrument of the sovereign will of the American people. No man whose brain is not impenetrable by

UNLOADING ON THE PUBLIC, AS USUAL.
—*The New York Herald.*

mental light can doubt for a fraction of a second how the issue will be determined. By their own invention the franchise tax swindlers have hanged themselves at the end of their own tether. The franchise tax, backed by the voters of both great parties, will not down. It is beyond the power of any man or any influence to do for the corporations the things which they have conspired, or to save them from still other things which they have brought upon themselves in their arrogance, which has been as blind as it is unconscionable."

CHILD LABOR IN NEW YORK CITY.

THERE has been a great outcry of late in the North against child labor in the South, particularly in the Southern cotton mills; but it now appears, according to the New York *Tribune*, "that we need to turn our attention homeward." It has been found that about 16,000 children under fourteen years are employed in New York City in spite of the law, and it has been claimed by workers among the poor that more child labor exists in New York than in all the States of the South combined, which *The Tribune* calls "a remarkable revelation." An independent body, known as the Child Labor Committee of New York, has investigated the matter, and in its report declares that "grave defects exist in the present Child Labor and Compulsory Education law, to the great injury of the rising generation and of society at large." In spite of the effective work of the State factory inspectors and the city board of health in the enforcement of the present law, children are employed before the educational test has been complied with, and they are employed under the legal age of fourteen. The committee indorses the position taken by Governor Odell, in his message to the legislature recommending the amending of the child-labor laws, and has already entered on its campaign for legislation on the subject. The committee in its report cites some phrases of the law and shows the defects "due to the loose phraseology." The law says that children shall not be employed under fourteen, but this allows them to work "if they are accompanied by a parent or elder brother or sister who is paid for the child's work (the

child's name not appearing on the pay-roll)." The ten-hour law for children under fourteen "is made difficult and almost impossible of enforcement by a clause which allows any day to be lengthened on condition that a shorter day is made of Saturday." The law allows vacation work for children twelve years old, but the committee states that "only with great difficulty can children who work during vacation be taken out of the many factories and stores in which they are widely distributed and returned to school." The report adds:

"The statutory definition of those occupations which constitute factory or mercantile work has several times been amended, but is still incomplete. Office boys, messenger, delivery, and express boys, etc., who have been protected by similar laws in other States, do not receive that protection in New York. If, in addition to a better definition in the mercantile and factory laws, the statutes were extended so as to deal with street work, *all children working for wages should be protected by law*. This is most desirable as a reenforcement of the Compulsory Education law. A measure for regulating street trades was proposed and powerfully supported under the last Administration.

"The Compulsory Education law requires of children twelve years of age merely that they should attend school eighty days. The child-labor laws say that the children shall not work until they are fourteen years old. This lack of agreement between the two laws is perhaps the most serious obstacle to the proper enforcement of either. The inspectors of this and other States are agreed that the enactment and proper enforcement of such a Compulsory Education law as that now being urged by the Association of Superintendents of Education is at the same time the most important measure for the restriction of child labor."

MRS. IDA HUSTED HARPER,

Who thinks that "quality, not quantity, is imperatively needed" in the modern family.

The work of investigation is being continued under the direction of Miss Helen Marot, says *Charities* (New York), and one of the "most striking features" has been the "large number of children found beyond the pale of the present law." These include the newsboys, bootblacks, pedlers, office boys, messengers, and telegraph boys and those who deliver for the express companies. There are children who deliver milk from four in the morning until the opening of school, and others who work before and after school. Twenty-eight of the newsboys questioned made less than $1 a week. Out of one hundred newsboys, sixty-seven were twelve years old or under. Those of the boys who go to school sell their papers after half-past three in the afternoon until as late as midnight, and some later. The condition among the delivery boys seems to be worse. The committee investigated the case of an express company that employed children of eleven years and upward from seven in the morning until about nine and ten at night. On Friday and Saturday nights they work until midnight, and, if all the packages are not delivered at midnight on Saturday, the children have to work on Sunday.

One of the investigators, Mr. Poole, of the University Settlement, as quoted in *Charities*, found near Newspaper Row over one hundred boys sleeping in the streets. "Other hundreds sleep in stables, condemned buildings, back-rooms of low saloons, and halls of tenements. This sleep they piece out at intervals." He found boys between the ages of twelve and sixteen working in the Chinese quarter of the city, cooking opium pills and running errands for the white women who frequent these dives, from 8 P.M. until after 8 the next morning. In Wall Street, too, Mr. Poole found hundreds of stock-runners below fourteen years of age.

"Compared to this the child slavery of the South is the greatest freedom," says the Memphis *Commercial Appeal*. "There is nothing in Southern factories," it adds, "to be compared to this, and yet the evils that exist in Southern factories might be abated." The Philadelphia *Record* remarks that "if private persons can find cases enough to warrant organization, there can be no excuse for the paid agents of the State whose sole duty is to maintain the integrity of the law."

Among the executive officers of the Child Labor Committee are Dr. William H. Maxwell, superintendent of public schools in New York, William H. Baldwin, Dr. Felix Adler, and Robert Hunter. Other prominent persons behind the movement include Dr. Lyman Abbott, Jacob A. Riis, Robert C. Ogden, and Bishop Potter.

SMALL FAMILIES, OR LARGE?

MRS. IDA HUSTED HARPER stirred up a pretty warm discussion not long ago by declaring for small families, rather than large, on the ground that "parents have a right to claim some of the desirable things of life for themselves, and should not be required to make their whole existence a sacrifice for children." Her critics denounced this as a selfish view of the matter. She now returns to the attack (in *The North American Review*) by declaring that her view is not only best for the parent, but best for the child, and best for society. She says:

"The responsibility of every parent is twofold; first, to the child; second, to society. The child's absolute right is to have a fair start. Society's absolute right is to have in every new member a help and not a hindrance. Both the child and society are wholly at the mercy of parents. If parents produce children with proper physical, mental, and moral endowments, and if they are able to give their children the care and training necessary for the development of these qualities, then they are entitled to the gratitude of both the children and society; but if they fail in either respect, they commit a crime against both."

Hundreds of thousands of deaf, blind, feeble-minded, insane, criminal, pauper, and other dependent and delinquent children, now a burden upon society, stand, we are told, as living arguments to show that not more children are needed, but better ones:

"It seems a hopeless undertaking to lift up the race into higher conditions, with such children continually brought into existence by hundreds of thousands. Disease begets disease, crime breeds crime, and a crowded population is the most fruitful cause of both. The most utterly discouraging feature of the slums in our cities is the immense number of children that swarm in them, and yet to begin with them is the only chance for lessening crime and misery. If the over-production would cease only for a few generations, the problems could be solved. The Divine Father never would have given the command to 'increase and multiply' such as these. It is principally because the families are so large that they are so terribly poor, and that the parents become discouraged and reckless and seek to forget their wretchedness in dissipation."

Many will no doubt admit that such an argument holds good against large families among people who are defective, delinquent, and dependent. But how about the well-to-do, the strong, the educated? Mrs. Harper says, in regard to them:

"It is also insisted that people of means and education should have a large number of children because the poor and ignorant produce so many. But does it help the latter to become desira-

ble citizens, to place over them a still greater number who are infinitely better prepared in every way for the battle of life? The immense reproduction of the lower classes is unavoidable; and, instead of trying to outnumber them, the better classes can more effectually serve society by having smaller families themselves, and applying the surplus parental affection and care, and the surplus time and money, toward fitting those unfortunates for respectable and useful lives. Over one-fourth of our entire population now is composed of children of school age, and there is not a large city in the United States which has sufficient accommodations to give a full day's tuition to all those who wish it.

"At the usual rate of increase, the next census will record a population of 100,000,000 in the United States. This is all that the area of our country and the condition of our industries require. If this population should remain stationary, all the harassing questions of the present could be solved—the labor problem, the school problem, the social problem, and the rest. Employment could be provided for all, and, with the inevitable increase of the demand for labor unaccompanied by an increase in the supply of laborers, the wage question would settle itself. Men could afford to marry, and the frugal and industrious could secure a home and more than a living. All the children could be properly educated, and there would be a place for them when they were ready for work, which would not be until they had reached a suitable age. This would be not only the most prosperous nation on earth, but a nation of the most prosperous individuals. There would be also a mental and moral development such as never has been approximated in the world's history."

PROPOSED HARMONY OF TEMPERANCE AND LIQUOR INTERESTS.

NO doubt a large number of temperance workers will be surprised to learn that the best interests of temperance and of the liquor trade are identical. That proposition is demonstrated to the satisfaction of *Mida's Criterion of the Wholesale Whisky and Wine Market* (Chicago) by the Toronto *Liquor Journal*, which says:

"The true interests of the liquor trade and the best interests of temperance are, after all, about the same. Both are radically opposed to the evils of habitual intemperance; and it is a pity, therefore, that this ceaseless war between so-called temperance organizations and the liquor trade could not call a truce and join hands for the proper and healthy promotion of the object both have at heart.

"It is quite unnecessary for the liquor trade to take any hypocritical stand on temperance or claim any sentimental motives for their temperance principles. On purely commercial grounds, cold self-respect if you will, temperance in its best and broadest sense is the sincere desire of all the better minds in the trade. Unless the trade discourage drunkenness, respectable men will not engage in the retail trade; and with disreputable and irresponsible men in control of the sale of liquor, the industry becomes unprofitable. This is the motive back of the vigorous opposition of the industry to prohibitory laws. We are quite aware that prohibition will not decrease the consumption of spirits, but we do know that the unlicensed sale that follows prohibition puts the traffic in the hands of the lowest element in the community, who, having no financial responsibility or moral character, are not, to say the least, desirable customers.

"So it will be seen that temperance is in the interests of the trade; and our fight with fanatical organizations is not against abolishing the evils of intemperance, but rather against their attempt to reduce the business to the unrestricted debauchery which would inevitably follow prohibition. Our interests lie in constantly raising the standard of the business, in license laws that make the trade both respectable and profitable; and by thus offering an incentive to honorable men to go into the retail trade, we can alone hope to keep the industry profitable for the manufacturers. The deeper and broader thinkers in the temperance ranks have seen the futility of making mankind good by act of Parliament, and recognizing that the evils of alcohol arise from its abuse rather than its use, they counsel the quiet reform of the trade rather than impossible attempts at prohibition.

"No, the trade and temperance are not enemies; they are the best of friends; only a few extremists wage a ceaseless and ridiculous war on us, and in self-defense we must oppose their misguided efforts to demolish the temperance they would fain promote.

LETTERS AND ART.

A FRENCH "MISSIONARY OF LITERATURE."

IN one of his suggestive essays, Comte Robert de Montesquiou-Fezensac, the French littérateur who has just arrived in the United States, coins a notable designation for those who seek to extend beyond the limits of a country the spirit of its culture. "Missionaries of literature" is the term that he uses; and he cites in illustration the names of Baudelaire, the French translator of Poe, and of the Vicomte de Vogué, interpreter of D'Annunzio, Tolstoy, and Dostoievski. "It is as a 'missionary of literature,'" remarks the Paris correspondent of the New York *Herald*, "that M. de Montesquiou visits the New World . . . His mission will be to reveal or explain to his hearers some of the unknown, little known, or wrongly known artists of France." From *The Critic* (December) we quote the following account of M. de Montesquiou's personality and literary achievement:

COMTE ROBERT DE MONTESQUIOU FEZENSAC,
Who has come to this country to lecture on French art and literature.
Courtesy of *The Critic*.

"'Le Fiancé de l'Idéal,' as Comte Robert de Montesquiou-Fezensac has been called by an eminent French writer, is one of the most interesting figures in the literary world of contemporary Paris. A lineal descendant of d'Artagnan, that soldier made famous by Dumas, he of whom it was said that he went to war with a sword in one hand and a pen in the other, de Montesquiou is a true child of his race, and of those ancestors in whom for centuries the courage of the knight has been united to the wisdom of the statesman. Comte Robert de Montesquiou, the poet of to-day, seems almost the cavalier of the past, so much does his personality suggest the Grand Seigneur of feudal times and the belted leader of dashing romance. For twenty years he has followed a literary career, a reverent disciple of Ronsard, Racine, Alfred de Vigny, Victor Hugo, and a fellow student of Verlaine and of the latter-day poets of France. Few writers have provoked so much discussion, few have commanded so much recognition. An aristocrat by birth, his proudest quartering is that of his own talent, so that it might be said de Montesquiou has succeeded despite his inheritance of race, for in republican France of to-day the ink-pot of the tavern is presumably more inspiring than the inkstand of the study. . . . . .

"De Montesquiou's poems appeal through an exquisite refinement of mentality and through a broad and cultured sympathy. An art lover of rare acquirements, he has become the champion of artists ungratefully forgotten. His conference upon Madame Desbordes Valmore brought Paris to his feet, with the result that in its new-born enthusiasm a monument was speedily erected to this great poetess. Verlaine, Coppée, and Mirbeau all paid tribute to de Montesquiou. In 1892 appeared his first volume of verses, entitled 'Les Chauves Souris.' After this in successive order were published 'Les Hortensias Bleus,' 'Le Chef des Odeurs Suaves,' 'Le Parcours du Rêve au Souvenir,' 'Les Paons,' one of his finest works, in which the poet describes the changing glamour of precious stones, their unity to human beauty and to created art, the enigmatical title being suggested by Juno's peacock of a thousand colors, that proud bird whose sumptuous fan was composed of emeralds, topazes, rubies, and turquoises. In 'Les Perles Rouges,' the poet has found his inspiration in the park of Versailles. Here, wandering in the deserted alleys, he has caught the spirit of that past so rich in memories, and with tenderness he has woven the bow-knots and the ribbons and the roses into a lasting wreath of beauty. The melancholy bowers become peopled, and along the deserted promenades we see again the courtly crowd, and the high-heeled and perfumed procession steps lightly on those 'Trois marches de marbre rose,' whose veins of scarlet seemed an ominous forecast of that guillotine whose very victims were then reveling in the sunshine of Versailles. Monsieur de Montesquiou's last volume has only recently been published. Its title is 'Prières pour Tous.' Its success has been instantaneous. These prayers written in verse are a rosary of sonnets. Herein we find the prayers of the elements, of plants, of animals, of workers, of dreamers, of those who suffer and of those who make suffer; they are neither the prayers of the church nor of the oratory, but they are prayers of that most sacred of all sanctuaries, the human heart. They are full of fragrance and of charm. Madeleine Lemaire has illustrated this delightful book with a series of appropriate vignettes and borders which make a fitting frame to the poet's fancies."

M. de Montesquiou proposes to remain in this country until the end of April. He will deliver a number of informal lectures on literary and artistic topics, dividing his subjects under the heads: "Le Mystère," "Le Nocturne," "Le Voyage," "L'Histoire," "Le Temple," "Le Jardin," and "L'Ecrin." It is expected that he will deal, in particular, with the work of Madame Valmore, Leconte de Lisle, Barbey d'Aurevilly, Verlaine, Ernest Hello, and Paul Helleu.

TOLSTOY ON MODERN EDUCATION.

THERE are questions upon which one never can reach positive and final conclusions, confesses Count Leo Tolstoy in certain fragments on "Education" published in a Russian periodical, *Journal Dlia Veisch* (A Magazine for Everybody). On the other hand, he continues, there are questions which one settles in his own mind so absolutely and conclusively that change or abandonment of the conclusions reached is wellnigh impossible. To the latter, according to Tolstoy, belongs the question of education, which has long occupied him and which he feels that he has mastered fully. Expounding rather loosely these "final" opinions in the review named, he writes as follows:

"Man lives in order to manifest and express his individuality.

"Education—modern education—perverts and destroys individuality.

"Modern education is really the science of how, living badly, one might have good influence on children, exactly as medicine is a science teaching how to be well in spite of a mode of living contrary to nature and the laws of health. Both are cunning and empty sciences, which fail of their respective aims.

"Education appears a complex and difficult matter only so long as we try, while neglecting to improve our own natures, to educate and build up the natures of others. Once we realize that we can educate others only through educating ourselves, the great difficulties vanish, and the question becomes simple. Education is life. To know how to live is to know how to educate.

"There are two fundamental truths to be set down as rules for education: Live properly, and continue to perfect yourself; and hide nothing from the children. It is better that children should know the weak side of their parents than that they should feel that their parents have two lives—one an open life, the other a secret one. The trouble is that parents, without making any attempt at correcting their own shortcomings, try to prevent similar faults in their offspring. Hence a struggle. Children are more penetrating than adults, and they see and realize the faults of their parents, especially the greatest fault of all, hypocrisy, and consequently lose respect for them and interest in their moral precepts.

"Truth, therefore, is the first, the main condition of effectual moral education. Hence, in order to be able to tell the truth, parents must make their own life respectable and good, or at least less objectionable than it now is.

"Parents who lead an immoral life, an intemperate life, a selfish one, nevertheless demand of their children moderation, temperance, industry, respect for the rights of others. But the language of practise, example, is heard and felt by the big and the little, by strangers and by neighbors.

"Be honest and truthful; conceal nothing from children, and live so as to have no reason for concealing anything—this is the essence of education."—*Translation made for* THE LITERARY DIGEST.

ROBERT BROWNING'S "ATTITUDE OF DETACHMENT."

MR. STOPFORD A. BROOKE'S new volume on "The Poetry of Robert Browning"—a book characterized by the London *Times* as "the most satisfying and stimulating criticism of the poet yet published"—brings out very vividly Browning's intellectual isolation, his remoteness from the English life and thought of his time. "With steady purpose," we are told, "he refused to make his poetry the servant of the transient, of the changing elements of the world. He avoided the contemporary." We quote further:

THE REV. STOPFORD A. BROOKE.

His new book is pronounced "the most satisfying and stimulating criticism" of Browning yet published.

"During the years between 1860 and 1890, and especially during the latter half of these years, science and criticism were predominant. Their determination to penetrate to the roots of things made a change in the general direction of thought and feeling on the main subjects of life. Analysis became dearer to men than synthesis, reasoning than imagination. . . . Browning, who on another side of his genius delighted in the representation of action, anticipated in poetry, and from the beginning of his career, twenty, even thirty years before it became pronounced in literature, this tendency to the intellectual analysis of human nature. When he began it, no one cared for it; and 'Paracelsus,' 'Sordello,' and the soul-dissecting poems in 'Bells and Pomegranates' fell on an unheeding world. But Browning did not heed the unheeding of the world. He had the courage of his aims in art, and while he frequently shaped in his verse the vigorous movement of life, even to its moment of fierce activity, he went on quietly, amid the silence of the world, to paint also the slowly interwoven and complex pattern of the inner life of men."

If Browning pioneered the analytical mood in English literature, he anticipated no less strikingly the methods of "impressionism." We quote again:

"The time came, and quite lately, when art, weary of intellectual and minute investigation, turned to realize, not the long inward life of a soul with all its motives laid bare, but sudden moments of human passion, swift and unoutlined impressions on the senses, the moody aspects of things, flared-out concentrations of critical hours of thought and feeling which years perhaps of action and emotion had brought to the point of eruption. Impressionism was born in painting, poetry, sculpture, and music. It was curious that, when we sought for a master who had done this in the art of poetry, we found that Browning—who had in long poems done the very opposite of impressionism—had also, in a number of short poems, anticipated impressionist art by nearly forty years. 'Porphyria's Lover,' many a scene in 'Sordello,' 'My Last Duchess,' 'The Laboratory,' 'Home Thoughts from Abroad,' are only a few out of many. . . . He was impressionist long before impressionism arrived. When it arrived he was found out. And he stood alone, for Tennyson is never impressionist, and never could have been. Neither was Swinburne nor Arnold, Morris nor Rossetti."

Browning's essential difference from the poets of the last fifty years, declares Mr. Brooke, is found in his positive religious faith; and this "marks not only his apartness from the self-ignorance of English society, and the self-skeptical skepticism which arises from that self-ignorance, but also how steadily assured was the foundation of his spiritual life."

"In the midst of the shifting storms of doubt and trouble, of mockery, contradiction, and assertion on religious matters, he stood unremoved. Whatever men may think of his faith and his certainties, they reveal the strength of his character, the enduring courage of his soul, and the inspiring joyousness that, born of his strength, characterized him to the last poem he wrote. While the other poets were tossing on the sea of unresolved Question, he rested, musing and creating, on a green island whose rocks were rooted on the ocean-bed, and wondered, with the smiling tolerance of his life-long charity, how his fellows were of so little faith, and why the skeptics made so much noise."

There is scarcely a trace in Browning's work, as Mr. Brooke points out, of any vital interest in the changes of thought and feeling in England during the sixty years of his life. Mr. Brooke writes on this point:

"No one would know from his poetry (at least until the very end of his life, when he wrote 'Francis Furini') that the science of life and its origins had been revolutionized in the midst of his career, or, save in 'A Death in the Desert,' that the whole aspect of theology had been altered, or that the democratic movement had taken so many new forms. He showed to these English struggles neither attraction nor repulsion. They scarcely existed for him—transient elements of the world, merely national, not universal. Nor did the literature or art of his own country engage him half so much as the literature and art of Italy. He loved both. Few were better acquainted with English poetry, or reverenced it more; but he loved it, not because it was English, but of that world of imagination which has no special country. He cared also for English art, but he gave all his personal love to the art of Italy. Nor does he write, as Tennyson loved to do, of the daily life of the English farmer, squire, miller, and sailor, and of English sweethearting, nor of the English park and brook and village-green and their indwellers, but of the work-girl at Asolo, and the Spanish monk in his garden, and the Arab riding through the desert, and of the duchess and her servant flying through the mountains of Moldavia, and of the poor painters at Fano and Florence, and of the threadbare poet at Valladolid, and of the peasant-girl who fed the Tuscan outlaw, and of the poor grammarian who died somewhere in Germany (as I think Browning meant it), and of the Jews at Rome, and of the girl at Pornic with the gold hair and the peasant's hand, and of a hundred others, none of whom are

English. All his common life, all his love-making, sorrow, and joy among the poor, are outside this country [England], with perhaps two exceptions; and neither of these has the English note which sounds so soft and clear in Tennyson."

Sir Leslie Stephen, who contributes an elaborate study of "The Poetry of Robert Browning" to *The National Review* (December), is largely in agreement with Stopford Brooke's conclusions. Browning, he observes, was ever "in an attitude of detachment." He writes further:

"Browning, whatever else he was, was essentially a psychologist; not only interested, but it might seem exclusively interested, in varieties of human character and passion. So far, indeed, he represents one contemporary tendency. When the revolutionary impulse of the previous generation died away, and society was settling down for a time into a comparatively settled order, it was natural that men should begin to look about them and take stock of the social position. The novelists turned from the romance of Scott and tried like Bulwer and Thackeray and Dickens to portray the various phases of contemporary society. They make up for the want of romance by a closer psychological analysis than had satisfied their predecessors; and more or less consciously give us what may be called 'descriptive sociology' by photographic portraits of characteristic types. No one was a keener observer of character than Browning, or more profoundly interested in anything which revealed human nature. The fascination for him of a remarkable crime is sufficiently proved by the amazing plan of making a poem by repeating such a story twelve times. The English crime recorded in the 'Inn Album,' and the unpleasant vagaries of the lunatic of 'Red Cotton Night-Cap Country,' are equally singular if less successful. In that direction Browning no doubt anticipates one of the marks of modern 'realism.' He may be compared with his contemporary Balzac, who was beginning his comedy of human life a little before Browning's first publication. The contrasts are obvious enough; but the two are alike in the keen interest with which they follow the abnormal developments of human passions."

Altho it is true, concludes Sir Leslie Stephen, that Browning wasted too much time on the impracticable, "he succeeded—even by a kind of accident—in achieving so many superlative triumphs that we need not bother ourselves, if we want poetry, by puzzling over the failures."

THE FINANCIAL RETURNS OF AUTHORSHIP.

THE announcement from England that Bret Harte left a personal estate valued at only $1,800 is made the text for much newspaper moralizing on the scant rewards of literature. One commentator goes so far as to say that if an author produces only literature of the highest kind, he is certain to die in poverty. To the New York *Commercial Advertiser*, this pessimistic view appears "utterly unjustified." "The amount of money that a man leaves at his death," it says, "is by no means indicative of the amount of money that he earned while living. It merely affords a clue to the manner in which he has managed his financial affairs." We quote further:

"The records of literary history will show, as a general principle, that in this as in every other sphere of effort, the best work is certain to receive the highest compensation. And this is true not merely in our own time, but it has been true for the last century and a half. If Goldsmith, who was notoriously a prodigal, died poor, Pope, who was an excellent man of business, died rich. Sir Walter Scott died poor; but, nevertheless his pen had earned for him a princely fortune which he lost through his carelessness in business matters. Dickens began life as a bottle-washer in a blacking establishment, and at his death he left at least a quarter of a million dollars, all earned by his writings and his public readings. Thackeray also left a competence, and it might have been even more had he not been so averse to lecturing. Bulwer-Lytton began life with an encumbered estate and the most meager income; yet his novels enriched him and he died a wealthy man. Trollope's earnings from his pen alone and apart from his official salary in the government service amounted to some $400,000, as he has himself recorded. Poetry is not supposed to be lucrative, yet Byron received great sums of money for what he wrote; while Tennyson, who was an excellent manager, accumulated a sufficient fortune to maintain the dignity of a peerage.

"In our own country, the facts all point in the same direction. Irving acquired a competence by his literary labors; Fenimore Cooper died a wealthy man, and even such unworldly writers as Hawthorne and Longfellow and Lowell lived very comfortably as the result of their devotion to literature. Of course, Poe is the stock example of a neglected genius; yet, as a matter of fact, the sordid poverty in which he often lived, and in which at last he died, was due entirely to his own habits and peculiarities, which made it quite impossible for his friends to set him on his feet. Again and again he occupied positions which would have insured him a comfortable living had he cared to keep them; but he practically threw them all away through a sort of perversity of temperament.

"Hence, if now and then a popular writer dies and leaves a very small estate behind him, this does not prove that the public has been ungrateful, but it suggests rather that the writer has been incapable of profiting by the favor that has been shown him. Many bankers have died poor after possessing millions, but no one would argue from this fact that banking is an unremunerative occupation. The truth is that literature stands upon precisely the same basis as do the other professions, and the only moral to be drawn from the case of Mr. Harte is the very old one that it is far easier to acquire money than it is to save it."

THE MOST AMERICAN BOOKS.

THE editors of *The Outlook* recently submitted to a group of writers and literary students of distinction this question: "Which are the ten books, or parts of books, in prose or verse, most characteristic of American genius and life, which could not have been written on any but American soil?" The answers to this question suggest a double classification of our national literature. We are reminded, on the one hand, of books which express the American spirit; on the other, of books which deal distinctively with American themes. In the first class, Emerson's essays take the foremost place; in the second class Lowell's "Biglow Papers" and Hawthorne's New England romances are cited as most adequately representing American feeling.

Prof. Hugo Munsterberg, of Harvard University, voices an opinion which is shared by almost all the contributors to this symposium when he says: "It was always my opinion that no element of the American spirit is more essential than the often-veiled idealism; I take Emerson's 'Essays' as its noblest literary document." The Rev. Dr. Edward Everett Hale says:

"A man who thought he knew told me that more than five million copies of the first volume of Emerson's 'Essays' have been printed in America. You know Dean Stanley said to Dr. Eliot that he had heard some thirty or forty preachers of different communions in his six weeks of America, and that in every case the sermon was by Mr. Emerson. And please to observe that he is everywhere and always distinctively American. He understands better the life of New England than any two men do of the next fifty I shall talk with. Holmes calls him 'The Buddha of the West,' and Lowell calls him 'The Yankee Plato.' Both phrases are good, and anybody who chooses to borrow them must remember the 'West' and the 'Yankee.' One of the keenest of our advisers says that the first time she saw Mr. Emerson—when she was herself a young girl—the thing which impressed her was the union in his face of the practical New Englander and the profound philosopher."

Lowell's "Biglow Papers," observes Col. Thomas Wentworth Higginson, "takes the lead of unequivocally American books. . . . It was the fruit of our most brilliant wit, and was some-

thing absolutely unproduceable elsewhere." According to Prof. Brander Matthews, it "displays the shrewd humor and the clear thinking of the dominating element in our commingled stock." Hawthorne's literary qualities, Prof. Edward Dowden, the English critic, attempts to sum up in the following words: "Add to New England vividness of perception and New England ideality a sentiment of romance, to which the remoteness from the medieval world gives a certain wistfulness, and you have an expression for much that lay in the genius of Hawthorne." Prof. George E. Woodberry says: "'The Scarlet Letter' is a creation of spiritual nightmare, the spirit of Salem witchcraft turned to prettiness and art; but its fortune as the legacy of imagination to history is as secure as Shakespeare's kings."

Edgar Allan Poe is excluded by common consent from the list of distinctively American writers. "The native perfume," remarks Mr. Owen Wister, "is absent from . . . 'The Raven.'" And Professor Dowden declares: "I suppose that Poe would have differed little from his actual self had he been born on an Irish hillside or in a German forest, or in any ultimate dim Thule, where it was possible for a dexterous brain to rehandle the suggestions of a subtle imagination."

Walt Whitman, on the other hand, is accepted as an American of Americans. In attempting to estimate the democratic temper of American society, says Professor Munsterberg, Whitman's "Leaves of Grass," after all, "tells the whole story." "Whitman's 'barbaric yawp,'" adds Colonel Higginson, "however high or low we may class it, is absolutely cis-Atlantic. He is as essentially steeped in his national life as Poe is detached from it."

Longfellow's "Hiawatha" and Whittier's "Snowbound" are included in several of the lists presented. Thoreau's "Walden" and Mrs. Stowe's "Uncle Tom's Cabin" are books so thoroughly American that their credentials are hardly likely to be challenged. In regard to Cooper, however, a curious conflict of opinion is noticeable. Colonel Higginson hails Cooper as the creator of American fiction; but Dr. Hale thinks that Cooper's novels "are not really American, excepting that they tell about Indians and trails and blazed trees and rifles and buckshot and moccasins. There was no moment in Cooper's life when he would not have been pleased to have been mistaken for an Englishman." Washington Irving's Americanism is also debated, and while Professor Woodberry treats "The Legend of Sleepy Hollow" as a unique contribution to our national literature, Mr. Wister is of the opinion that "much of Irving could be English."

Mr. Hamlin Garland transgresses the numerical limit imposed by *The Outlook's* question in the following comprehensive survey of our native literature:

"Bret Harte's 'Argonauts' (and humorous verse) and Joaquin Miller's 'Songs of the Sierras' and 'Pictures in Rhyme' sprang from the soil of the Pacific Slope as naturally as its pines and redwoods; in them is the old California; in Frank Norris's 'Octopus' is the modern California.

"Howells's 'Silas Lapham' and 'A Modern Instance' (and 'A Boy's Town') could not have been written by any other than a transplanted New Englander, so vivid and so true are they; and Mark Twain's 'Roughing It' and 'Life on the Mississippi' are deeply typical of Western New World humor, as are also George Ade's 'Artie' and James Whitcomb Riley's dialect verse. Riley may be said to supplement both Whittier and Lowell. Owen Wister is a good representative of the swiftly increasing literature of the Rocky Mountains, and Miss Wilkins in New England, Miss Ellen Glasgow in Virginia, and Mrs. Ruth McEnery Stuart in Louisiana are capital examples of the fiction which is avowedly local in its inception, but which has a wide appeal by reason of its truth and its artistic expression. To this might be added Harris's 'Uncle Remus,' Henry Fuller's 'With the Procession' (a study of Chicago life), Edward Eggleston's 'Hoosier Schoolmaster' (one of the first of local novels), Harold Frederic's 'Seth's Brother's Wife,' and Irving Bachellor's 'Eben Holden.'"

Mr. Wister finds that the American spirit is distinguished by two traits:

"First, it has Youth. We are a *young nation*, and possess the young virtues and the young faults; the hope, the daring, the generosity, the extravagance, the impatience, the irreverence of youth. But, next, we are an *old people*—Puritans, Huguenots; and this means fatalism, subtlety, a strange sadness, a pondering the problem of evil, a power of asceticism and of exaltation."

THE FATHER OF AMERICAN MUSIC.

EVERY year are published books and articles which clear up some of the more obscure corners of the early history of the country, and which bring once again into the light the names of men and women who were famous in their own time and who deserve better things than to be forgotten. In "Musical Pastels," Mr. George P. Upton has recalled to the music lovers of to-day the name of the first American composer:

"To William Billings, a good tanner, good patriot, and good Christian, of Boston, Mass., self-taught and self-made, belongs the high honor of being the first to compose music in the United States. To this sturdy eighteenth-century Yankee must also be ascribed the paternity of the church choir, the singing-school, and the secular concert of this country. Crude as his compositions were, and violating, as they did, all the conventional laws of harmony, they nevertheless were so infused with vigor, enthusiasm, and tunefulness that some of them have survived to the present time, holding their places persistently in the multitudinous modern psalmody. Rugged in style, imperfect in harmony, unpolished in composition as they are, they must ever command respect as the beginnings of American music and as a type of the same patriotism which inspired the men of Boston to throw their tea into the harbor. For Billings's sacred music was the first protest against the English psalmody, which had been in use for nearly a century and a half. . . . . .

"It was in the year 1770 that William Billings declared American musical independence. He was at that time in the twenty-fourth year of his age, and engaged in tanning in Boston. He had a common-school education and showed an early inclination toward music; but in this art he was self-taught, his only sources of knowledge being the labored and often incorrect musical grammars that prefaced the English psalters. His studio was the tannery, and upon its walls as well as upon the hides he wrote the first music with chalk."

Physically, Billings was a bundle of deformities which were matched by mental qualities equally eccentric, oddity of humor being the most conspicuous. Among his friends he counted Samuel Adams, who was very fond of music. He wrote much music of a patriotic, as well as religious, nature, and his songs were sung as much around camp-fires as in the churches. During a period of twenty-four years Billings published six collections of works of music, nearly all the tunes in which were his own composition. They were as follows: "The New England Psalm Singer" (1770); "The Singing-Master's Assistant" (1778); "Music in Miniature" (1779); "The Psalm-Singer's Amusement" (1781); "The Suffolk Harmony" (1794). We quote further:

"William Billings died September 26, 1800, and, notwithstanding the vogue of his compositions, in indigent circumstances—a not uncommon fate of innovators. His affairs must have been at a low ebb many years previously, for in 1792 there appeared in *The Massachusetts Magazine* an advertisement announcing that a large committee had been selected by the musical societies of Boston to solicit the attention of the public to proposals for publishing a volume of original American music by him, the publication to consist of 'a number of Anthems, Fugues, and Psalm Tunes calculated for public social worship or private Musical Societies.'"

SCIENCE AND INVENTION.

A RETURN TO OLD METHODS IN MEDICAL PRACTISE.

WHAT seems to a French writer a justification of some of the methods of the ancients in the treatment of fever is described in *Cosmos* (December 27). The ancient view of disease was that it was a poisonous principle of some sort that had gotten into the body and must be expelled. This is not so very different from the modern view that many diseases are due to toxins elaborated by bacteria. The writer in *Cosmos* condemns all treatment of mere symptoms. In the French military hospitals of the first half of the century just past, he tells us, the number of prospective patients was always asked in advance so that the authorities might know how many leeches to order. "How many patients are there?" was the question. "Ten." "Very well; that will require 300 leeches, 30 apiece"—and the proper notification was given to the nurses. This anecdote is told to illustrate how, at that time, following the theory of Dr. Broussais (1772–1838), the chief feature of all disease was thought to be inflammation, and the necessity of controlling this by bleeding was believed to be paramount. We are past this now, but the writer reminds us that the view of disease taken by some physicians at the present day is scarcely more philosophical. He says:

"After considering the lesion almost exclusively, physicians then began to consider one symptom or another. The most important, or at least the most apparent, because it was easy to observe and to measure with the thermometer, seemed to be fever. Forty years ago, excess of temperature seemed to be the sole symptom that must be fought in pyrexia. Now, altho high temperature is sometimes the measure of the gravity of certain fevers, particularly of typhoid, it is not the cause of the trouble.

"From this somewhat too exclusive conception of the origin of fevers came the practise of cold bathing. This is generally effective, not only because the cold water takes off the heat, but because the bath gives tone to the nervous system, excites the skin, and favors elimination. . . . . .

"The discovery of chemical antithermics, such as kairin, now forgotten, and later phenacetin and antipyrin, seemed likely to render great service to therapeutics, from the standpoint of those who considered nothing but the fever. But it was not so; these medicaments have a depressive action on the nervous system; under their influence the fever falls, but the invalid gets worse.

"In certain maladies fever seems to be a means of defense, a reaction of the organism against infection. It may be remembered that Pasteur, to inoculate fowls with the virus of anthrax, was obliged to lower their temperature by cold baths. Experiments made on animals have shown that in many cases chemical antithermics aggravate experimental infections.

"Pasteur studied the agent of the malady by itself, outside of the human organism. His investigations, altho very fertile, led at the outset to some errors in therapeutics. It was thought that to destroy the microbe was all-sufficient, and antiseptics were used—and abused. A more complete study of microbes and their mode of action has shown that man is not an inert field of culture for the parasite. The organism must be favorable; the disease is produced not so much by the life of a micro-organism as by the struggle of the living being against the pathogenic agent.

"The study of the microbes has shown that they produce toxins. The work of divers scientists has also shown that the living cell itself, outside of any microbian infection, elaborates toxins. A normal physiologic mechanism, whose function is exaggerated during disease, enables the organism to destroy or eliminate these poisons. . . . . .

"Microbiology is taking us back to the methods of the physicians of the Middle Ages and even of the Hippocratic school. The ancients used to say: 'It is necessary to provoke evacuation of the harmful matter; we say to-day that we must favor the elimination of the toxins. Thus at the present day, in fevers, the principal curative agents seem to be abundant drinks. . . . . Clinical investigations have proved that treatment by drafts is followed by the best results in typhoid fever.

"Thus by a roundabout road, we have justified the practise of the ancients. Each generation contributes some new discovery to science.

"As Erasset said in an address before the Medical Congress at Lille in 1899, in this permanence of the old word which continues to express its teaching in the midst of the diversity of more modern theories, satirists see only the proof of a discouraging repetition that carries us around always to the same point, like squirrels, behind the bars of our formulæ. This is not true; we must rather view it as illustrating the solidity and firmness of acquired doctrine, which shows that a discovery once established, is completed—not destroyed nor replaced—by later discoveries, and that the dry bones of the old traditional medicine, far from breaking under the impulse of new facts, strong as they may seem, appear to be endowed with new youth and consolidated by all these new conquests."—*Translation made for* THE LITERARY DIGEST.

IS THE PLANET MARS INHABITED?

THE vexed question whether any of the planets are inhabited is discussed anew by Prof. Simon Newcomb in *The Youth's Companion*. He concludes that Mars is more likely to have inhabitants than any of the others, but that the chances that even it has are very small. He says:

"It was long supposed that the surface of this planet resembled our earth in every feature that we could discern with the telescope. The most curious analogy, and one of the first to be noticed, was in the existence of a brilliant white region round each pole of the planet, looking like a white cap. When the sun shone on the north pole the cap diminished, sometimes almost disappearing; when the pole was turned away from the sun the cap increased in extent.

"There would seem to be no doubt of the cause. Snow and ice are deposited in winter on the poles of Mars, as on the poles of the earth, and in summer these deposits melt away under the heat of the sun. Supposing this to be the case, it would seem that there must be an atmosphere on the planet with clouds and vapor, as there is around our globe.

"But the most recent observations, both with the telescope and spectroscope, fail to show any well-marked signs of an atmosphere round the planet, or of any clouds or vapor obscuring the surface. If an inhabitant of Mars should look on our earth with a telescope, he would frequently find large portions of the surface hidden from his sight by bright white clouds. Only when the clouds disappear here and there would he see the outlines of oceans and continents. But it seems that in Mars the outlines of its surface are always visible. Sometimes they appear more distinct than they do at other times, but this is probably due to the varying clearness of our own atmosphere. If there are no air and no clouds on Mars, how can there be any vapors to condense round the poles?

"The answer is very simple. If there is any water on the surface of the planet, it would still evaporate very slowly, whether there was any air or not. This vapor would condense again on the colder portions round the poles. There could, however be, so little of the vapor that we could hardly suppose a great snowfall. Very likely the condensation may be little more than hoar-frost. With our telescopes we can tell nothing about the thickness of the coat; the thinnest layer of frost on the surface would present the same appearance as the thickest ice-caps.

"It has also been suggested that some other substance than water might produce the white caps, carbonic acid for example, which condenses into flakes like those of snow under very great cold. What we know of the subject may then be condensed into the simple statement that if Mars has any atmosphere at all, it is much rarer than that of our earth, and that if there is water on the planet, which is very likely, there is not enough of it to form extensive clouds in its very thin atmosphere.

"Every reader of astronomical literature has heard of the supposed canals on Mars. But these are not canals at all, but simply long streaks stretching from point to point on the planet, slightly darker than the rest of its surface. They must be at

least a hundred miles in breadth to be visible as they are. They can not possibly be the work of the inhabitants. At best they can only be darker regions on the surface.

"All this does not militate against the possibility that Mars is inhabited. Very likely it is. But granting that such is the case, we can not say whether its inhabitants are rational beings, or whether they are superior or inferior to ourselves."

THE PRESENT AND THE FUTURE IN NATURAL SELECTION.

MANY thinking people have been unable to believe that the principle of natural selection holds in a state of civilization. At any rate, they say, civilized man is doing all he can to nullify it. Natural selection, for instance, would kill off all the physically weak; civilization provides hospitals to save them. This sense of humanity, or of "responsibility toward life," which even Darwin thought he saw interfering with the operation of his famous law, is not, after all, the suspension of natural selection in society, so we are assured by Benjamin Kidd in *Harper's Magazine*, but the basis of a social process involving natural selection on a wider scale. When types of society come into competition, he tells us, the higher type will survive, and this very sense of responsibility is what characterizes the higher types. In essence it is a result of the growing tendency to make the future more important than the present in our life-processes. Says Mr. Kidd:

"The fact which becomes more evident in the study of the evolution of society is that, just as in the evolution of life, the highest efficiency is not simply that which includes only the qualities necessary to maintain a place in the free fight in progress in the present, but rather those which are identified with the still higher interests in the future. The evolution of society from the beginning has thus centered round the function of socialization, in the development of which progress has necessarily been toward a more organic type of social order. In this development the characteristic feature is that the mean center of the life processes of society is undoubtedly tending to be projected ever farther and farther into the future. It is in this supreme rivalry that the great systems of society are being continually matched against each other, and that races, nations, and eventually great types of civilization have their principles tested in a process of natural selection the principles of which extend far beyond the consciousness not only of the individuals concerned, but even of the political systems in which they are included."

Our present stage of civilization, Mr. Kidd thinks, is marked by a social order which, while keeping up its efficiency in the present, is influenced by conceptions that apply more and more to the future. He says:

"One of its most significant features consists in the fact that the essentially Eastern conceptions of renunciation, of individual subordination, and of responsibility to life extending beyond all claims of the present and the finite, for which no Eastern people has ever been able to supply an enduring stage in history, has at length been provided with a permanent *world-milieu* by the peoples of Western stock, amongst whom the military process in human evolution culminated. The characteristic phenomenon of the historic process as a whole in this phase is such a free conflict of forces as has not been possible in the world before. . . . . The projection of the sense of human responsibility outside the limits of all the creeds and interests which in previous stages had embodied it in the state has resulted in the gradual dissolution of the closed absolutisms in the state within which human activities had previously been confined. The dissolution of the conception upon which slavery rested; the growth of the conception of the native equality of men, and of their right to equal voting power in the state, irrespective of status or possessions; the undermining of the absolute position of the occupying classes, and of the ideas by which civil and religious opinion was previously supported by the power of the state; the tolerance of parties to the right of free inquiry in every direction; the long movement toward political enfranchisement; with finally the growth of that conviction which constitutes a standing challenge to all existing absolute tendencies in the economic conditions of the modern world, namely, that the distribution of wealth in a well-ordered state should aim at realizing political justice—are all features of an integrating process in Western history. They are all the marks of a type of society of higher organic potentiality than has existed in the world before—a type of which the characteristic feature is that the sense of human responsibility has been at last projected outside the state and beyond the present.

"As social evolution continues, it is evident that to an increasing degree the entire range of the processes of the human mind is being gradually drawn into the vortex of this supreme conflict between the present and the future. As the present writer has put it elsewhere, we stand in it at the very pivot of the evolutionary process in human history. The whole content of systems of thought, of philosophy, of morality, of ethics, and of religion must in time be caught into its influence. It is in the resulting demiurgic stress that the rival systems of society are being unconsciously pitted against each other; that nations and peoples and great types of civilization will meet and clash and have their principles tested. And it is in respect of the controlling principle of the conflict—the degree of efficiency of the subordination of the present to the future—that natural selection is continuing to discriminate between the living, the dying, and the dead, as progress continues in the modern world."

ELECTRIC WIRES AND ANIMAL OBSTACLES.

AS electric lines are extended and multiplied, we hear more and more stories of trouble caused by animals and birds. The luckless beast that meddles with a live wire loses his life, of course; but even in death he often continues to be an obstacle until his corpse is discovered and removed. A number of these animal stories are collected by *The Electrical Review* in an article which it entitles "The Brute and the Circuit," and which runs partly as follows:

"The builders of the telephone and telegraph wires in Mexico first congratulated themselves that the absence of sleet would allow them to economize on the construction; but the ring-tailed monkeys and parrots soon availed themselves of the opportunity to congregate on these lines at night, and a heavier construction became necessary. In like manner, when lines were first built through forests the absence of municipal supervision did not allow the full range of anticipated economies, for the bears, mistaking the humming of the wires for concealed hives of bees, were active in their search for the hidden sweets, gnashing the poles until those of moderate size were severely weakened. And now came the birds to add to the trouble, for the power circuit at Anaheim, in Southern California, was short-circuited by an owl, causing trouble at the power-station, and the wires falling upon telegraph wires caused difficulties on those lines.

"If the eagles which alighted on wires of opposite polarity in the Fresno power circuits had remained in peace and harmony it would have been better for both birds and plant; but the first blow of a fight caused the simultaneous defeat of both eagles, and the arc short-circuiting the wires made the inevitable trouble at the central station.

"A heron recently alighted on the power circuit of the Trenton Falls line, a few miles north of Utica, N. Y., and stepping across from one wire to the other made a burnt-offering of himself and trouble again at the central station.

"Along the Atlantic coast in Eastern New Jersey, the fish-hawks establish their nests on the telegraph and telephone poles, and defend their homes with such pugnacity that the linemen are obliged to carry sheath-knives in their belts for defense.

"The prevention of these occurrences appears to be outside of the functions of circuit-closers and fuses; and may it not be possible that in the near future the owners of electric lines will emulate the farmer and decorate the poles with scarecrow devices; or, perhaps, it may be accomplished by ceasing to make efforts against the youth's throwing the pair of horsechestnuts joined together by a string, like the bolas of the Gauchos in South America? The sentiment of the linemen on this subject may

experience a change that will render these festoons a welcome addition.

"There are numerous instances of rats causing crosses at switches in electric-lighting lines, and some of the fires in the underwriters' bulletins have been ascribed to this cause. It is but a short step from rats to cats, and a cat at Lockport, retreating up the pole of a power line to escape a dog—from the danger she knew to the perils she wot not of—at the cross-arm made a cross from one circuit to the other in such a manner that the arc melted the wire for a long distance, and also caused some difficulty at the power-house at Niagara Falls.

"The use of the expression 'bugs' for specific trouble is not entirely of ethical significance, because the insects are an omnipresent difficulty for outside lines. The larvæ of small insects, secreting formic acid, have opened circuits by corroding away the fuses. Hornets congregate on the poles and indicate their umbrage at the disturbance, when the lineman opens the door, in a most vigorous manner."

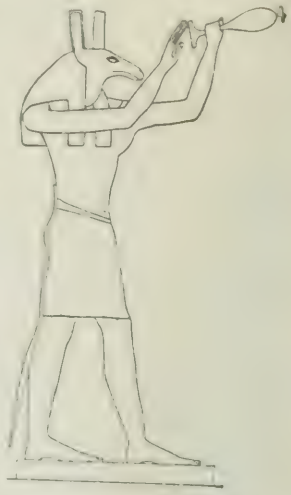
A NEWLY DISCOVERED BEAST AND AN EGYPTIAN GOD.

THE discovery of the animal known to the natives of Central Africa as the okapi was the subject of several articles in these columns soon after it was found, about two years since, in the forests of Uganda by the British governor, Sir Harry Johnston. Interest in the animal has lately been revived by a comparison, made by Professor Wiedemann, of Germany, between its head and that of the Egyptian god Set, as pictured on the monuments. Professor Wiedemann concludes that the one was the prototype of the other. A *résumé* of recent as well as earlier discoveries in regard to the okapi, written by Professor Matschie, which appears in *Die Gartenlaube* (October 21), is illustrated by a drawing from descriptions of adult animals by the well-known animal painter Paul Neumann. Sir Harry Johnston's original picture in the London *Graphic* represents the young animals first obtained. The following is the substance of the *Gartenlaube's* note:

OKAPI.

From a picture in the London *Graphic*.

"The okapi . . . was first assumed to be akin to the zebra, but it was soon proved to be not an equine but a ruminant nearly related to the giraffe and more nearly to the extinct *Helladotherium* of Mediterranean tertiary deposits, which, like the okapi, lacks the long neck and legs of the giraffe.



GOD SET WITH A VASE.

Relief in Karnak of the period of Seti I., about 1400 B.C.

"The animals first bagged were quite young, and it was an open question whether the adults would show the hairy frontal protuberances of the giraffe, or horns, or neither. Now Forsyth Major has published in *La Belgique Coloniale* the results of recent investigations and the Tervueren Museum has received an adult skin and skeleton. It appears that the okapi has no true horns, but has hairy protuberances over the eyes very small in the female, long and sloping backward in the male. It seems therefore to be a connecting link between giraffes and horned cattle."

An abstract of Professor Wiedemann's article connecting the okapi with the god Set, which appears in *Umschau*, is as follows:

"The zoologists of the world have taken the liveliest interest in the okapi, for the discovery at the end of the nineteenth century of a previously unknown land animal of such size seemed little short of marvelous. The question naturally suggested itself: Had it always been unknown, or had bygone races known it, even described and pictured it, and had we overlooked their testimony? Hanno, the Carthaginian, wrote of wild men on the west coast of Africa, but his story was regarded as a 'traveler's tale' until the discovery of the gorilla. The answer to this question was naturally sought in Egyptian sculptures and inscriptions, in which so great a variety of animal forms is represented—many of them, such as elephants, ostriches, giraffes, and rhinoceroses, now long extinct in Egypt. But in this Egyptian menagerie the okapi is not to be found either in realistic representation or conventionalized as a hieroglyphic. The head of the okapi has been found, however, on the shoulders of an Egyptian deity. It was the Egyptian theory that the gods when they came to earth assumed the forms of animals. Most of the Egyptian deities are depicted with the heads, tho not usually with the bodies, of certain animals, and these animals were deemed sacred.

HEAD OF THE GOD SET.

After a relief, probably of the time of Thothmes III., about 1550 B.C.

"The sun god, Horus, has a hawk's head, Sebak a crocodile's, the goddess Bast a cat's, and so on.

"Now among these deities was one whose head was like that of no known animal. This was Set, the brother and the murderer of the god-king Osiris, whose son Horus he also attempted to destroy. But Horus, aided by his mother Isis, escaped and lived to avenge his father.

"According to one version of the story, the land was eventually divided between uncle and nephew, Horus receiving Upper and Set Lower Egypt; but the commoner version is that the murderer was driven out altogether.

"But Set, tho vanquished and expelled from Egypt, remained

lord of the desert and was ranked with other foreign gods by the Egyptians. He had his ups and downs, like other gods and men. At one time he was in great disfavor, and some of his images were destroyed, but at an earlier period he was highly venerated and the Pharaoh was regarded as the earthly representative of the two gods, Horus and Set. The head of Set is long and narrow, the lips are very long, the upper one protruding beyond the lower, the nostrils well in front. Over each eye is a small protuberance. The ears are long, narrow, and erect and cut off square at the top, like those of no known animal.

"The fox of the desert, the camel, the giraffe, various rodents, even a fabulous creature, half antelope and half ass, have been suggested as prototypes of the head of the god Set. But in each case for one point of resemblance there are several of marked dissimilarity. The head of the okapi, however, agrees with that of Set in all essential particulars, and the small and crude entire animal figures of the earliest representations of the god do not deny the resemblance. The okapi must have become extinct in Egypt, if it ever lived there, at a very early period, for it is not found in any Egyptian hunting scenes except those of Beni-Hassan, which include other animals assigned by tradition to the desert, even griffins and other fabulous monsters. Later, when the real prototype of the Set head was forgotten, it was sometimes confused with the wild ass. Hence the tradition, dating from the Greek period, that Set after his defeat by Horus fled mounted on an ass which ran seven days before it stopped. Thereafter, says the legend, Set begat Judaios and Hierosolymus, from whom Jerusalem derives its name. And another late tradition asserted that in consequence of these things a golden ass's head was set up in the Temple at Jerusalem and was the chief object of Jewish worship.

"So, even in classical antiquity, this peculiar but once familiar creature, the okapi, had utterly vanished from the ken, the memory, even the traditions, of the civilized world—to be rediscovered by an Englishman, in the heart of the Uganda forest, after five thousand years of oblivion."—*Translation made for* THE LITERARY DIGEST.

IS THE UNMARRIED STATE UNHEALTHFUL?

THIS question is by no means a new one. As long ago as 1853 Farr asserted, after a study of the statistics of France for that year, that marriage is a "healthy estate." Starr, registrar-general of Scotland, went further and declared his opinion that bachelor life is much more destructive to males than the most unwholesome trade or the most insanitary residence. Frederick L. Hoffman, after citing both these statements, makes an interesting attempt in *The Spectator* (London, November 6 and 13, 1902) to verify them by an analysis of statistics of the census of 1900. After tabulating his results he states his conclusions as follows:

"These tables, tho limited to essential facts and to periods rather too long for life-insurance purposes, conclusively show that (1) the mortality of the single or both sexes is higher than the mortality of the married, and at all periods of life, except ages 15 to 44 for women; (2) the mortality of the single of both sexes is less at all periods of life than the mortality of those who are widows at ages under sixty-five, while at ages sixty-five and over the differences are too slight to indicate a definite law one way or the other; (3) the mortality of the married of both sexes is more favorable at all periods of life than the mortality of the widowed; (4) the mortality of single males is higher at all ages than the mortality of single females; the mortality of married males is higher than the mortality of married females, except in the age period 15 to 44, . . . ; (6) the mortality of widowers is higher than the mortality of widows at all periods of life."

Among other facts brought out by Mr. Hoffmann are that the death-rate from consumption is lower for the married of both sexes than for the unmarried, and that fewer married men than bachelors commit suicide. Mr. Hoffmann's figures are discussed editorially in *The Medical Record* (New York, January 10), which says of them:

"On the whole, we incline to the belief that any one who wishes from these figures to extract a demonstration of the healthiness of marriage may find himself in a quandary. For obviously, what passes for the 'mortality of the married' is in no sense its *true* mortality. The latter is clearly the 'mortality of the married,' as now reckoned, plus a certain, entirely indeterminate, fraction of what is here classed as the 'mortality of the widowed'; that fraction, in short, which represents the mortality due to causes which originated during the married state, and not during widowhood. Our Pension Office certainly would smile at a demonstration of the healthiness of military life, deduced by ignoring the future mortality of those discharged for disability. Here the case is peculiar in that the recruits of the matrimonial army are discharged therefrom, not by reason of any demonstrated unsoundness in themselves, but on account of that of the other partner; and the question is, therefore, utterly problematical as to what their physical status is at time of discharge into the ranks of the widowed. . . . . .

"These statistics are, at any rate, certainly a composite of several factors. To show the urgent need of analysis before any conclusions are drawn, we may assume that the majority of the single fall, at a guess, between fifteen and perhaps twenty-five or thirty; and that the majority of the married fall over twenty-three to twenty-five. Now if, as is probable, most marriages last at least as long as six years, then the minimum age for the widowed would be not far from thirty. But if this comes anywhere near the truth, then we are, in the tables, lumping together mortalities not only for single, married, and widowed, but also for ages fifteen, twenty-five, twenty-five and upward, and thirty and upward. . . . . .

"Interesting and suggestive as they are, in their present form [these data] prove little, and they need to be supplemented by detailed data for at least every decade (and a five-year period would be better) of life before any certain conclusions can be drawn. It was doubtless statistics which the poet had in mind when he recommended drinking deep or tasting not."

Invisible Artillery.—An interesting experiment has been tried at Aldershot, England, in an attempt to render artillery inconspicuous against all kinds of backgrounds. Says *The Electrical Age:*

"A battery of six guns, with their limbers, was painted rainbow fashion, with streaks of red, blue, and yellow, the whole blending, at a little distance, into a confused mass that rendered each gun difficult to locate, whatever its surroundings might be. At 800 yards the outline of the gun is lost, while at 1,000 it harmonizes with trees, open grass land, sandy plains, or broken country. As a trial the guns were placed in position on the eastern slopes of the hills, and the artillery officers at Aldershot were invited to try and locate them from the western slope at a distance of about 3,000 yards. Altho all knew the direction in which the guns were, none succeeded in finding them all, even with strong glasses. A section of the horse-artillery guns were sent forward to engage them so soon as they could discern them, and they actually advanced to within 1,000 yards before they were espied. At close quarters the guns present a most incongruous appearance, being a mass of daubs of color, but the idea is a decidedly practical one, nevertheless."

SCIENCE BREVITIES.

"IT begins to look as tho the brothers Lebaudy, of Paris, had already solved the problem that has baffled every air-ship inventor hitherto—sailing against the wind," says a writer in *The Scientific American.* "Following up their first rather sensational success, they made an ascension at Nantes recently that gave striking testimony to the truth of the claim that they have made the most nearly perfect air-ship yet built. Several ascents were made, the balloon returning to a given spot each time. It moved in all directions above the fields and woods which border the Seine. In every instance the air-ship was brought back to its starting-point at a speed of twenty-five miles an hour, the turn being made against the wind."

A CURIOUS railway accident is reported from India by *Cosmos.* About two kilometers [1¼ miles] from Rampore Hat, says that journal, "a train composed of an engine, thirteen passenger-cars, and three other cars, was seized and overturned by a tornado. The phenomenon was absolutely local, since nothing was noticed at the station just left by the train, and except for the upsetting of a few native huts, there appears to have been no other damage done. The number of the wounded is not exactly known, for the Hindu passengers fled panic-stricken in an instant. Thirteen persons were killed and fifteen wounded are known. Some of the cars were turned end for end, indicating a whirlwind."—*Translation made for* THE LITERARY DIGEST.

THE RELIGIOUS WORLD.

THE NEED OF A NEW APOLOGETIC.

THE most serious religious problem of to-day, as viewed by the Rev. William P. Merrill, of Chicago, is bound up in "the fact that the church is a factor of lessening importance in the lives of good people—morally good, helpfully good, aggressively good people." The greatest need of the church, he adds, "is such a presentation of Christianity as shall make it the chief object in the hearts of such people." He says further (in *The Biblical World*, January):

"Of course, I know that some surface indications are the other way; church-membership has grown five times as fast as the population of the country, benevolence four times as fast as the country's wealth, and all that. But this is more than a matter of figures. It is a question of the place of the Gospel and the church in the hearts of leading men and women, leading in ethical standards, in helpful activity, in thought. And I believe that there is an increasing number of such leading men and women whose membership in the church is not the chief thing to them, means little if any more to them than their membership in the art institute, or the orchestral association, or the women's clubs."

There are many questions, continues Mr. Merrill, on which the light of a new and practical apologetic is needed. He mentions, in particular, the subjects of "salvation," "the spiritual life," and "the social value of the church." We quote again:

"The first need is to show that salvation is something definite, practical, and vital. I use the word 'salvation' in a loose sense, to denote that which is offered in the Gospel, that which we present to men in our preaching. The man who has 'accepted Christ,' the man who 'is a Christian' has something. What is it? . . . . . .

"Do you clear the matter up by saying that salvation is 'from sin'? That sounds well, but what does it mean? That the Christian is always moral, and the unbeliever always immoral? The facts are against such a statement. That the Christian is not *counted* as a sinner in the sight of God? That does not appeal to the ethically sensitive man of to-day, who cares little what he is counted, and everything for what he *is*. Do you make the matter much clearer when you say that salvation means 'character'? Can you put any sharp, strong meaning into that? Has it any vital connection with the person and work of Christ, and the truth of his Gospel, and with faith in him? Is the preaching of the Gospel anything more than the teaching of ethics? If so, what? Shall we fly with Dr. McConnell to the theory of conditional immortality? Shall we find the answer in the life of fellowship with God?

"These questions may indicate the deeply felt need of a new statement here, a conception of salvation definite enough, practical enough, vitally important enough, to attract to Christ those before whom it is set. I believe many besides myself are waiting for the man who can give that question, 'What is Salvation?' not a final answer (for that is impossible), but the answer we need in and for our own time."

The second great need, affirms Mr. Merrill, is a clear statement about the whole matter of the spiritual life:

"Here is the very core of Christianity as we apprehend it to-day. We differ in our creeds, but evangelical Christians are agreed as to the reality and importance of the spiritual life. We are turning more and more from the legal, formal presentations of Christianity to the vital and spiritual. The Holy Spirit, the indwelling Christ, fellowship with God—these and like phrases are used in this day as never before. One of the first things in amending the confession of faith of the Presbyterian Church was to insert a chapter on 'The Holy Spirit,' and the spiritual life. . . . Yet here, too, is not the strong, keen-sighted apologist needed? He must discriminate against counterfeits, loose unworthy notions of spiritual life. Occult and mystic systems abound. It is needful to heed John's exhortation, and 'try the spirits whether they be from God, for many false spirits are come into the world.'"

The third need Mr. Merrill deems "perhaps the greatest and most apparent." It is "to make clear that the church has a function in society, a part of supreme importance to play in human progress and well-being." The writer declares on this point:

"I believe the church is not indifferent to the masses, but only uncertain. It realizes its failure to reach those most in need more bitterly than do the masses themselves, or the critics of the church. But it waits to know what to do, what path to take. Are the settlements pointing out to us the true way, and is the institutional church the right response to make to the need? Is something more radical necessary, a Protestant order of St. Francis vowed to poverty and service of the poor, serving in a new spirit and form of consecration? Professor Harnack hints that this is needed, that missionaries and mission workers should take the tenth chapter of Matthew as their rule of life. Do we find the right guides in the ministers who are going to factories and other great business centers, and there preaching to the workingmen and reaching them personally? Is Dr. Strong the true prophet, and does he point out what is truly to be the 'next great awakening'? This at least is clear to us, that the ministry and the church must be consecrated as never before to real social service; there must be less following Christ for selfish reasons, and more taking up of the cross. But who will show us the way?

"I believe the heart of the church would gladly respond to the right call. And I believe the world would respond to such a ministry. Bishop Winnington Ingram, of London, is the greatest living apologist in this line. By his work, by his sacrifices, he has found great influence, not only in winning the masses, but in winning the cultured, the indifferent, because they see in him the representative of a Christianity that is a social force. The church must become, not in name, but in fact, the greatest brotherhood on earth, the greatest instrument for truth, righteousness, and love in society. That will best commend Christ and his Gospel to a world keenly alive to social conditions ethically sensitive, and indifferent to religion largely because organized religion seems dragging behind rather than leading, in the effort to realize the brotherhood of man."

JAMES MARTINEAU: "A SAINT OF THEISM."

THERE are very few of the theological students of two past generations who have not at some time read and admired Martineau's "Endeavors After a Christian Life." A smaller number perhaps have found light and guidance in "Essays Philosophical and Theological," the riper fruit of Martineau's life-thinking and of a somewhat later date. The many American readers of these brilliant works will learn with satisfaction of the publication of "The Life and Letters of James Martineau" in two bulky volumes—a work of sufficient importance to warrant the somewhat extended notice we give to it. Martineau, Channing, and Parker, declares the Boston *Christian Register* (Unit.), are the three "spiritual guides and masters of thought" who have not only given shape and direction to the religious life in the Unitarian churches, but have also "done more than any other three men to direct religious thought and lead theological progress in all parts of the church during the nineteenth century." These three, it adds, "consciously or unconsciously wrought together to the same end. . . . Martineau did not always agree with either Channing or Parker. He passed beyond Channing in his respect for transcendentalism, and he could not go with Parker in all his iconoclasms."

The volumes comprising the "Life and Letters" are limited in their usefulness by the circumstance that the career of Martineau was so nearly eventless. He entered into some theological controversies of minor importance, and an episode of difference and a consequent estrangement arose between Martineau and his almost equally famous sister Harriet. His biographers (Dr. James Drummond and Prof. C. B. Upton) give us the details of these incidents, but present no psychological or analytical estimate of the man himself. Whatever the reader gains of this must be derived from the letters, and the letters are for the

most part impersonal and throw very little light upon personal characteristics. To quote the London *Academy and Literature*:

"It seems hardly worth while to epitomize in these columns the gentle floatings of his outward life. He was not indeed tied to one place or to one sphere of activity, but in Manchester, in London, in Berlin, he was the same man, engaged with like serious thoughts, delivering his soul generously of the best that it conceived. His outlook was, if one may say so, inward; and when he had once shaken off the necessarianism that trammeled his earliest years he rested to the end, confident and courageous in the sense of freedom to will the will of God."

We get in these "Letters" many interesting glimpses of Martineau's attitude toward the religious problems which were stirring the world of his day. Upon the subject of "special inspiration" Martineau seems to have maintained a view more moderate than Parker's, but quite different from the notion of mechanical and verbal inspiration then dominant in the church.

As to miracles, Martineau held that "there is nothing to render them incredible if we have sufficient evidence." He never seems to have been driven to affirm that the evidence for any particular miracle was sufficient to establish it, tho he argues with spirit that the miracles of the Gospels are distinctly different and far higher than those found recorded in the apocryphal literature of the first centuries. They "served the purpose of attracting attention to the real character of Christ. So I do not think that whether or not they were really true is a matter of much moment; for they showed the belief that Christ was capable of working such miracles, and this is the impression that ought to be left on our minds."

The specific nature of Christianity is stated as follows, in a passage that was widely quoted about the time it appeared:

"We are content to receive at the hands of Christianity the pure truths of natural piety, cleared from all that oppresses and degrades them. We receive these, however, through the mind of Christ, and deeply colored by the transmission. His divine life has disclosed a fresh image and ideal of human perfection—changed and raised the standard of aspirations—and, above all, furnished a new type, representative of God, and determining the spirit of every heavenly hope. In this, his personal occupancy of our revential and trustful affections, has consisted, we believe, the essential power of Christianity."

To the secular observer Martineau presents aspects of very little interest, chiefly because he was from the beginning to the end of his career out of all immediate and practical connection with the ongoings of his time and locality. He affirmed that it was not best for the religious teacher to deal with politics, and he never, like Robertson, made any close application of his spiritual principles to the conditions of the world in which he lived. The nearest he comes to this is in his slight occasional estimates of some of his contemporaries. Of Tennyson he wrote in 1897: "Loose and indefinite as his spiritual conceptions were, his soul was full of reverence, and he saved more religious faith than he impaired." Of Emerson he wrote (1893): "Among the many marks left by the genius of Emerson on the intellectual habits of your [American] reading people one of the most striking, I have thought, is the taste for epigram, as the high-pressure engine charged with detached inspiration. His spiritual forces seemed to work chiefly in this way by successive condensations of light into some brilliant flash of wisdom that instantly fixed a star in the sky—quite unlike a rhetorical gas comet carrying its nucleus no whither and sweeping half the heavens with a tail that can neither hide nor light anything. Many are the prophetic utterances which you may take out of Emerson and redeliver wherever the language is understood, without losing any portion of their truth." He affirmed that Carlyle was a man "who above all others stands amidst this age as its prophet and interpreter. He has shamed the folly and braced the nerves and touched the conscience of not a few, including some of the noblest spirits of our time. But he will leave no successor, I fear, that can bend his bow, and when he is gone there will be no such voice to be a terror to pretenders, and an inspiration to veracious men."

Martineau seems never to have formed deep and lasting intimacies with the other great men of his time, tho he was for a long time a friend of Newman. The Rev. Dr. John Watson (Ian Maclaren), in an article on "James Martineau: A Saint of Theism" in *The Hibbert Journal* (January) declares:

"There was in Martineau a certain aloofness, due partly, one imagines, to the cultured reserve characteristic of his religious communion, partly to his exacting habits of study. His correspondence embraces a considerable range, and is in many cases most interesting, but one misses expected names. There is not a letter from Jowett, or Maurice, or Kingsley, or Stanley. He used to meet Jowett in the North, and sometimes he stayed with the Master at Balliol; he had conversations with Stanley, and in the Metaphysical Society he was associated with the leading thinkers of the day. But one does not hear of visits to country-houses where interesting people gather, or dinner parties in London where he was a guest, and the impression is left that he kept himself as much apart from society as Browning threw himself into it. Jowett once said that Martineau had the face of a medieval monk, and certainly he had the disposition of an ascetic of learning. He was not indifferent to life, and he was a keen student of character; he sympathized intently with the joys or sorrows of his friends, and could write the most understanding letters of consolation: he was most accessible to any one who called upon him, and most ready to discuss any question of intellectual interest. But he was so absorbed in the pursuit of truth that he failed somewhat, not so much in friendship as in comradeship. No one would have felt it becoming to have intruded on Martineau's high thoughts with even the best of stories; no one would have dropped in on Martineau simply for

half an hour's human gossip. It would have been irreverent, as if one had talked about the weather with a Hebrew prophet, or passed a pleasant jest with Marcus Aurelius."

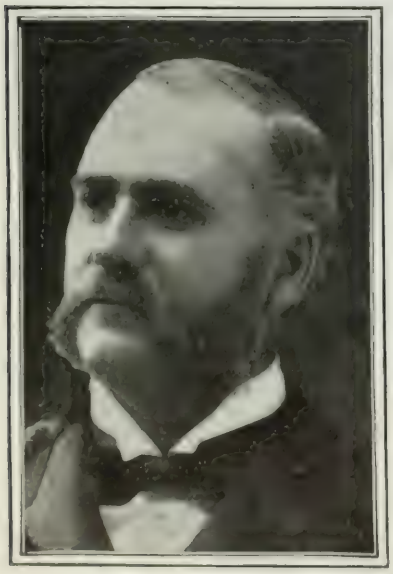
As to the question of classifying Martineau, the same writer hesitates to call him a mystic in the undefined fashion in which that word is sometimes used. He says:

"It is a question of delicate and academic criticism whether Martineau ought to be classed as a mystic. Certainly no writer of modern times has so powerfully expounded and enforced that 'life with God which is an ascent through simple surrender to the higher region of the soul,' where 'spirit may meet spirit'; and it is open to believe that when his 'Seat of Authority in Religion' is no longer read, his 'Endeavors after the Christian Life' will have a place upon the shelf of devotional literature, second only to the 'Imitation' and 'The Pilgrim's Progress.' He was also so profoundly affected by the ethical and intellectual shapes of knowledge, that it is equally fair to hold that he approached the things of the spirit through the things of the intellect and the conscience, and that he is at his strongest in the 'Types of Ethical Theory.' If a mystic be one whose knowledge of God is the direct vision of the soul, unaided and uncontrolled by the intellect or the conscience—a revelation as in a glass—then Martineau had neither the abandonment nor the directness of the mystical faculty; but if mysticism be communion with God revealed within the soul upon a throne which is high and lifted up among the purest affections, but firmly established upon reason and conscience, one is fain to believe that Martineau was the most profound because the most reasonable mystic of the modern type."

CHURCH STATISTICS FOR 1902.

THE Rev. Dr. H. K. Carroll's annual statistics of the churches of the United States are always greeted with interest, and his latest statement, published in the New York *Christian Advocate* (January 8), is widely noticed and commented upon. He declares:

"The net gains of all denominations in 1902 were 720 ministers, 1,261 churches, and 403,743 communicants. These are much smaller than those reported for 1901, particularly of communicants. The increase of communicants in 1901 was 924,675, or considerably more than twice as great as that for 1902. The difference is not due to a decrease of prosperity in the churches the past year, but to the abnormal increase credited to the Roman Catholic Church in 1901. . . . Leaving the Roman Catholic Church out of the counts, the increase for 1902 is wholesome and encouraging. The leading Protestant denominations all had a prosperous year. The Methodist Episcopal Church, which has passed the 3,000,000 line, had a net increase in the United States of 35,384 communicants and in all the world of about 50,000. All Methodist bodies added over 98,000 to their membership. The Presbyterian Church (Northern) had a notable gain of over 24,000, and all Presbyterian bodies of about 30,000. All branches of Lutherans advanced 49,320, if the returns are not at fault; the Disciples of Christ, 27,836; the Protestant Episcopal Church, 16,355; the Congregational denomination, over 13,000; the two branches of the United Brethren, over 10,000; the Baptists, more than 48,600. The large decreases which appear in connection with the Christians (12,071), the Communistic Societies (926), and the German Evangelical Protestant (16,500) are not the losses of one year, but are due to more correct figures in the first-named instance, and to a revision covering a period of years in the others. The gain of churches—1,261—does not speak of decline in popular interest. The inference often drawn from reports of church attendance, that the church service is losing its attractiveness for the people, is hardly borne out by the fact of continued enterprise in building houses of worship. Many of the new structures are finer and costlier than those they replace. Rarely or never does one hear of congregations building cheaper edifices for the sake of economy, or smaller edifices because of decreasing attendance."



THE REV. H. K. CARROLL, LL.D.

Dr. Carroll presents the following table showing the number of ministers, churches, and communicants in the various denominations:

Denominations.	SUMMARY FOR 1902.		
	Ministers.	Churches.	Communicants.
Adventists (6 bodies)	1,554	2,402	98,487
Baptists (18 bodies)	[illegible]	51,142	4,629,487
Brethren (River) (2 bodies)	121	168	[illegible]
Brethren (Plymouth) (3 bodies)	.....	314	6,691
Catholics (8 bodies)	[illegible]	11,070	9,581,693
Catholic Apostolic	95	10	[illegible]491
Chinese temples	.....	47	
Christadelphians	.....	[illegible]	1,777
Christian Connection	1,151	1,817	[illegible]7
Christian Catholics (Dowie)	55	80	[illegible]
Christian Missionary Association	10	18	784
Christian Scientists	[illegible]	[illegible]	51,608
Church of God (Winebrennarian)	460	[illegible]	38,000
Church of the New Jerusalem	115	187	7,892
Communistic societies (7 bodies)	.....	[illegible]	[illegible]4
Congregationalists	[illegible]	5,520	[illegible]4
Disciples of Christ	[illegible]	10,957	1,207,377
Dunkards (3 bodies)	[illegible]	1,071	[illegible]4
Evangelical (6 bodies)	[illegible]	2,479	162,031
Friends (4 bodies)	[illegible]	[illegible]	118,306
Friends of the Temple	4	4	40
German Evangelical Protestant	100	[illegible]	20,000
German Evangelical Synod	[illegible]	[illegible]	[illegible]56
Jews (2 bodies)	[illegible]	[illegible]	143,000
Latter-Day Saints (2 bodies)	[illegible]	[illegible]	340,500
Lutherans (12 bodies)	[illegible]	[illegible]	[illegible]
Swedish Evangelical Miss. Covenant (Waldenstromians)	[illegible]	[illegible]	32,100
Mennonites (12 bodies)	[illegible]	973	[illegible]4
Methodists (17 bodies)	[illegible]	56,787	6,084,755
Moravians	[illegible]	[illegible]	[illegible]5
Presbyterians (12 bodies)	12,207	[illegible]	1,635,016
Protestant Episcopal (2 bodies)	5,071	6,725	[illegible]
Reformed (3 bodies)	1,906	2,474	[illegible]8
Salvation Army	[illegible]	615	[illegible]
Schwenkfeldians	3	4	306
Social Brethren	17	20	913
Society for Ethical Culture	.....	4	1,500
Spiritualists	.....	334	[illegible]
Theosophical Society	.....	71	1,629
United Brethren (2 bodies)	2,348	[illegible]	[illegible]
Unitarians	540	482	71,000
Universalists	750	[illegible]	52,944
Independent congregations	54	150	14,126
Grand total in 1902	[illegible]	194,116	28,689,028
Grand total in 1901	[illegible]	[illegible]	28,285,285

The following table shows the relative rank of the several denominations:

Denominations.	Rank in 1902.	Communicants.	Rank in 1890.	Communicants.
Roman Catholic	1	9,401,798	1	6,231,417
Methodist Episcopal	2	2,801,798	2	2,240,354
Regular Baptist (South)	3	1,702,324	4	1,280,066
Regular Baptist (Colored)	4	1,618,321	3	1,348,989
Methodist Episcopal, South	5	1,518,854	5	[illegible]976
Disciples of Christ	6	1,207,377	8	[illegible]81
Presbyterian (Northern)	7	1,024,196	7	788,224
Regular Baptist (North)	8	[illegible]	6	800,450
Protestant Episcopal	9	758,052	9	[illegible]84
African Methodist Episcopal	10	728,354	11	452,725
Congregational	11	[illegible]	10	512,771
Lutheran Synodical Conference	12	[illegible]	12	[illegible]3
African Methodist Episcopal Zion	13	[illegible]	13	[illegible]
Lutheran General Council	14	344,037	14	324,846
Latter-Day Saints	15	300,000	21	144,352
Reformed (German)	16	255,408	15	[illegible]
United Brethren	17	[illegible]	16	202,474
Presbyterian (Southern)	18	230,655	17	[illegible]
Lutheran General Synod	19	211,238	18	187,432
German Evangelical Synod	[illegible]	[illegible]	20	[illegible]
Colored Methodist Episcopal	21	204,972	23	[illegible]
Cumberland Presbyterian	[illegible]	184,493	19	[illegible]
Methodist Protestant	23	184,007	22	[illegible]
United Norwegian Lutheran	24	142,360	25	[illegible]
Primitive Baptist	25	126,000	24	[illegible]
United Presbyterian	26	[illegible]	26	[illegible]
Reformed (Dutch)	27	[illegible]	27	92,970

These figures evoke comment of a varied character. Roman Catholic papers protest that Roman Catholic strength is underestimated. The Boston *Pilot* thinks that the Roman Catholic

population of the United States is at least 11,000,000. On the other hand, the Boston *Congregationalist* points out that Congregationalist gains during 1902 are set at too high a figure.

The Louisville *Christian Observer* sees indications of retrogression in the statistics, and declares that Christian people are confronted by "a most serious state of affairs, and one that needs a remedy." The New York *Independent*, so far from acquiescing in this pessimistic view, regards the situation with utmost cheerfulness:

"Two conclusions come out of these annual statistics. One is that the church is not losing its hold on the people, as is asserted abundantly by those who wish it so, but it is not true. The percentage of communicants is even gaining on the population. The influence of the church grows stronger and stronger. We see it in all reforms; we see it in the constant organization of new churches and the building always of larger and finer houses of worship. The people put more and more money into religion and benevolence. The difference between the church and the world is diminishing, not wholly because the church is relaxing its demands, but in good part because the world is becoming more Christian. It is not as necessary to fight the ways of the world as it once was, for they are better. Science and history and criticism are not injuring the church on the whole, altho they may in cases where the church has put too heavy burdens on faith.

A NEW PORTRAIT OF DR. LYMAN ABBOTT.
(Photograph by Henry Hoyt Moore.)

"The other conclusions from these figures is a lesson, and an old one. It is that there are too many denominations, and the smaller ones ought to gravitate to the larger ones, and the larger ones ought to gravitate together. This is the most important ecclesiastical work of the next decade or two."

The Chicago *Interior* (Presb.) says:

"This report of Dr. Carroll's makes it plain that the great evangelistic and aggressive denominations bear the same relations to each other from year to year. Of the eight religious bodies which number over a million adherents each, only two have changed positions since the taking of the census of 1890, if we count all the Baptists of the South as one body. There has been much said about rapid strides of the Protestant Episcopal Church and of decreased gains among Presbyterians; yet if we take the period of twelve years into account, we find that the position which the Episcopalians held in 1890—the ninth place—they hold still; while the Presbyterians still hold the seventh place which they held then. Where two denominations stand near each other, there may be temporary change of relative position from year to year; but in the long run the churches share prosperity or share defeat. If one member suffers, all the members suffer with it. It may be said that in twelve years no denomination with a membership above 100,000 has changed more than one place up or down, except in the case of a very few churches whose returns are so palpably defective that definite conclusions can not be based upon them. The fact is, that evangelical religion rises as a whole or as a whole falls. The returns seem to be as near a mathematical demonstration of the power of Bible faith as the nature of the case will admit. Any church not built upon the divinity of Jesus Christ is built of perishable materials; and any church which does not honor the word of God falls into inevitable decay. Every faith and every unfaith has in America a free field. It is the testing ground of every religion. And the review of the churches for the year just closed attests the power of the Gospel and exalts the cross of Christ."

DR. LYMAN ABBOTT AND THE EVANGELICALS.

IN his latest theological work, "The Church's One Foundation," Dr. Robertson Nicoll, of London, classes Lyman Abbott with the radical and destructive critics of Christianity, such as Baur, Strauss, Renan, and Matthew Arnold. This attitude of mind, which, it need hardly be said, carries with it a derogatory implication, is shared by many evangelical thinkers both in England and this country. The Rev. Dr. David James Burrell, pastor of the Marble Collegiate Church, New York, has recently gone so far as to say that "if there is such a thing as infidelity, Dr. Lyman Abbott stands for it." This remark, which is reported in the New York *Evening Journal* (January 21), was evoked by Dr. Abbott's declaration, in an address in Chicago a few days ago, that the Bible is a record of the religious experiences of "imperfect men." Dr. Burrell is reported to have said further:

"It has been known for some time that Dr. Lyman Abbott is against every cardinal doctrine of the Christian religion.

"It has been recognized by all evangelical ministers that in reckoning with the enemies of the Bible, Dr. Abbott is counted in.

"There is not one of the fundamental facts of the Christian religion that he is now understood to hold."

The Evangelical Messenger (Cleveland) devotes a leading article in a recent issue (January 7) to an analysis of what it terms Dr. Abbott's "spiritual quackery." He must be reckoned, it affirms, among the "blind leaders of the blind," "utterly lacking in that truly spiritual discernment which is so essential in the religious leader and teacher."

This unfriendly criticism is called forth by Dr. Abbott's editorial reply (in *The Outlook*, December 13) to a lady who states her case and asks counsel, in the following words:

"Will you not help me to a clearer insight into that which makes for peace and righteousness? I was told by a clergyman that if I would unite with the church, and believe Christ had pardoned my sins, all would be well. And I dared to join the church on simply this assurance. And now I see how false is my position, how back of this false belief is my true self, stronger in sin and doubt. Won't you help me, and tell me if there is not some way out of this besides leaving the church? I am not a backslider, surely, for I have never known the cleansing, healing power of Jesus Christ."

To this Dr. Abbott answered:

"Your experience is not at all unusual. There are in the church a great many who want to be Christians, and yet who have not the happiness which belongs to normal Christian experience. They read that 'the fruit of the Spirit is love, joy, peace.' They have some love, but they have little joy and no peace, except at times when they forget their religious experience and so forget themselves. This is not because they are not conscientious. It is not because they do not try. They are the victims of a misdirected conscience. They try too hard. What they really need is some one to explain to them what is meant by the very familiar saying, 'Believe on the Lord Jesus Christ, and thou shalt be saved.' They do not know what it means. Jesus Christ is the Savior of men, the physician of souls. Our business is simply to follow his directions, and never to ask ourselves how we are getting on; never to test our symptoms or

examine into our spiritual conditions, or ask ourselves whether we are getting better or worse. Spiritual self-examination almost inevitably produces spiritual hypochondria. . . . . .

"I advise you, then, to forget yourself and think only of your duty. Do what Christ bids you do, regardless of the question whether he gives you peace for doing it or not. Read the Sermon on the Mount and then try to live it. 'Let your light so shine.' Do you know, or can you find, any darkened home? Go into it and carry the illumination of a bright and cheery presence. 'Love your enemies.' Do you know any one who has done you an ill turn? Study how you can do her a good turn. Give the whole of your mind to doing each hour the duty which lies next to you. And when the day is over, waste no time in an idle review to see whether you have done the duty well or not. Put your thoughts on the morrow; on the question what you can find to do to make some one happier and better for your being in the world. If you have peace, be glad of it. If you have no peace, go on just the same, resolved to show yourself, the world, and your Master how loyal you can be to your own life, to your fellow men, and to him."

The Evangelical Messenger enters emphatic protest against such a line of argument. It observes:

"The learned doctor chides such as this inquiring soul with 'trying too hard' to be saved, and being victims of a 'misdirected conscience.' He suggests that it is not wise to be introspective, and adds 'Spiritual self-examination almost inevitably produces spiritual hypochondria.' It is of no use to inquire 'whether we are getting better or worse.' Well, what did Paul mean when he said, 'Examine yourselves, whether ye be in the faith; prove your own selves?' And how are we to know that our heart condemns us or not, if we do not sometimes listen to the voice within? Surely we may sometimes stand still and listen to the murmur of the deep sea within the soul that we may know which way the currents flow."

The same paper maintains that "all the way through Dr. Abbott urges the impossible, and makes the doing of good works the *means* of salvation, instead of the *fruit* of a saved state. He really preaches the old doctrine of salvation by works." We quote, in conclusion:

"Salvation is by faith in Jesus, not by works. Christ's sacrificial death is the meritorious ground of our redemption. Works are the result, not the means or the ground of our salvation. Jesus saves. And the Christ who saves is the crucified and risen One. In him we have peace. Dr. Abbott talks as tho it were not necessary to have peace, or hardly possible. And since we can not know that we have peace, it is better not to try to find out. Paul says, that now being justified by faith we have peace with God, through Jesus Christ our Lord, and rejoice in hope of the glory of God. There is now therefore no condemnation to them that are in Christ Jesus.

"So then we may and do have peace, but it comes by faith in Jesus, not by works, lest any man should boast. Yes, bless God, we may have peace, peace that passeth understanding, peace that flows like a river. We can be saved and know it. And it is the business of religious leaders and teachers to set this glorious privilege before the people, and to lead them into it. But to try to make people believe that they must live in uncertainty and doubt all their lives, and to keep them in such painful suspense, when it is possible to live and flourish in the riches of grace, in the fulness of the blessing of the Gospel, in the superabounding joy of a deep, personal experience, is to be utterly remiss in our duty as religious teachers."

Dr. Abbott, stirred by the attacks made upon him, took occasion last week, in a newspaper interview, to reaffirm his belief in the fundamentals of the Christian religion. "My faith in God as the All Father," he said, "in Jesus Christ as the Son of God and the Redeemer of the world, in the Bible as the record of the revelation of God, in human experience culminating in the life and teachings of Jesus Christ as rendered in the four gospels, and in the progress of the human race under the guidance and inspiration of God toward that universal brotherhood which is the culmination of all history, has been often repeated by me in sermon, article and volume."

A DEFENSE OF THE MOHAMMEDAN ATTITUDE TOWARD WOMEN.

THE social condition of the Mohammedan woman is interestingly discussed in a recent issue of *Zezia* (Tunis). This Moslem journal endeavors to look at the question through Christian eyes and to defend Mohammedanism against the serious charges so often made against it. We quote from its pages as follows:

"Christians attempt to estimate the teaching of Mohammed from the lofty standpoint of their own Gospel, and pronounce it ungenerous and devoid of moral grandeur. Historians have taken a more charitable view, because they appreciate the enlightening influence which the Koran exerted over bestial and pagan Arabia. If Christians would study the Koran, they would ascertain that their execration of Mussulman doctrines is due to their ignorance of the texts.

"The Koran is not oppposed to the amelioration of the condition of women. The debasement of woman and the excesses attributed to the Koran should rather be imputed to a coarse tradition which found its origin in the sensuality of a race of men. The Koran limited polygamy without commending it. Mohammedans of the higher class do not practise it. It is only honored among the poorer classes in which woman has become degraded to a thing of merchandise, a servant, a mere instrument of production. The segregation of woman is not decreed by the written law. All that is recommended is the wearing of a veil. While it is true that a virgin may be compelled to marry, yet the Koran censures the father who marries his children against their will. The repudiation of a wife by her husband is condemned as a sin more displeasing to God than any other. The pure law, disentangled from its late corruptive interpretations, makes such a course almost impossible. There is nothing in the law of Islam to prevent a woman from acquiring literary and scientific knowledge. In fact there are to be found in the harems many women of high culture."

Zezia contends that the condition of the Mohammedan woman in many respects decidedly preferable to that of her Christian sister. We quote again:

"Before criticizing the Mussulman law, Christians should understand that it guarantees to woman an amount of respect and happiness that would seem enviable to many European women. There is one admirable feature of Mohammedan teaching. Celibacy is deemed a sin and a shame. Every man, therefore, gets married, and every woman follows her ideal destiny, which is to be a wife and a mother. Mohammedan society does not include, as Christian society does, a lamentable 'job-lot' of old maids, overlooked by dowry-hunters. With us the dowry is not a contribution made by the woman, but a gift from the husband; and, since the property of husband and wife is owned separately, a man marries for love, and not for money. The Koran commands protection and respect for the faithful wife. To the son it says: 'Respect the mother who has given thee birth.' To the husband: 'Be good in all things to her.' A woman can never be in want of food; her weakness and inferiority protect her. Her father, who has first authority over her, is in duty bound to deprive himself to take care of her. Later on this duty is taken up by the husband. Even if he repudiates her, he must still support her. If she becomes a widow, her children have to take care of her. At law she has extensive rights, altho she is not on an equality with man in matters of inheritance."

We are informed, in conclusion, that "feminism," "woman's rights" movements, have no place in the Mohammedan world. The Mussulman woman's only ambition is to rule over her husband and children, and to exert the moral authority which has been hers from time immemorial. "Mohammed," observes *Zezia*, "may not have been very gallant when he assigned woman a place second to man. But Christianity, which apparently wishes to give woman the first place, is guilty of a species of hypocrisy and absurdity."—*Translation made for* THE LITERARY DIGEST.

FOREIGN TOPICS.

JOSEPH CHAMBERLAIN'S DOINGS IN SOUTH AFRICA.

JOSEPH CHAMBERLAIN, Britain's epoch-making Colonial Secretary, landed in South Africa toward the end of December. Ever since then he has been commanding the applause of listening senates (or rather of listening Britons and some Boers) by making speeches. According to these Chamberlain utterances, "the motherland during the crisis of the [Boer] war had done her duty" and the war itself showed that "no member of the empire, however comparatively weak, should stand alone to face difficulty and danger." Cicero himself was never more applauded. But the Colonial Secretary has had his bad quarters of an hour. Every Boer he meets has a claim for damages. One such claim footed up to the equivalent of $75,000. "What!" exclaimed the man from Birmingham; "of course, we can not entertain it." He had been told, he observed later, that Boers generally ask for only ten times as much as they expect to be given. It has been conjectured that their receipts from Mr. Chamberlain may be in the proportion of one to a hundred. Apart from this, the comment upon his mission is a little indefinite. For instance, the London *Times* expatiates on the statesman's "broad purpose":

EARL OF ONSLOW.
In charge of the British Colonial Office during the absence of Joseph Chamberlain.

"The broad purpose he has in view is, as he told the citizens of Durban immediately after he had landed, to draw more closely together the people of the mother country and their kinsmen over sea. At home he has been for many years the most prominent and the most unwearying exponent of the imperial ideal, and he has steadily shown by his action as a minister that his love of the empire and his faith in its future are no mere platonic sentiments, but living principles which guide and quicken the whole course of his career. Here the work has been in great part done, and done, as we trust, for all time. It is the habit of some statesmen to speak of the fickleness of democratic communities, and to urge it as an excuse for refusing to engage in great undertakings which demand for their realization steadfastness of view. We do not believe that this theory applies to such wide and simple conceptions as the unity of our empire. The apathy and indifference to our colonies which were general forty years ago have passed away, and passed away, as we are confident, forever. They have been replaced by a deep sense of the vital importance of the empire, not only as the foundation of our material greatness, but as the sure bulwark of the moral and political ideals with which British civilization in the course of its long history has endowed mankind."

Something suspiciously like this was said by the great London paper at the time of the first announcement of Mr. Chamberlain's tour. But if the famous man's friends are repeating themselves, so, too, are his enemies, especially the London *Daily News*. That Liberal organ says:

"He has gone to Africa—so it was understood—to see if order can be evolved from the chaos which his policy has brought about, and not to delight the British colonists with specimens of his oratory. If he is to play the part of conciliator, it is all the more necessary that spread-eagleism and self-glorification should be kept in the background so far as Mr. Chamberlain's temperament will permit. . . . We observe that Mr. Chamberlain makes light of the difficulties attending the work of repatriation. At this stage of his travels we do not know that his opinions carry more weight than those of any other man. After he has seen Lord Milner and observed for himself on the spot what repatriation means and what is involved in building up again from the bottom two ruined and devastated states, we shall be prepared to treat his utterances with respect."

Mr. Chamberlain made one sensation by announcing, according to report, that the Boers could help to put down the Mad Mullah in Somaliland if they felt like it. Some Boers volunteered for this purpose weeks ago, but their services were declined with much civility. *The Daily News* (London) thereupon makes these few remarks:

"We can not say that the reversal of Lord Lansdowne's decision not to employ the Boers in suppressing the Mullah strikes us as a happy beginning of Mr. Chamberlain's task. This Mullah-chasing is one of the maddestkinds of imperialist sport, and there is no sort of sense in trying to enlist the Boers in such enterprises. The place for them is on their own deserts, which must somehow be restored to cultivation, and not in Somaliland."

But Mr. Chamberlain is not always accurately reported, and in the Mad Mullah matter he may have been misunderstood. None of Mr. Chamberlain's generalities have been misunderstood, however. *The St. James's Gazette* (London) pays one of them this left-handed compliment:

"Mr. Chamberlain, we are glad to see, was loudly applauded when he claimed that the war had proved 'that the mother country was always willing to help her children, and that her heart was true and her arm strong to serve them.' He would hardly have made such a pronouncement had he not felt assured that in Natal at any rate loyal men of British blood have no good cause of complaint with their treatment. We hope it is equally true of other parts of South Africa. It is difficult to be sure of the truth about this matter. Very bitter complaints have certainly reached us from Cape Colony since the end of the war. It is alleged that even after the fight to a finish the experience of loyalists is the old one that 'loyalty does not pay.' No doubt some wholly unreasonable expectations were formed which have necessarily been disappointed, but we fear there must be some substantial ground for the discontent which unquestionably exists among some of our fellow countrymen."

Mr. Chamberlain's doings in South Africa have been attentively followed by the *Journal des Débats* (Paris), which thinks he is making a special effort to conciliate the Boers. Before he set sail for South Africa, says the Paris paper, he spoke in an uncompromising spirit of every Boer problem confronting him. Now his tone has altered:

"It is especially to be noted that the Colonial Minister spoke in a most eulogistic way of the Dutch population of South Africa. The fact that this population possesses the same virtues as the Anglo-Saxon race was stated by him to be the cause of the struggle for supremacy that must inevitably have ensued between them. . . . Mr. Chamberlain also says that Britain offers the Boers equality of position with Britons on condition that they accept the supremacy of the British flag. The favorable impression made by this utterance has been confirmed by what he said of the Colonial Office. He praised this institution, but observed that it was in a position to take larger views of colonial matters than are the colonies themselves, and to reach maturer decisions, even if those decisions entailed a sacrifice of certain colonial prejudices. This seems to be another way of saying that the home government can free itself of those racial antagonisms that work such evil in South Africa. . . . It can only be wished that Mr. Chamberlain will harmonize his acts with his words and thus his voyage may produce happy results."

REVIVING THE GORGEOUS EAST.

READERS of Milton need not be told just who it was that sat high on a throne of royal state which far outshone the wealth of Ormus and of Ind, or where the gorgeous East with richest hand showers on her kings barbaric pearl and gold. This description has been made a little shabby by the Durbar at Delhi, a ceremonial in honor of the accession of Edward VII. to the imperial throne of India. Everything was gorgeous. The imperial ensign—to continue the paraphrase of Milton—full high advanced, shone like a meteor streaming to the wind, with gems and golden luster rich emblazed. Ten thousand banners rose into the air with Orient colors waving. With them rose a forest huge of spears, and thronging helms appeared and serried shields in thick array. The central figure was not of course Milton's creation, but the creation of Edward VII.—Lord Curzon of Kedleston, Viceroy of India. Hence the language of Milton may well be abandoned for that of *The Standard* (London):

"If the opening spectacle owed the perfection of its scenic effect to the combination, on a singularly lavish scale, of Oriental magnificence with the Western instinct of precise order, it derived its impressiveness from the general sentiment of the celebration in which it was a superb detail. There is a pardonable tendency among those who are privileged to be the observers of such a sight to express their appreciation in terms which the frigid historian, referring to the documents of the past, would have to pronounce excessive. Those who are familiar with life as it was lived in the days when Akbar or Shah Jehan or Aurungzebe held their courts in Delhi or Agra, or even in that traveling capital their camp, will not be in a hurry to affirm that the display devised by the representative of the English Sovereign of all India exceeds in grandeur the spectacles in which the famous dynasty of Mussulman conquerors indulged their own taste for pomp or ministered to the desires of their subjects. Even in the days when the feeble descendants of the Mogul still kept up a fantastic shadow of the vanished glory, there were sights to be seen at Delhi with which the tamer ceremonials of the cold Occident could not well be brought into comparison."

These splendors, including salutes by trumpeting elephants, trained to use their trunks with effect, were contrived because, to quote *The Standard* again, the natives of India "think that their rulers should maintain a becoming gorgeousness." Yet *The Daily News* (London) throws cold water on it all:

"Doubtless the Oriental mind must needs be impressed not merely with the sword, but with the bejeweled scabbard in which the sword mercifully sleeps. Part of our power must obviously reside in the trappings thereof. But, apart from Lord Curzon's love of display, it is difficult to discover any pretext whatsoever for the almost illimitable extension this Christmas of the ceremonial which, in far more perilous times, has proved sufficient to retain the respect and the loyalty of our Indian subjects. It is not only probable, it is certain, that, as years pass, this kind of pageant will have to be repeated. Is the increase in its costliness to proceed at the present geometrical ratio?"

The English newspaper is tempted to go into the whole subject of India, and it reaches conclusions which may be prompted by its Liberal point of view, but which, if ever justified by events, are extremely grave:

"Seeley, in his 'Expansion of England,' with all the optimism of naked materialism, brushes aside the poverty of India by arguing comfortably that starving people do not rebel. Doubtless Persia might be instanced as a country where extreme penury is accepted passively by Orientals who have no heart to throw off the yoke. Russia, again, has suffered this year more grievously than for many decades, yet an explosion was averted. But between India and these countries there are three essential differences. In the first place India is densely populated; secondly, the tonic of Western literature is allowed free access to India; thirdly, the Indians, altho of very varied races among themselves, are yet ruled by a nation which declines to intermarry, which is prevented by climate from colonizing, and which possesses no land link with its dependency. The future of India is one of the great mysteries of modern statesmanship. Carlyle expressed the opinion that India must go some day, and no one believes that the despotism of the present is to remain without challenge."

THE MISSION OF COUNT LAMSDORFF.

COUNT LAMSDORFF, as all authorities agree, is the most silent diplomatist in Europe. He is the Russian Minister of Foreign Affairs, having attained that dignity after years of service in minor posts. No man living is believed to know more of the traditional policy of his country. The state secrets of the present Czar and of the late Czar are said to be an open book to Count Lamsdorff. Language to him is not an instrument with which to conceal his thoughts, but an instrument with which to dispense almost altogether. Every movement he makes is watched intently, for he is deemed the embodiment of Russia's foreign policy. "Count Lamsdorff," observes the *Neue Freie Presse* (Vienna), "has as yet refrained from any striking act that would serve as a clew to his personality. He has been handed on like a fixture of the Russian Foreign Office from one minister to another. He was the custodian of Russian diplomatic tradition under Foreign Ministers Giers and Muravieff. Long before he was himself made Foreign Minister he came into close contact with Alexander III., and he had many opportunities of gaining the confidence of Nicholas II. Count Lamsdorff's personality is no whit less striking than that of his predecessor, Count Muravieff":

COUNT LAMSDORFF,
Russian Minister of Foreign Affairs, who is hailed in Europe as a master of silence.

"But his ways and traits are the opposite of those of the former Foreign Minister. Muravieff was convivial. Count Lamsdorff is a silent, reserved man. In no sense is he a lion of the salon. He toils unremittingly. In his walks through the streets of St. Petersburg he chooses the quiet and lonely neighborhoods, avoiding the crowded and lively thoroughfares. He goes about with his eyes cast down, and apparently he is ever absorbed in thought. . . . The Count is a red blond. His hair has begun to whiten about his forehead. A reddish mustache, carefully trimmed, covers his lip. He is not by any means a sly diplomatist of the old school. There is about him nothing of the subtle profundity associated in the general mind with the idea of an experienced Russian diplomatist. There is, indeed, a look of sincerity about him, and his personality denotes candor. It is this frankness of nature that endeared him to the Czar. But those who know Count Lamsdorff are well aware of the impossibility of gaining information from him. He never under any circumstances utters one word more than is absolutely necessary."

This unusual and interesting person has lately completed a mission to the Balkans and to Vienna that is asserted to portend great things for Europe in the near future. "It will certainly be contrary to all experience," says *The Standard* (London), "if a journey made by a Russian Minister in the Balkan states, and

his interviews with their rulers, be not followed by events of a more or less striking character." The grand object of the mission, if we are to accept the general verdict, was to settle the question of Macedonia. *The Spectator* (London) thus analyzes the situation:

"She [Russia] has sent her Chancellor to study the [Macedonian] situation in person in Sophia and Belgrade, and further to organize in Vienna, in concert with Austria, a joint scheme for dealing with the situation which seems likely to arise. The official explanations of Russian policy which have appeared in St. Petersburg no longer confine themselves to the old hopeless declarations in favor of the maintenance of things as they are. The *status quo* has at last become impossible. The Sultan may be allowed to play with his paper reforms for some months to come, but there seems little reason to doubt that Russia has at length decided to impose a plan of her own, doubtless a very conservative plan, whose main object will be to avert war, but still a plan which will aim at placing in more trustworthy hands the responsibility for the government of Macedonia."

Count Lamsdorff is said to favor the appointment of a Christian Turkish governor for Macedonia whose administration is to be supervised by the Powers. But the Russian newspapers say that the Count merely visited the Bulgarian and Servian capitals in order to let it be understood that there must be no official winking at revolutionary uprisings in Macedonia. Significance is attached to the fact that the alleged organ of Count Lamsdorff himself, the *St. Petersburger Zeitung*, reproduces with friendly comment the following from the *Neue Freie Presse* (Vienna):

"Russia desires to avert the Macedonian peril—which grows acuter every day—not in a spirit of opposition to Austria, but in harmony with her. This is the only way to prevent Macedonia from setting the Balkans in a blaze and threatening European peace with a dire catastrophe. . . . This imminent peril exists in Macedonia and threatens to become general throughout the Balkans unless the sparks of the fire are trodden out in time."

The net result of Count Lamsdorff's mission, says the Vienna organ, will be an accord between Russia and Austria on the Balkan question. The Count, according to the *Serpske Novine* (Belgrade), an official Servian organ, "renewed, by his trip to Servia, the friendship between the Czar and King Alexander." This is taken to mean that satisfactory explanations were made concerning the postponement of the visit of King Alexander and Queen Draga to the Czar and Czarina. This visit is always in contemplation, but it never comes off. The *Samouprava* (Belgrade) declares that Count Lamsdorff's mission has guaranteed a tranquil future to Servia. The *Listok* (Odessa) says positively that the Macedonian problem will now be settled in short order. It would seem from the indefinite character of all this comment that whatever was done took place behind the scenes. Such is the conclusion of the Paris *Temps*. Count Lamsdorff wound up his grand tour in Vienna, as noted already. There he had a conference with Count Goluchowski, Emperor Francis Joseph's Foreign Minister, the result being a preliminary agreement for joint action in Macedonia by Austria-Hungary and Russia. What form that action will take remains to be seen.—*Translations made for* THE LITERARY DIGEST.

GERMANY'S ALLEGED PROPOSAL TO BUILD THE PANAMA CANAL.

CERTAIN English newspapers have a way of publishing particulars regarding Germany's plans in the American continent. The result is embarrassing to Berlin. The very latest instance of the kind involves the London *Daily News*, which gives information "on high authority" on the subject of Germany's arrangements to build the Panama Canal. The English daily says a German offer was made to the French Panama Canal Company to purchase for $40,000,000 all its franchises should the United States not take advantage of its option expiring March 4 next. The German Government is further said to have offered to buy from the Colombian Government its Panama shares at par, agreeing to abandon all German claims against Colombia should this offer be accepted. The *Temps* (Paris) says of the alleged proposition:

"Germany bases her claim to be able to build the Panama Canal without violating the Monroe Doctrine upon the fact that according to her constitution Colombia can neither alienate any of her soil nor transfer it to a foreign Power. Hence in constructing the canal the Germans would acquire neither rights of sovereignty in Colombia nor rights of permanent occupation in Colombian territory. Finally, the Germans point to the existence of the French Panama Canal Company, whose undertaking

CARTOON CRITIQUES ON GERMAN RULE.

has never been regarded as an infraction of the Monroe Doctrine."

The *Hamburger Nachrichten*, however, thinks the canal question will be settled entirely in accordance with the wishes of President Roosevelt. He has indicated a preference for the Panama route, and while it is true that he may meet with strong opposition in Congress, that opposition will almost certainly be overcome. Therefore the construction of the Panama Canal by the United States may be deemed a practical certainty. The *Vossische Zeitung* (Berlin) observes that the Monroe Doctrine need not disturb Germany in any way, as she has "never recognized it" and it is no part of the law of nations; but Germany will look out for her own interests in every part of America. This utterance is deemed significant, because the German daily has hitherto been friendly to the United States and has advocated deference to American susceptibilities.—*Translations made for* THE LITERARY DIGEST.

THE DARDANELLES.

A WAR-SHIP can float out of the Black Sea int othe Mediterranean only by going through the Bosporus and the Dardanelles. This geographical truism has been converted into a strait-jacket for Russia by means of a treaty closing these straits to the war-ships of the great European Powers. "The closing of the straits," Lord Salisbury once said, "is a European principle," a proposition to which the assent of Russia is far from cordial. Her famous Black Sea fleet is deprived of access to the Mediterranean—bottled up, to put it flatly. She may not send that fleet out and she may not float another war-fleet in. Turkey owns the territory on both sides of the narrow outlet into the Mediterranean, and the Sultan is bound to forbid "the ships of war of foreign Powers to enter the straits of the Dardanelles and the Bosporus." Furthermore, "so long as the Porte is at peace, His Majesty [the Sultan] will admit no foreign ship of war into the said straits." But Great Britain is now vehemently protesting that Russia has violated this treaty with the Sultan's consent by sending four war-ships through the Dardanelles. Russia replies that the vessels were torpedo-boat destroyers, disarmed, flying a commercial flag. Hence they were not war-ships at all. *The Speaker* (London) heaps ridicule upon this Russian contention, but says nevertheless:

"After all, what is our interest in closing the Bosporus to European war-ships? We do not prevent Russia from maintaining a permanent fleet in the Mediterranean in time of peace. We merely succeed in causing her the expense and inconvenience of sending her fleet round from the Baltic when she wishes to be represented in the Levant. So far as the affairs of Turkey are concerned, the inconvenience weighs as heavily on ourselves as it does on Russia. If we could have sent a flying squadron to anchor in front of Yildiz Palace, there would have been no Armenian massacres. Disraeli's theories of geography, which saw in Constantinople the center of the universe, and in the Mediterranean one of the larger English lakes, are sufficiently obsolete to-day. Lord Lansdowne would have done better to make some amicable arrangement with Russia, instead of committing himself to a protest which must be as irritating to Russia as barren of results, and as humiliating to ourselves as our verbal fulminations against the occupation of Port Arthur."

The disagreeable impression made by the incident upon the British mind has been intensified because Germany is carefully holding aloof. She deems the affair "outside her political sphere," much to the vexation of the London *Times*. "In all controversies with Russia," declares the British organ, "we may confidently count on having Germany against us." *The Daily Mail* (London) asserts that it is Germany's aim to promote discord between Great Britain and Russia. This and like utterances in other British papers have inspired these comments in the *Hamburger Nachrichten*:

"The British ambassador at the Porte has lodged a protest, as our readers know, because four Russian torpedo-boat destroyers passed through the Dardanelles on their way to the Black Sea. It is held that such a proceeding constitutes a violation of the international treaties according to which the Dardanelles are closed against the war-ships of all nations. Great Britain demands a similar privilege [of passage through the Dardanelles] in the event of its concession proving desirable to herself. According to the British view, the character of a war-ship is in no way altered by the fact that it has been disarmed and flies a flag of commerce. But this was the means resorted to by Russia to assure the passage of the four torpedo-boats in question. Russia urged in her behalf that an unarmed vessel under a flag of commerce can not be regarded as a war-ship. As Russia persisted in this contention, the Porte adopted the same view and assented to the passage of the torpedo-boat destroyers."

The German paper goes on to say that the London *Times* "naturally" takes advantage of the Dardanelles question to attack Germany. To resume our quotation of the Hamburg newspaper:

"Germany is certainly in a position to regard the Dardanelles question as lying outside of her political sphere. Consequently Germany must maintain a neutral attitude, and she has ere this let Russia understand as much. The use which *The Times* makes of Germany's attitude is naive. The paper says this is about what it expected of Germany. Germany has never used the influence it has acquired with the Porte to bring about conditions of general advantage to Europe—for Europe read England. Germany would under no circumstances do anything to disturb her harmonious relations with her Eastern neighbor [Russia] in England's favor. England may safely depend upon it that Germany will be against her in any dispute with Russia. We hope so because we have no desire to promote a policy which in the last analysis would mean that we fight England's battles with Russia and thus come into conflict with France at the same time."

Germany, says the Paris *Temps*, "altho associated with England in Venezuela, or perhaps for that very reason, and in order to retort to the insulting suspicions of the British press and to Rudyard Kipling's cry of hatred, finds no difficulty in justifying Russia and in putting Great Britain in the wrong. Here is an offensive and defensive alliance that begins strangely with a slightly clouded honeymoon."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

PATAGONIA.—The neglected South American region known as Patagonia may have a great future before it, in the opinion of the *Prensa* (Buenos Ayres). Its resources are richer than has hitherto been supposed, and colonists from Europe are beginning to find this out.

THE AMERICAN FAMILY.—There are three powerful factors operating to destroy family life in the United States, according to a writer in the *Revue des Deux Mondes* (Paris). Among the wealthy classes it is sport, among the middle classes university education, and among the wage-earners the factory system.

DISTRESS IN JAVA.—Economic conditions in the large island of Java are giving serious concern to the Dutch Government, says the *Gids* (Amsterdam). The population has grown enormously, and we are told that methods of administration are antiquated with the result that a native question presses for solution.

STEALING INTO THE CARIBBEAN.—Is Germany responsible, after all, for Denmark's refusal to sell her West Indies? The question is asked by *The National Geographic Magazine* (Washington), which thus replies: "Germany has always wanted a naval station in the West Indies, but has been unable to obtain one on account of the Monroe Doctrine. Some years ago Denmark offered to sell the Danish West Indies to the United States, but the United States Congress did not accept. Recently another treaty was made and ratified by the United States Congress, but this time, for some unknown, mysterious reason, Denmark refused to sell. Why? It is well known that Germany has always wanted Denmark, and if by some peaceable means the kingdom of Denmark should become a state of the German empire, the Danish West Indies would not have changed sovereigns, but yet the German fleet could have its station there. Would the Monroe Doctrine interfere with this arrangement?"

NOTABLE BOOKS OF THE DAY.

SAINT PIERRE AND POMPEII.

MONT PELÉE AND THE TRAGEDY OF MARTINIQUE. By Angelo Heilprin. Sixty-five photographs, largely taken by the author. Cloth, 6 x 9½ in., 337 pp. Price, $3 net. J. B. Lippincott Company.

SCIENCE is not compelled to resort to allegory in perpetuating the memory of its heroes and their achievements. Professor Heilprin, standing on the edge of the smoking crater of Pelee, gazing on the phenomena that presaged the second disastrous eruption with the eyes of an observer and not of a dreamer, or on the next day viewing the writhing victims of that eruption, requires no symbolism at the hands of sculptor or painter who may endeavor to immortalize the scenes. The facts were dramatic enough, just as they were, to satisfy any artist.

Professor Heilprin, President of the Geographical Society of Philadelphia, was the first scientist to visit Martinique after the first eruption of Mount Pelee, on the 8th of May, and the only one to observe directly the subsequent eruption of August 30, which completed the destruction of Morne Rouge. The latter disaster occurred during his second visit to the island, and gave him the fullest opportunity of verifying the conjectures, formed during his first visit, of the nature of the cataclysm.

ANGELO HEILPRIN.

Through questioning the groaning victims in Morne Rouge, he found out that the "flame" which was the agent destructive of life, was "only a heated or luminous blast" accompanied by "localized lightning. . . . The inhaling of an atmosphere of intense heat of many hundreds of degrees, in places with a temperature possibly much exceeding one thousand degrees, means practically almost instantaneous death."

This theory also completely explains the hitherto inexplicable phenomena of death connected with the eruptions of Vesuvius and other volcanoes in ancient and modern times.

Professor Heilprin's parallel instituted between Saint Pierre and Pompeii is striking in its artistic as well as its scientific aspects. His writing as well as his painting (for Professor Heilprin is a landscape artist of reputation) establishes the fact that a scientist may also be a man of interpretative and prescient imagination. He says:

"Compared with Pompeii, Saint Pierre appeared ten times more ancient. The green and fertile slopes of Campania, with their nestling cottages and cultivated fields, are here wanting; . . . these make modern even an ancient field. In Pompeii the eye has had restored to it the special activities of man; he reads the life of the household, hears the clamor of the market-place, follows the debate in the Forum, and gambles on the wheels of the chariots as they whirl around the circus-field. In Saint Pierre, for those who have not known it before, there is nothing of this. Tho its walls are modern . . . and everything that has been found within is modern, the city itself looks as tho it had been deserted at a time when man was still prepared to be a wanderer, long before the beautiful sculptures of Pompeii had been carved, long before the paintings had been put on walls to charm and adorn."

A bird's-eye view of "The Silent City," one of the numerous artistic photographs which illustrate the work, finely interprets this feeling.

It is doubtful whether the scientist or the artist will more appreciate this book in the years to come. It is certain, however, that no other description of the awful event will ever supersede it in the estimatino of either class of readers.

ANOTHER SCOTCH STORY.

THE CONQUEST OF CHARLOTTE. By David S. Meldrum. Cloth, 5 x 7½ in., 480 pp. Price, $1.50. Dodd, Mead & Co.

SCOTLAND seems destined to serve as the scene for the best of our modern novels. First Stevenson, then Barrie used this land as the background of their wonderful stories. Then a host of minor writers who did very creditable work followed in their footsteps. Last year we had that somber but almost great book, "The House with the Green Shutters," and one of the best books of this year also hails from Scotland. The name of this book is the "Conquest of Charlotte," and it is so good a story that one feels that here is a new writer whose work bids fair to stand among the very best. A person who reads much of the current fiction will find in this book the same uplift that he gets when he turns from the book of the hour to a book by Thackeray. Here at last is a world of three dimensions, instead of the usual paper world of two; a book whose characters move and act like real people, instead of in the stereotyped manner of paper heroes and heroines. It is a book full of human nature, a picture of a community where even the least character is human and leaves a vivid impression on the reader's mind, and where a few of the principal characters are so well drawn that we are almost convinced that we have met them, as with Stevenson's Alan Breck and David Balfour.

The chief character of the book is one Rab Cuick, a talented rascal, who plays the game of life for the sake of the game, and gets his reward in the excitement of staking his own wits against those of others, as a man without scruples, without affection, and even without personal ambition. His own knowledge of his own cleverness is enough for him. His character is described by the hero of the story, who tells the story in the first person. The author has managed to give a most piquant flavor to the whole tale, because his hero, who is a bit of a prig, writes the account of his plausible but rascally father-in-law. The plan the book follows is like no other. There is a plot, but it is developed along lines of its own. For its character-drawing the book deserves all praise, but here again the writer has pursued a method that is personal to him and difficult to describe. The book is a meaty one; you may "cut and come again" and yet have plenty left over.

THE PORTRAIT OF A GREAT ITALIAN.

THE ROMANCE OF LEONARDO DA VINCI, THE FORERUNNER. By Dimitri Merejkowski. Cloth, 4¾ x 7½ in., 402 pp. Price, $1.50. G. P. Putnam's Sons.

THE Russian litterateur has to be taken seriously, for he takes himself so seriously and his theme grips him so strongly. Dimitri Merejkowski has produced a remarkable study of the most unique figure of the Italian Renaissance, Leonardo da Vinci, in the form of an historical novel 462 pages long. This is the second book in a trilogy. The first is "The Death of the Gods," the third is "The Antichrist," the Russian title of the second being "The Resurrection of the Gods." The first treated of the period of Julian the Apostle, whose "*Tu vicisti, Galilæe!*" recorded the *coup de grace* of paganism. This second deals with the revival of the antique spirit when Art recalled the Olympians by its new activity. The three are put into English excellently by Herbert Trench, whom Merejkowski formally recognizes as his only authorized translator.

All of which prænotanda is merely to show the magnitude of the theme which this Russian has essayed. In "The Romance of Leonardo da Vinci," he proves how capable he is of coordinating a prodigious mass of historical matter into perfect unity. It demonstrates his scholarly familiarity with the character of Italian life of the fifteenth century, "in thought, word and deed," and he reproduces its color with an artistic mastery, forceful and individual.

The title is slightly misleading. It might have been "The Frustration of da Vinci," for the picture of this solitary genius, so notable a factor in his period and yet so pathetically self-inclusive, breeds melancholy regret in the reader. "Romance" speaks of the tender passion or chivalric adventures, neither of which found place in the life of Leonardo. This love-child, born of an orphan tavern-maid as the result of Piero da Vinci's visit to Anchiano on business, never married, and it is doubtful if he ever felt passion boil in his heart to the disturbance of the brain which was ever seeking Truth and Beauty. Tenderness he had, for beast and human, and his affection for his contadina mother was exquisitely filial.

DIMITRI MEREJKOWSKI.

From his father, the Florentine notary, he inherited vigorous health, a powerful frame, and zest for life; from his mother, his long, slender hands, his smile and an almost feminine charm of blue eyes and golden hair. The incessant energy of his myriad-sided intellect, which made him the most versatile genius of his time, was a gift, as it ever is, apart from and transcending fleshly progenitors. He thought and studied and planned more than he achieved. It took him ten years to put into clay "Il Civallo," the heroic equestrian statue of Francesco Sforza, *condottiere* and parvenu Duke of Milan, and he gave four years to elaborating the subtle beauty of Monna Lisa Gioconda, the one unquestioned work of his brush which remains to attest his supremacy as painter.

Despite the vivacious prodigality with which Merejkowski combines characters, events, local color, and places in this immense Florentine mosaic, and despite his nerve and fusion with his subject, he has an impersonal poise which is quite akin to that of Leonardo himself. It is a marvelous projection, that of this Russian of the cold North, into the complicated and surging vitality of the Italian Renaissance. The very opposite of Merejkowski's acute analysis of Tolstoy is so exact an esti-

mate of his own quality as man and litterateur that it may well be quoted here. He says in a recent essay of his great fellow countryman:

"Tolstoy, altho an artist of European celebrity, and himself deeply characteristic of Russian nature, is wholly devoid of that capacity for fully absorbing universal culture which seemed to his rival [Dostoievski] a distinguishing feature of the Russian. In spite of all his calculated and supposedly Christian cosmopolitanism, there is not, I think, another so hampered as he in his creative power, by conditions of place and time and the limits of his own nationality. The creator of 'Peace and War' (a work meant to be historical) may, perhaps, on his intellectual side, acknowledge history, and even be to some extent acquainted with it. But the imagination of his heart has never felt it: he never penetrated, or tried, or thought it worth while to penetrate, into the spiritual life of other ages and nations. The 'enthusiasm for the distant' for him does not exist—that inspired realization of history—nor grief for, nor living delight in, the past. Every fiber and root of him is fixed in the present."

Merejkowski certainly has "that inspired realization of history." The times and events and localities through which da Vinci moves are portrayed as minutely as the painter's character. It is the "Resurrection of the Gods," and the human agencies in Italy that revitalized them, which holds his attention primarily and unintermittently.

He introduces Cesare Borgia, the Pope Alexander, Nicoló Macchiaveli, Cesare da Sesto and Giovanni Battsaffio, students of Leonardo, the Sporzas, Beatrice d'Este, El Moro's wife, and his mistresses, Cecilia and Lucrezio Crivelli, Beliincioni, the court poet, Savanarola, and depicts each with the strongest touches and characterization.

PRESENT TENDENCIES OF RELIGION.

RELIGIOUS LIFE IN AMERICA: A RECORD OF PERSONAL OBSERVATIONS. By Ernest Hamlin Abbott. Cloth, 5½ x 8½ in., 370 pp. Price, $1.00 net. The Outlook Company.

MR. ABBOTT, the author of this book, gathered his material in the course of a tour of three months' duration through the Eastern, Southern, and Western sections of the United States. He held interviews with men of all classes and conditions, and took his observations apparently from an entirely unbiased position. He does not profess to speak as an expert or a scientist, and disclaims having made anything like an exhaustive survey of the situation with which he deals. His intention in the main is to give the impression that he derived, in the course of his travels, of religious life in America, and this he does in very lively and telling report. A shrewd and careful observer, divested of all prejudice, willing to see all phases of his subject, and not in haste to make inductions, Mr. Abbott has given a book of great value, and one calculated to excite both commendation and hostile criticism.

In a general way, the antagonism or indifference of the laboring classes to the churches has found voice frequently; but it is not often so frankly and strongly reported by an observer who speaks on the whole as a friend to the churches and as a professing Christian. He found this breach between the church and the workingman confessed and deplored by Christian men generally, and especially by intelligent and progressive Christian ministers; tho very little appeared by way of intelligent and successful attempts to improve the situation. In all quarters, he encountered the opinion of workingmen, especially such as belong to the labor-unions, that the church and the ministry are unfriendly or indifferent to the aims and principles for which organized labor is contending, and that the churches are on the whole controlled by those who oppress the workingman and seek to deprive him of his rights. The situation thus disclosed seemed to him partly to involve real conditions in the churches, and partly to indicate widespread misapprehension of the sincere aims of Christian people. As to either horn of this dilemma Mr. Abbott points out the necessity that exists for the use of such means, the preaching of such a gospel, the pursuit of such activities on the part of the churches, as will result in a better understanding between them and the laboring classes.

Mr. Abbott also took observations in the South of the religious condition among the negroes, where he found some good beginnings toward a type of religion more closely related to personal morality than has traditionally and formerly prevailed. The attitude of the dominant classes toward the colored race seemed not to be encouraging. Christianity thus far seems not to have made much inroads upon the caste spirit. There was evident very little consciousness, on the part of Christians, that the law of brotherhood requires any change in the social or political relations existing between the white populations and the negro.

The "revolt against convention" to which the author devotes a chapter, is a phrase which describes an increasing disposition observed among ministers, especially the younger men of the West, to break loose from traditionalism and religious pretense, and strike out directly for the "main thing" with any implement or method conveniently at hand. This return to natural and "up-to-date" procedure is a symptom to be noted in contrast with considerable reaction to formalism and traditional methods. On the whole, the church seems to Mr. Abbott still to be the greatest existent moral force, especially as it is still the only systematic teacher of the august morality of the Bible.

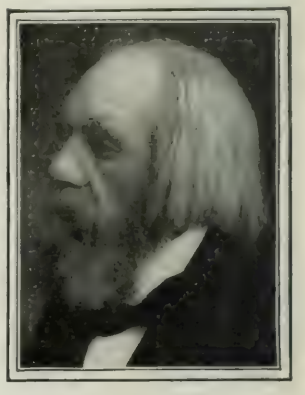
A BIRD'S-EYE VIEW OF THE NINETEENTH CENTURY.

MEMORIES OF A HUNDRED YEARS. By Edward Everett Hale. Two vols. Cloth, 5¼ x 8¼ in., 318, 321 pp. Price, $5.00. The Macmillan Co.

THERE is no class of books among which there are more dull ones and fewer sprightly and interesting ones than books of memoirs or reminiscences. Any one whose business it has been to read a grea tmany books as they appeared, will testify to the leaden dulness of so many books that are supposed to be a sort of foot-note to the century through which we have just passed. A man to have something interesting to say must himself be interesting. He must have equipments other than age and the remembrance of notable people among whom chance has thrown him: he must have a personality. Now this is precisely what Dr. Edward Everett Hale has, and what makes his "Memories of a Hundred Years" such good reading.

In this book Dr. Hale pretends to do no more than to invite his readers "to look through my own keyhole upon this landscape of a hundred years' horizon." By his keyhole he means his own personal experience and that of his father and grandfathers.

The result is as interesting a book as one would well imagine. There is no man living who is better fitted to give a bird's-eye view of the century. Dr. Hale's activities have brought him in contact with men of all conditions. He has seen the inner history of all the important political, religious and literary movements of the last sixty years, while the practical side of his nature caused him to be deeply interested in all the varied improvements which made for the material prosperity of this country. So in this one book one aspect after another of the country is flashed before the reader, until one understands the great sequence of events which have led to our wonderful national development. The author has used his own method in giving his pictures of a hundred years, and his method at times seems almost fragmentary,—an anecdote here, a violent prejudice there, some one's letter elsewhere, as in the battle of Bull Run; and yet the effect as a whole is more complete than that given in most books whose authors have carefully considered each sentence in relation to every other sentence. It is a book full of the author's personal predilections and those of his family, and yet the book is nowhere narrow. Nowhere are the small men mistaken for great ones, nowhere are the important events magnified into large ones. Throughout his life, Dr. Hale's eyes have been fixed on the horizon, and so in his book he has been able to give an impression of the great currents of events instead of describing a few little back-water eddies.



EDWARD EVERETT HALE.

THE STORY OF A RIVER.

THE ROMANCE OF THE COLORADO RIVER. By Frederick S. Dellenbaugh. Cloth, xxxv + 399 pp. Illustrated. Price, $3.50. G. P. Putnam's Sons.

MR. DELLENBAUGH was a member of the Colorado River Expedition of 1871–72, conducted by Major Powell; and it is with the express approval of that able and intrepid explorer that he puts on record here the incidents and achievements of the memorable venture.

If difficulty, danger and disaster ever mean romance, then surely the story of the wild river of the West may claim that distinction. Never is the Colorado twice alike, "and he who would try the temper of its waters were wise to approach them in a humble and a reverent spirit." No party, as Major Powell demonstrates, has since made the passage through the complete line of cañons; those of the upper region being even yet quite unknown to the outer world. Several trappers (such as Pattie and Carson) had acquired considerable knowledge of the general course and character of the river as early as 1830, but to Major Powell and his two parties belongs the honor of being the first to explore and explain its extraordinary canyon environment. "Defiant, fierce, opposing utility everywhere," scornful of all helpful things, refusing to be bitted and bridled in the service of commerce, perpetuating a wilderness, forbidding encroachment, "from the tiny rivulets of its snowy birth to the ferocious tidal bore that marks its death in the sea," it wages unending battle—relentless, sublime, unique. The whole country drained by its tributaries has been wrought by the waters and the winds of ages into multitudinous plateaus and canyons—a stupendous system of gorges, and tributary gorges, which, even now bewildering, were to the early pioneer practically prohibitory. "Water is the master-sculptor in this weird and wonderful land;" yet men have died of thirst there, for water except in the river is scarce; often for months, in the valleys and plains, the soil is never comforted with rain; even dew is unknown. From its snow-source to the sea, the dragon river has made its own epic of perils, privations, reverses, disasters, appalling by their forces and their forms.

BOOKS RECEIVED.

CURRENT POETRY.

A Walk with the Wind.

By EDWIN MARKHAM.

Come with me to the open road
And let the woodland write the ode—
Come, for the hill-wind takes my arm
And laughs away the heart's alarm,
Drawing me on from ridge to ridge,
By field and ford and frosty bridge.

Down from his wide tree-darkened hall
The gray owl sends his Saga call.
And here a field-mouse leaves his home,
His labyrinthine catacomb,
And prints the snow with little tracks,
Like hackings of an elfin ax.
I see a spider by a stream
Bridge his small Nile with swaying beam—
See on my path a bold ant dare
His Chimborazo hung in air.

I pass an old decaying fence,
Turned to a rare magnificence,
For gold of lichen and green of moss
Have paid with beauty all the loss.—
Ha, landlord Fox, alert and lithe.
Is out to get his morning tithe,

With thrifty eye to oversee
His unstaked principality.
Circling, the high crows swing and caw,
Poised by the same impartial law
That traced the orbit of the star
Wide wandering on the dark afar.

The snows are heaped along the ground,
Bright kingdoms builded without sound.
The cleansed air tingles in my blood,
The joy pours through me like a flood!
I tread on Hellas as I go,
Wrecking her Parthenons of snow;
I sweep across imperial Rome,
Wasting her glories, dome by dome.
And yonder, at the wind's footfall
Crashes a jeweled Taj Mahal,
An irised miracle of white,
Built by what spirits of the night!—
And yet those shut-in mortals choose
To peer into the Press for news,
Thinking the great events are hurled
On lightnings round about the world!

—In December *Success*.

Going Like the Wind

yet gliding along so smoothly that only the rapidly moving panorama, the exhilarating breeze and the surprised faces of those you pass tell you how fast when riding in

The Winton

No shock or bump, no vibration or jar. The greatest luxury of automobile travel. The new 1903 model Winton has a 20 horse-power, double cylinder motor which can make you shoot over the road or will let you "just crawl along," according to the pressure put upon the spring "governor button," which is conveniently placed beneath the right foot. It is so simple to operate, yet as sensitive and effective as the throttle control of a railroad locomotive.

The Winton double cylinder motor, of the opposed type, has behind it an unparalleled success, demonstrating beyond cavil the correctness of the principles on which it was designed. The 1902 car, with its 15 horse-power motor, is the foundation of our present model, which has fulfilled our most sanguine expectations. The intensely gratifying results shown by this new model give added strength to our position as leaders in the world's automobile-building industry.

Price of the 20 horse-power, 1903 Winton Touring Car, including detachable tonneau, two full brass side lamps, tools, etc., $2,500. Visit any of our branch or agency depots and the many features of Winton excellence will be fully demonstrated.

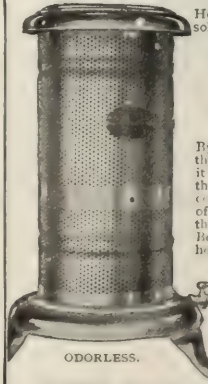
Cheaper than Coal!



Here's a new invention that will solve the heating problem—the

Economic Gas Stove

By an ingenious arrangement the gas is superheated, causing it to expand before being fed through burner. This secures consumption of *all* the products of combustion, using ¼ less gas than best of other gas heaters. Besides, the flame is 2½ times hotter—so that it burns *less than ⅓ the gas required by others.*

Optimism.

By H. W. Bynner

There's not a man of all that preach despair
Who, under his stolidity, would dare
A moment go without the inner trust
That something Blessed shall be found somewhere.

—In January *McClure's Magazine.*

Heaven.

By Josephine Dodge Daskam.

She says that when we all have died
We'll walk in white there (then she cried)
All free from sorrow, sin, and care—
But I'm not sure I'd like it there.

She can not tell me what we'll do,
I couldn't sing the whole day through:
The angels might not care to play,
Or else I mightn't like their way.

I never loved my Uncle Ned,
So I can't love him now he's dead.
He'd be the only one I know—
She says it's wicked to talk so.

I'd like to see how God would look,
I'd like to see the Judgment Book:
But pretty soon I'd want to be
Where the real people were, you see.

When people turn dead in a dream,
I wake up, and I scream and scream:
And since they're all dead there, you know,
I'm sure that I should feel just so!

—In January *McClure's Magazine.*

Western Blood.

By Juliet Wilbor Tompkins.

My tower faces south and north,
And east it opens wide,
But not a window-pane looks forth
Upon the western side.

I gaze out north on city roofs,
And south on city smoke,
And to the east are throbbing hoofs,
The rush of city folk.

But not a ray of western light
May fall across my work,
No crevice opens to the night
Where western eyes may lurk:

My crowded days are spent in quest
Of eager city things,
And when the little birds fly west,
I would not hear their wings.

But they who once have climbed the Town
When daylight lingered late,
And watched the western sun go down
Athwart the burnished Gate,

And felt the rolling fogs descend,
And seen the lupin blown
(And known what things a western friend
May offer to his own),

Ah, they can never still, for long,—
He knew what would be best
Who built our tower fair and strong,
And closed it to the west!

—In January *Scribner's Magazine.*

PERSONALS.

How Marion Crawford Lost a Dinner.—Hall Caine has established a reputation for unusual conversational powers. A story illustrating this is developed during his recent stay in New York, and it is printed in the New York *Times*. A certain lady invited F. Marion Crawford to meet Mr. Caine at dinner. Mr. Crawford flatly refused, and this was the reason given for doing so:

"Caine did me out of a meal last summer through his conversational habit, and here's where I get even. It was this way. I was at work in my den in the little tower at the top of my villa at Sorrento when Hall Caine's card was brought me. I did not wish to be interrupted in my work and so sent word to my wife to say that I was out, and asking her to entertain the visitor until he went away.

"Mrs. Crawford carried out my request, but Mr. Caine became engrossed in conversation and stayed to lunch. The meal was served in the library, just at the foot of the stairs leading to my den. When I started down for a bite to eat I heard Caine talking away as if he never would stop. I couldn't get down-stairs without facing my visitor. Then I thought that my wife would find some way to send me something to eat. But the afternoon wore away with Caine still talking. It seemed as if I was never so hungry in my life. Well, on toward dinner time Caine finally bethought himself of other engagements, I suppose, for, expressing his regrets that he had been unable to meet me, he took his leave. It was not until then that Mrs. Crawford thought of her poor hungry husband. I hardly care to have Caine talk me out of another meal even to enjoy the pleasure of your charming society, madam."

How Carnegie Greeted the King.—The visit which King Edward paid Andrew Carnegie at Skibo Castle was a complete surprise to the philanthropist, the King merely telegraphing him a few hours beforehand that he would arrive at a certain time. Mr. Carnegie happened to be asleep when the "wire" came, says a correspondent of the Philadelphia *Press*, and it was not handed to him until he awoke. The correspondent relates the incident that followed:

Then there was considerable excitement. The King was due in five minutes, and Mr. Carnegie was in despair at the thought that not a single arrangement for his reception had been made. Then he had an inspiration. At Skibo there is an immense pipe organ which Mr. Carnegie had put in some time ago for his own pleasure. An organist is a permanent member of the millionaire's household. Mr. Carnegie determined that the organ should thunder out "God Save the King" as his Majesty entered the castle. But when he sent for the organist, the reply came back that the musician had gone down to the neighboring swimming-pool.

"Have him out of the water, then!" roared Mr. Carnegie.

And so they had him out. Actually dripping and clad only in a blanket, the wretched man was brought back to the castle on the run, borne into the concert-room and plumped down on the organ stool. It was just time, for the word passed that the King's carriage was coming up the driveway. An immense screen had been dragged in front of the organist, now innocent even of his blanket, so that he was shielded from view, and thus, the water dripping from his hair, his fingers and his shoulder blades, the shivering musician played "God Save the King," while one servant rubbed him with a coarse towel and another gave him brandy. The King was delighted with his musical reception, and when Mr. Carnegie told him the circumstances under which the national anthem had been performed his Majesty laughed till his sides ached.

TO CURE A COLD IN ONE DAY
Take Laxative Bromo-Quinine Tablets. This signature E. W. Grove on every box, 25c.

A good investment for the old home

A modern Hot Water heating apparatus introduced will largely enhance its value, as well as comfort.

It makes the even, perfect temperature which prevents disease.
It promotes and maintains the family health.
It saves doctors' bills. Ashes and coal gases are not brought into the living rooms.

Far less coal is consumed—and not this only—the economy of fuel is the lesser gain—the healthful, convenient, comfortable *control* of temperature at all times is the *great* gain. And this great gain is all paid for—for you—in the fuel economy. The apparatus is now simply and cheaply erected in old homes. Need not be connected to waterworks system. Describe your house to us.

MORE OR LESS PUNGENT.

Realism.—It is said that a certain young lady in a certain printing-office has a special talent for drawing. One day she drew the picture of a hen so true to life that when she threw it into the waste basket it laid there.—*The Lyre.*

Usual.—CONDUCTOR (To stranger in New York): "Did you want to get off at Fiftieth Street?"

STRANGER: "Yes."

CONDUCTOR: "Well, step off at the next corner and walk back ten blocks."—*Life.*

A Poser.—On some of our trains carriages for "ladies only" have been placed.

On one occasion these carriages were all occupied by the fair sex; consequently a number of ladies were obliged to procure seats in a compartment in which a haughty young fellow was the sole occupant.

He quickly saw that the carriage would soon be filled and he be in danger of losing his seat.

At length, when an elderly woman hove in sight, he thought it time to interfere.

"My good woman," he remarked, somewhat testily, "this is a carriage for gentlemen."

But he was quite taken aback when the old lady made the unexpected reply:

"Then what are you doing here?"—London *Tit-Bits.*

Unstable Criticism.—FIRST ACTOR: "What do you think of Macready Barnestormer's performance of Hamlet?"

SECOND ACTOR: "Uncommonly good, dear boy, splendid."

FIRST ACTOR: "H'm. He says your Hamlet is the most rotten thing he's ever seen in life outside a penny gaff."

SECOND ACTOR: "Ha! Well, no doubt we're both wrong."—London *Judy.*

Kind-hearted.—"He's a kind-hearted automobilest, isn't he?"

"Exceptionally so. I never knew him to run over even a child, unless he was in a hurry."—*Life.*

A Great Hand.—MIKE (Teaching Pat poker): "Well, what hov yez got?"

PAT: "Four trowels and a black shamrock!"—*Puck.*

The Sultan and the Opera-Hat.—The French artist Benjamin Constant was very fond of telling this story, which we take from the New York *Staats-Zeitung:*

Once when Constant was traveling in Morocco he received an invitation from the Sultan to present himsel to court, at Fez. The painter's first thought was for his his costume, and after much deliberation he decided to appear in conventional European evening-dress, including an opera-hat. He was ignorant of the fact that the Moors regard black garments as very common and vulgar, but he soon learned, from the audible sneers of the native courtiers, that he had sadly contravened Moorish ideas of "good form."

Being somewhat rash and considerably nettled he revenged himself by closing his hat and springing it open in the face of the sneerers, who scat-

"Macey" SECTIONAL BOOKCASE { Patented—Other Patents Pending }

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL. There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval," subject to return at our expense if not found at our factory price 40 to 50 per cent greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION—Do not be misled by the deceiving advertisements of imitators. No other sectional bookcase has a self-receding door that is absolutely non-binding and automatic—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Court rendered a sweeping decision in our favor.

Stack No. 106.—Genuine Mahogany, $56.50. Golden Quartered Oak, $42.00. Ask for Catalogue No. "P-1."

STARK BROS, Louisiana, Mo.; Dansville, N. Y.; Etc

tered yelling with surprise and fear. The noise attracted the attention of the Sultan, who, on learning the cause, asked to be shown the wonderful hat in action. After seeing and carefully examining it, he gave utterance to this wise opinion:

"If I had lived a hundred years in your country and adopted all your other customs I could never have brought myself to set on my head so hideous a contrivance as that!"—*Translation made for* THE LITERARY DIGEST.

Coming Events.

February 5–6.—Convention of the Manufacturing Perfumers' Association, at New York.

February 9–14.—Canners and Packers' Association and Canning Machinery and Supplies Association joint convention, at Washington.

February 12.—Convention of the American Jewish Historical Society, at New York city.

February 13–14.—Convention of American Road-Makers, at Detroit.

February 17.—Convention of the United States Golf Association, at New York city.

February 19–20.—American Carnation Association Exhibition, at Brooklyn.

Current Events.

Foreign.

VENEZUELA.

January 22.—The German war-ships renew the bombardment of Fort San Carlos.

January 23.—Commodore Scheder, the German commander in Venezuela waters, declares that Fort San Carlos fired the first shot at the *Panther*.

OTHER FOREIGN NEWS.

January 19.—General and Mrs. Miles arrive in St. Petersburg.

China replies to the demand of the Powers.

The German Foreign Office disclaims having ordered the shelling of the Venezuelan port of San Carlos.

January 20.—Chancellor von Bülow speaks in the German Reichstag on Germany's action in Venezuela.

Dr. Lorenz, in Vienna, praises American doctors, nurses, and hospitals.

January 21.—The trial of Col. Arthur Lynch, M.P., for treason begins in London.

A Russian kerosene trust is formed to compete with the Standard Oil Company.

January 22.—The second anniversary of Queen Victoria's death is observed in England.

Chancellor von Bülow declares in the Reichstag that the Powers were actuated in their operations in Venezuela not alone by the question of claims but by the desire to preserve their prestige.

January 23.—Colonel Lynch is convicted of high treason and is sentenced to death.

January 24.—The pending treaty of reciprocity between the United States and Cuba is causing much apprehension in Great Britain.

January 25.—Count Boni de Castellane is re-elected to the French Chamber of Deputies.

Domestic.

CONGRESS.

January 19.—*Senate:* Cuban reciprocity treaty is considered. Senator Foraker, of Ohio, speaks on the Omnibus Statehood bill.

House: The Diplomatic and Consular Appropriation bill is passed. The District of Columbia Appropriation bill is considered.

California Oil Stocks

There is an immense future to the Crude Petroleum industry of the Pacific Coast. The "Standard Oil Co." and others are expending millions in development work to handle the product, and they know what they are about! A word to the wise is sufficient.

"The Light that NEVER FAILS"

comes pretty near expressing the views of thousands who use

THE ANGLE LAMP

But there is more to this lamp than ever this phrase conveys. Folks are so accustomed to smoky, smelly lights that it is often hard for them to believe that **The Angle Lamp** is simply faultless. Think of a light as brilliant as gas or electricity, that never smokes or smells under any circumstances, that is lighted and extinguished as easily as gas and that burns but 1 8 cents' worth of ordinary kerosene (or coal oil) a month. These are the reasons why **The Angle Lamp** has grown steadily in popular favor year after year. There is nothing like it. Send for our free catalogue W. It shows all styles from $1.80 up and tells a lot of interesting facts about light.

The Angle Lamp Co., 76 Park Place, N.Y.

The "Best" Light

is a portable 100 candle power light costing only 2 cts. per week. Makes and burns its own gas. Brighter than electricity or acetylene and cheaper than kerosene. No Dirt. No Grease. No Odor. Over 100 styles. Lighted instantly with a match. Every lamp warranted. Agents Wanted Everywhere

THE "BEST" LIGHT CO.
92 E. 5th Street, CANTON, OHIO.

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

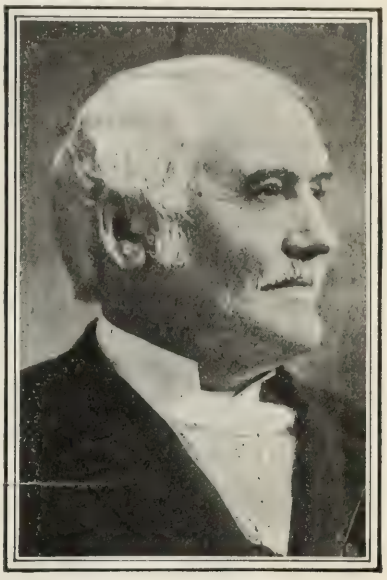
THE LEE MONUMENT AT GETTYSBURG.

SEVERAL Grand Army posts of Pennsylvania emphatically denounce the proposition to erect a monument to Gen. Robert E. Lee at Gettysburg, but very few protests come from the press. "It would be an injustice to the men of the Union army"; "a palpable and flagrant insult to the memory of their loyal and sacred dead"; "this battle-field was purchased by the loyal States of the North, and there is no room for a monument to any rebel officer"—such are a few expressions taken from the resolutions adopted by several posts. A bill providing for a commission and for an appropriation of $20,000 "to erect, in cooperation with the State of Virginia, an equestrian statue of Gen. Robert E. Lee on the battle-field of Gettysburg," was recently introduced into the Pennsylvania Legislature by Representative Thomas V. Cooper. This bill was suggested by Col. A. K. McClure, formerly editor of the Philadelphia *Times*. Mr. Cooper's own G. A. R. post (the Bradbury Post, 149, of Media) calls the bill "an insult to the memory of our dead comrades, not only of Pennsylvania, but of the whole country." The Pittsburg *Dispatch*, one of the few papers that denounce the proposition outright, says:

THOMAS V. COOPER,

Who has introduced into the Pennsylvania legislature a bill providing for the erection of a statue of General Lee on the battle-field of Gettysburg.

"We do not recall any prior case of erecting a statue to a defeated general on the battleground where he was defeated, especially by the Government against which he was fighting. Every Northerner of liberal spirit will gladly honor Lee's personal virtues, among the greatest of which were the calm dignity and perfect good faith with which he accepted the ultimate defeat of the Confederacy. But we can hardly construe a statue erected by public funds on a famous battle-field to be intended as a tribute to personal virtues. It must refer to the military service of the general commemorated. It is certainly going a long way to thus establish monumental honor to the general whose fame was created by the effort in war to disrupt the United States. The era of good feeling is worth cultivating, but people may be pardoned for asking if no distinction is to be made between the attempt to maintain the republic and the attempt to overthrow it."



COL. A. K. McCLURE,

The leading advocate of a Gettysburg monument to General Lee.

According to Colonel McClure, the monument is not meant to glorify Lee as an individual or the cause he represented, but "to give historic value to the most memorable battle-field of the country, and to present General Lee as one of the most heroic chieftains of both sides who are illustrious representatives of American valor." The majority of the Northern papers accept the proposition in that light, and add, in the words of the Pittsburg *Gazette*, that it marks the beginning of a time "when every remnant of bitterness will have died out of true hearts, North and South." *The Army and Navy Journal* declares that all the surviving major-generals of the Union army who fought at Gettysburg, all but three of the surviving brigadiers, and all but one of the surviving colonels are in favor of the monument.

Most of the Southern papers are inclined to think that the time has not yet come to erect the monument on Northern soil. "The monument of Hate stands upon the pedestal of Northern narrowness," says the Columbia (S. C.) *State*; and "so long as it does stand, neither Virginia nor any other Southern State can afford to entertain such a proposal." It believes that some day a monument to Lee and to Davis will be erected in Washington. The Richmond *Dispatch* agrees with *The State* and declares that Lee "will be placed where he belongs by the united action of the American people." The Richmond *Times*, however, says that "General Lee would not be more honored than he is by having his statue on Northern soil," and the Charleston *News and Courier* says:

"We wish that our friends would let the South and its heroes alone. They do not require special advertising. It is only a week or so since the building of a tablet to Winnie Davis in a church in Philadelphia was abandoned because there was so much opposition among the Christian people of that community to honoring her in that way. If Colonel McClure and our other sincere friends throughout the North would not 'fire the Northern heart' by seeking to do honor to Southern soldiers in the

way contemplated in the present bill before the Pennsylvania Legislature, it would be better for them and for us. General Lee is safe forever from the touch of those who would dishonor him if they could."

The New York *Sun* remarks that the Grand Army posts "are struggling against a tide that can not be stemmed in their endeavor to prevent the erection of a monument to Lee at Gettysburg." "The State which contains Gettysburg," says the Philadelphia *Record*, "can unite with the State that produced Robert E. Lee to erect a monument to Lee at Gettysburg with only the best effect upon the new patriotism of the new Union." The Philadelphia *Public Ledger* observes:

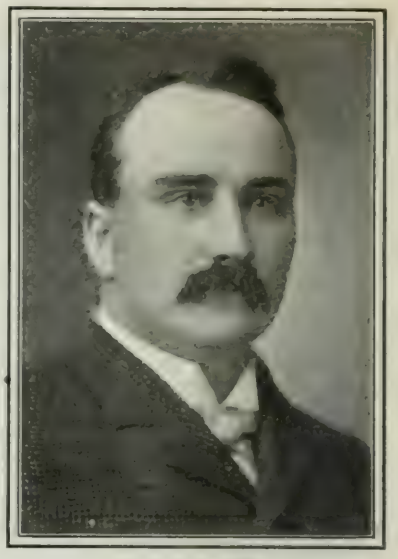
"The opposition of the professional patriots, of all those whose various interests thrive upon the traditions of the war, is to be expected as a matter of course. The corresponding class in the South are still more unrelenting in their determination never to forget. . . . It shows that the country is not really one in heart and spirit, and it is very certain that it never will be one, never can realize its own ideals, till the division between sections has ceased to influence our life and thought, and till Lee can be commemorated in Pennsylvania and Grant in Virginia as great Americans whose fame is a part of the whole nation's heritage."

State Senator Tyler, of Virginia, has proposed placing the statue of Lee in the Statuary Hall, Washington, as a contribution from Virginia, and Charles Francis Adams, in his speech at the dinner of the Confederate Veterans' Camp of New York, last week, pleaded for a statue of Lee in Arlington. The Baltimore *Sun* declares that "the appropriate place for a monument to Lee is in the Statuary Hall in the Capitol of the United States beside the statue of Washington."

THE NEGRO AS A BLESSING.

A GOOD many Northern people will probably be surprised to learn that "the negro is a blessing to the South," and that "the Southern people would not consent to his removal"; yet we are assured by *Dixie*, an Atlanta monthly devoted to Southern manufacturing interests, that such is the case. The editor declares:

"There is no spirit of antagonism between our people and the negro. On the contrary, there is mutual understanding and mutual regard. The trouble, when such exists, comes from outside influences, from the meddling of well-meaning but mistaken citizens of other sections, or else from meaner sources, too frequently from designing men who seek to use the negro to gain selfish ends, and when these ends are gained the negro, debauched and degraded, is left to his own resources, and thus he becomes a burden, not so much upon the white man as upon his own race, for every mischief-making, worthless negro stands as a stumbling-block in the way of race progress; for every such negro helps to destroy the confidence and good feeling that exists between the white man and the black man, and without this mutual confidence there can be no progress for the Southern negro.



MR. E. H. MARTIN

Editor of *Dixie*, who declares that "there is no spirit of antagonism between our people and the negro."

"The white men of the South will work out their own salvation. Let alone, the negro will share in the general progress. If false prophets shall lead him away from the white man, his fate is sealed. The white man can do without the negro, but the negro is too near the jungle to stand alone; barbarism is only a few generations behind him, and it would be still fewer generations ahead of him without the white man's uplifting influence."

HOW TO CATCH A GOOSE.

The New Orleans Times-Democrat.

The negro is a blessing to the South because his presence there "is a permanent guaranty against vicious labor organization." The editor explains this statement as follows:

"Labor organization must deal with three separate and distinct classes: First, the worthy artisan, capable, sober, and industrious; second, the lazy craftsman, who is without ambition, and works merely that he may live; third, the envious man, whose mean nature breeds anarchy and socialism. These three classes make up the great army of workmen that must be reckoned with to-day in the consideration of any and all industrial problems.

"We have two of these classes here in the South. The third, thank God, has remained away, and the presence of the negro will hold us free forever from this objectionable factor in the industrial problem. Indiscriminate and unguarded foreign immigration has cursed many sections of our good land, but its blight has never fallen upon the South, and it never will, for the negro will be with us always.

"Left to work out the problem, the whites and the blacks of the South will labor in harmony. There may be labor organization, and it is well that there should be. But labor organization, minus the man of socialistic tendencies, will not retard industry. Leave out the embittered, envious outcasts of Europe, and the labor organizations of the land would be useful agencies for the nation's progress. But so long as these organizations are led and controlled by men who seek only to destroy, who depend upon brute force rather than right argument to carry their cause, just so long will labor organizations be harmful alike to the men who work and to the men who pay.

"But we have no fear of wild-eyed anarchists here in the South. Occasionally one finds his way across the line. But the problem of organization, of the sort he desires, is a staggering proposition. If he organizes the whites, the negro stands ready to turn the wheels of industry, not so well as the white man would do it, but well enough to keep the ball rolling. If the negro be organized—but the thought of such a thing is ridiculous. The negro is not serious enough for that. He is not vindictive, he is not ambitious, and having neither of these qualities the doctrines of anarchy are not for his consideration.

"But what is most astonishing about this talk of deporting the negro is the fact that advocates of the plan do not seem to consider the very important question of the negro's citizenship. He is a citizen of the United States. He has constitutional rights that must be respected, and his right to remain here, if he chooses to do so, can not be questioned by any sane person.

This matter was settled thirty-eight years ago. A million good lives were sacrificed in the very sanguine consideration that was given the question, and the verdict was: 'full citizenship for the negro.'

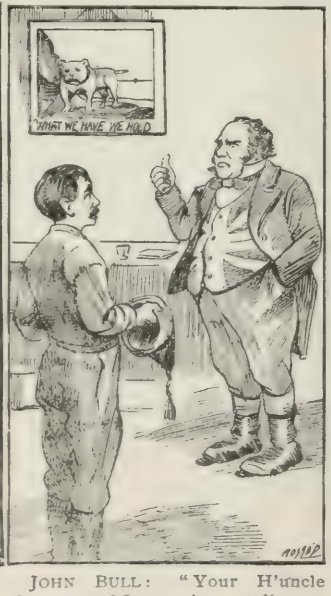
"It was not a very satisfactory verdict to a good many other citizens, but, nevertheless, it was accepted, and it is in force today."

A YANKEE BARGAIN WITH BRITAIN.

GREAT satisfaction is being expressed by the newspapers in this country over the arrangement that Secretary Hay has made with Great Britain for the settlement of the Alaska boundary dispute. This arrangement provides that the dispute shall be left to a joint commission of six eminent jurists, three of them American and three British. As there is no seventh commissioner, a deadlock is regarded as almost certain, in which case the boundary will remain, until further negotiations, where it now is; and it now is pretty nearly where the United States claims it ought to be. The British can win, of course, by persuading one of our judges of the righteousness of their case, or the Americans can win by persuading one of the British judges. The American papers think that the latter is far more likely to happen than the former. The Brooklyn *Eagle* says confidently:

"That the court will sustain the American claims is more than probable. The case for both sides is already public property. We know in advance of their submission the arguments that will be employed to effect conversion from one view to the other. We know that Great Britain, long before the cession or sale of Alaska to the United States, admitted in public documents and in official maps the Russian claim to land which was afterward legally transferred to us. We rely upon these admissions to convince one or more of the British members of the court that our contention is well founded. We rely upon them to accomplish with adjudicators what they could not effect with high commissioners, who were politically and by natural prejudice precluded from assenting to any agreement not based upon their own premises. We rely upon them to convince the world that in securing what belongs to us we are not possessed by land hunger nor by a desire to profit unduly at the expense of a smaller people."

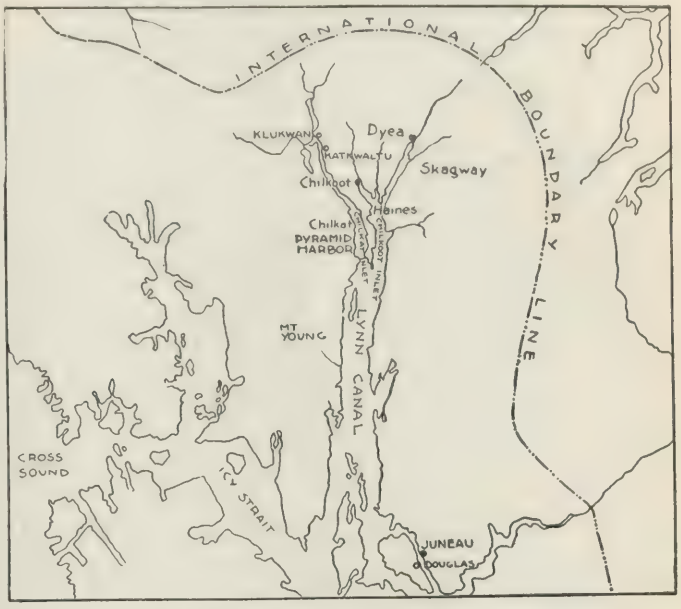
MR. BULL (the land agent): "Is there any hother section of Canader as seems to take your heagle eye, Sammy? Don't let your natural modesty prevent your saying so if there is, y' know."
—*The Toronto World.*



JOHN BULL: "Your H'uncle Sammy and I are going to talk over that little dispute of yours and—er—you might just turn that picture to the wall and keep yourself in the background as much as possible."
The Toronto Telegram.

Great Britain has refused to enter into a precisely similar arrangement on several previous occasions, we are told, so that the present bargain is something of a triumph for Mr. Hay. The New York *Press* declares:

"It was a victory of tactics, a dashing stroke at exactly the right time. His weapon was opportunity. Finding the whole British people aroused against the Balfour ministry for its odious alliance with Germany, which they feared was a sore tax on American friendship for themselves, Mr. Hay urged his representations as to Alaska. It was a happy occasion for the British Government to give evidence of its attachment and good-will, at no cost to what in the last analysis would be shown to be its rights, and the Alaska treaty was signed on the conditions laid down by our Secretary of State. This was really magnificent strategy."



A DISPUTED PART OF THE ALASKA BOUNDARY.

The Canadians claim that the boundary line, instead of making the broad curve to the northeast, as above, should follow a more direct course, leaving Dyea, Skagway, and other important places on the Canadian side of the line.

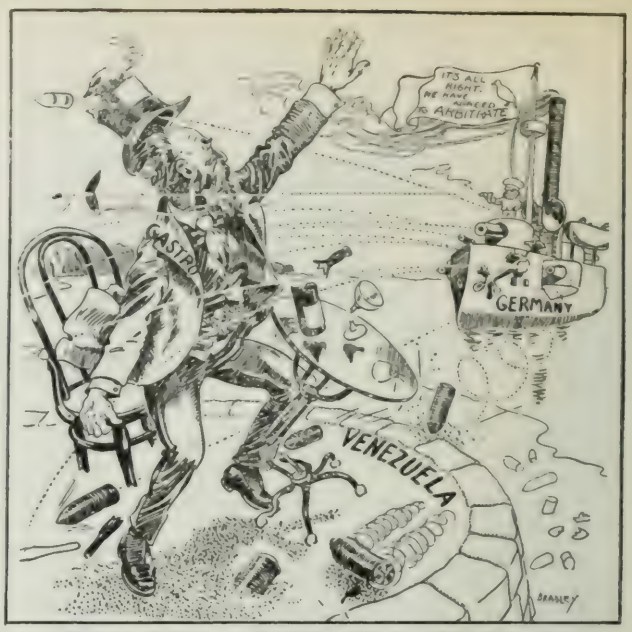
The whole dispute is, in brief, whether the boundary line of the Alaska "panhandle" (which lies between Canada and the ocean for more than 500 miles) is thirty miles from the coast's windings and indentations, or thirty miles from the coast's general line. If the former, it cuts off Canada from the water for all that distance; if the latter, it gives Canada Dyea, Skagway, Pyramid Harbor, and other ports on Lynn Canal. It appears that until recently the former course of the boundary was undisputed. Frederick W. Seward, who was Assistant Secretary of State under his father, William H. Seward, and took part in the negotiations for the purchase of Alaska, points out in a letter to the New York *Tribune* that the acceptance of the Canadian claim would cut that part of our territory in two and give Great Britain a harbor that could be made into an impregnable naval station. He pronounces the Canadian claims absurd, and gives this interesting information:

"On the table before me, as I write, are some copies of the maps—the map prepared at St. Petersburg in 1829 by the Russian topographical bureau; the map compiled by the deputy surveyor general of Lower Canada in 1831; the map offered in evidence by Sir George Simpson in London in 1847; the map prepared by the United States coast survey, and, finally, the British Admiralty chart published in 1877 and corrected to 1898 by the hydrographer of the royal navy. In all these the boundary line between Russia and British America runs thirty miles inland, coming nowhere near that grand old arm of the sea known as the Lynn Canal or any of its harbors—the line just as it was laid down at the time of the treaties, and just as the United States says it should be now."

The Baltimore *Sun*, however, is not so sure that the Canadian claim has not a leg to stand on. It says:

"It is not reasonable to assume that Canada, whose contentions are supported by the British Government, would have

HE MAY NOT BE HUNGRY, BUT HE HAS A HUNGRY LOOK
—*The Minneapolis Journal.*



CASTRO: "Hold on; if this is arbitration, I'll take war."
—*The Chicago News.*

CASTRO AND THE KAISER IN CARICATURE.

challenged the American title to the territory without substantial grounds. There are two sides to every question, and it must be admitted that the Canadians make out a plausible, if not a convincing, case. Their interpretation of the Anglo-Russian treaty of 1825 is in sharp conflict with the American understanding of that convention, and it differs materially from the Russian Government's interpretation as embodied in the Russian official map of 1827. Did Russia, in that treaty, intend to bar Great Britain's free access to the Pacific? That is the effect of the treaty, as our diplomatists construe its provisions. The Canadians deny that this was the intention of the Czar's Government, and attach great importance to seemingly conflicting provisions in the treaty of 1825. The territory claimed by the United States, through its purchase of Alaska from Russia in 1867, is more than 300 miles from north to south and from 14 to 70 miles wide, and excludes Great Britain from the Pacific. The Canadians contend that under the treaty of 1825 Russia guaranteed Great Britain free access to the ocean. In a recent statement of the Canadian case, Mr. F. C. T. O'Harra, of Ottawa, Secretary to the Minister of Trade and Commerce, asserts that the United States claims territory to which it has no title under the treaty between Great Britain and Russia, and that the American contention is based on a fallacy. Canada, he says, has been anxious for a settlement of the question ever since 1872, but not until 1898, when the British Government supported its claims, has the United States shown any disposition to adjust the dispute."

SETTLING THE VENEZUELAN CLAIMS.

IT is the general expectation that a few days will suffice for such an adjustment of the European claims against Venezuela as will induce the allies to raise their vexatious blockade, and leave President Castro to his normal occupation of fighting the insurgents. Mr. Bowen, our minister to Venezuela, who is arranging the terms between Castro and the Powers, has proposed a plan by which a certain percentage of the customs duties shall be devoted to paying Venezuela's debts, and it only remains to be decided who shall be the preferred creditors, and what the percentage shall be. As the New York *Commercial Advertiser* says:

"The warlike phase of the affair has pretty certainly passed by, and the business stage has been reached. What is now going on in Washington is nothing more than a species of chaffering in which each side naturally desires to get as much as it can and to give as little as it must. All sorts of checks and delays are to be expected. The allies wish to be considered as preferred creditors of Venezuela, and their claim is on the face of it a just one; for they alone have been to the trouble and expense of forcing Venezuela to an adjustment of her debts. Mr. Bowen is apparently not prepared to concede this, and yet he will probably have to do so in the end. There is, however, no reasonable occasion to feel apprehensive concerning any renewal of hostilities. These delays, and threats to break up the conference are simply a part of the game."

Now that the affair is thought to be practically over, the Detroit *News* finds that it has not been without its blessings. It says:

"The affair on the whole will not be without its advantages, at least in beneficial experience for Venezuela and the United States. All the world will have learned that we shall not indifferently regard attacks upon American republics by European Powers, howsoever potent the latter or feeble the former; and the American republics will, in their turn, have learned that we are not likely to interpose by war to protect them in the repudiation of their just debts. In our own turn we shall have been taught that the defense of the Monroe Doctrine is no easy task, and that a crisis may come at any time which would demand the exertion of all our strength to meet. The completion of the Panama Canal will increase our burdens and responsibilities, not our capacity to bear them. Nothing less than an enormous increase in the strength of our fleet will do that. We can not afford to ignore this necessity much longer."

An interesting feature of last week's developments was the assertion that Great Britain, and not Germany, initiated the movement against Venezuela which has stirred up so much resentment in this country. Where this assertion originated is not clear. Some think that the German Government, tired of bearing the brunt of American ill-feeling, sent out the report that Great Britain "began it." Others believe that the Balfour ministry, equally tired of hearing that it was being led by the nose by William, sent out the report to create the impression that the reverse was the fact. I. N. Ford, London correspondent of the New York *Tribune*, takes the latter view, but doubts the truth of the report. He says, in a cable letter:

"Apologists for the Government are striving to create the impression that the initiative in the naval demonstration was not taken by Germany, but by England. Various dates are assigned for the first proposal for joint action, and there are strenuous denials of the generally accepted opinion that the German Em-

peror entrapped the court and ministers on his Sandringham visit. The truth is that the German Government was the first to approach the State Department at Washington with reference to the claims against Venezuela, and this was done in December, 1901. A similar consultation occurred not long after with reference to the British claims. Both Germany and England were informed that the Washington Government was not prepared to offer objection to measures for the collection of just foreign debts provided adequate assurances were offered that neither territorial acquisitions nor permanent occupation of the ports was intended. The suggestion for joint action did not come from Washington. The State Department did not prearrange the affair, but contented itself with imposing restrictions in consonance with the Monroe Doctrine. It is immaterial whether the first suggestion for joint action came from England in July or even in February, 1902. What can not be denied by the apologists of the Balfour ministry is that an iron-clad alliance was made by which England was deprived of independence of action and committed against withdrawal until the German claims were settled. It is incredible that the precise form of this alliance was not made in Germany. Wherever the first proposal for joint action originated, whether the British ministers forged their own chains or accepted the German patent, they tied their hands and exposed themselves to the serious risk of affronting the United States."

THE RISING PRICE OF OIL.

THE standing defense made for the Standard Oil Company by its friends has been the allegation that it has greatly reduced the price of kerosene—that oil was never so cheap as it has been since the trust gained control of the field. Within the last four or five months, however, the price has advanced $1.47 a barrel, and the retail price has advanced four or five cents a gallon; and the newspaper editors are beginning to call for an explanation. The New York *Commercial* says the advance has been due entirely "to decreased production and increased demand," but most of the other papers that comment on the matter decline to accept that reason as valid. The Chicago *Tribune* has fears that the trust is showing a grasping spirit, and suggests a Congressional investigation:

"The scarcity of coal necessarily increased the demand for a substitute such as petroleum. The demand would justify a rise in price, but there is a strong impression that the Standard Oil Company has taken an unfair advantage of it, and that, in spite of all it may say to the contrary, it has kept the lion's share of the higher price for itself and has left little for the producer.

"The value per gallon of the illuminating oil exported last month was one cent in excess of the value of the oil exported in December, 1901. Foreigners are paying only a little more for the oil they burn, while Americans are paying much more. There is competition in the oil business abroad and none at home.

"It is unfortunate that there is such a lack of information concerning interesting questions of this kind and that there is at present no agency for securing the information. Perhaps before Congress shall adjourn it will devise some method of ascertaining to what extent a large and seemingly excessive jump in the price of a monopoly controlled article of general use like petroleum is unjust to the consumer."

Another explanation is that the trust has to pay the producer more for his crude oil than formerly. The New York *Evening Post*, a paper of high standing as a commercial and financial journal, says on this point:

"In connection with the recent extraordinary advance in the price of petroleum, we hear of some mutterings from the producers because they are given so small a share of the enlarged profits. To the consumer, oil has advanced in the past four months $1.47 a barrel. The producer maintains that he gets but 27 cents of this, and perversely argues that he ought to have more. But he should understand better the wise and benevolent ways of the Standard Oil Company. The considerate gentlemen at the head of that charitable institution know well the temptations which sudden wealth brings in its train. They could not think of subjecting a mere producer to such a test. So they restrain their instinctive desire to give him six-sevenths of the increased price, and keep it themselves out of regard for his moral character. Besides, how could they be sure that he would endow Chicago University?"

"Deliberate robbery" is the term applied by the Waterbury *Republican* in the following comment:

"Those who know declare that the by-products of petroleum make the oil cost nothing to the Standard Company. Hence the advance of one or two cents a gallon is deliberate robbery after a magnificent profit was assured. The people were in desperate circumstances by the scarcity of coal. They turned to oil as a substitute and increased the demand. The opportunity for put-

"I GUESS THIS PROP ISN'T WHAT WAS HOLDING THAT UP."

"SUNNY JIM" UP TO DATE.
—*The Detroit News.*

SOME COAL FAMINE SKETCHES.

ting on the screws was too much for the manipulators to lose, and on they went to the tune of $6,000,000 more profit.

"Churches and colleges will doubtless be glad to receive a share of the proceeds of this robbery from Rockefeller. Yet it does not differ much from the methods pursued by the highwaymen of the dark ages who plundered right and left and then attempted to make their peace with God by building churches, or distributing a part of their spoil among charitable bodies. It may be that some time the golden age will be so near dawning that there will be honest manhood and womanhood enough in the world to spurn benefactions offered which may have any taint in them."

The situation calls out the following picturesque remarks from the San Francisco *Argonaut*:

"While coal is unobtainable, or only obtainable at prices prohibitive to lean purses, petroleum becomes the natural substitute. Oil-heaters are not very expensive, the petroleum supply is unlimited, the great storage-reservoir system of the Standard Oil Company renders easy a prompt response to demands for oil, however large. The improvident who, in the past, have bought coal by the pail, can now buy oil by the quart. Petroleum would appear to stand between some of the very poor of cities and absolute suffering from the bitter cold.

"But just at this point the poor man, whose misfortune it is to live in the frigid East, runs kaplunk into a condition and not a theory. Oil that, in the mild days of September, was cheap is now dear. During the past few months, the cost of petroleum has increased fifty per cent. Three months ago, the wholesale domestic price in New York was about eight cents per gallon. Then from the north came the first chilling blast of winter, and the Standard Oil Company put up the price. Coal grew scarce, the weather colder; up went the price another notch. Then the storm king, in full panoply of icy mail, swept down upon the shivering cities, and the cost of oil rose once more. For a Christmas present to the poor there was another advance. The joyous new year saw a further rise. And the end is not yet.

"What was the reason for this suddenly increased tax? Is the cost of production any greater, or the supply of oil any less? Not at all. It has been frankly admitted by officials of the Standard Oil Company that the rise is due to the increased demand for oil for heating purpose. In other words, the company has been guided simply and solely by that venerable and well-established business maxim of the late Collis P. Huntington—charge all the traffic will bear. The proper price for oil, says the Standard Oil Company, is the price you can get. If the people are in a corner, squeeze 'em. Meanwhile the papers are full of stories of people freezing in their homes; of city councils appropriating money for relief of their poor; of desperate inhabitants of small towns holding up coal-trains; of men found frozen in the street; of dark, frigid towns, because there is no coal to run lighting-plants; and of charitable organizations overwhelmed with demands for aid such as are unparalleled in their histories. It is not a pleasant picture.

"These are not, we repeat, pleasant pictures. Possibly the continuance of the summer prices for petroleum would make them pleasanter only in a small degree. But the admitted fact remains that the Standard Oil, with a virtual monopoly, put up the cost of its product because the demand for oil for heating purposes had increased. A dark cloud of suspicion hangs over the head of Rockefeller.

"It has already been pointed out that the advanced price of oil means a profit of many millions. For 1902 the Standard Oil paid dividends of 45 per cent. It could spare a few millions, easily enough, to quell the clamor of protest at its arbitrary methods. But beyond all this what becomes of that boasted American spirit of independence—that spirit which of old asked not for alms, but for simple justice—when every town plays the mendicant to Carnegie, and our youth look forward to being educated by the charity of a Rockefeller?

"The giving of money for beneficent purposes, inspired by high and sincere motives, may be all right. But is it so when the motives are bad—when they may be, indeed, to influence public opinion—and when such giving breeds in the public mind a spirit of obsequiousness, of expectation for favors, of charity seeking?"

APPEAL OF THE SILVER COUNTRIES.

"STABILITY of relationship" between the silver-using and gold-using countries is sought by Mexico and China in their appeals to the United States, which were sent to Congress last week by the President, with his recommendation "that the Executive be given sufficient powers to lend the support of the United States in such manner and to such degree as he may deem expedient to the purposes of the two governments." Secretary Hay is careful to point out, in an accompanying note, that "it is not asked that the United States modify its monetary system, and it is distinctly disavowed that any movement is contemplated for the restoration of international bimetalism." And the petitioners take pains to make clear the same fact. The Mexican note, which is practically identical with that of China, tells in the following paragraph what the proposition is not, and what it is:

"The Government of Mexico does not seek the restoration of free coinage of silver by either the gold or silver-using nations, and does not ask the United States to modify her present monetary standard. It is recognized by this Government that bimetalism in the sense of free coinage of both metals is a policy which has been definitely discarded by the leading Powers of Europe and by the United States, and that it would be futile to ask its restoration. It is, therefore, not the expectation nor the wish of this Government that the gold-standard countries should take any action tending to impair their monetary standard or to make material changes in their monetary systems. It is desired that the governments of gold countries having dependencies where silver is used and the governments of silver countries shall cooperate in formulating some plan for establishing a definite relationship between their gold and silver moneys, and shall take proper measures to maintain such relationship. One such plan has already been proposed in both houses of Congress of the United States with reference to the Philippine Islands. It is this and other plans designed to accomplish the same end which the Government of Mexico would be glad to have considered by the United States and other governments, with the view to the adoption of the best attainable monetary arrangement by those countries which are not prepared under existing conditions to adopt a currency system involving the general use of gold coins.

"The cooperation of the United States with the republic of Mexico in presenting this subject to other governments would, in the opinion of the latter, aid greatly in securing a prompt and satisfactory solution of an economic problem which threatens the ruin of silver-using countries on the one hand in the vain effort to meet increasing gold obligations abroad, and which threatens also the commercial prosperity of the gold-using countries, by destroying the purchasing power of their customers. It seems that it would contribute materially to the permanent and satisfactory settlement of this problem if Great Britain and France, with their important colonial possessions in Asia, and if Germany, Russia, and other countries having large commercial and territorial interests there would unite with the United States and Mexico in the adoption of a common standard for a new coinage system in the silver countries; in recommendations for the readjustment of the fiscal and monetary relations of China with the other Powers, which would permit that country to continue to be a user of silver and a purchaser of the products of the manufacturing nations, and in such provision for their own subsidiary currencies as would tend to promote stability of relationship between their gold and silver money."

Little objection is offered by the American newspapers to this proposition. Stable currency relations with China and Mexico "would save loss and confusion," observes the New York *Times* (Gold Dem.), and the Pittsburg *Times* (Rep.) adds that such arrangements would also relieve the sad monetary plight of the Philippines, where the fluctuation in the price of silver is causing grave losses and interruption of trade. The New York *Tribune* (Rep.) believes that any monetary relationship that we enter into with China and Mexico can be arranged only by putting those countries on a gold basis, and it therefore thinks

the plan highly commendable. And the New York *Mail and Express* (Rep.), after noting approvingly that "the plan is not in the least degree a soft-money or a fiat scheme," says:

"If Mexico and the countries of Asia can be given a currency maintained at par with that of the gold countries, or even close to par with slight fluctuations, the possibilities of trade extension which are opened to the manufacturing nations are almost bewildering in their extent. If China under the operation of a stable monetary system could be persuaded to become as large a purchaser per capita as Japan has become of European and American products, she would raise her volume of imports to $1,200,000,000. This would represent an increase in her present import trade of about $1,000,000,000, and would absorb the surplus manufactures of the gold countries for many years to come. Substantially this rate of increase has come about in Japan within ten years, and largely within five years, since she adopted a gold parity for her currency system. If such results are even within the realm of possibility as the result of study and reform in existing currency systems, such reforms are at least entitled to careful consideration and to the cordial support of the United States, because of their far-reaching influence upon our commercial prosperity."

But some are skeptical. "If the wise men have decided to make another silver experiment—a brand-new thing never tried before, as they seem to imagine—let them go ahead," says the New York *Evening Post* (Ind.); "it will amount to nothing except the salaries and expenses of the commissioners, which, of course, we are able to pay." And a similar view is taken by the Philadelphia *Evening Telegraph* (Rep.), which says:

"As the downfall of silver is the cause, and the only cause, of disturbance, to ask the United States to take some action which will remedy this trouble is to ask that our Government shall step in and stop the decline of silver. At the bidding of the silverite clique in the United States Senate, our Government undertook at one time to uphold the price of silver by buying the product of the senatorial silver-mining combination to the extent of $300,000,000. On that deal the people of the United States have lost, approximately, $200,000,000, besides the interest. To ask that this nation shall again intervene to 'do something for silver' is a piece of presumption worthy of the combination which sold this nation the $300,000,000 of silver at prices three times greater than the metal is now worth."

ASPECTS OF ANGLO-SAXON SUPREMACY.

LETTERS AND ART.

WANTED: ATELIERS OF FICTION.

WHEN Prof. Oscar Lovell Triggs put forward a few weeks ago an argument on behalf of a "school for novelists," his suggestion evoked more scorn than sympathy. He is not alone in championing this theory, however, as appears from an article in *The Bookman* (January). The writer, Mr. H. C. Chatfield-Taylor, urges the establishment in this country of "ateliers of fiction." "If painters take pupils," he asks, "why should not novelists? The idea may seem startling, but if the one may impart the canons of his calling, can not the other?" He continues:

"Ateliers, where art students pay for the privilege of a master's scrutinizing glance, fill the capitals of Europe. Once a week the great man passes among the easels, with a nod for the promising, a shrug for the mediocre, and good, sound, epithetic abuse for the hopelessly bad *rapin*. But isn't it better to be made to realize your shortcomings in time to turn from the palette to the plow, or the pen, or any instrument which will gain you a livelihood, than to inflict art juries with hopelessly bad paintings? Of course, the masters of painting are not entirely successful in ridding the world of misfit artists, but they show them the error of their ways, and, what is more to the point, they show the talented how to paint.

"No two artists were ever born equal—nor were any two humans, for that matter—except in the opportunity to strive. That is exactly what the atelier gives the embryo painter—opportunity. By that I mean the chance to try himself out, to mingle with kindred souls, to be corrected, to be inspired, to be taught, in fact, every chance an artist ought to ask for in this world except the patronage of millionaires and the praise of critics. When a man has spent a lifetime painting and has succeeded, it is presumable that he can impart to intelligent students at least the technique of his art. We can't all make a Velasquez of ourselves, any more than we can be Thackerays or Balzacs, but the radical difference between a genius and a clever fellow, aside from a capacity for hard, persistent work, is craftsmanship."

The painter, then, can be taught his craft by a master. Not so the author. He must "grope in the darkness of his own ignorance." It is true that he can read good books, and try to write like the great authors he has read. But how much more satisfactory it would be, declares Mr. Chatfield-Taylor, if he could go, say, to Mr. Howells's studio! We quote further:

"The master could tell him very readily why one word gives tone and another color, and if he were to the writer's manner born and his stuff had 'meat,' he would see a few interlineations turn his word-jumbles into writing. But suppose Mr. Howells should place a model throne in the center of the studio and seat thereon a girl with arching brows, curving lips, and a golden flood of hair! What a keen, zestful exercise it would be for the itching fingers to write a picture in twenty-five words—or still better, in five—of her pose and appearance! Think of Mr. Howells passing among the desks, to shake his wise head at the pulchritudinous asseverations of her charms!"

If this studio system of instruction were adopted, students could choose their masters according to their predilections; and Mr. Chatfield-Taylor remarks that a popular novelist of the up-to-date commercialistic school would probably find his atelier as overflowing with students as the news-stand with his record-breaking books. The writer says in conclusion:

"I know of but one example of my theory, and a fairly good example it is. Guy de Maupassant was taught to write by Gustave Flaubert. For years he was not permitted to publish, and his crude efforts were torn up time and again, but finally he sprang full-armed upon the world. Flaubert used to talk to him somewhat like this: 'You see that cab-horse across the street; there is just one word in the French language to describe his attitude. Find it.'

"If we young writers who are groping away in the darkness of our own ignorance could only go to a Flaubert and have our manuscripts torn up, if we could only be made to find the one word, there would be fewer books in the world, but I believe there would be more masters of technique like Guy de Maupassant."

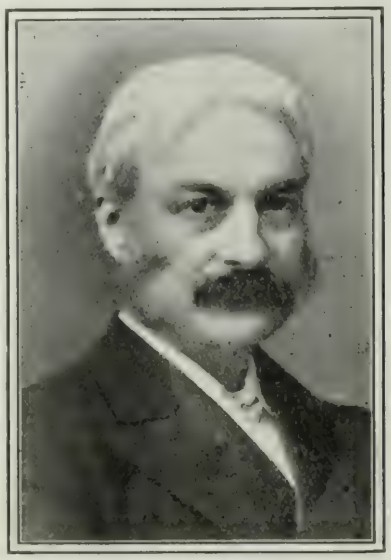
The New York *Times Saturday Review* indorses Mr. Chatfield-Taylor's proposition. "If novels must be written," it observes, "the persons who write them should be taught to do the work properly. This would substantially benefit American letters and the minds of future generations of readers." The same paper adds:

"It is a foregone conclusion that novels will continue to be written and that people will continue voraciously to read them. Hitherto the novelist's has been, practically, a self-taught art, as the soldier's used to be, and, indeed, all other arts were in the beginning of things. The apprentice novelist has practised directly on the suffering public for centuries after the students of all other arts have been forced to do their practising in seclusion. But if the aspiring novelist is to be taught now, it is quite clear that only the finished novelist can teach him."

NEW ESTIMATES OF DICKENS.

ANDREW LANG and Mrs. Alice Meynell have both contributed papers on Dickens to current American magazines. Mr. Lang's article is a brief summary of Dickens's achievement, and appears in the first issue of *The Booklover's Magazine* (Philadelphia). Mrs. Meynell's estimate is entitled "Charles Dickens as a Man of Letters," and is printed in *The Atlantic Monthly* (January).

Mr. Lang names as the leading qualities of Dickens's genius "his high spirits, his copious comedy, his observation, so minute yet so fantastic, his sympathy, his energy." He writes further:



ANDREW LANG.

"Here is one *practical* reason for reading Dickens. Next to Shakespeare, Dickens supplies most of the current quotations, allusions, and illustrations in the language. Not to know and understand them is perpetually to be missing the point in conversation and in reading. Dickens is the source of these innumerable allusions and quotations because, after Shakespeare and in company with Scott, he has been the most creative of all writers in the language. He is the father of the greatest number of delightful personages in fiction and the inventor of the greatest number of comic situations. We are not in love with his women, to be sure, as we are with Rosalind and Beatrice; with Diana Vernon and Catherine Seyton; with Beatrix Esmond and Rebecca Sharp; but his men and boys and comic women are simply delightful. Who can number these dear old friends? Mr. Pickwick, the Wellers, the Shepherd, the Red-Nosed Man, Mr. Solomon Pell, Mr. Jingle, all the Pickwickians, Dr. Slammer, Captain Boldwig, the Eatanswill editors and candidates, the people in the Fleet, the judge and counsel in 'Bardell versus Pickwick,' the attorneys, the witnesses, the jury (especially the chemist), the Fat Boy, the keeper, the cricketers, Mr. Peter Magnus, the cabman who drove Mr. Pickwick, the footmen at Bath, the Old Lady, the cook at the school, Pruffle, the Scientific Gentleman—one is only beginning to reckon up the creations in

a single book, not to add Mrs Bardell, her lady friends, young Bardell, Count Smorltork—everybody. They caricature; the refined say they are out of nature. So much the worse for nature, if so. They are all alive and all, I hope and believe, immortal. In any case not to know them and their adventures is to be grossly ignorant and exceedingly unfortunate. If you do not enjoy their acquaintance, one can only be sorry for you, and thankful to have been born with a capacity for tasting the humor and pleasure of their society."

MRS. ALICE MEYNELL.

Mr. Lang becomes quite iconoclastic in some parts of his criticism. He thinks that Dickens's pathos is often forced and his melodrama is sometimes crude. He avers that Dickens is "far too fond of death-bed scenes," and he resents "the conspicuous struggle to make us cry." Furthermore, he points out that Dickens has repeatedly laid himself open to the charge of exaggeration. Mr. Lang goes on to say:

"Many of the defects in Dickens arose from his hurry; at one time he was writing three or four novels at once in monthly instalments. He was entangled in meshes of unlucky literary engagements, and the monthly method of writing tempted to laxness, prolixity, want of plan, and digressions satirical and rhetorical. These are most numerous where the author does not write in the first person. In 'Copperfield' and 'Great Expectations' the narrator, being the hero, can not well inflict sermons and essays on his readers, as Dickens could and did, when he himself was the narrator. These discourses are in some degree 'topical,' and now more or less obsolete; old abuses which he attacked wear new faces now, and occupy new positions, requiring a different kind of attack. Moreover, Dickens never knew, and never chose to know, much about 'society'; thus his caricatures of it in 'Bleak House' and elsewhere are scarcely successful. 'Bleak House' has one of his best plots, tho it is too complex, but Jo and Harold Skimpole, and the Borrioboola Gha lady, with Mr. Guppy, supply abundant relief. Quite the most comic of his later works, and the best planned and constructed of his tales, is 'Great Expectations' where the terrible and the humorous are deftly blended with a study of young selfishness gradually redeemed and outgrown, in the character of Pip. Here the pathos is moral, is not the pathos of the death-bed or of suffering childhood. After 'Copperfield' I, for one, would place 'Great Expectations' among the foremost of Dickens's novels which do not rely for their best effects on burlesque *genre* and 'character parts.'"

Mrs. Alice Meynell's article in *The Atlantic Monthly* is, in the main, an appreciation of Dickens as a stylist; and coming as it does from the pen of one who is herself a poetess and essayist of distinction, it possesses a special interest. She writes:

"Dickens was very much a craftsman. He had a love of his *métier*, and the genius for words, which the habitual indifference of his time, of his readers, and of his contemporaries in letters could not quench. To read him after a modern man who had the like preoccupation, displayed it, and was applauded for it phrase by phrase—Robert Louis Stevenson, for example—is to undergo a new conviction of his authorship, of the vitality of his diction, of a style that springs, strikes, and makes a way through the burden of custom."

The style of Dickens, continues Mrs. Meynell, is "assuredly not great. It has life enough for movement, but not life enough for peace. That it *has* life, whether restless or at rest, is the fact that proves its title to the name of style." We quote, in conclusion:

"Dickens was urged by his own modern conviction, and excused by his splendid sense of words. He was tempted everywhere. As you read him, you learn to understand how his vitality was at work, how it carried him through his least worthy as well as his most worthy movements, and justified his confidence where a weaker man had confessed unconsciously the ignominies of false art and luxurious sentiment. Charles Dickens seems to defy us to charge him with these. None the less do we accuse him—at Little Paul's death, for example. Throughout this child's life—admirably told—the art is true, but at the very last few lines the writer seems to yield to applause and to break the strengthening laws of nature down. We may indeed say the strengthening laws; because in what Hamlet calls the modesty of nature there is not only beauty, not only dignity, but an inimitable strength. The limitations of nature, and of natural art, are bracing. A word or two astray in this death scene; a phrase or two put into the mouth of the dying child—the 'light about the head,' 'shining on me as I go,' phrases that no child ever spoke, and that make one shrink as tho with pain by their untruthfulness—and the sincerity of literature is compromised.

"But it is not with such things that the work of Dickens is beset; it is rather filled with just felicities—so filled that on our search for passages of composure and dignity we are tempted to linger among excellent words that are to be praised merely because they are the words of precision—arms of precision—specific for his purpose."

BERNHARDT'S NEW PLAY.

IN "L'Aiglon," the poetic drama which M. Edmond Rostand wrote for her two years ago, Madame Sarah Bernhardt appeared as the incarnation of imperial ambition vainly struggling for expression. In "Théroigne de Méricourt," her new play, written by M. Paul Hervieu, she incarnates the spirit of the French Revolution, embodying in her own person the hope and the failure of that great national revolt. "At the outset," observes the Paris correspondent of the New York *Tribune*, "she is mystical, soft, and persuasive, like a graceful goddess of reason or like youthful Liberty. She soon gets to be ferocious and bloodthirsty, like the Committee of Public Safety; and finally she becomes insane, like the Reign of Terror." The same writer continues:

"This superb allegorical conception is magnificently developed by Mme. Sarah Bernhardt in her double capacity of actress and stage manager. Mme. Sarah Bernhardt makes M. Paul Hervieu's idealized heroine stand forth as the living genius of the Revolution. Apart from 'L'Aiglon,' the only character in Mme. Sarah Bernhardt's repertoire that resembles 'Théroigne' is that of 'Jeanne d'Arc,' which presents the incarnation of the French people that during the first half of the fifteenth century threw off the yoke of English invasion. 'Jeanne d'Arc,' 'L'Aiglon,' and 'Théroigne' are all reconstructions—more or

less accurate, but accuracy is of no importance from a theatrical standpoint—of the most dramatic epochs of French history."

The play opens in the palace in Vienna, and we learn of the secret participation of Emperor Leopold Joseph II. in the affairs of his sister, Marie Antoinette. Théroigne, who has been seized by French royalists on account of her sympathy with the revolutionists and has been brought to Vienna, is released on condition that she return to Paris and inform the French people that if a hair of the heads of the King and Queen is injured, united Europe will invade France. Later acts show the Court of the Tuileries in Paris, just previously to the assault by the populace; Théroigne's humble quarters in the Rue Tournan, the meeting-place of the revolutionary leaders; and the Garden of the Tuileries, in which Théroigne is kicked, beaten, and whipped by the women of the Revolution. The last act, the dramatic climax of the play, takes place fifteen years later in the courtyard of the Salpétrière Madhouse. Théroigne, hopelessly insane, invokes the presence of the leading men of the Revolution. Spirits appear in melancholy procession—Robespierre, Danton, Marat, Desmoulins, St. Just, Brissot, Fabre d'Eglantine. As she asks them who killed them, each points to the one behind. "The Revolution has devoured its own children." Sieyès, one of the few surviving leaders of the Revolution, now Count of the Napoleonic empire, comes to comfort Théroigne, but is dismissed with scathing denunciation and mad eloquence. With this poignant scene the drama ends.

The Parisian dramatic critics devote much space to the construction of the play, arguing in some cases that it is hardly a drama at all, but rather a series of tableaux surrounding the heroine. Jane Misme, the critic of *La Fronde*, concedes that Madame Bernhardt is "harmonious and superb," and "in every way equal to the work," but thinks the play "defective in action." Leon Kerst, of *Le Petit Journal*, declares:

"'Théroigne de Méricourt' is nothing but a poem in prose. Chateaubriand would have failed to recognize in it the elements that constitute a drama of six acts. Properly speaking, it is a symbolic panorama of the Revolution. The personality of Théroigne dominates everything. There are many dramatic incidents, but they are unrelated to one another. M. Hervieu has given us something very different from what we usually see on the stage. . . . The reading of this drama will undoubtedly prove delightful."

M. PAUL HERVIEU.

The author of "Théroigne de Méricourt," Bernhardt's new drama.

From the point of view of historical accuracy, many charges are leveled against the play. "Théroigne deserves no such honors as are now being heaped upon her," remarks Emmanuel Arène, of the *Figaro*; "she has been rehabilitated, idealized, made to fill the whole Revolution with her diminutive personality." Aimé Adolphe Basson writes in *La Nouvelle Revue*:

"To symbolize the Revolution, M. Hervieu might have created a heroine invested with all desired attributes. But instead of doing this, he chose to select a real personage. Unfortunately, Théroigne is known, too well known; and she is made to play a part that she never played. Historical truth is sacrificed. . . . The play is a kind of biography divided into tableaux, and a spectacle of that description is always unsatisfactory."

M. Edouard Sayadin, of *Le Journal des Débats*, finds Madame Bernhardt's art "incomparable, as always." "All secondary criticisms," he declares, "are overborne by the wonderful prowess of this woman, who during six acts, without weakening, bears the crushing weight of this piece."—*Translations made for* THE LITERARY DIGEST.

A ROMANCE BY JOHN MILTON?

THE publication of "Nova Solyma, the Ideal City; or, Jerusalem Regained," a romance discovered by an English clergyman and attributed to John Milton, has aroused both curiosity and interest in the literary world. Walter Begley, the clergyman in question, is firmly convinced that his find is a genuine one, and he contributes to the book an introduction of some seventy-six pages supporting this conclusion.

"Not the least extraordinary fact connected with this new romance by Milton," he says, "is that it was not discovered in manuscript in some old library, nor yet unearthed from old and forgotten bundles of documents in a state paper office, as was the case with the last find of Milton's 'De Doctrina Christiana,' about seventy-five years ago." The romance seems to have been in print for over 150 years without being identified. It was published in 1648 in the Latin language, and the present translation is the work of Mr. Begley.

The book is difficult to classify, for it contains both prose and poetry. It might be called a "didactic romance." Its contents suggest comparison with the Utopias of Plato, Bacon, and Sir Thomas More. It is "a Puritan 'New Atlantis,'" remarks the London *Outlook*. Miss Jeannette L. Gilder, of New York, gives the following account of the book in the Chicago *Tribune Literary Supplement*:

"We will probably never know beyond a doubt whether Milton wrote this book or not, but there is every reason to believe that he did. He was probably not particularly proud of it when he grew to riper years, and that may be the reason that it does not bear his name. The story is of a Jewish youth, Joseph, who, accompanied by Politian and Eugenius, two Cambridge students who have run away from college, arrives at Jerusalem. The day of their arrival is the anniversary of the founding of the city, and a maiden representing the daughter of Zion is being carried through the streets under a canopy of vine. The two Englishmen are at once attracted by her beauty, and learn to their surprise that the woman, Anna, the daughter of Zion, is a sister of their companion, Joseph. Eugenius and Politian become enamored of Anna, and are fierce rivals for her love. They arrange a duel, but this is called off by Joseph, who produces another sister, Joanna, who is so like Anna that the lovers can not tell one from the other, and complications arise; but in the end the union of Joanna and Anna with Eugenius and Politian is arranged, and all ends happily. There is a lot of discoursing through the pages of this story, preaching, one might almost say, for every subject that comes up is discussed at length and moralized upon. There are here and there bits of epigram and philosophy, such as these, for instance:

What [illegible] fair beauty can compare with one glance of a fair woman instinct with life?

He was willed that [illegible] ever be with us as [illegible] tax gatherers.

It can hardly be expected that God will approve of that marriage of [illegible] the parents [illegible].

Poetry finds in religion its most suitable subject, for religion presents

NOTABLE PAINTINGS AT THE PENNSYLVANIA ACADEMY.

to us the unusual, the marvelous, and the sublime. . . . Do we not read that holy men, when they were about to relate the great acts of the Almighty . . . broke forth into song?

Every poem, as a whole, must be so blended together responsively in its several parts that the stream of verse, with all its windings and turnings, is ever seen to be flowing in one and the same channel.

"The poetry scattered through the book certainly does have a Miltonian flavor. Here, for example:

O young-eyed choir of angels blest,
Who ne'er, by sin or pride possessed,
Have forfeited your heavenly rest,
But kept your first estate,
Come, raise your joyful songs on high,
Let all the morning stars draw nigh,
Let antiphons of praise reply,
"Our God alone is great."

But we below have sins to own;
Oppressed with shame, we can but groan
Beneath our burden vast.
Oh, how we long for that great day
When he who went before shall say,
"Come, join our choir with voices gay,
For all your woes are past."

'Tis yours to leave, if God approve,
Your heavenly citadel above,
And fight the infernal crew;
'Tis yours, as ministers of grace,
To guard and guide our mortal race,
Or speed as messengers through space,
And 'tis your pleasure too.

May it be ours with joyful heart,
Under God's will, to bear our part
And bravely stand our ground.
Soon shall the fight be won, and they
Who fret not at their Lord's delay,
But faithful unto death do stay,
Shall be as victors crowned.

Mr. W. L. Alden, the London correspondent of the New York *Times Saturday Review*, declares that "there can be very little doubt that 'Nova Solyma' is the work of Milton." He goes on to say:

"It is probably impossible for any person of the English-speaking race to form an unprejudiced judgment of Milton. We are all brought up to reverence him as the greatest English master of prose and verse. We have inherited this belief through many generations, and altho in some quarters it has now become the fashion to regard the Bible as an overrated book, no one dares to think of Milton as an overrated writer. I remember what a shock it gave me when I first read Taine's estimate of Milton. It was like reading blatant blasphemy. But in point of fact how many of us have read 'Paradise Lost' from the beginning to the end? Did any one ever know a man who read 'Paradise Regained,' except in order to be able to boast of that athletic feat? And as for Milton's prose works, which we all unhesitatingly assert to be unequaled in grandeur and beauty, do any of us read them for the second time? Had the 'Nova Solyma' been written by any one except Milton, no one would dream of reading it, or, rather, of attempting to read it; for I do not believe that any reader will faithfully go through the whole book unless he is suffering from insomnia and is in search of something to put him to sleep. It is to the last degree tedious and unprofitable. If the average Vassar girl could not write a book after the same pattern that would be less tedious, then the higher education of women is a failure.

"Doubtless Milton was a great poet, perhaps the greatest of English poets, but why should we pretend to enjoy his ponderous prose writings, with their tiresome Latin, when, as a matter of fact, we can not read them except as a duty? Doubtless there are many persons who will insist that the 'Nova Solyma' is a great work and one which every person of taste must admire, but that will not alter the fact that it is deadly dull. Whatever else Milton may have been, he was not a heaven-sent novelist, and his 'Nova Solyma' strikes me as being altogether the worst of the several books of the same sort which have from time to time wearied English readers. Let us clear our minds of cant in regard to Milton as in regard to other things. He could no more write a romance than Mr. Hall Caine could write an epic. He was not a universal genius, and unless we are to inherit our opinions, instead of forming them for ourselves, we must admit that even as a poet he was not free from faults."

EXHIBITION OF THE PENNSYLVANIA ACADEMY OF FINE ARTS.

THE most important yearly event in the American art-world is the opening of the annual exhibition of the Pennsylvania Academy of Fine Arts, an exhibition, as the Philadelphia *Evening Telegraph* remarks, "comparable in character and significance with that of the Royal Academy in London, and the Salon in Paris." The Academy is now in its seventy-second season, and exhibits this year nearly twelve hundred pictures. In the estimation of Mr. Arthur Hoeber, the Philadelphia correspondent of the Boston *Transcript*, the present exhibition is "quite the best the Academy has yet held."

The keynote of the exhibition, as the Philadelphia *Inquirer* points out, is portraiture. The same paper says further:

"Of the portraits now on exhibition, some are notable. That of Chase by Sargent is an admirable piece of work, one that will long remain a monument in American art. Mr. Sargent is undoubtedly the foremost painter of portraits in the world when he is at his best (which is not always), and Mr. Chase is the

greatest 'all-around painter' in this country and an instructor of rare abilities. The combination is one of more than usual interest, and the place of honor given the portrait is well deserved. Much less satisfactory is the same artist's portrait of our fellow townsman Peter A. B. Widener, who is disclosed in a distrait position. The head is good, but the rest is a mediocre bit of work. More admirable in many ways is a portrait by Mr. Chase of Jay Cooke, the veteran financier, who at eighty has the vigor of many men of fifty.

JOHN S. SARGENT.

J. M'NEILL WHISTLER.

Famous exhibitors at this year's Pennsylvania Academy.

"The women come in, of course, for some attention. Miss Cecilia Beaux, 'the best man in Philadelphia art,' has some notable works, including a picture of Mrs. Roosevelt and daughter; and Miss Julia Marlowe, whose career is so largely connected with this city, is portrayed in a canvas of great beauty, tho lacking in poetic charm."

John W. Alexander contributes several portraits, including one of his wife, seated on a balcony. "They make an impressive showing," declares Mr. Hoeber (in the Boston *Transcript*), and disclose Mr. Alexander's "great originality, feeling, craftsmanship, and artistic sensibility."

The Walter Lippincott prize of $300 for "the best figure painting in oil by an American citizen" is awarded this year to Mr. Frank W. Benson for his "Sunlight." Says the Philadelphia *Public Ledger*:

"The title fully expresses the subject. Benson is one of the Boston group whose technical experiments have been directed mainly to secure the effect of light, and he is the one who has succeeded best of all. For several years he has been exhibiting women and children in the sun. In this picture, little more of the woman is visible than her lap, but the child stands out clearly on the grass, with the sunlight playing over her white frock. The sunlight fills the picture. This is what the painter tried for and has attained. He has learned to do it clearly and directly."

One of Mr. Sargent's early pictures, "The Clam Gatherers," is prominently displayed. Its general tone, observes Mr. Hoeber, is "bright, sparkling, and very beautiful, disclosing the fact that had Mr. Sargent chosen to continue this sort of work he would have been equally great." The same writer goes on to say:

"A group of six pictures by Whistler gives *éclat* to the show, but we must frankly say that were some other name signed to the work it is likely little attention would be paid to it. The largest is 'Cremorne Gardens,' a view in those old London pleasure-grounds with a number of weird, abnormally tall figures, loosely indicated. There are more sketches, such as a painter suggests sometimes in a preparatory *ébauche*, and of course, the tone is most harmonious in its pleasing grays. Beyond this, we discover in it no great qualities of picture-making. A portrait of 'The Little Lady Sophie of Soho' is mostly amusing in its title, for it is of an uninteresting woman and not overclever in the painting, many a student being quite able to do as well. The others are small, sketchy affairs, with alluring names, 'Rose and Brown,' 'Rose and Red,' and 'Rose and Gold,' all being bestowed upon swabbles of sea, or of the figure, apparently the work of half an hour at most and without the model. They bear the magic name, however, and so will have a vogue."

NOTES.

BLISS CARMAN is announced as the new editor of the old-established Boston periodical, *The Literary World*.

The Bookman's January list of the six best-selling books of the past month is as follows:

1. The Virginian.—Wister.
2. The Two Vanrevels.—Tarkington.
3. Mrs. Wiggs of the Cabbage Patch.—Hegan.
4. The Blue Flower.—Van Dyke.
5. The Letters of a Self-Made Merchant to His Son.—Lorimer.
6. Cecilia.—Crawford.

IN the deaths of M. de Blowitz, the Paris correspondent of the London *Times*, and of Julian Ralph, the well-known American journalist, the newspaper world loses two eminent figures. "With a gift for self-advancement amounting to genius," observes *Harper's Weekly*, "M. de Blowitz managed to make himself an international personage." The same paper says of Julian Ralph: "Newspaper readers of mature years remember his long and brilliant service as a reporter and correspondent of *The Sun*. He joined that paper about 1875, and continued on its staff for twenty years. He went to South Africa as correspondent of the London *Mail*, suffered great hardships there, lost his health, and came home in 1902 much the worse for his experiences. . . . His death at fifty is a sorrowful consequence of his labors as a war correspondent."

SCIENCE AND INVENTION.

SEWAGE DISPOSAL BY BACTERIA.

USEFUL bacteria are becoming so much more numerous than harmful ones that the name of "microbe" is losing its terrors. It is becoming a neutral word, like "animal," requiring a prefixed adjective, like "domestic" or "wild" to fix its status. The latest work of utility performed by bacteria has been in connection with the purification of sewage. Of this, a correspondent of *Cosmos*, M. Elbée, writes in that paper (Paris, December 13). Noting the various methods now in vogue for sewage purification, he says that until recently chemical treatment and filtration have disputed the favor of municipalities, but that filtration is the better process whenever it is practicable. It furnishes an irreproachable method of purification, but it has the inconvenience of requiring vast surfaces. He continues as follows:

"The study of the way in which the purification of sewage takes place in filtration, the investigation of the mechanism of the transformation of the nitrogenous organic matter into ammonia and then into nitrous and nitric acids by the successive action of various ferments, due to the researches of Schloesing and Müntz, and of Winogradsky, has led the English to a sort of intensive filtration through a bed of slag of small dimensions. This constitutes the bacterial purification of sewage.

"It was the chemist Dibdin who first applied this method practically. His process, first carried out at Sutton, near London, consists in letting the sewage to be purified stand for two periods of four hours each in basins, whose bottoms, properly drained by a system of pipes, are covered with a layer of slag 60 centimeters [about 2 feet] thick, the size of the fragments decreasing from the bottom to the surface. . . . . .

"This is not at all filtration pure and simple. . . . It has been found that, contrary to what we might expect, there is no clogging of the layer of slag, and that after six months it is as clean as at first. This is due to the work of the bacteria in the sewage, which . . . finding in the interstices of the slag the oxygen necessary for their life, literally burn the organic matter, transforming successively the nitrogenous substances into ammonia and then into nitrites and nitrates which flow away with the water.

"Thus the purification of the sewage is effected by the very germs that it contains, thanks to the presence of atmospheric oxygen; it is a process of oxidation in which the bacteria serve as intermediaries.

"These 'aerobic contact-beds' do not acquire their efficiency until a considerable time has elapsed; their working, too, is essentially intermittent; a rest of eight hours daily is indispensable to enable the bacteria to destroy completely the slime accumulated in the interstices and to assure the influx of air. A rest of eight days after two months' service has been found necessary. These are inconveniences that are very serious in practise, and the ingenuity of inventors has sought, unsuccessfully, to do away with them by using apparatus that is generally costly and fragile, whose value time alone can show.

"Cameron has modified the method—we can not say perfected it, for both the systems are in use, and the question of superiority has not yet been settled. In the hope of avoiding the clogging of the aerobic beds, Cameron lets the sewage ferment twenty-four hours in a huge reservoir, the 'septic tank,' out of contact with the air. A very active fermentation develops: the water becomes covered with a layer that serves as a natural lid. This is broken here and there by discharges of gas, but according to the inventor this is not objectionable. The solid matter liquefies, and, in a word, the sewage becomes more ready for purification by the aerobic contact-beds through which it is afterward passed. . . . . .

"Here, briefly set forth, are the two English processes that are offered as a new solution of the serious question of sewage-purification. They both have enthusiastic partizans and ardent detractors; numerous are the articles and books of which they have been the subjects. . . . . .

"The system that employs for the purification of sewage the very bacteria that it contains, and that constitute its dangerous element, is evidently seductive. By it we confine within narrow limits of space and time the work of purification that is effected spontaneously in arable land, and in watercourses into which cities discharge their sewage, as in the Seine, which is infected at Asruères, but has become pure again at Meulan. . . . . .

"Is the purification complete? Do not variations of temperature influence the vitality of the germs and thus arrest the work? . . . Fowler, the municipal engineer of Leicester, declares that [the system] is the reverse of successful. The crux of the method lies in the question of mud. . . . The cry of 'no more sludge,' which was the slogan of the inventors, is hardly justified; a preparatory settling is necessary to separate the sand and other inorganic substances that the microbian action is powerless to destroy."

The combination of chemical and bacterial treatment may furnish, at least in certain cases, a solution of the problem, the author thinks. Such a combined process has already been used by Dr. Calmette at Verviers, France. Probably there should always be an intelligent combination of divers methods, in proportions dependent on the geographical situation of the city in question and the nature of its sewage. The writer concludes:

"At any rate, the bacterial purification of sewage constitutes one more step in advance, in the important domain of municipal hygiene. Thanks to it we shall be able to diminish the number of rivers that have been turned into sewers, where the sewage forms floating islands, and where the gas formed by putrefaction may burn in flames six feet high, as in certain English streams."
—*Translation made for* THE LITERARY DIGEST.

BAD AIR IN TUNNELS.

IS it important that an underground road should be ventilated, even when steam is not used as a motive power? *The Medical News* comes to the conclusion, from an examination of conditions in other cities, that subway air is generally bad, and that there is little natural ventilation. It says editorially:

"The recent experiences in the 'tuppenny tube,' London's latest underground railway, is one which calls for urgent discussion and enhances the desirability of a thorough understanding of what provision is being made by our subway engineers.

"In London it has been noted that many passengers, especially those who were riding long distances in the underground electric, suffered from intense headaches and even symptoms of air hunger. So many were affected that an investigation became imperative, and it was found that the amount of carbonic dioxid gas in the tunnel was in great excess of the normal limits.

"Some recent figures that are presumably authentic we present herewith. During hours of limited traffic:

	Carbonic acid in 10,000 volumes of air.
On platforms at 8:15 A.M.	4.23
On platforms (Saturday), 7 P.M.	3.74
In elevator, 10:10 A.M.	7.36
In cars, 9:30 A.M., from city	4.33
In cars, 1:30 P.M., from city	5.33

"During hours of heavy traffic:

On platform, 4 to 7 P.M.	11.04
In cars, 9:30 A.M., to city	16.65
In cars, 4 to 5 P.M., from city	13.74
In cars, 6 to 6:45 P.M., from city	15.54
In cars, 6:10 P.M., from city	20.46

"The carbonic-acid tests were made between December 11 and 15. The range of outside temperature was between 37° and 56° F. The range of temperatures on the platforms was between 56° and 76° F. and in the cars between 66° and 76° F. The barometric pressure throughout the period of the experiment was very constant, ranging between 30.1 and 30.2 inches. Readings with the anemometer showed an air movement due to forced draft and train movement of from one mile to five miles per hour. Some of the tests were made with the Chattaway and Wharton apparatus, and some by the Pettenkofer method. One method was employed to check the other, and the mean average result

was 16.62 volumes of carbon dioxid in 10,000 volumes of air. This is an amount much above the bearable average.

"It had been assumed that, inasmuch as the cars were in such close connection with the surrounding tubular masonry, an entire renewal of the air would result from the powers of suction. Apparently this has been a forlorn hope, for all that has been accomplished has been the pushing around in a circle, as it were, of the vitiated atmosphere of the tunnel.

"Have the engineers of the subway [in New York City] considered this problem sufficiently; and what of our new tunnels under the North River and to Brooklyn, in all of which the problem is destined to be one of extreme seriousness?

"Underground railways such as these permit of the accumulation of enormous quantities of confined air that must be removed or regenerated. It is idle to discharge this question with the familiar 'diffusion of gases' theory—the dangers are real and are soon to be met.

"The necessity for some definite outlining of plans as to what is to be done by the engineers of the various tunnels to obviate these grave dangers is apparent, and competent sanitary engineers as well as the New York health department should be taken into consultation."

SALT AS CURE FOR OLD AGE.

THE most characteristic ill of advanced age is hardening of the arteries—arteriosclerosis, as physicians term it. It has been asserted by Dr. Trunecek, a European investigator of the subject, that this is due to deficiency of salt in the blood, and he treats it by injection of a saline solution. His results are discussed in *Cosmos* (December 13) by M. P. Goggia, who says of them:

"Arteriosclerosis is an affection almost exclusively confined to the second half of life, for it depends on all kinds of chronic poisoning and on the use and maltreatment of the arterial walls; nevertheless, it is not excessively rare to meet with it in subjects who are yet young, either because of a special predisposition, of peculiar vulnerability of the blood-vessels, or of serious chemical or microbian poisoning. . . . . .

"This malady is characterized by a local or general thickening, which, starting in the internal layer of the artery, extends later to the median and outer layers. . . . It forms in the great arterial trunks more or less numerous layers, isolated or confluent, often resembling cartilage, and infiltrated with calcareous salts, among which phosphate of lime holds a foremost place. In the small arteries and the capillaries the hardening process goes so far as to transform their walls into a fibrous and compact tissue that gives to the touch the sensation of a rigid tube or cord."

The disagreeable and even dangerous consequences of such a change in one's arteries are apparent. It may result in their further degeneration and in ulceration of the arterial walls, ending in death, and if matters do not go so far, it may lead at least to loss of elasticity in the greater arteries with diminution of the caliber, and to the actual obliteration of their finer branches. The blood does not flow so readily through them and anemia results, with all its connected evils, particularly angina pectoris. The resistance encountered by the blood increases the work of the heart, whose enlargement often follows, as well as other heart troubles dependent on disorders of the nervous system. The writer goes on to say:

"Arteriosclerosis is a malady that is almost universally present with persons of a certain age, and it is difficult to avoid; its importance in the treatment of numerous diseases of old age will be evident when we consider that we can study no invalid who has passed his fiftieth year without taking into account the possibility that arterial sclerosis exists and is the principal or secondary cause of the morbid symptoms. . . . . .

"As we have said above, a deposit of calcareous salts, and particularly of phosphate of lime—a compound insoluble in distilled water, but soluble in a solution of chlorid of sodium [common salt] . . . constitutes the principal factor of arteriosclerosis. The presence of chlorid of sodium in considerable quantity in the blood and humors of the organism . . . explains how the phosphate of lime remains in solution in the blood during the first part of life. Now Bunge, who has noted the richness in chlorid of sodium of all young mammals, has demonstrated that with age this reserve of salt diminishes; it is therefore not rash to suppose that . . . arteriosclerosis is the natural consequence of the insufficiency of chlorid of sodium in the organic liquids. In fact, the treatment originated by Trunecek to remedy this insufficiency has given encouraging results.

"Trunecek's inorganic serum, which has been widely discussed in the medical press, is made by dissolving in distilled water the different salts composing the mineral part of blood-serum, but in proportions ten times greater than the normal. . . . Injected into the veins the salts diffuse rapidly through the tissues and are generally eliminated through the kidneys."

This serum, we are told, has very beneficial results, but extended experiment, according to M. Goggia, fails to show that it diminishes in any degree the hardness of the arteries, which is supposed to be at the bottom of the whole trouble. However, he asserts, it certainly acts favorably on all the symptoms regarded as characteristic of arteriosclerosis, and after all, as he concludes, "this is the essential thing." Hence we may regard it as proved that common salt, when injected directly into the veins, is a specific for the most characteristic troubles of old age.—*Translation made for* THE LITERARY DIGEST.

A REPORTED CURE FOR BLOOD-POISONING.

TWO recent successful cases of the treatment of blood-poisoning, or septicemia, by the injection of formalin have attracted much notice from the daily press, and the method, which was introduced by Dr. Charles C. Barrows, of New York, has been announced as a very important discovery in therapeutics. The medical journals so far have had nothing to say of the new cure. The New York *Times* (January 18), in an editorial on the subject, says that it doubtless belongs in the classification created by the journalists of the last generation of "important if true." The writer goes on:

"What was done in these cases was to inject into the circulation an antiseptic solution capable of destroying the bacillus of septicemia if brought into contact with it. It seems to have done its work; but the reason this apparently obvious method of extermination of malignant bacilli is not generally practised is that antiseptics strong enough to destroy such micro-organisms in the patient have usually been credited with the capacity to destroy the patient as well. Reasoning from the analogies of experience, it might be assumed that formalin in sufficient strength to destroy streptococci in the blood would harden the tissues, impair the elasticity and plasticity of the linings of the blood-vessels, and render them incapable of performing their functions. Analogical reasoning might also lead us to expect that it would act upon the fibrin, inducing coagulation, and forming clots which might be as fatal as the septicemia in another way. Just here lies the doubt."

Discussing the same cases, *The Sun* (New York, January 17) reports a statement made by the president of the New York Obstetrical Society that "without further trial and taking the case as it stands, the discovery of Dr. Barrows is the most important contribution to medical science of this generation." It comments on this as follows:

"If it shall prove a cure for blood poison, or even if it cure only a certain portion of cases, or if it does not more than to open the door for the curative agent yet to come, it will be difficult to estimate its value to the human race; but it should be borne in mind that the discovery of the germ theory of disease, advocated and established by those two chiefs among the immortals of science—Pasteur and Lister—comes within this generation so rife with startling discoveries. They showed the scientific world

the cause, and placed in its hands the prevention of blood-poisoning and other diseases."

On January 20 the physician who introduced the method read a paper on his experiments before the New York State Medical Association, and the subsequent discussion showed that his hearers did not all agree that its efficacy had been proved, altho Dr. Barrows's report aroused great interest.

A DEVICE TO PREVENT RAILWAY COLLISIONS.

A SUCCESSFUL test of a newly invented device for electrically preventing collision between railway trains was announced recently in press despatches from Frankfort, Germany. This apparatus is now described in detail by Frank H. Mason, United States consul-general at Berlin, in *The Advance Sheets of Consular Reports* (Washington, January 13). Says Mr. Mason:

"It is the joint invention of Messrs. Hubert Pfirmann and Max Wendorf, and its construction and method of operation are as follows: Midway between the rails is laid a light third rail of

ENGINE 290 EQUIPPED FOR EXPERIMENTS AND SHOWING THIRD RAIL.

the ordinary T pattern, the joints of which are so connected as to form a continuous conductor.

"Midway under the forward part of the engine is hung the working instrument, an electrical apparatus enclosed in a square case or jacket occupying a cubic foot of space. The instrument is connected with a contact-shoe, which slides along the third rail and by wires with a telephone and electric alarm-bell in the cab of the engine-driver, and a red incandescent lamp which is lighted by the same impulse that rouses the alarm-bell into action. A further improvement of the device sets the electric brakes on the engine or entire train simultaneously with the alarm-signal which sounds the bell and lights the lamp. The apparatus is so adjusted and arranged that the engineer can at any moment, by touching a lever, satisfy himself that it is in full working condition.

"The tests on November 12 were conducted on the main line from Frankfort to Hanau, between the stations Sachsenhausen and Goldstein, and a translation of the official report will illustrate concisely the working of the apparatus. Two locomotives numbered respectively 290 and 1420 had been equipped with the new device and the experiments proceeded as follows: Engine 290, drawing a special train and approaching Sachsenhausen at full speed, received the danger-signal and came to a full stop; the driver of 290 then asked by telephone the cause of the signal and received from the keeper of a grade-crossing, half a mile in front, word that a wagon had broken down in crossing the track and obstructed the line. After ten minutes' wait, the engineer of 290 received word by telephone that the obstruction had been cleared away and thereupon resumed his trip.

"A mile further on, the signal on 290 again sounded, and the

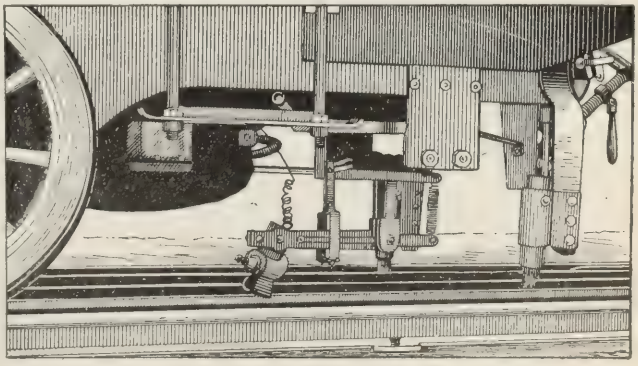
THE PREPARED TRACK.

driver was informed, by telephone as before, that the semaphore round a curve and more than half a mile distant was set at 'halt.' Thereupon engine 290 slowed down and proceeded cautiously, sounding its whistle at short intervals, the telephone-bell in the drivers' cab ringing continuously until the curve was rounded, when the ringing ceased, notifying the engineer that the semaphore had changed to 'track clear.' Thereupon 290 resumed full speed.

"In the tests to prevent collision, engine 1420 came up rapidly from behind and on the same track as 290, which had slowed down and was proceeding cautiously in consequence of reported danger in front. The moment that 1420 came within 1,000 meters (1,093 yards) of 290, the signal on both engines began to ring and their red lights to glow. Thereupon 1420 halted, the driver inquired of 290 in front the cause of the alarm, and a complete understanding between the two trains was immediately established."

An important point in this connection, Mr. Mason tells us, is hat in practise the same warning signal is sounded upon every engine equipped with the apparatus which is on the same track and within a prescribed radius from the engine and train which cause the obstruction. If a semaphore be falsely set at safety, so that the train runs past it into the same block with another train, warning will be given in ample time to prevent a collision under any and all conditions of darkness, fog, storm, or mistaken instructions. He goes on to say:

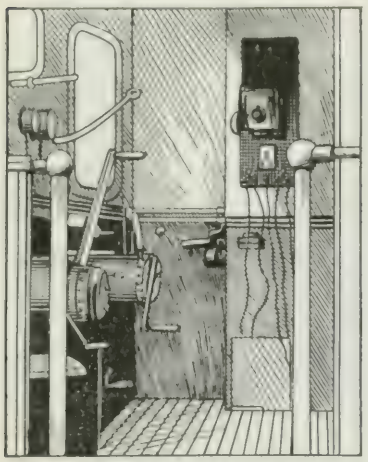
"The invention has other minor points of usefulness, but the foregoing will be sufficient to indicate the general method of its



THE THIRD RAIL AND THE CONTACT-SHOE.

operation and the measure of its efficiency. In effect, it puts the engine-driver of every train into instantaneous touch with other trains, switchmen, and station and crossing keepers in his neighborhood and keeps ever before his eye and ear an automatic and infallible signal which springs into activity the moment that his locomotive, whether running forward or backward,

comes within the radius of danger from collision. What ghastly wrecks might be spared, what precious lives saved, what a sense of added security given to multitudes of railway travelers, what delays avoided under certain atmospheric conditions, by a device which puts the man behind the headlight, rushing on through night and fog and storm, into instant and unerring touch with the train next in front and with those whose duty it is to watch and guard the safety of the line! That the present invention is yet perfected and fully adapted to practical use is not to be prematurely assumed; but, in the judgment of those whose opinions are entitled to respect, the way has been pointed out and the germ of a new and effective system discovered.



TELEPHONE, ALARM-BELL AND RED LIGHT IN ENGINE CAB.

"The German Government has directed that a section of track be equipped with the apparatus for careful, practical experiments, and it is reported that the Government of Russia has obtained license to test it in actual service on its new military lines now under construction in Siberia."

OUR ARMY OF CRIPPLES.

ONE curious and unexpected result of Dr. Lorenz's visit to this country was the enormous number of deformed and crippled children that presented themselves for treatment in every city where he operated. At one hospital in New York where it was thought there might possibly be a hundred applications, more than 2,000 patients presented themselves for treatment, and nearly 8,000 altogether were brought to light throughout the city by the interest excited by the visit of the Austrian surgeon. The same was true in other cities. The sudden appearance of such a large army of crippled children, writes Dr. Newton M. Shaffer in *Charities*, was a revelation. Whence did they come and why had they previously escaped medical observation? Says Dr. Shaffer:

"Speaking from personal experience and from a close observation of the thousands who applied at the Cornell Clinic, I have divided these applicants into four classes. It may be of interest to briefly study them:

"The *first* class were those who, either through ignorance or neglect on the part of the parents, had been allowed to go without any treatment. Some of these came from the East Side and from the very poor. Others came from the more thrifty class, whose fatalistic views prevented any effort. Some had become quite indifferent without any apparent cause. The great majority were susceptible of relief or cure if proper hospital care could be afforded them for a period varying from a few months to a few years. Ordinary dispensary care could not reach them, their home surroundings being such that any detailed orthopedic care would be impracticable.

"The *second* class includes the 'disappointed ones.' Willing and anxious to obtain relief, and patient to a degree, they have waited, under a tentative dispensary treatment, for the necessary hospital care for months or years, only to be disappointed. Home care, under dispensary direction, had failed to secure good results. They had become discouraged and had ceased all effort.

"The *third* class are the 'relapsed patients'—that is, patients who, having received a certain amount of hospital care, have been prematurely discharged, and all the good which had been accomplished was lost. Many of these were hip-joint and spinal cases; patients, in other words, with tuberculous joint disease. Many of them can still be reclaimed and made much better with proper care.

"The *fourth* class were what I call 'the floaters'—that is, patients who go from clinic to clinic attracted by some new method or inspired by curiosity. This class was not a large one.

"It is most interesting to note the effect upon all these patients of Dr. Lorenz's visit, from the standpoint of the intense interest he excited among them. He became a sort of Messiah to them. They came with a great hope of cure or relief—a hope that could not always be fulfilled, for only a few of the thousands could be operated on by Dr. Lorenz. While those not selected for operation were disappointed, in one sense, many who were hopeless have been encouraged, even if they can not at present receive all that proper hospital treatment can provide. We all know that the hospitals are overcrowded, that many patients are upon the waiting lists. It all means that thousands must wait and suffer. And this is even more true of the country patient than of the city patient. Away in the rural districts, remote from any medical center, without hope of hospital care, with every resource exhausted, both pecuniarily and professionally, these country sufferers await some local Lorenz to excite their blunted interest and point out the road to relief."

Lorenz is gone, but, as Dr. Shaffer points out, the crippled host is still with us. What shall be done for them? Their numbers are too great for our present hospitals to deal with properly, and the necessity for the increase of facilities for treatment is plainly indicated. Dr. Shaffer concludes:

"Whatever may be the outcome of Dr. Lorenz's visit, two things which the visit has developed stand out prominently—we have many thousands of crippled and deformed children in our State, and the present facilities for their proper treatment are inadequate. With the expenditure of a few thousand dollars, the State Hospital could be enlarged and in this way we would be able to give these sufferers the relief to which, under the laws of humanity, they are entitled."

An English View of the American Face.—A writer in *Health* (London) is of the opinion that in no sense of the word is the American face distinctive and that there is nothing that will call it up in the mind from the world's group of Caucasian faces. He goes on to say:

"Yet this is not true of other white-skinned races. The English face, the Jew face, the Irish face, the Italian face, the Chinese face, the Japanese face, the French face, the Indian face, and even the negro face, all these have something about them which calls up a definite picture in one's mind. But the American face has no strong characteristic to differentiate it from other faces of superior races, tho it is peculiar in some ways. It is peculiar in its cosmopolitanism. It is in one sense a composite face. It is international, for here and there one may find the traces which suggest a relation to this, that, or the other face. It may be a line or a ligament bequeathed by an early English ancestry or something suggestive of Teutonic origin or a sharp suggestion of the Frenchman's face or the Irishman's or the Italian's or the Scotchman's. But when one must deal with the American abstractly one can scarcely call up the American face. Uncle Sam, with his striped trousers, his sharply-cut coat, his plug hat, his whiskers, and his bland, good-natured countenance, is a happy conception, yet he may never hope to portray the matchless and indescribable cosmopolitanism of the American face."

SCIENCE BREVITIES.

"THE contractor for the New York rapid transit subway recently stated," says *The Electrical Review*, "that owing to the great developments in electrical art, a generation of electricity is now only three years. This is a startling announcement and sets one to thinking. What becomes of all the old machinery and who pays for the new? How long will it be before a company can install a plant and feel assured that the machinery will not have to come out within a year or two? Does not this continual scrapping of machinery mean a loss somewhere?"

ATTENTION is called by Col. G. Espitalier, writing in *La Grande Revue*, to a proposed plan to develop the possibilities of the aeroplane, which, he says, is generally admitted to possess greater scientific possibilities than any form of dirigible balloon. "If an aeroplane, constructed upon such scientific lines as the machines of Langley or of Maxim, were supported by a dirigible balloon, it might be altogether possible to obtain such a degree of experience in its manipulation as to allow the degree of support to be gradually diminished and finally withdrawn altogether. The operation would resemble the use of the inflated belt in swimming instruction, the belt being gradually deflated as the pupil gains proficiency."

THE RELIGIOUS WORLD.

RELIGIOUS COMMENT ON THE SMOOT CASE.

THE election of "Apostle" Reed Smoot, of the Mormon Church, to the United States Senate, evokes indignant comment from several of the church papers. There is already some talk of organizing a crusade against Mr. Smoot similar to that which resulted in the exclusion of Brigham H. Roberts from Congress three years ago. Says the New York *Observer* (Presb.):

"The American people are not yet all that they ought to be intellectually or morally, but, at any rate, the rank and file of the people believe in common decency, and have no desire to see seated in the national legislature any man from any section who either practises polygamy or is a member of a church or system that defends that iniquity. Mr. Smoot is an avowed 'apostle' of Mormonism, he has been a Mormon missionary, and he is responsible for Mormon doctrine so far forth. The American people do not believe in Mormonism, considering it a pest and a menace to public morality and so to American institutions. The Republicans of Utah, by overriding the timely caution of President Roosevelt, who had the best of the American people behind him in that action, have affronted the whole nation and deserve severe censure.

"It now remains to agitate against the seating of Mr. Smoot when he appears at the door of the United States Senate. The women of America, including the Women's Christian Temperance Union, and other organizations, such as that so efficiently led by Mrs. Darwin James, are actively at work educating public opinion up to the point of resisting the encroachments of Mormonism masquerading under the cloak of an 'apostle' Smoot.

"Public morality is a sacred interest, not to be lightly trifled with. Mr. Smoot may not be himself a polygamist, but he has been in bad company, and, in the thought of many, will continue to be intimately associated with the Mormon system. It is useless to try to deal with Mormonism simply as a religious belief. Its known corruptions and depravities must be taken into account and resisted to the end. There is no room in the Senate of the United States for a Mormon Senator."

The Salt Lake Ministerial Association has adopted resolutions which declare that the attempt to elect Mr. Smoot is "an endeavor to force on the citizens of Utah a union of the church and the state" and "a menace to our civic and religious beliefs." The same resolutions declare further:

"The election of Apostle Reed Smoot to the United States Senate would virtually be the election of the will of the Mormon first presidency and twelve apostles to that body.

"As a consistent member of the Mormon apostolate, Apostle Smoot can not make an important move without getting permission or taking counsel of the quorum of Mormon high priesthood to which he belongs. By virtue of his apostolic vows he must act first as a Mormon apostle and second or third as a citizen of Utah and patriotic American."

To the New York *Independent* these arguments are not convincing. It says:

"It is very hard to see how a good argument can be made against giving Apostle Smoot a seat in the Senate if he should be elected. The main charge is that he recognizes in the church a higher power than the federal Government. So does every good man who has any religion. That argument has been used *ad nauseam* against Catholics. Fifty years ago William H. Seward was teaching our people to obey a 'higher law.'"

Similarly, the San Francisco *Monitor* (Rom. Cath.) observes:

"Apostle Smoot will represent Utah in the Senate of the United States, in the face of vociferous ministerial opposition at home and abroad. The influence of the preacher body in politics is necessarily, and fortunately, small. It is rendered smaller than it might otherwise be by the absurd tendency of the brethren to project themselves hysterically into controversies without the slightest excuse of rime or reason. The trouble with most of this element is that in political affairs they overlook the fact that the constitutional prohibition of religious tests for public office applies to all citizens alike, and was not invented solely for the benefit of their own number. Smoot, the Mormon, provided he is otherwise eligible, is no less qualified before the law to a seat in the Senate, than if he was a Methodist or a Baptist or a Presbyterian or an atheist. A man's religious opinions and professions are not supposed to have anything to do with his political rights in this republic."

The New York *Outlook* takes the view that nothing less than an amendment to the Constitution will fit the case:

"The part which the Mormon hierarchy is taking in our national politics is disgraceful not only to Utah but to the nation; but the action which the nation ought to take to wipe out this disgrace is not to violate the principles of religious equality by excluding a Mormon from the Senate, but to assert the principles of civil equality by excluding polygamy from American soil. Before Utah was admitted to Statehood the judiciary committee of the House of Representatives reported unanimously in favor of a constitutional amendment prohibiting polygamy within the territory of the United States. The election of Apostle Smoot ought to be the signal for petitions demanding the passage of this amendment."

The New York *Christian Work and Evangelist* advocates even more drastic measures. It says: "The great, the colossal blunder was committed when Utah was admitted a State with its Mormonism. The only act we can see that is available is the disestablishment of Utah as a State and its relegation to a territorial condition. Why not move in that direction?"

THE ROMAN CATHOLIC CHURCH AND THE SCRIPTURES.

RECENT acts and expressions from high authorities in the Roman Catholic Church are giving a severe shock to the traditional charge of Protestants, that their great rival church is hostile to the free use of the Bible. The appointment of a papal commission for Bible study is an accomplished fact and this body is now at work. Recently the *Osservatore Romano*, the official organ of the Vatican, published a series of articles on the importance of Bible study, of which the following are the leading thoughts:

The reading of the Holy Scriptures is the best means for the support of the true and genuine apostolic office, and is entirely adapted to awaken in the people a truly Christian knowledge and conscience, which can then be perverted by nobody. What an inestimable blessing it would be if every Christian family would be assembled daily and read a chapter from the Gospels! In this way the divine language of the book, together with its sublime simplicity, would become common property; the image of Jesus Christ would become clearer and more deeply impressed on the hearts of the people; a thorough religious training would be imparted on all sides, and in this way the most dangerous results of ignorance and indifference would be removed. If it would only be made possible to have this constant and steady reading of the Scriptures introduced into many families, as is the case in a number of countries in Northern Europe, what an immense gain this would be for the church and the faithful!

The *Wartburg*, the new influential organ of the Protestant Bund of Germany, the chief opponent of the Roman Catholic Church in Central Europe, in commenting on these words says:

"We can scarcely believe our own eyes. Is it possible that the Vatican really holds up to its readers as examples of Bible readers and students the people of Northern Europe, *i.e.*, the Protestant nations? It really seems as tho the church authorities had determined to inaugurate a new policy with reference to the use of the Scriptures, both as an object of learned study and as a book of devotion and instruction for the people."

The *Osservatore* announces that the Vatican press has now in preparation a new Italian translation of the four gospels and of the Acts, which can be bought at the small price of one

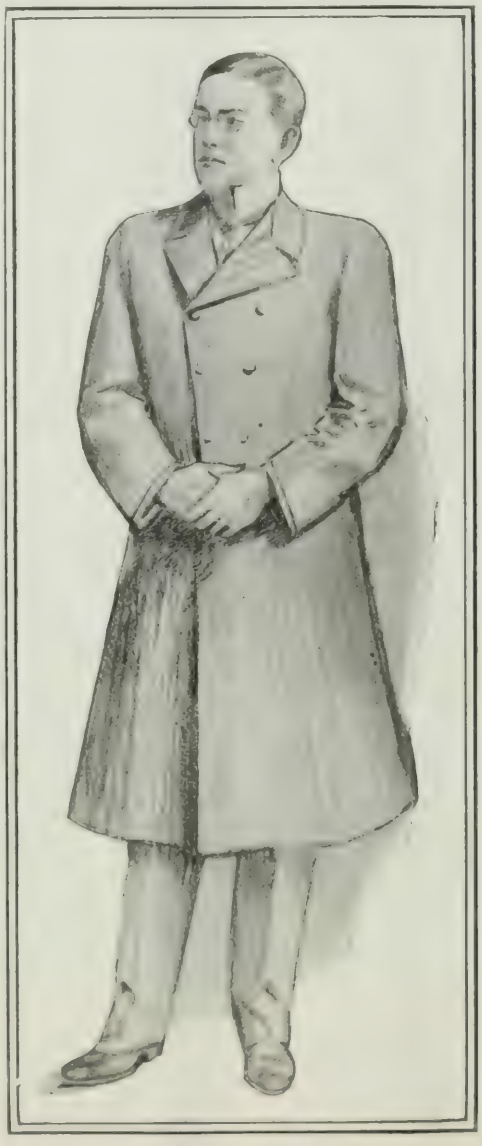
franc. A committee has been organized to see to the distribution of this popular edition, its duties being apparently those of a Bible society. Other Roman Catholic journals speak in the same tenor as the *Osservatore*. Among them is the *St. Elisabeth*, which says:

"It is now the common practise not to take as a personal matter the permission of the church authorities to read the Bible in a translation—study of the Scriptures in the original tongues was always permitted—but as general, *i.e.*, everybody is allowed to read the Word in a translation which has the approval of the church. It is very much to be desired that a version of this kind be found in every Roman Catholic family."—*Translations made for* THE LITERARY DIGEST.

DO RICHES SEPARATE MEN FROM GOD?

MR. JOHN D. ROCKEFELLER, JR., is, as is well known, the teacher of a Bible class affiliated with the Fifth Avenue Baptist Church, New York. A few Sundays ago he attempted to grapple with the difficult problems presented by Christ's injunction to a young man of great possessions: "If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me." Mr. Rockefeller, when asked to interpret this text, replied:

"I do not think we can accept the teaching to give up everything in a literal sense. Conditions are different. Nevertheless, we can conscientiously give up some things, and the question for each man to answer is, What can we give up in our life? I think we might find a solution by giving up those things that may tend to keep our thoughts from Christ and his work."



JOHN D. ROCKEFELLER, JR.

His "earnest attitude while addressing his class" is thus portrayed in a New York *Herald* article.

Mr. Rockefeller's observations have been given wide publicity by the press, and bring up once again for discussion the old question: Do great possessions separate men from Christ? The New York *American and Journal* moralizes as follows:

"Mr. Rockefeller says that we should part with what comes between us and Christ. He goes on to define his meaning by saying: 'If you have wealth and you love it better than you do Christ, then you should give it up.'

"It is very interesting and important to know, and we wish that Mr. Rockefeller would tell us, just what effect the possession of vast accumulations of money has upon the human heart and intellect.

"Does that fortune separate Mr. Rockefeller from sympathy with his fellows, from a clear sense of justice and of the rights of others? Does it prevent his seeing the world and his own responsibilities in their true proportions? Or, to use the interesting phraseology of his own son, does that great fortune 'come between him and Christ'? . . . .

"This newspaper is inclined to take rather an optimistic view of the situation, and this optimism is based on study of actual conditions.

"The very rich and prosperous man of olden times, as the Bible story tells us, had a way of putting an obnoxious husband in the front ranks where he would be killed, thus getting possession of his wife. Young Mr. Rockefeller, heir to a thousand millions, and on week-days a very active juggler of millions in Wall Street, devotes his evenings to the Young Men's Christian Association, and his Sundays to Sunday-school teaching. . . . .

"We are inclined to think that a very great fortune does make a man somewhat indifferent to the rights of others and to that extent indifferent to the teachings of Christ. But, on the other hand, modern public opinion is able to do very effectively in the way of restraining the powerful the work of restraint which in past times was achieved by the fear of everlasting torment."

Several newspapers indulge in severe and ironical comment on Mr. Rockefeller's utterance. "The world does not need a Rockefeller," remarks the Detroit *Journal*, "to tell it what should be the opinion of Christian people everywhere as to the predatory progress from poverty to millions of the chief beneficiary of the oil monopoly of the country." The Baltimore *American* finds in Mr. Rockefeller's "placid and entirely self-satisfactory interpretation of the Scriptural story" simply a new illustration of the tendency of human nature to "believe that whatever is easiest for us to do is entirely justifiable." From these and similar criticisms the New York *Christian Herald* endeavors to defend Mr. Rockefeller:

"Sacred and secular history is full of instances of the splendid services rendered by men and women who consecrated their wealth and energies to the cause of religion and the uplifting of the human race. And in no single instance was the sincerity of their religious profession or their purity of purpose ever successfully assailed. The world is all the better for such characters, and they should receive its cordial welcome and cooperation, rather than its harsh and cynical abuse.

"Young Mr. Rockefeller has really nothing to fear from his present critics. They are not Christians, for they do not show the spirit of Christ. If they were Christians, they would encourage him in well-doing, and help rather than hinder him. They are merely cheap sensationalists. Let him not turn aside from his work, but rather labor to broaden and deepen it. . . . Bunyan's 'man with the muck-rake,' who was so completely engrossed with his work of accumulating dirt and straw that he could not see the shining One, who held above his head a rich prize to be had for the taking, was a type of the man who, neglecting all else, gives up soul and body to the gathering of wealth. Hard may be the struggle of the rich who desire to enter the kingdom; but the harder it is the greater is the victory."

Harper's Weekly comments:

"Upon the whole, his [Mr. Rockefeller's] discourse as reported, was pathetic, for he said quite what that other young man who had great possessions might have said to a Bible class in the synagog, after parting very sorrowful with Jesus. No one can read that plain story without a heartache, if he has a heart; it is awfully human; and no one, if he has a heart, can withhold a throb of compassion for the young man with great possessions who finds himself in like case to-day: who hears that call and longs to obey, but can not because of his great possessions. Then, as now, such a young man would have told the members of his class that 'the conditions of society' were different from those of a time when a person could

give up his property for the sake of life everlasting. He would have made excuses, and said that those fishermen who had left their nets at Christ's call had certainly set a very noble example, 'and that the lesson to be derived is obedience to the words of Christ,' but you must first make sure whether he meant his words to be taken figuratively or literally. . . . . .

"Were these and other sayings of Christ too hard for human nature? It would really seem that they were; and the church is founded on the spirit of words whose letter killeth. It comes mercifully between the absolute love and the purity and righteousness and the trembling sinner who would like to obey, but does not want to, and offers him a compromise, a *modus vivendi*, which he can accept. Sometimes it does this in one way, and sometimes in another, according to its special creed, or his special need, and as the churches are several and by no means all of the same mind, there is hope for almost every sort of sinner. The church has tried to have the children of light do as wisely in their generation as the children of darkness, and it can not be said that is has not succeeded. If offers a compromise, a *modus vivendi*; but nobody contends that this is final. Perhaps we are really, tho unconsciously, waiting for the conditions to be changed, so that the precepts of Christ shall be practicable. In that time, whenever it comes, no young man having great possessions will be obliged to account for their retention, for there will be no such young man. Meanwhile, with Christ figuratively taken, Christianity gets on very well, while with Christ taken literally, it bristles with apparently insuperable difficulties."

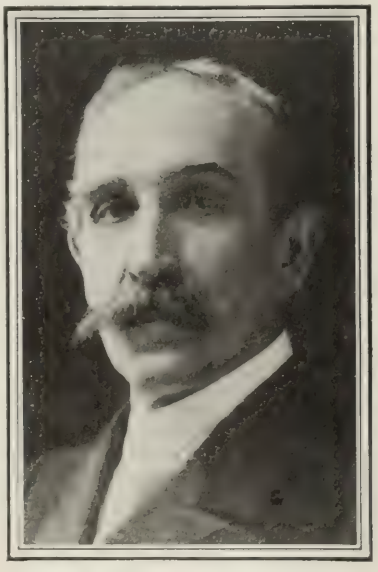
A CONTROVERSY OVER THE DIVINITY OF CHRIST.

REFERENCE was made in our pages last week to a conflict between the Rev. Dr. Lyman Abbott and the evangelical Christians. An even more vital controversy, involving the very central facts of Christianity, was precipitated on Christmas Day by the Rev. Dr. Minot J. Savage, and has been raging ever since. During the course of his Christmas sermon in New York Dr. Savage declared:

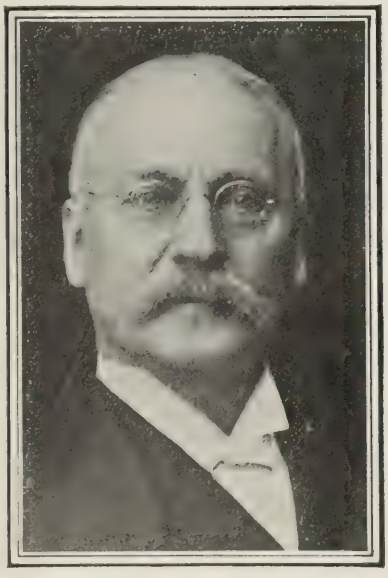
"There is no good reason in the New Testament, or in the early church history, for the belief that Jesus was God. I believe, and I assure you that all the best, the unbiased scholarship of the world is back of this statement, that Jesus was born in Nazareth, that his father was Joseph and his mother Mary, about the year 4 B.C. The month, the date of the month, nobody knows. There is not time now for me to explain how it happened that the 25th of December was decided upon, but it was decided upon after much controversy and was not generally accepted throughout the church until some time in the fourth century.

"I believe that Jesus was man; I believe in the divinity of man; I believe in the humanity of God; I do not believe that there is any gulf of separation between the divine nature and ours that needs to be bridged by any unnatural and stupendous miracle. The doctrine of the deity of Jesus is part of a scheme the characteristics of which are pessimism, disaster, despair. It is part of a scheme of theology that begins with the Fall of Man, the curse of God, and ends in the eternal loss and wo of the immense majority of the race.

"Why should we go back and burden ourselves with the discredited horrors of the ages of the world's ignorance and barbarism? We know now—it is no question of dogmatic statement—that there has never been any fall of man, and that there is no need in the nature of things for any such thing as the coming of God into the world by unnatural methods to deliver man from a condition which does not exist."



THE REV. MINOT J. SAVAGE, D.D.,
Of the Church of the Messiah, New York.



THE REV. D. J. BURRELL, D.D.,
Of the Marble Collegiate Church, New York.

They are combatants in a spirited theological controversy.

These sentiments, which are, of course, in harmony with the tenets of the Unitarian Church, were reported in the New York *Sun*, and have evoked quite a flood of correspondence from readers of that newspaper. Arguments are freely made on both sides of the questions at issue, and the participants in the controversy include a Roman Catholic priest and two Baptist clergymen. One of the most forcible opponents of Dr. Savage's position writes as follows:

"Looking at the subject coldly, the arguments of Dr. Savage would seem to me to call for a new trial for Jesus Christ.

"There is no use evading the question. Jesus was crucified on the specific charge that he was an impostor. He was guilty, or not guilty. Before the court of Pilate the people said, 'We have a law, and according to the law he ought to die, because he made himself the Son of God.' Before the court of Caiphas, the high priest, the question was put to him directly, 'I adjure thee by the living God, that thou tell us if thou be the Christ the Son of God.' And Jesus said, 'I am. And you shall see the Son of Man sitting on the right hand of the power of God, and coming with the clouds of heaven.'

"Jesus is God, the light of the world, or a loathsome liar. The Jews have ever since regarded him as an impostor, the Christians adore him as God incarnate. If the Jews are right, Dr. Savage is wrong, and the Christians also are wrong. It is not only interesting, it is fascinating, to study every incident of the passion of Jesus, in the light of the cross as well as in the light of exact science."

Dr. Savage has written several letters to *The Sun* in defense of his views. In one of these he challenges scholarly contradiction of his statements (1) that "Jesus nowhere claims to be God, and no person in the New Testament, whose name is known, makes any such claim on his behalf"; and (2) that "there is no text in the New Testament which is authentic and whose authorship we know, which can be properly interpreted as teaching that Jesus is God." This challenge was promptly accepted by Father Lambert, the editor of the New York *Freeman's Journal*, who devotes two lengthy editorial articles to a rebuttal of Dr. Savage's arguments. A writer in *The Sun* declares:

"In answer to Dr. Savage's double challenge . . . I venture to send herewith straight to his head and heart two small pebbles chosen from the Gospel, evidences of the Truth he flouts:

"First—The testimony of Jesus himself: 'I and my Father are one.'—John iv. xxvi.

"Second—The testimony of St. Paul: 'Who, being in the form of God, thought it not robbery to be equal with God.'—Philippians ii. 6."

This controversy has overleaped the bounds of the newspaper in which it was started and become the subject of pulpit discourses. On a recent Sunday, the Rev. Dr. David James

Burrell, of the Marble Collegiate Church, New York, referred to Dr. Savage in the following very uncomplimentary terms (as reported in the New York *American and Journal*):

"If any man denies the divinity of Jesus Christ, he is Antichrist, and the doctrine he teaches is Antichrist.

"No heresy ever dies. The denial of the divinity of Christ was taught by the agnostics, and, since their day, by many other heretics under many different names.

"John pronounces this denial of Christ's divinity a lie, and for the man who denies he has another word—John calls him a liar. The reason he denounces this heresy is that it strikes at the very root of Christianity. You find me a man who denies the divinity of Christ, and you will find a man who denies every one of the fundamental truths of the Christian religion."

The Rev. Dr. Thomas R. Slicer, the well-known Unitarian minister of New York, has also taken part in the discussion, contending for the more radical interpretation of Christian doctrine.

The Sun editorially sums up the purport of the whole controversy in these words:

"The discussion as to the historic Jesus, at this time pushed into prominence, is a natural consequence of the unsettling of religious belief which comes inevitably from a scientific examination of the narratives of the Bible: from the critical analysis of the Christian evidence which has been introduced at this period. If the Bible is not accepted dogmatically as the word of God, and therefore unquestionable; if its accounts of the dealings of God with man; if its solution of the problem of existence, its miracles and its narration of events, even tho contradictory of natural possibility, are not believed in, simply because they are in the Bible, the whole structure of Christian theology falls to the ground. Whether the historic Jesus asserted or denied his supernatural origin and birth does not matter. Even if Dr. Savage admitted that the Gospels attributed divinity to Jesus he would reject it, all the same. He denies their infallibility, even their authenticity and credibility as historical documents of authoritative value. To discover infallibility, he might argue, requries infallibility in the discoverer, and he knows no such power in man or in any assemblage of men. To him, a dogma is nothing more than a human opinion. With those who start out with belief in the supernatural authority of dogma as an inspiration of the Holy Ghost, he can have no argument and they none with him. The two sides can only affirm and deny, without convincing.

"The great question now agitating the Christian world is not as to the historic Jesus, whether the Gospels ascribe to him divinity, or agree or disagree in regard to his character, but whether the Gospels themselves are to be treated as historically indisputable, because supernaturally infallible, or are to be viewed as merely human documents of doubtful authorship and, chiefly, of no original historical authority."

MARK TWAIN AND MRS. EDDY.

MARK TWAIN'S recent article on Christian Science in the *North American Review* (see THE LITERARY DIGEST, December 27) has come to the attention of Mrs. Eddy, and she has made a public statement dealing with some of its features. It will be recalled that Mark Twain asked in that article: "How long do you think it will be before it is claimed that Mrs. Eddy is a Redeemer, a Christ, and Christ's equal? Already her army of disciples speak of her reverently as 'Our Mother.' How long will it be before they place her on the steps of the throne beside the Virgin?" To this Mrs. Eddy replies (as reported in the New York *Herald*):

"It is a fact, well understood, that I begged the students who first gave me the endearing appellative 'mother' not to name me thus. But without my consent that word spread like wildfire. I still must think the name is not applicable to me: I stand in relation to this century as a Christian discoverer, founder, and leader. I regard self-deification as blasphemous; I may be more loved, but I am less lauded, pampered, provided for, and cheered, than others before me—and wherefore? Because Christian Science is not yet popular, and I refuse adulation.

"My first visit to the Mother Church after it was built and dedicated pleased me, and the situation was satisfactory. The dear members wanted to greet me with escort and the ringing of bells, but I declined, and went alone in my carriage to the church, entered it, and knelt in thanks upon the steps of its altar. There the foresplendor of the beginnings of truth fell mysteriously upon my spirit. I believe in one Christ, teach one Christ, know of but one Christ. I believe in but one incarnation, one Mother Mary, and know I am not that one, and never claimed to be. It suffices me to learn the science of the Scriptures relative to this subject.

"I have not the inspiration or aspiration to be a first or second Virgin-Mother—her duplicate, antecedent, or subsequent. What I am remains to be proved by the good I do. We need much humility, wisdom, and love to perform the functions of foreshadowing and foretasting heaven within us. This glory is molten in the furnace of affliction."

The article which elicits this statement is one of a series of three written by Mark Twain in Europe in 1899. The second of the series, which appears in the January issue of *The North American Review*, opens as follows:

"We consciously declare that Science and Health, with Key to the Scriptures, was foretold, *as well as its author*, Mary Baker Eddy, in Revelation x. She is the 'mighty angel,' or God's highest thought to this age (verse 1), giving us the spiritual interpretation of the Bible in the 'little book *open*' (verse 2). Thus we prove that Christian Science is the second coming of Christ—Truth—Spirit.—*Lecture by* DR. GEORGE TOMKINS, D.D., C.S.

"There you have it in plain speech. She is the mighty angel; she is the divinely and officially sent bearer of God's highest thought. For the present, she *brings* the Second Advent. We must expect that before she has been in her grave fifty years she will be regarded by her following as having been *herself* the Second Advent. She is already worshiped, and we must expect this feeling to spread, territorially, and also to deepen in intensity.

"Particularly after her death; for then, as any one can foresee, Eddy-worship will be taught in the Sunday-schools and pulpits of the cult. Already whatever she puts her trade-mark on tho it be only a memorial-spoon, is holy and is eagerly and passionately and gratefully bought by the disciple, and becomes a fetish in his house. I say bought, for the Boston Christian Science Trust gives nothing away; everything it has is for sale. And the terms are cash; and not only cash, but cash in advance. Its god is Mrs. Eddy first, then the Dollar. Not a spiritual Dollar, but a real one. From end to end of the Christian-Science literature not a single (material) thing in the world is conceded to be real, except the dollar."

It is a "reasonably safe guess," continues Mark Twain, "that in America in 1910 there will be 10,000,000 Christian Scientists, and 3,000,000 in Great Britain; that these figures will be trebled in 1920; that in America in 1910 the Christian Scientists will be a political force, in 1920 politically formidable, and in 1930 the governing power in the republic—to remain that, permanently." We quote further:

"And I think it a reasonable guess that the Trust (which is already in our day pretty brusque in its ways) will then be the most insolent and unscrupulous and tyrannical politico-religious master that has dominated a people since the palmy days of the Inquisition. And a stronger master than the strongest of bygone times, because this one will have a financial strength not dreamed of by any predecessor; as effective a concentration of irresponsible power as any predecessor has had; in the railway, the telegraph, and the subsidized newspaper, better facilities for watching and managing his empire than any predecessor has had; and, after a generation or two, he will probably divide Christendom with the Catholic Church.

"The Roman Church has a perfect organization, and it has an effective centralization of power—but not of its cash. Its multitude of bishops are rich, but their riches remain in large measure in their own hands. They collect from 200,000,000 of people, but they keep the bulk of the result at home. The Boston pope of by and by will draw his dollar-a-head capitation-tax from 300,000,000 of the human race, and the Annex and the rest of his book-shop stock will fetch in double as much more; and his metaphysical colleges, the annual pilgrimage to Mrs. Eddy's tomb, from all over the world—admission, the Christian-Science dollar (payable in advance)—purchases of consecrated glass beads, candles, memorial spoons, aureoled chromo-portraits and bogus autographs of Mrs. Eddy; cash offerings at her shrine—no crutches of cured cripples received, and no imitations of miraculously restored broken legs and necks allowed to be hung up except when made out of the Holy Metal and proved by fire-assay; cash for miracles worked at the tomb: these money-sources, with a thousand to be yet invented and ambushed upon the devotee, will bring the annual increment well up above a billion. . . . . .

"I think the trust will be handed down like the other Papacy, and will always know how to handle its limitless cash. It will press the button; the zeal, the energy, the sincerity, the enthusiasm of its countless vassals will do the rest."

FOREIGN TOPICS.

KEY TO EMPEROR WILLIAM'S DIPLOMACY IN THE UNITED STATES.

THE great aim of Emperor William's diplomacy, so far as it relates to the United States, is to prevent an Anglo-American understanding. This is the conclusion arrived at by the Social-Democratic organ *Vorwärts* (Berlin), which has long studied imperial foreign policy. "Anglo-American friendliness," it observes, "has been very evident since the Spanish-American war, when Great Britain showed a benevolent neutrality as regarded the United States." This aim of preventing an Anglo-American understanding, proceeds the same paper, is difficult; but the Russian Ambassador in Washington has orders to help the policy of William II. "But the weakness of German diplomacy is twofold. First, it can not grasp the fact that international policy, like domestic policy, must in the last resort be

WILLIAM II. AND HIS AMBASSADOR.

VON BULOW: "Let me say to you privately, Von Holleben, that I administer the blows but the Emperor should receive them."

—*De Amsterdammer Weekblad voor Nederland.*

dependent upon economic policy. Secondly, German diplomacy assumes that it is possible to sit upon two stools at the same time, a feat that calls for the nicest balancing":

"The United States regards itself as the heir of the British empire. This fact will have to be faced. The heritage is a vast one. Cecil Rhodes, who understood material things, said, in his last speech at Kimberley, that the British flag is the biggest commercial asset in the world. The United States will not, consequently, let this asset go to waste. A pilgrimage of all the German princes to New York would never alter that fact. From the moment it became manifest that Great Britain was on the decline, leading American statesmen would change their attitude toward her. All phrases regarding Anglo-Saxonism have a hollow sound. The rich heritage is the main thing. What do the revelations of German ambassadors, trips of royal brothers, or songs of praise amount to in comparison with such vast interests? They are laughed at, a fact which has been proved too much in the past year. It is superfluous to observe that von Holleben, with his complaints against Pauncefote, was guilty of intrigue. But the German Ambassador was right. Yet what is the result? He had to leave Washington. Moreover, the anti-English policy of the German embassy in Washington fills the Americans with the suspicion that Germany wants to rob them of their heritage."

Therefore, we are further assured, if Germany wants to be met with cordiality at Washington she must charge her Ambassador there to assume a friendly attitude toward Great Britain, or at any rate tell him to confine himself strictly to German interests. But this is not a very easy course to pursue, in view of the complexity of world-politics. However, the only policy for Germany as well as for the United States is one of friendliness to Great Britain, because diplomacy nowadays is a mere hanger-on of material interests. It is susceptible of easy demonstration that Mr. Hay, Secretary of State of the United States, bases his whole foreign policy upon a study of the world's industrialism. Germany must do likewise. Thus far *Vorwärts*. But another theory is advanced by the *Vossische Zeitung* (Berlin). This paper says it is a gross slander to insinuate that Emperor William seeks, or has ever sought, to sow dissension between Great Britain and the United States. "The Emperor has never concealed his friendliness for Great Britain. The desire for closer relations with both Great Britain and the United States is greater in him than the desire for any discord between the two great Anglo-Saxon Powers." German interests require such a policy and the Emperor is well aware of it. The *Nation* (Berlin) shares this view, but says that "unfortunately it can not be disputed that in the United States as well as in Great Britain powerful interests are at work to cast suspicion upon German diplomacy." The *Kölnische Volkszeitung* even expects trouble for Germany's new diplomatic representative in the United States in view of the complications that will beset him. The *National Zeitung* (Berlin) refers to the immense importance now attached by Emperor William's Government to the post of its diplomatic representative in Washington:

"Prior to the entry of the United States into the arena of world-politics, the task of Germany's diplomatic representative in Washington was an easy one. Speaking generally, he had only to preserve the mutual friendliness of both Powers and to adjust trifling misunderstandings that grew out of the military obligations of naturalized American citizens of German birth. . . . To-day the embassy in Washington is among the most important of diplomatic posts."—*Translations made for* THE LITERARY DIGEST.

WHERE FRANCE MAY FAIL.

THE colonial empire of France is magnificent, but it is a failure, in the opinion of many authoritative exponents of French opinion. The building of a colonial empire, these authorities contend, is a task foreign to the national genius. Many and gloomy are the prophecies of those who find their cue in this idea. According to the *Journal d'Outre-Mer* (Paris), semi-official organ of the colonies, it requires a great amount of courage to "expose the numerous ulcers" which menace the life of the French colonial empire. Senator Louis Pauliat, chairman of the commission on the colonial budget, gives in the organ just quoted a gloomy impression of the expense outlook:

"The appropriations amounted in 1885 to 34,720,000 francs [about $6,944,000], to which sum must be added 7,844,000 francs [about $1,568,800] for supplementary appropriations. By the way, these supplementary appropriations voted by parliament always turn out to be insufficient, altho the colonies themselves are required to pay expenses as much as possible. In 1900, for instance, the amount advanced by the colonies reached a total of 129,928,000 francs [about $25,985,600]."

What advantage, it may well be asked, is France deriving from her colonies? says the *Journal d'Outre-Mer*, which cites statistics of a disconcerting nature by way of reply, and proceeds:

"The commerce of France with her colonies amounts to 313,000,000 francs [about $62,600,000]. This is absolutely inadequate, compared with the colonial trade of Great Britain. That nation expends but 62,000,000 francs [about $12,400,000] annually upon her colonies, whereas she transacts with them 5,356,888,000 francs [about $1,071,377,600] worth of business."

Nor is this the only unpleasing aspect of the matter. Senator Pauliat complains that during the past six years France sent no more than 4,000 emigrants to her colonies. Furthermore, he is unable to ascertain the number of Frenchmen now living in

these colonies. "We know," he says, "the total number of Europeans, but the Government has deemed it unnecessary to tell us the total number of French settlers. And the matter is doubtless of no great importance, for the French settlers are so few. Undoubtedly the colonial empire of France is not very flourishing":

"Must we conclude from all this that France made a gigantic blunder in undertaking to build up her colonial empire twenty years ago? In other words, did we waste our energy in a futile effort? Let us not think so. This work undertaken by the third republic should constitute a monument to her everlasting glory."

Senator Pauliat himself is of opinion that France should buy from her colonies the 1,200,000,000 francs [about $240,000,000] worth of colonial products she consumes yearly. He also advocates a system of self-government similar to that of Great Britain. But he acknowledges that France has done everything of which she is capable to succeed in her colonial enterprises. "When France began to carve out her colonial empire twenty years ago, she went at it with a will":

"Her only idea then was to conquer territories as quickly as possible, so as not to be left behind by the other Powers. She organized merely a temporary administration. To-day the fever of colonial conquest is over and it is time to reorganize on a serious basis."

What the French colonies need above all else is to be protected "from foes within and without," observes the *Journal des Sciences Militaires* (Paris). It urges the somewhat reactionary view that the military power of the republic in the colonies should be built up before anything else is attended to. Native regiments should be recruited to their utmost possible strength, and the presence of the soldiery in large numbers will constitute a bulwark of the power and authority of the home Government. —*Translations made for* THE LITERARY DIGEST.

POLITICAL UPHEAVAL IN TURKEY.

THERE is a new Grand Vizier in Turkey—Ferid Pasha. The Sultan's relations with his former adviser grew strained, as the two could not agree as to the best means of delaying the Macedonian and other crises. Ferid Pasha was president of the Macedonian reforms commission at the time of his appointment as Grand Vizier. The Sultan's choice has made the best possible impression, according to the *Vossische Zeitung* (Berlin). It shows the Turkish ruler's good faith that he has chosen an experienced and capable official to advise him at a time when crises compass the Porte about. The *Politische Correspondenz* (Vienna) attributes far-reaching views and plans to the Grand Vizier, who is an orthodox Mohammedan, aged about fifty. His rise to power has been rapid, his mind is brilliant, and his gifts of a character to make him the wonder of Europe when it knows him better:

"He has had the advantage of an education along European lines, is master of the French language, and favors reforms when they are practical. He first attracted the Sultan's attention when filling the post of governor of Konia, where he evinced capacity, promptitude, and devotion to duty. He was raised to the rank of Vizier before quitting his post in Asia Minor. Next he was summoned to Constantinople and placed at the head of the commission in charge of Macedonian reforms. His promotion to the post of Grand Vizier demonstrates the Sultan's sincerity in correcting abuses in his European dominions."

Liberal as the new Grand Vizier is, he dislikes Christians, according to the *Allgemeine Zeitung* (Vienna). This paper attributes to him love of neither reform nor corruption. He will do exactly what the Sultan tells him to do, but he owes his appointment to Count Lamsdorff, the Russian Foreign Minister, who arranged the whole matter during his recent tour of the Balkans. Many press comments indicate that the evils of Turkish government in Europe will grow worse before they grow better. The new Grand Vizier, we are told, could not cope with these evils if he wanted to. *The Quarterly Review* (London) thus refers to the chief embarrassment of the statesman in Turkey:

"Since the accession of the present Sultan—an abler and more active, but also a more timid and suspicious man than his last two predecessors—a new element has come into the Government, that of espionage and secret denunciation. Not only Constantinople, but other important cities are full of spies who surround all high officials and all persons of note, watching their actions, and prepared to report or to pervert their words. Nobody is safe; everybody moves in an atmosphere of fear and distrust. The spy, to justify his existence and earn his pay, is obliged to invent if he has nothing real to send to his employer. Innocence is no protection. Silence and caution may themselves expose a man to suspicion. These things recur from time to time under despotic governments. The account which Procopius gives of the spy-system at Constantinople during the sixth century suits very well the phenomena of Constantinople to-day."—*Translations made for* THE LITERARY DIGEST.

THE VENEZUELA PERIL OF THE BALFOUR MINISTRY.

IT is the general opinion in England that the Venezuelan complication narrowly missed assuming a phase that would have led to the fall of the Balfour ministry. The union of forces with Germany has proved unpopular to an extent positively amazing to the Government. An important by-election went against the ministry solely because, as the London *Spectator* insists, Mr. Balfour allowed himself to fall a victim to German wiles. The Premier is entreated to learn a lesson from the experience. As the English weekly puts it:

"For ourselves, and writing as persons whose business it is to study and understand, tho not to follow, public opinion, we can say with perfect sincerity that we have never known a more genuine and more spontaneous feeling of protest aroused among members of a party by the blundering of their leaders. They simply will not follow those leaders in the matter of the German alliance. It is hopeless to wait for such a feeling to blow over. It will merely become more intense and more resolute through waiting. The only wise course is for the Government to show that they are doing their best to get as quickly as possible out of the quagmire into which they have so heedlessly walked."

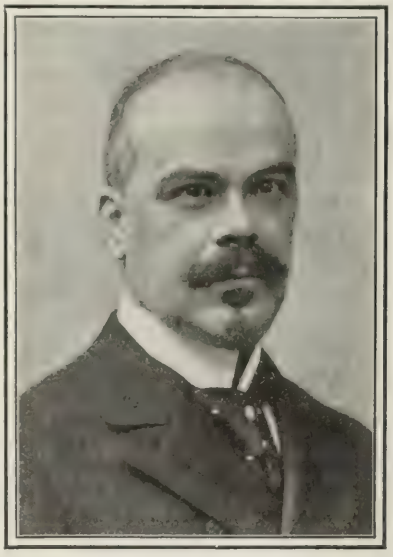
It has been unanimously agreed in England until lately that the Balfour ministry was lured into a sort of Venezuela trap by the German Emperor. But this notion has been upset by an article in *The Empire Review* (London), a pro-German organ, which asserts that the Balfour ministry actually proposed the Venezuelan adventure to Berlin. This "revelation" is not yet generally credited. *The National Review* (London) inclines to make a scapegoat of Lord Lansdowne, who is now in charge of the British Foreign Office. The anti-German magazine utters this warning:

"No Government will be able permanently to retain power in this country which deliberately persists in an Anglo-German policy. Europe may, however, take some time to realize this, and in the interval much mischief may be done. The Kaiser scores heavily for the time being by suddenly appearing before Europe with England once more in tow. Up goes the price of Germany, both with her partners of the Triple Alliance and her opponents of the Dual Alliance. Our position is of course correspondingly lowered, but all students of German policy—of whom there are unfortunately none in the Balfour cabinet—are aware that there is no object so steadily, relentlessly, and thoroughly pursued by the Berlin Government than the world-wide depreciation of Great Britain. The Kaiser is even more active in carrying on the campaign of detraction than Prince Bismarck who inaugurated it. Never was the German press under stricter official

control than during the last few years, and never was it more rancorous, while every German embassy has become a center of Anglophobia, and we may judge from the speches of Count von Bülow, the imperial Chancellor, whom the Emperor has lately desired to make a prince, as to whether this attitude is displeasing to his Majesty."

Even the stanch newspaper supporters of the Balfour ministry are warning it of the serious risk it runs in continuing the partnership with Germany in Venezuela. *The St. James's Gazette* (London), for instance, has received a shock in consequence of Germany's pointed refusal to associate herself with Great Britain in the Dardanelles:

"Experience of Bismarckian methods, which still govern German diplomacy, forbids us to be amazed at German disloyalty to allies; while we have no reason to be disquieted by any policy which the Government of William II. may think it expedient in the interests of the German empire to pursue in the near East so long as no step is taken that could be construed as positively unfriendly or menacing to British interests. But if not disquieting and amazing, the action of Germany in promptly and emphatically dissociating herself from Great Britain in this matter at a moment when our navy is at her disposal in another hemisphere, is at least instructive."



DR. VON KÖRBER.

MR. SZELL.

Who find it hard to agree on matters of general importance to the Austro-Hungarian monarchy.

Mr. Balfour is considered by many observers to owe his country a personal explanation of his course in the matter of Venezuela. No one dreams of accusing him of bad faith, but at the same time certain statements of his totally misled public opinion in Great Britain. Sir Wemyss Reid, in the course of an able review of the whole situation, takes this view. He says in *The Nineteenth Century and After* (London):

"Upon one point we are entitled to an explanation from the Prime Minister. Speaking at the Guildhall banquet, he told his audience not only that no disturbance of the peace was in his opinion possible, but that all the statements which had been circulated in the press as to some bargain concluded between our Government and the German Emperor during the stay of the latter at Sandringham were sheer inventions. Yet at that very moment we were on the point of taking war-like measures against Venezuela, and an agreement had been arrived at between Lord Lansdowne and the German Ambassador, under which we had placed the British fleet under certain conditions at the disposal of the Emperor. This agreement was made at the very time when the Prime Minister, the Foreign Secretary, Mr. Chamberlain, and the German Ambassador were members of one or other of the house-parties at Sandringham. It would be interesting to know how Mr. Balfour reconciles the actual facts as they have now come to light with his speech at the Guildhall. It is not surprising that men of all parties should have received a shock, and that their confidence in the Prime Minister's accuracy should have been disturbed."

The folly of the Balfour ministry merits a sharp rebuke, asserts *The Daily Chronicle* (London), while *The Daily Telegraph* (London) points out that British opinion is thoroughly aroused and will approve of any measure calculated to impress upon the ministry the magnitude of the blunder it has committed. The net result of the Venezuela business, therefore, has been to weaken Mr. Balfour's hold upon the confidence of the country.

MR. SZELL AND DR. VON KÖRBER.

MR. SZELL is Prime Minister of Hungary and Dr. von Körber is Prime Minister of Austria. These two statesmen are in a chronic state of negotiation with each other regarding matters of general importance to the Austro-Hungarian monarchy. They are seldom able to agree. The result is an inflamed state of public opinion. When affairs are at their worst, the Emperor Francis Joseph intervenes, and the influence of his splendid personality has thus averted crisis after crisis. Austria-Hungary has again emerged from one of these periodical political agonies. As usual, it was due to the everlasting *Ausgleich*, of which, by the way, the London *Times* has given this editorial definition:

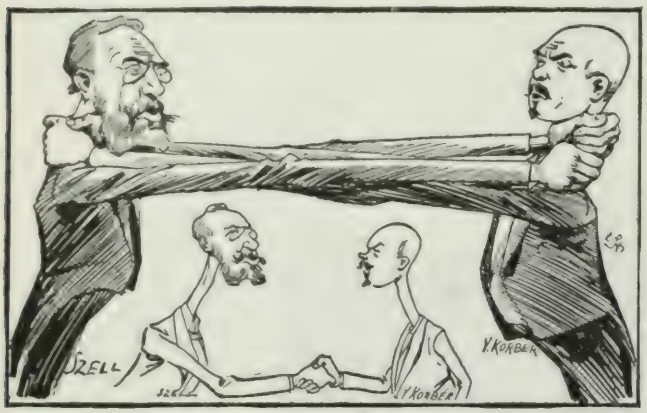
"There is an ambiguity about the use of the word *Ausgleich* which should be cleared up. It is sometimes, and quite properly, applied to the constitutional compromise of 1867–68 which forms the permanent political basis on which the Dual Monarchy stands. But, while the strictly political arrangements relating to the dynasty, the army and navy, foreign relations and the control of 'common affairs' by the delegations are unalterable, the commercial and financial relations between Austria and Hungary are subject to revision from time to time. It is this part of the original *Ausgleich* that has been lately in question."

Mr. Szell and Dr. von Körber now announce—what they have announced heretofore—that the *Ausgleich* is concluded. This time it is to stay concluded. So says the London organ just quoted, altho it admits that both Mr. Szell and Dr. von Körber must face formidable opposition in their respective parliaments. The *Indépendance Belge* (Brussels) makes no concealment of its amazement at the sudden agreement of the two premiers, an agreement which may meet the fate of their previous agreements:

"Everybody thought the affair hopeless. An official communication had already announced a rupture of the negotiations. At a final interview, however, the two ministers agreed somewhat hastily, which has caused some surprise. It is evidently to the personal intervention of the Emperor-King that this final harmony is due. During the months in which the two premiers have been negotiating they certainly exhausted every possible and impossible argument to make their views prevail. The final concessions could not have seemed to them compatible with the interests they are charged to defend, since rather than consent to them they were willing to abandon the matter and give up the customs union between the two states. Francis Joseph must have precipitated matters and brought the discussion back to the question of principle. The two premiers ended by yielding in order not to create serious difficulties for the aged sovereign. It was a success no doubt, but from every point of view a mediocre success."

In the course of the long negotiations the conflict of Austrian

interests with Hungarian interests was very apparent, and separatism has found new arguments. This fact has been dwelt upon at Budapest, where Mr. Szell has been accused of sacrificing Hungary's economic interests. This separatism can not but develop. Hungary is a power in the ascendant, whereas Austria is threatened more and more with decadence. Yet in the union of the two states it is Austria that has hitherto played the leading part and exercised a proponderating influence. Hungary is now disputing this supremacy. Hence the antagonism,



THE AUSTRO-HUNGARIAN AUSGLEICH.

At last they can congratulate each other.

—*Kladderadatsch* (Berlin).

which is found in men most disposed to maintain the present order for the sake of protecting the rights of the common sovereign of both countries. So far the Brussels paper. The *Pester Lloyd* (Budapest) praises the course of Mr. von Szell and denounces "Austrian politicians" in general, saying:

"Perhaps Austria must undergo the ordeal of separation before she learns to appreciate the blessings of union. Such is the peculiarity of Austrian politicians. They underrate the value of what they possess only to long eagerly afterward for what they lightly discarded."

Dr. von Körber, the Austrian premier, is warmly defended by the *Fremdenblatt* (Vienna). It was very hard for him, we are told, not to yield to Hungary on every point. He was withheld from doing so only by a sense of duty. "Hungary was always a nation that clung to the right and which cherished right above all things. She will in the long run not deny recognition to the right of Austria."—*Translations made for* THE LITERARY DIGEST.

SUPREMACY ON THE HIGH SEAS.

FEW things in the foreign press are more significant than the attention it bestows upon the increase in the United States navy. Elaborate calculations are made of the probable naval strength of the great republic in 1910, in 1915, and in 1920. Comparisons are made with the German navy, suggestive facts being brought out, and in not a few cases sensational inferences being drawn. But there has recently appeared a protest against this sort of thing in the *Petit Journal* (Paris). The French paper says the personal element is too much neglected. After all it is not the ship but the man who handles it that counts. Admiral Dewey is referred to as the type of naval commander who might be expected to win victory and supremacy for his country on the high seas, regardless of odds. Moreover:

"When a nation is lucky enough to possess a chief military officer who can handle his fleets with skill, it has the secret with which to attain success. When a conflict occurs between two naval organizations, the triumph is not doubtful; it is on the side of the admiral who has pushed to the extreme limit the tactical instruction of his squadrons, from which he can then expect the maximum of results."

The Austro-Italian conflict is instanced by this authority as a case in point. The Austrians gained the victory over their foes with no very great expenditure of strenuous energy. To quote once more:

"In 1866 Austria, numerically weak on the seas, subdued without great effort the superior fleet of Italy, because Tegethoff knew his fighting instruments and made a marvelous use of them. The same thing is true of Dewey and Sampson regarding their overwhelming victories of Manila and Santiago."

This is apparently the opinion of President Roosevelt, asserts the *Petit Journal*, which sums up his views as follows:

"A good navy is not created in a day. It requires years to drill the crews, and the captains under Dewey could not have obeyed his instructions to the letter if the men in control of the machinery and those at the guns had not been trained during many years. It requires a hero, however, to lead the men. Dewey had carefully prepared his plans while in command of the Asiatic squadron. Therefore there was no delay or hesitation at Manila. There was nothing to indicate that the submarine mines were or were not likely to be exploded; but Dewey, notwithstanding his circumspection, did not show a particle of fear. The great secret of Dewey's success, however, was 'his moral superiority' over the material advantages of the Spanish commander."

Supremacy on the high seas has been discussed with reference to France by the Russian papers. They return again and again to the subject, and they appear to have received orders to combat the theory that personality is everything and ships and guns are nothing. The *Novoye Vremya* (St. Petersburg) even warns the French against entertaining delusions on the subject:

"The great Franco-Russian alliance was created by the will of Alexander III. In his estimation Russia did not need France on land, but on sea. Alexander III., the great reformer of Russia, said: 'A potentate who has only an army or a fleet has only one arm; the one who has an army and a fleet has two arms.' The French fleet was the only one in the world which could not be compelled to remain locked up in ports in case of a war with Great Britain—the only one, in fact, which could cope on the high seas with the British fleets. The French and Russian navies could together dispute the supremacy of the seas with Great Britain. France has received many advantages from her alliance with Russia. She should not forget, however, that her fleet must be maintained on a footing of expansion. We are ready to shed torrents of Russian blood for the defense of France on land provided only we can rely upon her fleet."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

ANTI-GERMAN POETRY.—The forcible lines in which Rudyard Kipling characterized the present Anglo-German combination are referred to by *The Saturday Review* (London) as "ill-mannered doggerel."

THE REPUBLICANS OF SPAIN.—The feeling against monarchy in the kingdom of Alphonso XIII. grows intense, according to the *Pueblo* (Valencia), an organ of Spanish democracy. It attacks the dynasty with all the freedom permitted by the press laws and predicts that the masses will organize a government on the American model for the Iberian peninsula.

NO CATACLYSM COMING.—Herbert Spencer was bold enough lately to predict that a great social revolution is impending in the United States. An article in *The New Liberal Review* (London) examines the arguments favorable to this notion. The conclusion reached is that Herbert Spencer errs grievously and that no cataclysm need be anticipated in the United States.

GRANT ON SOUTH AMERICA.—Sir Richard Temple, Bart., once had a conversation with Gen. U. S. Grant regarding the South American republics. The English publicist gives the details in the *Deutsche Revue* (Berlin). The talk turned on the practicability of having the Spanish-American republics refer their numerous disputes to a court of arbitration. "But who is to compose the court?" asked Sir Richard, who had in mind disputes to which only South American republics were parties. "Would you have a tribunal appointed by England and America?" To this General Grant replied "Scarcely," whereupon the Englishman inquired: "Who shall decide?" "The United States," answered the general.

NOTABLE BOOKS OF THE DAY.

ENGLISH HEROINES OF YESTERDAY AND TO-DAY.

THE SUCCESS OF MARK WYNGATE. By Una L. Silberrad. Cloth, 5¼ x 7½ in., 320 pp. Price, $1.50. Doubleday, Page & Co.

IT is not uninteresting to the lover of cause and effect to turn from the pictures which English writers gave us of Englishwomen in the middle of the last century to the pictures which Englishwomen to-day are painting of themselves. Formerly, we had as antitheses Blanche Amory and Laura Pendennis; Dora Copperfield and Agnes Copperfield; and all the women, foolish, selfish, wise, or lovable, were overshadowed by conventions of what was right and proper for the British female.

That was an age when propriety stalked unchecked in every street, when the odor of sanctity smelled to heaven, and when rules of conduct and etiquette became so rigid that they seemed likely to endure forever. And just about that time the daughters revolted. Conservatism had gone one step too far. Those who choose can see the reflections of that revolt in a score of the novels published in the last ten years. The heroine is no longer a commonplace person. She is different from everybody else, she has ideals, she is an odd creature, and ten to one she scandalizes the community in which she lives. This heroine, whether her name is Salesia in "Spindle and Plow," or whether she is a Heavenly Twin, or Judith in "The Success of Mark Wyngate," is intended by her author to be a very fine person. She is described with a nervous fervor that in this more hustling and less serious country seems somewhat humorous. No ray of humor gladdens the countenances of either the heroines of these tales or their creators. They are serious about themselves and their own superiority, as well as about the serious business of life. They have only just begun to try their wings and have not learned to take flying as a matter of course. Judith is an attractive person for all her lack of humor, and the book of which she is the heroine is a good story with a good deal of clever character-drawing in it; some rather new situations and some graphic descriptions of the way the London "bachelor girls" live. After reading it, one feels that for real emancipation and the real bachelor girl one must go to England. They have gone to work there about being free and being bachelors with such earnestness and thoroughness that they have succeeded. While American girls who have always had all the liberty they cared to take have only played at the game, the English have made a cult of it, and this book gives an admirable picture of that phase of life.

UNA L. SILBERRAD.

A DESPISED VIRTUE.

THE LADY POVERTY. Translated and edited by Montgomery Carmichael. Cloth, 4¼ x 6¼ in., 209 pp. Price, $1.75 net. Tennant & Ward.

A LITTLE book on a despised virtue! The cynical observer of the times, especially as differentiated by New York city, can but regard this small volume with a wan smile. Is it not an engaging contrast of "high lights" to picture the president of an American railroad whose "understanding" of a deal by which his road disbursed $50,000,000 for the acquisition of another road was thus expressed by himself: "We were buying this stock from J. P. Morgan & Co., just as you would go into a confectioner's shop and buy a pound of candy, and when it was wrapped up and delivered to us we would pay for it, and that was all there was of it," sitting down cosily and reading this Franciscan's thirteenth century allegory, eulogizing St. Francis of Assisi's passionate ardor for poverty!

Jesus Christ was a poor man, and those who believe him to be the Son of God, consubstantial with the Father, conclude that this lack of earthly goods must have been of his own election. Nevertheless, the passion for the "Almighty Dollar" is not likely to be mitigated by the lives of those who, following his example, have chosen Poverty as their earthly lot, nor by their ardent tributes to this Evangelical Virtue. The lowly, nature-loving saint of Assisi stands as one of the most conspicuous of these, and the interest in the founder of the Franciscan order, which has become a sort of cult to-day, is responsible for the publication of this allegory by one of his disciples.

It is to be feared that with its medieval, ascetic tone, this allegory will not purge the tinge of gold from eyes of the twentieth century. It would be little short of a miracle if it did. It has not the unction, the searching truth, the illuminative simplicity of Thomas à Kempis's "Imitation of Christ," qualities that made it a favorite book of George Eliot. The short essay, "On the Spiritual Significance of Evangelical Poverty," by the Franciscan Father Cuthbert, is more calculated "to do good" than the allegory to which it is annexed in this small volume. Father Cuthbert's attitude toward St. Francis and the Virtue of Poverty, which he made his distinctive virtue, is shown by this sentence: "To rescue the poor from the conditions which have so effectually demoralized them during the past two or three centuries of unheeding individualism would undoubtedly have been to Francis a first and urgent duty were he with us to-day." Father Cuthbert also says: "It is not the holding of property, but the selfish misuse of it which is opposed to the virtue of evangelical property." The rich man should "bear in mind that such goods are not absolutely his own. The rich are God's stewards, appointed 'to give to every man his just measure in due season.'" All of which blunt truths of Christian teaching are "caviare to the general."

MONTGOMERY CARMICHAEL.

But Dante was not above eulogizing in the Paradiso the mystic loves of Francis of Assisi and the Lady Poverty. He very probably was acquainted with this allegory, whose author is variously conjectured, but not clearly known. With whatever feeling one may read this little book, the naïveté and simple admiration for one of the extraordinary men who stand out from the mass of humanity, which is breathed by its author, can hardly fail to impress. Its missionary effect upon an age given to the acquisition of wealth and what it procures is scarcely to be hoped for.

FROM "HALF-MOON" TO HARBOR TUG.

THE HUDSON RIVER, FROM OCEAN TO SOURCE: HISTORICAL, LEGENDARY, PICTURESQUE. By Edgar Mayhew Bacon. With 100 illustrations, and sectional map of the river. Cloth, 7 x 10 in., xii + 590 pp. Price, $4.50. G. P. Putnam's Sons.

IN dealing with the history and traditions, "the men and the manners of the valley of the Hudson," Mr. Bacon begins with the arrival of Henry Hudson; for the reason that the record of the river, so far as it is clearly written, commences with the *Half Moon* and the first Dutch settlers, when "the Hudson River Boer" worked out his salvation through fear and trembling that were foreign to his temper and his ways. And it even occurs to the author that the Boer of the seventeenth century, with all his thrift and energy, his patience and his pluck, may be most justly measured and appraised by comparing him with his kinsmen of the Transvaal, about whom all the world has been writing or talking in these latter days. Behold the same "funny" garments, the same "cherubic breadth of feature," the same stolid, unterrified Boer—"unlettered, practical, not too nice in manners, and far from fanciful regarding either this life or the next." He treks, he hews out his home in the wilderness, he furnishes all the sinew and the backbone that the emergencies may call for, he digs and he chops, he prays and he fights—and he shoots straight.

EDGAR MAYHEW BACON.

Notably animated and picturesque is Mr. Bacon's description of the "White Wings"—the old river-fleets. From Burnet's Key and the Albany wharf, from fifty points and piers along the river shore, they put out with any wind that Providence might send, fair or foul, for far-off villages along the Tappan Zee and Haverstraw Bay, and even beyond the Highlands, as far as navigable water flowed. Before the railroad came there was hardly a village on the Hudson that did not own a fleet—from five or six to fifty or sixty sail. Even now, in many a town, half the old men answer to the title of captain. "He used to follow the river," they say. "Grizzled, keen-eyed, hard-fisted, broad-shouldered skippers—the men who had followed the river" Many of the older steamboats bear their names—better known at most of the landing-places than the name of the governor or that of the member of Assembly "from our deestrick." From generation to generation they have transmitted the legends and the secrets of boatcraft that no mere landsman can ever know; "and never one among them all had the wit or skill to set it down on paper for our delectation and his own enduring fame." But

hard horse-sense had they, and not a few of them have sat in directors' chairs in transportation companies and financial institutions.

Nor can it be fairly called "a far-off cry," on these impatient shores, from the day of these nimble "White Wings" to the hustling, bustling, rowdy tugs—the ubiquitous tug, "that irreclaimable tough of rivers and harbors"—that swearing, swaggering, cocksure ruffian, who respects neither age nor rank: "We say *he* advisedly—all vessels are feminine except this cockerel of the brackish waters," says our sprightly chronicler.

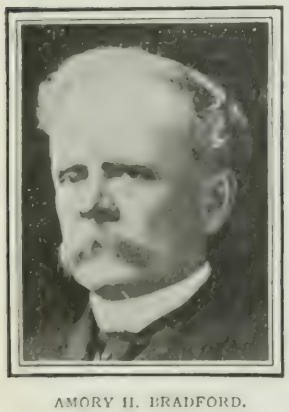
Now and then, this wisely wilful writer, having taken cognizance of the insistent city round about him, "overwhelming in its presentation of passing achievements," takes refuge from "the oppressive aura of multitudinous life, the hum of traffic, and the murmur of striving," in a true Knickerbocker reverie, a dream, or dwawm, of the quaint little city, "contracted, unalterable, peopled with ghosts"—the city that hid behind palisades for fear of Indian prowlers; that fretted and prospered under Dutch and English governors; "that, in place of stock-exchanges and produce-exchanges, raised live-stock and farm stuff"; the city that entertained the first representative Congress in the colonies and inaugurated the first President of the new republic.

"From the last stone of the Battery to the first spring that wells in Indian Pass," says Mr. Bacon, the Hudson is rich in literary associations. Already it begins to take rank among the storied rivers of the world; the Thames, the Seine, the Rhine, the Nile admit it to fellowship.

EVOLUTION AND THE SPIRITUAL MAN.

THE ASCENT OF THE SOUL. By Amory H. Bradford, D.D. Cloth, 5½ x 8 in., 314 pp. Price, $1.25 net. The Outlook Company.

WE find this a practical rather than a profound or distinctly philosophical treatise. It is calculated to remind the reader of his divine relations and his title to immortality. The author assumes for the most part the general truth of evolution, and makes a spiritual application of that truth to the progress of the psychical personality of man. For the man who contemplates an ascent out of animalism into the spiritual liberty of the "Sons of God," Dr. Bradford points out the first steps—moral discrimination, choice of ethical ideals, realization of moral freedom; and, having observed some of the obstacles to be overcome, he proceeds to outline the law-plan that binds him, and to describe the process by which he awakens to his needs and possibilities. For such a soul struggling upward Christ stands as both type and law. Death is not the end for such a soul. The goal is a perfection typified in Christ, in which the spiritual man entirely emerges from the nature conflict into complete spiritual freedom.



AMORY H. BRADFORD.

Dr. Bradford's treatment indicates the broad lines on which a new untechnical phraseology may describe the great outline truths of present-day theology. Tho not pursuing the outlines of a system, there is here more than a hint of a new soteriology based on the general philosophy of evolution, that is in harmony with much of the more modern theological thought. It is altogether tinctured with an optimistic spirit, and leaves with the reader an impression of religious cheerfulness.

THE PHILOSOPHY OF A RADICAL PRINCE.

MUTUAL AID A FACTOR OF EVOLUTION. By P. Kropotkin. Cloth, 5¼ x 8 in., 348 pp. Price, $2.50 net. McClure, Phillips & Co.

PRINCE KRAPOTKIN arrives at economic conclusions by the processes of political and historical, rather than economic, science, and therefore it is a little difficult to give him his exact place as a social philosopher. He is called an anarchist, but so great is his insistence upon cooperation that those advocates of the "cooperative commonwealth" who may read the present work would hail him as a socialist; yet Krapotkin indignantly repudiates the "state" whose omnipotence is the fundamental postulate of the Marxian philosophy. His attitude against the "imperialism" of the Roman idea of the sovereign state, now basic to every form of modern government, is as relentless as Cato's toward the rival of Rome: "Delenda est Carthago."

To one who reads between the lines, Krapotkin's position is midway between individualism and communism. His force of argument in favor of the latter is clearly of the nature of hyperbole—emphasis to counterbalance the prevailing tendency toward *laissez faire*.

With characteristic directness and astuteness, he attaches Darwin to his side. As evidence that mutual aid is the strongest factor in evolution, he cites the master's own words:

"Those communities which included the greatest number of the most *sympathetic* members would flourish best and rear the greatest number of offspring" ("Origin of Species," chap. iii.).

PRINCE KRAPOTKIN.

Krapotkin then attacks most effectively those "narrow Darwinists" (whom he shrewdly insists are followers of Hobbes or of Malthus rather than of Darwin) who would limit the idea of selective competition to an individual struggle of "each against all." The one distinct contribution he makes to evolutionary science is in this connection. He argues with a wealth of illustration drawn largely from the conditions of animal life on the Eurasian plains, that "competition for subsistence" may be an infinitesimal factor in evolution. Grazing on the steppes is either overabundant or, through a sudden snowstorm, absolutely lacking to the herds. The element of competition can not enter into such a struggle for existence, while that of association for protection and mutual aid is all-important.

The Prince further develops his theory by an examination of life among savages and primitive man. Here he relies, not on his own observation, but on such authority as Elie Reclus, whose political philosophy is the same as Krapotkin's. Similarly, in proving the central position occupied by mutual aid in the development of the medieval city, the facts unearthed by such sympathetic students of the workingmen's gilds as Thorold Rogers are presented with practically no additional deductions. In the discussion of mutual aid in present society, the same lack of original observation and conclusion is noted. This reliance upon others, however, while it detracts from the value of the book as a work of original research, strengthens greatly its argument. It shows that the general trend of modern thought is away from extreme individualism, and is preparing for that realization of the ideal social organization which, to quote the author's words, "would not be the state, nor the medieval city, nor the village community of the barbarians, nor the savage clan, but would proceed from all of them, and yet be superior to them in its wider and more deeply humane conceptions."

A NOTE FROM SIR GILBERT PARKER.

Editor of THE LITERARY DIGEST:

It has not been my habit, since I began writing, to object to newspaper criticism or to correct misstatements in the press. In public life one takes inaccuracy and misrepresentation, whether involuntary or wilful, as part of the game.

But I am now making a pardonable exception. I am sure that the misrepresentations contained in the article appearing in THE LITERARY DIGEST on December 13 are involuntary. The article is entitled "A Second Farewell to Canada," and it reviews two stories of mine, "The Lane that Had No Turning"—and "The March of the White Guard."

The very title of your paper would suggest a knowledge of books and of authors. So far as I am concerned it has yet to earn that reputation. The writer of the article referred to makes merry over the assumption that "The Lane that Had No Turning" is published in 1902 while its dedication was written in 1900. A better acquaintance with current literature would have informed your critic that "The Lane that Had No Turning" was published in 1900, and that this book is merely an illustrated edition of that tale.

The writer appears to regret that he can not offer me "a fresh laurel." He need not. Let him accept from me for the burial of his two years' ignorance a belated *immortelle*.

I am flattered by the importance he attaches to the other tale, "The March of the White Guard." I have never attached the least importance to it. It was the first story I ever published, and, as it was written before the American copyright law was passed, I was unable to protect myself from its publication in book form. The story is now published by Messrs. Fenno & Co. absolutely without my consent and against my will; and I have received not one farthing for it since it appeared in *Good Words* in 1902. Thus it is that one man labors and others enter into the fruits of his labor.

I am, sir, yours faithfully,

GILBERT PARKER.

ST. MORITZ, JANUARY 7, 1903.

[Sir Gilbert seems to us to take our reviewer's pleasantry a little too seriously. We were not unaware that "The Lane that Had No Turning" had been published before, and we were careful to state that the dedication was dated 1900. Had the book been published frankly as a new edition of an old book, it would not have placed the author in the apparent attitude of the foreign *prima donna* who returns annually for a "farewell tour." Our pleasantry was aimed at the publisher rather than the author. As for "the importance" which Sir Gilbert finds that we attached to "The White Guard," this is evidently "writ sarkastic." Our words were: "It would awaken no attention if the work of an unknown writer."—EDITOR OF THE LITERARY DIGEST.]

Hair Wealth and Health

The wealth of your hair depends upon the health of your hair. A healthy condition of the scalp is impossible unless you periodically cleanse it thoroughly.

FAIRBANK'S GLYCERINE TAR Soap is unequalled for this purpose It makes a rich, creamy lather, thoroughly cleanses the scalp, feeds and tones the hair follicles, disperses dandruff and leaves the hair soft and glossy.

A superior article, too, for toilet and bath, as well as an excellent remedy for any disease of the skin and scalp. Its mildness combined with antiseptic and curative qualities render it the safest and most hygienic Soap for every toilet use.

Don't judge of the quality by the price—

"Moods and Moments."—Carl Heinrich. (The Abbey Press, $1.25.)

CURRENT POETRY.

The City.

By WALTER MALONE.

Tho misanthropes may praise the country more,
And turn from mankind to some rude retreat,
I seek the City, with its rush and roar,
Its eager and enthusiastic street.
I turn from fellowship of beast and bird,
The coarse backwoodsman and unlettered swain,
To where heart-blood of humankind is stirred,
To share my brother's pleasure and his pain.

I love the City's wilderness of stone,
Its flags, like scarlet poppies in the air,
Where wealth erects a gold and silver throne,
And Fashion charms with silk and satin snare.
I love its splendid shops, where jewels blaze,
And crystals glitter like a starry crown,
With mirrors, plumes, and laces like a maze,
With furs and velvets, soft as thistledown.

. . . . . .

I love the City's darkness and despair,
Its grandeur, grief, its glory and its gloom;
My brother's bliss and bitterness I share,
And with him march to meet the Common Doom.
I love the lights that glitter through its dusk
Like star-strewn skies downfallen from above;
I love the fruitage of its iron husk,
Red-veined with life-blood from the breast of Love,

"Ostermoor"

What size do you want?

We make any size desired, but the following are

STANDARD SIZES AND PRICES:

2 ft. 6 in. wide, 25 lbs.	-	$8.35	6 ft. 3 in. long

UNITED STATES GOVERNMENT SOLD

200,000 Guns, Revolvers, Swords, etc., to FRANCIS BANNERMAN, 579 Broadway, New York. Catalog, 1,000 Illustrations, free.

Tho bud and blossom Autumn foliage flush,
This languing girl is lovelier than them all;
More charming than a blackbird or a thrush,
The schoolboy's whistle and the newsboy's call.
Let hermits heed the babble of the brooks,
Let anchorites be comrades of the clod;
I turn from sticks and stones to read good books,
And study Man, the first born son of God.

—In *The Critic*.

The Poem.

By MILDRED I. MCNEAL.

Once upon a crumbling tower,
By the lady's ancient seat,
Came an early flower.
Frail and brief its blossoming—
A flower has but a day in spring—
But its breath is 'live and sweet
With me to this hour.

And once a singer with a strain
Of heavenly beauty wandered by,
Chanting once again.
And the shadowy melody,
Dwelling secretly in me,
Makes a joy so strange that I
Almost deem it pain.

There's a bird the traveler hears
Singing in the April wood
Ere the green appears.
Every sense is exquisite
With the youthful lilt of it—
A heritance of morning mood
Through many and many years.

And to-day I come upon
This poem—simple as the dew
Trembling forth at dawn.
Tears and sunshine in its heart
Play the old unfailing part—
Each as old and each as new
As in ages gone.

Past and present harbor both
In the beauty of the rime.
It avails to soothe
Every trouble, and belongs
With the blossom and the songs
In some unforgotten time
Of immortal youth.

—In January *Harper's Magazine*.

Elizabethan Lyrists.

By FRANK DEMPSTER SHERMAN.

Like to the shining host of stars are they
Whose songs, made long ago, are sweet to-day:
And like the stars, enduring as the Sun—
Shakespeare,—from whom their radiance is won.

—In the New York *Outlook*.

The Waif.

By AGNES LEE.

I met a threadbare waif below the town.
Sad were his eyes, and from his dusty coat
Roses no longer crimson dangled down.
Pebbles that had been kisses decked his throat.

He held a cup, and listlessly and slow
Drank wine, as one who had no joy thereof.
And when I asked his name, he answered low:
"My name is Habit—once they called me Love."

—In January *Atlantic Monthly*.

A Husband to a Wife.

By MARY SINTON LEWIS.

Tell me, my dearest, that thy love for me
Is dead, then turn and look into my eyes:
Tho still shalt find a share of Paradise
Has lingered there—my boundless love for thee.
So thou shalt hear nor pleadings, dear, nor sighs,
But I shall coldly stand and quietly,
Nor touch thy hand, nor smooth thy hair, nor be
Thy lover, for my love will make me wise
And strong to be thy helper, that we bide
Together—tho apart. Not hand in hand

Into the morning, as true lovers might.
But still together, ever side by side—
Because we share one grief and understand
Let us walk bravely forth into the night.

—In January *Harper's Magazine.*

Do You Know?

By Bliss Carman

Do you know the pull of the wind on the sea?
That is the thought of you over my heart,
The long soft breath of the soul drawing back to me,
From the desolate lone of outer space,
At dead of night when we are apart.

Do you know the sound of the surf on the shore,
At the lilac close of a soft spring day?
That is the fairy music I hear once more,
As I remember your last farewell,
In the blue still night when you are away.

And the wondrous round of the moon on the hill,
When blue dusk covers the rim of the sea?
More desired and strange and loved and lovelier still
Is the vision that comes with love in her eyes—
Your wonderful eyes—forever to me.

—In *Harper's Bazar.*

From Far and Lonely Bivouacs of the Night.

By Antony E. Anderson.

From far and lonely bivouacs of the night
There fell the challenge that the crickets cry;
And now the expectant maples stir and sigh,
Green hills assemble, and behold! the light
Spreads out a sheaf of arrows keen and bright,
And flings his banners to the gladdening sky;
White conqueror is he: before him fly
Grim myrmidons of darkness and affright!

White conqueror is he: his arrows stirred,
Yet did not wound, the heart of yonder rose;
They wove enchantment round the mocking-bird,
Till all the air grew vibrant as a lyre;
They touched a soul that slept, and lo! it glows
With love, with duty, and divine desire!

—In January *Lippincott's Magazine.*

PERSONALS.

Roosevelt and the Newspaper Man.—President Roosevelt is regarded as a ready assistant to newspaper men. It is no uncommon thing for him to discuss freely state and political matters with correspondents, says *The Saturday Evening Post* (Philadelphia); but there are occasions when his friendliness is put to severe tests. One of these, it says, came soon after the Roosevelt family settled at Sagamore Hill last summer, when many greatly exaggerated stories of the exploits of the Roosevelt children found their way into the columns of the daily press. The President decided to put an end to these stories, and one day summoned a correspondent who had been

Only 50 cents

Old Gorgon Graham

By the author of Letters from a Self-Made Merchant to His Son. A new series of papers in which Old Man Graham preaches the gospel of good business and tells some of his characteristic stories. This Life Story of a Self-Made Merchant, by George Horace Lorimer, will be one of the features of coming issues of the magazine. The Letters from a Self-Made Merchant to His Son met with universal favor, and there is every reason to believe that the new series by the same author will be equally popular. In the new series old Graham tells the story of his own business career: how he began life as a farmer's boy, worked his way to the front and became the biggest pork packer in the West.

Try the NEW POST to July

New features, more of them, greatly improved. A handsomely printed and beautifully illustrated weekly magazine. Established 175 years and circulating nearly half a million copies every week.

THE CURTIS PUBLISHING COMPANY
PHILADELPHIA, PA.

active in supplying his paper with this class of news.

The President [illegible] in stating the object of the assembly.

"I have noticed, Mr. ——, that a great many stories have appeared in the —— regarding the exploits of my children. They have been very good stories, indeed, and I assume you are responsible for them. I have only one fault to find with them, and that is that they are not strictly accurate. Now, you know I am always ready to give you the facts, and hereafter whenever you wish exact information about the doings of members of my family I wish you would come to me. I shall only be too pleased to oblige you. I will give you a [illegible] right now, if you wish it."

The reporter sat up eagerly, even if somewhat crestfallen over the rebuke, as the President continued:

"Mrs. Roosevelt and I are going riding just as soon as you depart. We shall ride 'cross country, jumping exactly twenty-seven fences and six ditches, and when we return we shall go bathing in our riding-habits. My son Theodore is hunting this morning, and I have just received a bulletin from the jungle informing me that he has already killed two elephants and a tiger."

The reporter saw through the President's little play; but there was no way to escape.

"Isn't Theodore a wonder!" cried the President, and then continued:

"Archibald, my second son, went out a little while ago to fish for tadpoles to be used as bait for whale. Ethel is tearing down the windmill at this very minute—step around the house and you can see her. Kermit, aged about seven, has just thrown a 200-pound Secret Service man two bouts out of three in a catch-as-catch-can wrestling-match, and Quentin, my baby, is even now setting fire to the back part of the house.

"There, Mr. ——, you have what I should call a fine story!" said Mr. Roosevelt in all seriousness. "The facts are exactly right, and I trust you will not exaggerate, if you use them. After this, please come direct to me, and I will give you these stories about my family whenever you desire them. Delight-ed to have seen you. Good-morning."

Music for the Deaf.—The main fault with Spontini as a musician, it appears, was his style of orchestration. As to noise, blast of trumpets, and battery of drums, says *Musica*, Wagner himself would not have been able to compete with him:

At the time when his "Agnes von Hohenstauffen" was performed nightly at the opera-house in Berlin, the King saw from his window a large envelope in the hand of the statue of Blücher, which is located between the opera-house and the royal palace. He sent for the envelope, which was addressed to him. The enclosed letter read thus:

"Sire: You have done me the honor to put me in a position from which I could have the pleasure of seeing you, while enjoying good music. During the past few days my equanimity has been

"Macey" SECTIONAL BOOKCASE { Patented— Other Patents Pending }

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

It combines in the highest degree convenience, interesting appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL. There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval" subject to return at our expense if not found at our factory price 40 to 100 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION. Do not be misled by the deceiving advertisements of imitators. No other sectional bookcase has a self-receding door that is absolutely non-binding and automatic—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered a sweeping decision in our favor.

CREE-DICKSON Sections $1 without doors. With doors $1.75 to $7.25

SECTIONAL

BOOK CASES

Doors cannot stick as they open down and out to horizontal position, forming a book rest, and shut automatically unless held open by book or otherwise; the easy automatic action of the doors eliminates any attention that might interrupt your train of thought.

Dust proof joints are secured by use of cyma recta (O G) edge. Cases are interlocking and have no cross bars or unsightly exposed joints for connecting sections.

Entire front is a series of doors, working independently of one another and hinged one inch below the shelf on which the books rest; thus there is but one joint to each section and entire back of book is visible when case is closed. This is the most rigid bookcase built.

Sold on absolute guarantee. Money refunded if not satisfactory.

Ask for catalogue giving information as to style, size, finish, price.

disturbed by barbarous, fiendish, atrocious sounds emanating from the opera-house. Would it be asking too much to request you to suppress these obnoxious sounds? Your humble servant,

"Blucher."

As a matter of course the letter became public, and Spentia was the first one to enjoy a good laugh at his own expense.—*Translation made for* THE LITERARY DIGEST.

MORE OR LESS PUNGENT.

"Hamlet" Under Difficulties.—A short time ago, at a theater in a small country town, I witnessed a performance of the play of "Hamlet." My attention was entirely absorbed by two men who came in and took seats directly in front of me. They were father and son, I think, and as the old gentleman was almost totally deaf, he relied entirely upon his son, who bawled into his ear the story and dialog of the play.

The first scene was allowed to pass without further comment than the son's remark that "that 'ere tall gawk in white was a ghost," and his father's reply that he didn't believe it.

But when the second scene was disclosed, and the King, Queen, Hamlet, and all the courtiers entered, the old man's curiosity was keenly excited. As near as I can remember, the following conversation ensued:

"That 'ere is pretty—that *is* pretty. Say" (nudging his son), "who is that 'ere dark-complected young man there on the off side?"

"That? Why, that's Hamlet."

"Oh, so that's Hamlet, is it? Looks a little bilious, don't he?" (Pause.) "Say, who is that 'ere woman a-talkin' to him?"

"That's his mother—that's the Queen."

"Oh, that's the Qeeen, it it? Well—well, what's she a-sayin' to him?"

"She's tellin' him not to look so put out, and to take them black clothes of his off."

"*Take 'em off?* For mercy's sake, he ain't a-goin' to *do* it, is he?"

"No, not here."

"That's a kind of a curious-lookin' critter, that feller settin' up on that high-backed sofa—a kind of squire, I guess, ain't he?"

"That's the King—that's Hamlet's uncle Claudius."

"Oh, that's Uncle Claudius, is it? Looks somethin' like the jack of diamonds, don't he?"

WANTED—Active, educated men of business ability to represent us. Weekly salary or guarantee paid. Give age, qualifications, references. DODD, MEAD & COMPANY, New York.

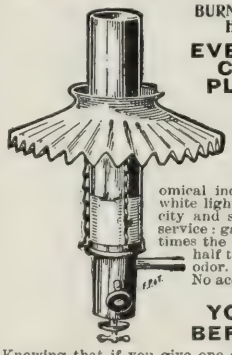
"Its invention supersedes all other methods of House Lighting." SCIENTIFIC PRESS.

CLEVELAND HYDRO-CARBON LIGHT

BURNS 84% OF AIR AND 16% OF HYDRO-CARBON GAS.

EVERY LIGHT IS A COMPLETE GAS PLANT IN ITSELF.

Generating and burning its own Gas.



More light at less cost than any known system of lighting. For all houses wishing economical independence. Gives a steady white light, more brilliant than electricity and softer. Excels any town gas service: gas cannot escape. It gives ten times the light of a kerosene lamp at half the cost, with no smoke and no odor. Nothing to get out of order. No accidents of any kind possible.

YOU CAN TEST BEFORE PAYING.

Knowing that if you give one of our lights a test you will at once recognize it as being far beyond anything in the line of house lighting, we will send you one of our Pendent Lights C. O. D. $4.00, express prepaid, with mantle, chimney and fluted porcelain shade, ready to light; test it three nights and if not found satisfactory and the most brilliant and inexpensive light you ever saw, return it to express agent, whom we instruct to refund your money and return light at our expense. **NOTE: If west of the Mississippi River enclose 50 cents for expressage. If west of Denver, $1.00.**

A RARE CHANCE FOR AGENTS WRITE AT ONCE FOR TERRITORY

Write at once for our full description and instructions on the new system of CLEVELAND LIGHTS.

Griffon Cutlery Co., 415-416 Broadway, New York.

If afflicted with sore eyes use Thompson's Eye Water

"Yes, somethin'. That bald-headed man there, his name is Polonius; he's the Lord High Chamberlain—"

"Oh, he is, is he?—but—seems to me he looks like a man."

"Why, *'tis* a man!"

"Well, then, what do they call him the chambermaid for?"

"The *Chamberlain*—the Lord High Chamberlain. (How deaf you be. I wish you'd stayed home.)"

"Hi, hi! That's a mighty pretty girl and likely-lookin' young feller a-talkin' to her—one of the neighbors' boys, I suppose, just dropped in. A—a—what's their names?"

"His name is Laertes. He's a-talkin' to his sister; her name's Ophelia."

"They've got funny names, 'ain't they? Well—well—what's Lackrotes sayin' to Euphena?"

"He's tellin' her to kind of keep her eye skinned, for he believes Hamlet's a little crazy."

"Crazy, eh? I thought he was a little shaller as quick as I see him."

"Now they are out on the platform again."

"Well, don't you suppose I see they are up there on the platform? They ain't got off of it, to my knowledge."

"No; they call that the *stage*. I mean the scene is changed."

"Oh, yes, yes. I see they are out in the door-yard again—and, by crickey! here comes old Grimes agin."

"His name ain't *Grimes*: that's the Ghost!"

"Git out. He ain't no more a ghost than I be. Not a bit. Well, Hamlet ain't afeared of him; he's a-talkin' right back to him. A—what's he sayin' to him?"

"The Ghost is a-tellin' him that he's been murdered—that Claudius, the King, has murdered him."

"Murdered him! Uncle Claudius has murdered him! I—I— Say, now look-a-here, my boy, I've been watchin' this 'ere thing right straight along, and Uncle Claudius ain't cut up no such caper, or or—you've been a-lyin' to me."

And here the curtain descended amid a general roar of laughter.—ERASTUS OSGOOD, in *Harper's Magazine*.

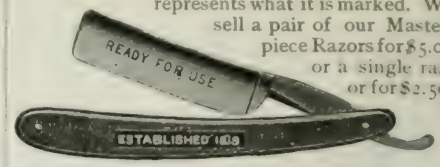
Box 561, Flushing, Borough of Queens, New York City

SHAVING WITH PLEASURE

is enjoyed only by those who possess good razors. Our **MASTERPIECE RAZOR,** with round or square end, the razor of the new century, is worth its weight in gold, and fully represents what it is marked. We sell a pair of our Masterpiece Razors for $5.00 or a single razor for $2.50.



We sell razors exclusively; we make them, we grind them, we hone them, put them in good cutting order, ready for the face—that has been our specialty since 1819. We use the best material money can buy. Every man in our employ is "an artist in his line." The work comes as near perfection as human ingenuity can make it.

We have no agents, we sell direct to consumer; we deliver free; we warrant every razor to be precisely what we say it is, and have but one price.

Our pamphlet, "All About Good Razors," will be mailed to any address upon request.

Food for Careful Thought

...mas Day, the peace and good w... which the angels sang.—Selected.

A GOOD OPPORTUNITY FOR CONSERVATIVE INVESTORS.

The Christian Nation exercices a rigid censorship over all advertisements received, and only those are accepted which the publisher confidently believes offer advantages to such of his readers as are in need of the things advertised. If there is one character of advertising more critically examined than another, before acceptance, it is financial or investment advertisements. The pages of many good papers have been fairly bursting with investment announcements, pages upon pages of which we were compelled to decline because we did not have good reason to believe that they offered safe and profitable investments to our readers. When, therefore, we do accept an investment advertisement, such as the Para Rubber Plantation Co., the very appearance of it in our paper says that we believe it to be a legitimate proposition, such as persons of means, seeking investment, may take hold of. We ask our readers to study carefully their announcement, consider the character of the public men and financial houses endorsing it, bear in mind that the leading journal of the rubber trade commends it unreservedly, and then those who have money to invest, address the secretary, F. M. Crawford, 52 Broadway, New York, for particulars and prospectus.

The above was published as an editorial in the *Christian Nation* after a most thorough investigation of the company by the editor and publisher of that paper. It was entirely unsolicited, and should be carefully considered by anyone having money to invest.

There is being offered for sale to-day at par, $10 per share, a limited amount of the treasury stock of The Para Rubber Plantation Company, one of the strongest companies of the kind in America. The Company has 500,000 shares—all common—preferred stock or bonds. They own 1,400 square miles of territory or about 1,000,000 acres, on which are growing in their native soil and element over 6,000,000 Rubber trees 15 years-and-over old. Each tree will yield 5 lbs. of rubber per season at a cost of not exceeding 35 cts. a lb. and sells in New York to-day for 95 cts. a lb. Two thousand men will earn 6 per cent. on the Company's capital. The Company owns territory sufficient to employ 40,000 laborers, that number being available. Operations will be conducted along the same lines that made the HUDSON'S BAY COMPANY'S stock worth four thousand for one, and which built up the Astor fortunes. The Secretary will be pleased to forward an illustrated booklet, descriptive of the Company and its methods, to anyone on request.

F. M. CRAWFORD, SECRETARY,

who desires to give his readers information of the very best book in the literature of the game. But, this work is not literature in the general sense of the term, it is a practical working-book for every student of Chess. You get here *all* the openings, with *all* the principal variations, illustrated by the actual play of the world's greatest Masters. A person who has these three volumes has a complete Chess-library, as far as instruction in playing Chess is concerned. In the three volumes there are 1,436 pages, giving thirty-two Openings. Forty-two books were consulted, from 1851 to 1884, from which the variations and games were taken, showing the most approved modern methods of attack and defense. The Chess-editor of THE LITERARY DIGEST began, several years ago, to select and arrange games under the various Openings. He found this unsatisfactory, as the games very largely reflected the special or characteristic genius of the players. Now, Mr. Morgan gives him, in a most satisfactory manner, just what he wanted; for, while the games in "The Chess Digest" may show the characteristics of the players, yet the Openings with their variations give the consensus of all players on these most important subjects. Every week persons write, requesting us to recommend the "best book on Chess." We haven't any hesitancy in saying that the best book on Chess we have ever seen is Mordecai Morgan's "Chess-Digest."

Notes from The Standard, London.

(a) Transforming the opening into a form frequently occurring in the Vienna game.

(b) It is preferable to wait with the development of the Q Kt until White has played B—Q B 4.

(c) This move generally compels 6 B x Kt, bringing White's Queen into play.

(d) It is not advisable to Castle so long as P—B 5 is threatened. The alternative would be either 11.., P x P or Q—K 2 (White having no Knight), and, if White play 12 Castles (Q R), Black may do so likewise.

(e) If 18.., Kt (B 5) move, then 19 Q—R 5, P—R 3; 20 B x P, P x B; 21 Q x P ch, K—Kt sq; 22 P—Kt 7 and wins.

(f) Threatening 21 Q—Q 5 ch, K—R sq; 22 B x P, etc., and, also, preventing Kt—Kt 6, after dislodging the Knight with P—Kt 4.

(g) The alternative would have been 26.., Kt—B 5; 27 Q—Kt 3, P—Kt 5; 28 B-B 5, Q—K 4; 29 B x R, R—R 6, with a powerful counter-attack.

(h) It is quite a pleasure to see Charousek's resources in supreme moments.

(i) 31.., R—K 2 would be followed by 32 P—B 8 (queen's ch), R x R; 33 B—B 5, etc.

(j) This useless move can not be retrieved, and it spoils a well-played game on the part of Professor Exner.

(k) The winning move. The two passed Pawns are stronger than the Rook.

(l) A real fighting game it was, with plenty of enterprise on both sides.

BERNARR MACFADDEN WILL GIVE ANYONE A TRIAL LESSON IN PHYSICAL CULTURE

BERNARR MACFADDEN, the man who put the science of physical culture on a scientific basis, will give to anyone who wants it, a trial lesson in physical culture as it really is, not merely for the sake of large biceps, but for the development of the entire body in every part.

GENUINE PHYSICAL CULTURE means the building of strength in the internal vital organs, as well as the development of the outward muscular system. Strong arms are useful; but strength of the digestive, respiratory and other vital centers is still more important.

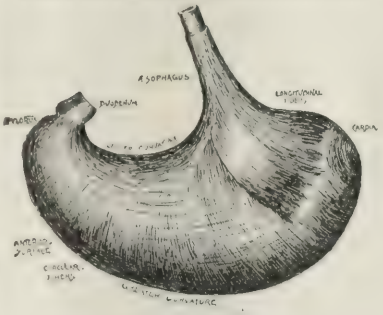
INTERNAL VITAL STRENGTH IS WHAT YOU NEED.

Don't you know that your very life depends upon the strength of your stomach and other vital organs? How can the functions of these vital organs be properly performed if they have not the required strength? Then, what is more important than this internal strength? Great strength of the stomach and other internal organs, means more vitality for the entire body, greater brain power and longer life. (*Sufferers from indigestion should give this thought.*)

HOW ARE YOUR STOMACH MUSCLES?

The lessons which Mr. Macfadden gives in his Magazine, PHYSICAL CULTURE, will tell you how to acquire and retain a strong, healthy stomach, healthy digestive organs, healthy heart, healthy lungs and splendid vitality, without dosing your entire system with drugs. Our sort of physical culture means, first of all, the acquirement and retention of health of the entire internal system. It also means superb, symmetrical development. In short, Mr. Macfadden's magazine,

YOUR STOMACH, FOR INSTANCE.



PHYSICAL CULTURE,

which will contain during the coming year nearly **1,200 pages of reading matter** and about **1,000 illustrations,** is a thorough encyclopedia of true physical culture knowledge. Much time and money has been devoted to making this magazine one of the most popular among thinking people.

In order to enable everybody to study physical culture as it should be, Mr. Macfadden has prepared a course in body-building and health-making which can be practised at home without apparatus or expense, and which will appear in Physical Culture in monthly lessons without extra charge. By subscribing to this magazine you really get

A $2,000 COURSE FOR $1.

The series of lessons included in this Magazine contains about 150 photographic illustrations, posed by the author, and describing in the plainest manner possible how every part of the body can be strengthened and developed. Its preparation required an actual cash outlay of about $2,000, and a life's work on the part of Mr. Macfadden. Please understand that this special course of lessons costs you nothing. It is given as a free supplement, one big lesson every month, to PHYSICAL CULTURE, the subscription price of which is only $1 00. It teaches the healthiest person how to be healthier, the weakest invalid how to be strong. The young, the old, or the middle-aged, the novice, or the professional strong athlete, should read it. The complete magazine, including the entire course, and the January issue free, will be sent to any one on receipt of $1.00, **which will be refunded without question** if you are not satisfied after receiving the first copy and lesson. If you prefer you can send 10 cents for one trial lesson. Please remember that this entire work is published under the direct supervision of Mr. Bernarr Macfadden, the best known Physical Culturist in the world

Address your letter at once, sending **$1.00** for the year's course, or **10 cents** for a trial copy and lesson to

CALIFORNIA

The Golden Gate is the crowning glory of San Francisco—the most magnificent combination of land and sea and sky on the continent. It is easily and quickly reached by the new overland service of the

Chicago, Milwaukee & St. Paul and Union Pacific Line.

Three thro' trains, Chicago to San Francisco, every day. All meals in dining cars. Folder on request.

W. S. HOWELL,
General Eastern Agent, 381 Broadway, New York.

Two "Tartars."

Lasker and Pillsbury in their exhibitions meet very many fine players, a number of good players, and occasionally calls a Tartar. Dr. Lasker found one in Mr. Ed. Schrader, artist, St. Louis; and Pillsbury caught one in Breslau, Herr K. Moll. Recently Dr. Lasker took chances with Mr. Schrader, and the artist, accepting the chances, beat the Champion in probably the shortest game in which he was ever beaten. Herr Moll generously gave Pillsbury his Queen, and followed it up by forcing a mate. We give scores of these games, with comments by Reichhelm in *The North American*.

LASKER. White.	SCHRADER. Black.	LASKER. White.	SCHRADER. Black.
1 P—K 4	P—K 4	10 Kt—B 5	Kt—K 2
2 P—K B 4	P—Q 4	11 Q—R 4 (c)	R—Q sq (d)
3 K Kt—B 3 (a)	B—K Kt 5	12 B—Q 2	Castles
4 B—K 2	P x B P	13 R—K sq	Kt—B 4 (e)
5 P x P	B x Kt	14 Kt—K 2	K R—K sq
6 B x B	Q—R 5 ch	15 Q—B 2	P—Kt 3
7 K—B sq (b)	Kt—Q 2	16 K—Kt sq	Kt x Q P wins
8 P—Q 4	B—Q 3	(f)	(g)
9 P—B 4	P—Q Kt 3		

Comments.

(a) To avoid the variation of those two German gentlemen, Falkbeer and Lederer.

(b) The strength of White's game consists in the weight of his Queen's-side Pawns receiving aid and countenance from the B at B 3.

(c) A perfunctory move; Kt—K 4 is much better.

(d) Made necessary by Lasker's threat of P—B 5, etc.

(e) Position is now with Ed. Schrader, and Lasker's Queen excursion is shown to be worse than useless.

(f) An error, to put it mildly, but Black had much the better of the game.

(g) Lasker resigned.

The continuation would be:

17 Q—Q 3 B—B 4 | 18 K—B sq Kt—B 7, etc.

PILLSBURY. White.	MOLL. Black.	PILLSBURY. White.	MOLL. Black.
1 P—K 4	P—K 4	12 Q Kt-Q sq	Castles
2 P—K B 4	B—B 4	13 P—B 3	Kt x Kt (e)
3 K Kt—B 3	P—Q 3	14 P x Q	K Kt x B ch
4 Kt—B 3	P—Q R 3 (a)	15 K—B sq	B x P
5 P x P	P x P	16 Kt—K 3	P—K B 4 (f)
6 Kt x P (b)	Q—Q 5	17 P—K R 4 (g)	P—B 5
7 Kt-Q 3 (c)	B—R 2 (d)	18 K—B 2	P—B 6
8 Q—B 3	Q Kt—B 3	19 P x P	R x P ch
9 Kt—B 2	Kt—B 3	20 K—Kt 2	Kt—B 5 ch
10 B—Q 3	Kt—K 4	21 K—R 2	R x P mate
11 Q—K 2	K Kt—Kt 5		

Comments.

(a) With the view of B—R 2 by and by.

(b) A bad capture, but Pillsbury at this moment didn't know the calibre of his adversary. B—B 1 was the safe move. If White had sprung his favorite maneuver of Q Kt—R 4 to change off the Bishop, Herr Moll would have retreated Bishop to R 2.

(c) Good enough—against ordinary players.

(d) This might be called the Moll signature.

(e) Moll's mistake evidently, but, of course, the well-established rule of touch-and-move was in force.

(f) Pillsbury's interest in the game had been waning, when this move awakened him to the fact that Black threatened something.

(g) For the double purpose of hindering Kt—Kt 3 and making an outlet at R 2, but it's no use. It turned out that Moll's mistake was a splendid sacrifice.

The Monte Carlo Tournament.

The next great event in the Chess-world is the Masters' Tournament in Monte Carlo. Twelve or fourteen of the greatest masters in the world are expected to play. The prizes are, 1st, 4,500 francs and an *objet d'art*; 2d, 2,250 francs. The sum of 7,250 francs will be divided among the other players according to their standing.

Prince Dadian, who is president of the Tourney committee, offers two brilliancy prizes of 250 francs each. Baron Albert Rothschild provides for two prizes of 500 and 250 francs for announced mates in the greatest number of moves.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

WORK AND PAY OF THE COAL-MINERS.

IF we are to believe the witnesses whom the coal operators have brought before the strike commission during the last three weeks of the hearing, the miners are a lazy, drunken set, who work but four or five hours a day, fill a small number of cars, prevent other miners from doing their best, and receive, some of them, pay equal to the salary of the governor of Delaware, New Hampshire, Maine, Vermont, or Oregon. The witnesses for the miners' union, on the other hand, would have the commission believe that the coal companies will not supply enough cars to permit them to do more work than they now perform, and report that their wages are grossly exaggerated by the operators' statements. The testimony given previously to the last three weeks of the hearing has been considered in articles in these columns on November 29, December 6 and 27, and January 3, 17, and 24. The hearing this week is devoted to arguments by the counsel.

Colonel Phillips, the D. L. & W. superintendent, said that there was a loss of 185,000 tons in his company's output in 1901 because of the loss of time from drunkenness on and after pay-day. The miners work from 6:30 or 7 in the morning till anywhere from 9 A. M. to 3 P.M., said the same witness, and load five or six cars a day when they might load more. And they restrict those who want to load more. "Their idea is," said Colonel Phillips, "to keep the good man back and put him on a par with the poor man, and then to go before the public and say: 'Here are the carnings of the miners.'" But J. P. Wickenzer is regarded as the operators' "star witness" on this question of restriction of output by the miners. He is a miner in the employ of the People's Coal Company. Here is part of his testimony, as given in the press reports:

"How much does a miner get?"

"I don't know exactly. I know what I get."

"How much is that?"

"Oh, anywhere from $5 to $10 a day."

"How long do you stay in the mine?"

"From eight to nine hours."

"How many men could be dispensed with, do you think, if all men worked as you do?"

"About three-fifths could do the work that the whole five-fifths now do, if they were prompt every day."

"What do the miners do when they go into the mines?"

"Well, the first thing they do when they get in is to examine their dinner-pails; then they take a smoke, maybe blow a couple of holes, and then sit around and talk politics."

"How much do you load?"

"I work eight or nine hours and load 25 to 30 cars, perhaps more. I have six laborers. The suffering public demands coal and I wanted to get it out."

"How about the distribution of cars?"

"We got all the extra cars after the other men left the mine."

According to the operators' witnesses, some of the miners receive $2,000 a year and upward in wages. Henry Carver was reported as getting the snug sum of $2,877.92. The average pay was reported as being about $600 or $700. Mr. Carver was brought before the commission and testified that out of his $2,800 he had to pay from six to eight laborers, so that he netted for himself only about $70 a month. Martin Murphy said that instead of making $1,928.51 in 1901, as reported, he divided that sum with several helpers, keeping about $500 for himself. How much was left for the great majority of the miners, who were reported as receiving from $500 to $700 each, was not brought out.

CLARENCE S. DARROW,

Counsel for the United Mine Workers. Mr. Darrow was Governor Altgeld's law partner, and defended Eugene V. Debs in the strike case. He is being mentioned for next mayor of Chicago. A new book from Mr. Darrow's pen advocates the Tolstoi doctrine of non-resistance.

In regard to the supply of coal-cars, George Hobbs, a miner, testified that the men in his mine could get only about three cars to the shift, altho they had asked for more; and Benjamin Thomas said he could get but four. Many others also testified that they were able and willing to fill more cars than the companies would give them. Mr. Darrow, counsel for the miners' union, did not deny, however, that the union regulates the number of cars to be filled by each miner. He said:

"I do not deny the miners have sought to regulate the crusts that have been thrown to them, so that one man should not have a loaf while the other has nothing. But they have not done it because there are too many cars. If those men were furnished the work and the cars, according to their own statements, there would be no restriction anywhere in this region. Let them take their own written records furnished to this commission and see the story they tell. I do contend, and I always shall, unless I change my mind—and I have studied these questions a good deal—that, where there is not work enough to go around, common justice and common humanity would say that one man should not jump in and eat all there is and leave the rest hungry, and that is all the miners have attempted to do in this case."

The Philadelphia *Press* reaches the following conclusion in regard to all this evidence:

"One fact has been brought out clearly, and that is the em-

ployment of too many miners. As Judge Gray remarked yesterday, 'when 100,000 men are doing the work that could be done by 75,000 there is bound to be trouble, and a radical change must come before peace can be assured.' When the number of miners employed is limited, so that they can work all the year, and the surplus men are allowed to seek other fields of employment, much of the trouble in the coal regions will disappear.

"The yearly earnings of a large percentage of the miners, as shown in this hearing, are ridiculously low. In fact, they are entirely insufficient to support a family. Just where the blame lies is for the commission to point out. It is made up of men who will give a verdict that will be respected by the country, which will also welcome the end of this long struggle."

EXAGGERATION OF THE COAL "FAMINE."

THE popular idea of the extent of the fuel shortage caused by the recent coal strike seems to have been somewhat exaggerated, in the light of the reports of charitable institutions situated in many large cities of the North, East, and Middle West. These reports, based on the number of applications for relief up to the early part of January, are summarized in *Charities*, "a weekly review of local and general philanthropy" published in New York, and are, according to that paper, "unique and first-hand." Out of twenty-five societies, from as many cities, four report an actual decrease in the number of applications for relief as compared with the corresponding period of the year before; nine, the usual number; seven, a slight increase; and five an increase that was more or less marked. In other words, in over half of these twenty-five cities there was no increase in the number of applications. That there has not been very much suffering is attributed by *Charities* to the fact that there was "unexampled employment this winter among the poorer working people of the cities," and the coal they needed they were able to buy in small quantities.

In New York, Brooklyn, and Philadelphia there has been an actual decrease in the number of applications, while in Jersey City and Buffalo the people have been "free from suffering." In Boston the demand has been practically the same as last year, and in Providence the societies report fewer applications than usual for help. In St. Louis the Provident Association has delivered forty per cent. less coal than for the corresponding period of last year. In Hartford, Springfield (Mass.), Portland (Me.), and Minneapolis there has been a little increase in applications. In Albany the people are "better off this winter than any other in the past ten years," the prices for coal ranging from $6 and $7.50 per ton to $8 when purchased by the bag. Cleveland has suffered less than most large cities. In Columbus there has been "no unusual suffering," and in Springfield (Ill.) little or no suffering. Detroit, Denver, and Cincinnati have experienced no scarcity of fuel, and Milwaukee has plenty of bituminous coal, but the people are not experienced in its use. In Des Moines the well-to-do have suffered, because the "dealers delivered coal to small customers, when they refused to deliver to large purchasers."

In Baltimore and Washington there has been "serious shortage," but, notwithstanding that, the demands upon the charitable societies of Baltimore have been less than for the same time last year. In regard to Washington, *Charities* says:

"People who purchase their coal by the bushel in Washington are paying this winter an average of forty-five cents as against twenty-five cents for last year. As a result there have been many instances of women who have had to give up their washings, and that has been an important matter in a city where large numbers of the colored people depend upon laundry work for their support. The doctors have reported that sickness has been increased by the fact that a good many people are now heating only one room, and a variety of makeshifts have been resorted to—driftwood gathered from the Potomac, coal from the numerous dumping-grounds of the city, and cinders, which are sifted almost as fine as flour. The number of demands for assistance, however, has not been greatly increased. There is more employment than usual in the winter time."

A different situation is presented in Indianapolis and Chicago. On January 12 the report stated that the situation was "steadily growing worse," in Indianapolis. As for Chicago, the report says:

"The demands upon charitable societies have been largely increased not only directly for coal, but also for other necessaries of life which people have not been able to purchase because they have exhausted their small resources earlier in the winter by purchasing the coal for enormously increased prices. . . .

"The funds which have been contributed by the public to relieve the coal famine are largely exhausted, and the impulse to give, which came with the cold weather and the newspaper publications of widespread distress, has subsided. The supply of coal has not materially increased, and the regularly organized charities see ahead several weeks of great need, the proper relief for which will require large means and sustained effort."

"The reports show," says *Charities*, "that the need has thus been for increased distributing-centers, where coal can be bought in small quantities at the least possible cost by people who have money to pay."

DISTRIBUTION OF GREENBACKS IN DELAWARE.

"NOW, Mr. Kennan, this is confidential—that's what it is—confidential—between me and you and God!—It ain't so!" Thus the president of an Addicks Republican club in Delaware to Mr. George Kennan, when the latter asked him if Mr. Addicks did not obtain his majorities "by means of wholesale vote buying." Mr. Layton, right-hand man of Mr. Addicks, and Secretary of State, made a similar statement. A little investigation, however, has brought out some rather sensational facts on the other side, which Mr. Kennan sets forth as follows in *The Outlook*:

"Two years ago Dr. Layton told a prominent lawyer in Georgetown that up to that time Mr. Addicks, to his certain knowledge, had spent $400,000 in Delaware in campaign years alone.

"Second, setting aside, for the present, the questions raised by Dr. Layton's conflicting statements, I shall try to describe what happened in the legislative campaign of 1902—that is, last fall; and I will begin with the notes of the Merchants' National Bank of Boston.

"Two or three days before the November election, Mr. Addicks, or somebody acting in his interest, brought into the State of Delaware two whole series (fives and tens) of crisp, new, consecutively numbered notes of the Merchants' National Bank of Boston, and distributed them among the Union Republican workers in all the election districts of Kent and Sussex counties. Prior to the first of November there was not a single new, unworn bill of that bank in all Southern Delaware; but five days later the two lower counties were flooded with them. On the day after election, Mr. C. W. Lord, a well-known hardware merchant of Dover, took in over the counter, in the ordinary course of business, twenty-eight of these bills, all of the denomination of five dollars, and before the end of the week the First National Bank of Dover was holding nearly five thousand dollars in this particular kind of currency, all crisp, new five- or ten-dollar notes that had never been creased, or that had been folded only once. Altho the numbers of these notes were scattering, they were so distributed as to show that the two whole series had been used, and that the notes whose numbers were missing in one shop or one bank had merely been spent or deposited in another. More than a month after the election, I myself obtained in Dover a lot of ten-dollar notes of this bank, whose numbers ran from 33,414 to 34,691, showing the use of $12,770; and through the hands of a single business man in Milford there passed notes whose highest and lowest numbers indicated the distribution, on election day, of more than $20,000. A gentleman in whose sources of information I have perfect confidence

informed me that not less than $30,000 in crisp, new bills of the Merchants' National Bank of Boston went into the banks of Kent County alone, immediately after the November election. An equal if not a greater amount was undoubtedly distributed in Sussex County, and thousands of dollars passed from hand to hand without getting into banks of deposit at all. If the cashier of the Merchants' National could be compelled to disclose the name signed to the check or checks upon which these new, consecutively numbered notes were issued, the attorney-general of Delaware would be fully justified, I think, in filing an information under Section 8, Article V., of the Delaware constitution, and bringing somebody before the superior court of Newcastle County for trial on the charge of vote-buying and bribery. Such a course of procedure would purify the political atmosphere of the State, and it might result in the enforced retirement of Mr. Addicks from the field of Delaware politics. I will not undertake to say where he would go, but he certainly would not go to the United States Senate."

AMERICAN "JINGOISM."

A CAREFUL examination of the comment of representative newspapers from all parts of the United States discloses the American press in a very calm frame of mind in their attitude toward England and Germany. A few papers display a feeling of vehement hostility to the allies, and their comments, cabled abroad, seem to have created an impression in Europe that the American newspapers are trying to stir up a war; but these vehement papers can be counted on the fingers of one hand. Our press, as a whole, seems to expect no attempt to infringe the Monroe Doctrine, and to apprehend no trouble with either England or Germany. The bombardment of Fort San Carlos aroused some indignation, but as the Venezuelan commander still holds the fort, with the German vessels at a respectful distance, and seems able to take care of himself without our help, our papers have ceased to worry about him. The Baltimore *News* says:

"In our country, the remarkable feature of current discussion has been the absence of jingoism—remarkable in view of the undoubtedly general and grave interest which the situation has attracted. The New York *American* occupies an almost solitary position in its screaming appeals upon the subject, and even that head center of yellow journalism has not yet issued a declaration of war."

THE KAISER IS READY TO SEND OUT THE DOVE OF PEACE.
—*The St. Louis Globe-Democrat.*

The Boston *Herald* suspects that Germany has been trying, in this affair, to goad the United States into the untenable position of asserting that the Monroe Doctrine protects bad debtors in South America, "a position which can not fail to unite practically all European nations in opposition to us, an opposition which will, unless we are prepared to face the world in arms, sweep away every vestige of our Monroe Doctrine." We have not fallen into the trap. The Detroit *Journal* thinks the war scare has existed principally in the imagination of the Washington correspondents. It remarks:

"The net results of the attempt to work up a war scare are not impressive. As one of these sleuths wires his paper, 'it is all of a speculative nature.' The substantials are that the President dined with Secretary Moody Saturday night, and that the entrance to the Moody portals was guarded by marines—presumably to keep off the unknown foreign enemy. It is ascertained that 'rush orders' have been sent to the navy-yards to hurry the completion of the bilge-water tanks and the hawser-holes. It is also reported that we are buying war-ships from Chile, tho the Navy Department does not know where it is to get officers to take charge of war-ships now approaching completion in our own yards. Over the Navy Department broods an air of suppressed excitement—in the despatches—and it is announced that the navy is to be put into first-class condition—as if it was ever in anything else—barring those battle-ships that are laid up for lack of men to run them.

J. B.: "I'll never go gunning with William again." —*Harper's Weekly.*

"All this would make good material for a comic opera except for one thing—that the correspondents at the capital think they are meeting a long-felt want by attributing the activity they find—and which does not exist outside their imaginations—to the hostility to us of Germany; not to the hostility of England which invited Germany into the Venezuela muss. Not the hostility of England, which has ten war-ships in or adjacent to our waters where there is one waving the black-white-red of the German empire; not of England, which has naval stations covering every foot of our coast within a few hours' steaming; not of England, our ancient enemy, if our present friend, which has also bombarded Venezuela forts—but always to Germany is this campaign for the creation of a war fever directed. And this tho the German Government has not made a move in the Venezuelan matter without consulting the wishes of this Government, and being guided by them, and has recently changed the head of its Washington embassy obviously in the interest of a better understanding between the two nations.

"It is because prejudices die hard that it is greatly to be regretted that a systematic and persistent effort is making to discredit the good faith of Germany over a matter of such small consequence as that involved in the collection of a comparatively insignificant debt. Why the effort should not include England the plotters would find hard to explain; still harder why the effort is making at all."

THE BILL TO PENSION EX-SLAVES.

"THE unintentional encouragement of human sharks," according to the Baltimore *Herald*, is likely to be the only result of Senator Hanna's introduction of a bill to pension ex-slaves. "I only introduced the bill by request, I am not going to push it," the Senator explained to a reporter; but despite that fact, declares the New York *Mail and Express*, "it may be said that the pension sharpers will use the reappearance of the scheme to levy fresh contributions on credulous blacks." And the Baltimore *Sun* says:

"Instead of helping the Afro-American brother, the bill will injure him. It is estimated that unscrupulous and designing men have collected in the last few years fully $250,000 from Southern negroes, promising them in return places on Uncle Sam's pension rolls. Now that so prominent a Senator as Mr. Hanna has apparently interested himself in the project, it is probable that another assault will be made on the pocketbooks of the former slaves by men who have profited by their ignorance and credulity in the past. Mr. Hanna is a very level-headed man, but it is probable that in this case he has been duped into introducing a measure without making careful investigation. Some years ago a similar bill was introduced in the Senate by Mr. Mason, of Illinois. Copies were distributed

throughout the South by a concern composed of educated negroes. The illiterate blacks were told that 'the bill had been read twice' and only required a 'third reading' to become law. They were invited to pay $2 each and have their names registered so that they would secure the immediate benefit of the proposed pensions. The promoters of this fraudulent scheme were doing a fine business when an investigation was ordered by the Pension Office. Subsequently they were denied the use of the mails and barely escaped prosecution. It would be very much better for the negroes of the South if a responsible statesman like Senator Hanna, whose words carry weight, would candidly and courageously advise them to abandon all hope of securing pensions from the national Government. Our esteemed Republican contemporary, the New York *Tribune*, treats the matter as a joke. 'The South,' it says, 'has sometimes felt that it did not have a fair share of the benefactions of paternal government, yet it could not hope to secure pensions for its old soldiers. The former slaves would seem to be an excellent substitute. If they can make a breach in the Treasury wall on the Southern side the fertilizing stream may be made to flow thence and irrigate a wide area. The negro and his money are about as soon parted as the most hungry onlooker could desire.' That may be true, but it is quite certain that *The Tribune's* party has no intention of giving pensions to the former slaves. The introduction of bills like that which Mr. Hanna has presented 'by request' will take money out of the ex-slave's pocket instead of adding to his

LET EACH SWEEP HIS OWN SIDEWALK.
The Brooklyn Eagle.

supply of coin. The men who fleeced him before will now have an opportunity to defraud him again. That may be fun for some of our Northern friends, but it does not appeal to the poor negro's sense of humor."

The following despatch from Mobile to the New York *Sun* is not without interest in this connection:

"H. F. Crosby, a negro, arrested in Montgomery yesterday for obtaining money under false pretenses, is said to have been selling certificates to old slaves to entitle them, he said, to pensions under a bill pending in Congress.

"The fact that the pension did not come on time was the cause of the arrest. Crosby made this statement:

"'I am only an agent. J. W. Crift, who signs the certificates, is the national president and lives at East Lake, Ala. Callie D. House is national secretary, and I suppose lives in Washington. I have been with them about four years. I have been an agent about a year.

"'Dickinson, who lives in Washington, was here last July and held a state convention. I have taken in about a hundred members. I send in all the money I take in, and when I want money I take a collection from the members. There are several other agents here. There are two other associations.

"'The national organ, *The Freedman's Headlight*, said the pensions would be effective by the 1st of January, 1903. That is the authority I had for the representations I made to the members.'

"The State is being systematically worked by alleged ex-slave pension-agents. Just where the headquarters is is not known here. The plan is proposed to old ex-slaves who can not read or write."

PROHIBITION SUPERSEDED IN VERMONT.

AFTER clinging to prohibition of the liquor traffic for half a century—for a longer continuous period than any other State—Vermont has repealed the law and adopted in its place local option and high license. Fifty years ago the prohibitory law was adopted by popular vote by the slender majority of 1,171, and last week it was voted down by a majority of about 1,600. The new system will take effect in March. "Vermont by its vote raises itself out of a mire of hypocrisy," says the Brooklyn *Eagle;* but the Providence *Journal* remarks that "in a State which has given a Presidential candidate more than 40,000 plurality, the majority of 1,600 for high license looks paltry enough, and must be taken as an indication that the issue is still open." The Burlington (Vt.) *Free Press*, which opposed license, declares that "the one gratifying feature for the opponents of the new law is that the margin in its favor in the popular vote is so small that its advocates will recognize their system to be on its good behavior, and the abuse of license will certainly cause a revulsion in popular feeling sufficient to overthrow it."

Some papers remark that the real test of the high-license sentiment in Vermont is yet to come. The real sentiment will be revealed next month, when each town and city shall settle for itself whether it will have license or local prohibition. Says the Rutland (Vt.) *Herald:*

"The dark night of prohibition is over. Vermont, this morning, is a part of the great world of intelligence, commerce, and wealth. We are no longer a peculiar people. We would be foolish to anticipate an easy road at first. The transition from one system to another is always attended by friction. To change the figure of speech, you can not make an omelet without breaking eggs, and you can not right a wrong without a disturbance. But we believe that there is stamina enough in the Vermont character to meet the responsibilities of new duties to which it is called with wisdom and self-restraint."

Much credit is given to Mr. P. W. Clement, of Rutland, for the result. He started the agitation against prohibition last fall, had a pledge put in the Republican platform to submit a new measure of this kind to a vote of the people, and then ran as an Independent Republican against Gen. J. G. McCullough, Regular Republican, who was elected by a small majority. Mr. Clement stood for high license and General McCullough for the prohibitory law. The Springfield *Republican* comments:

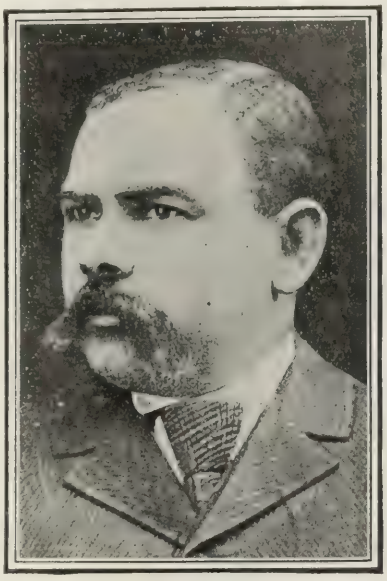
"Prohibition is still available wherever wanted, and probably two-thirds or more of the towns of the State will hold to it at the coming town-meetings. The cities and large towns, where liquor has been sold freely and often openly, in defiance of law, will generally choose a license policy, which will simply mean a regulated, revenue-producing traffic in liquor, in place of an illicit, lawless, and demoralizing sale conducted on a scale that the license policy will find it difficult to exceed. A system of high, restricted license like that of Massachusetts has been provided, and that it will prove as satisfactory in Vermont as it has in this State, we have little doubt. Anyhow, those places which do not want it need not have it, and in the application of this principle of local option is to be found the surest method of dealing with the liquor question."

The law provides seven classes for licenses, to be granted at fees ranging from $1,200 for a saloon to $10 for a druggist, who

can sell for medical purposes only. Each town voting for license may have one open bar for each 1,000 population, exclusive of licenses granted to summer-hotels and to drug-stores. With Vermont out of the prohibition column, there remain but four States in which prohibition prevails, namely, Maine, New Hampshire, Kansas, and North Dakota, and in the second of these only the sale at retail (not the manufacture) is prohibited.

SOUTHERN FEELING TOWARD THE PRESIDENT.

THE President is reported by the Washington correspondent of the New York *Times* to be "considerably upset about the attacks that have been made upon him by the Southern papers," and a survey of the press of that section discovers a good many editorials and statements by public men that might well produce such an effect. This criticism is directed at Mr. Roosevelt's negro policy, as it has appeared in the appointment of Dr. Crum, a negro, to be collector of the port of Charleston; in the Indianola post-office case (considered in these columns January 7); in the Booker Washington dinner at the White House; and in his invitation of the negro register of the Treasury and of the recorder of deeds to a White-House reception on January 22. These two negro officials attended the reception with several women friends, and "the whole party," we are told, "cut a conspicuous figure in the reception room." Several Southern Congressmen and their wives left the reception "in high dudgeon," and Governor Terrell, of Georgia, when in Washington a few days ago, omitted the customary call at the White House, to show his disapproval of the President's policy.



DR. CRUM,
Whose appointment to be collector of the port of Charleston, S. C., is resented by many Southern people.

The friends of the President aver, in his defense, that he has made fewer negro appointments in the South than his predecessors, and that the presence of negro officials at White-House receptions is nothing new. Secretary Root, in a speech of Friday evening of last week in New York city, said he thought the friction is due to a change of feeling in the South, and declared his conviction that this change of feeling will result in depriving the negro of the ballot and of the privilege of holding offices in the Southern States. Mr. Root said, in part:

"The suffrage has been taken away from the black man in most of the States where he composes the larger part of the population. The black man of the South in general no longer has his right to vote. The right to aspire to office is generally disputed and in a great measure denied.

"A curious development has been seen within the past year along this line. President Roosevelt has appointed fewer black men to office in the South than did President McKinley. There are fewer black men holding federal offices in the South now than there were when Mr. McKinley died. Yet outcries are to be heard throughout the South against what is called President Roosevelt's policy of appointing negroes to office, when, under Presidents McKinley, Harrison, and Hayes nothing was said, whereas more negroes were appointed.

"A few days ago a prominent black man, holding an important public office, attended an official reception at the White House. There has not been a time since the Civil War when black men have not held similar offices in Washington. Black men in these offices always have attended such receptions.

"They attended the receptions of Presidents Cleveland, McKinley, and others. Yet the attendance of one of them at Mr. Roosevelt's reception was a signal for the cry that the white race had been insulted by the attendance of this black man.

"I am simply showing that the state of official treatment of the black man has not changed, but the state of public feeling in the South has changed. The right to aspire to federal office, unquestioned a few years ago, is now challenged.

"It is only a question of a few years when white opinion will exclude blacks from office altogether in the Southern States. So the country has to face the failure of the plans adopted to elevate the blacks when they were freed by conferring the suffrage.

"Now that the first attempt has failed, the question of what can be done for them demands the best thought and the best patriotism. We can not throw away the responsibility we undertook for the welfare of this people."

Perhaps the most scathing editorial on the President that has appeared in the South is the following one from the Richmond *News*:

"We are told in Washington despatches that he [the President] has invited his colored appointee as assistant district attorney at Boston to visit the White House with his wife, and at the reception yesterday at the White House the colored recorder of deeds, of Washington, D. C., was present with two female relatives. This is about the limit.

"There is just one thing for the Southern people to do. There is no use in their indulging in any idle abuse or foaming at the mouth with rage. They can not defeat Mr. Roosevelt for reelection. They can prove in a manner entirely decorous and lawful their continued rejection of the idea of equality between the races. They can and should hold themselves absolutely aloof from any social recognition of Mr. Roosevelt. Socially, he has put himself on equality with the colored people, and he should be treated by Southern people precisely as if he were a negro official. This feeling should be illustrated by our representatives at Washington, both in the Senate and House. Their relation with the President should be absolutely formal from this time on, and should be confined to such business as it is necessary to transact with him. If he should come South, he should be left to associate with the negroes, whom he has chosen to regard as equals and fit companions for himself and his family. In other words, as Mr. Roosevelt has chosen to put himself on equality with the negro, he should be treated in all respects by Southern people precisely as if he were a negro of good character and representing the Government—that is, politely and kindly when kindness is necessary, and with absolute indication that he is not of our race or in any respect socially an equal with us or a fit associate for us or any of ours.

"We can not see any other position for Southern people or their representatives to take, unless they want to recognize the principle that the same white man can associate on terms of social and personal equality with Southern white people and their families and colored people and their families."

A calmer view is taken by the Augusta *Chronicle*, which says:

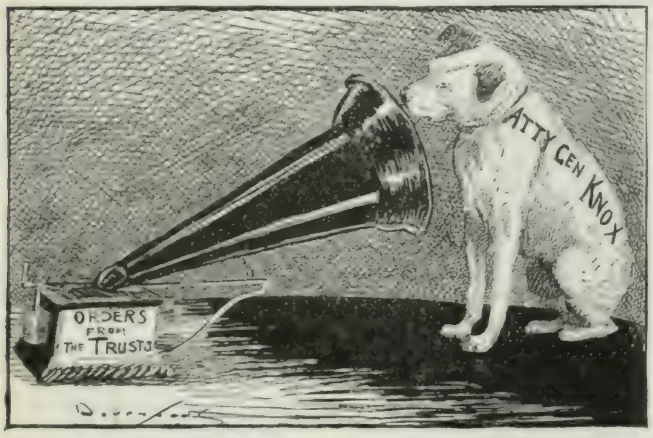
"We have never been able to become seriously excited about the periodical agitation of the subject of 'No Negro Domination,' a subject which has its vogue only at election times, and a bugaboo that is trotted out for political purposes to whip the indifferent into line, just as the Catholic or the A. P. A. issue is. The idea of negro domination over white men, either in the South or anywhere else, is too absurd for serious contemplation. Where on the globe are white men in subjection to an inferior race? Even savages recognize the white man's leadership, tho he is but one among a thousand, and the Indians of the West or the blacks of Africa, when a white man goes to live among them, soon make him a chief of their tribe.

"Recently our headstrong and self-willed President, who has a penchant for playing the bull in the political china-shop, went

out of his way to do a very foolish thing—invite negro men and women to a White House reception, placing them on social equality with the white guests of the occasion. The explanation given is that the negroes were office-holders and their official positions entitled them to recognition and invitation. This is tommyrot. Suppose they had not been invited? Would anybody have known or cared? They certainly would not have been surprised themselves at the omission, and the President would have sacrificed nothing in following the example of other Executives who have omitted them. If there had been any sort of necessity for his action, President Roosevelt might have been excused, but it was entirely gratuitous and foolish."

A NEW ESTIMATE OF MR. ROCKEFELLER.

SOME new side-lights are thrown upon the personality of John D. Rockefeller by Ida M. Tarbell in her history of the Standard Oil Company, now running in *McClure's*. How Mr. Rockefeller reconciles his ethics with certain alleged business methods has been a standing puzzle to his critics for thirty years; and as Mr. Rockefeller has never taken the public into his confidence on this point, the question has acquired a good deal of interest. Thirty years ago he had the experience of having his operations in the oil business denounced by President Grant, by



HIS MASTER'S VOICE.
—*The New York Evening Journal.*

a congressional committee, by the Pennsylvania legislature, by John D. Archbold, now vice-president of the Standard Oil Company, by H. H. Rogers, now a director, and by newspaper and public men all over the country. Even the producers in the oil-fields united in an agreement not to sell oil to his company at any price, New York dealers refused to handle the product of his refineries, and mobs "held up" trains carrying his oil. All this excitement followed the discovery of a very simple secret contract that his company (then called the South Improvement Company) had made with all the railroads tapping the oil-fields, by which the roads charged rival firms from forty cents to one dollar a barrel more for carrying their oil than they charged the South Improvement Company, *and turned the margin over to that company!*

This famous contract has long been a matter of history. How the railroads came to agree to it has never been explained, and Mr. Rockefeller's own views of the ethics of the transaction have also been somewhat in the dark. A careful reading of Miss Tarbell's account, however, seems to throw some illumination on them. When the South Improvement Company was formed, the oil-refining business "was overdone," "there was at that time a refining capacity of three barrels to every one produced, and this capacity was widely scattered," with the result, "every now and then," of "ruinous underselling in order to keep or to secure a market." Besides, the refiners in the oil-fields were boasting that they would "compel Cleveland and Pittsburg either to abandon their works or bring them to the oil country." In brief, the refining business was demoralized. Out of this cutthroat mêlée Mr. Rockefeller and his partners proposed to bring order. They persuaded Jay Gould, General McClellan, W. H. Vanderbilt, W. H. Clarke, and Tom Scott, the railroad presidents, to go into the rebate scheme. "It was, of course," says Miss Tarbell, "a direct violation of their charters as public carriers, but such violations had been in practise for at least four years in the oil business, and for a longer period in other industries." The next thing was to persuade or force the refiners to join the scheme or go out of business.

MISS IDA M. TARBELL,
Who believes that Mr. Rockefeller has "religious emotion and sentiments of charity," but lacks "notions of justice and regard for the rights of others."

"We are going to give everybody a chance to come in," said Mr. Rockefeller; and "he pointed out in detail, and with gentleness, how beneficent the scheme really was—preventing the Creek refiners from destroying Cleveland, keep up the price of refined oil, destroying competition, and eliminating speculation." The independent refiners were offered cash or stock in the Standard Oil Company for their plants. "I advise you to take the stock," Mr. Rockefeller would say; "it will be for your good." His concern for their good was not always appreciated, however, his offer would be declined, and he had to resort to threats of crushing them by his rebate scheme, which he referred to as "cooperation with transportation."

Robert Hanna, an uncle of Mark Hanna, was thus induced to sell his refinery, which was making 30 per cent profit a year, for about half what it cost. In this way the Standard had secured control of about one-fifth of the refining capacity of the country when the secret compact with the railroads became known, and the national storm of indignation, described above, broke upon

SHOOTING SHADOWS.
HUNTER: "I ought to get a medal for this shot."
—*The Brooklyn Eagle.*

the heads of Mr. Rockefeller and his partners. To let Miss Tarbell go on with the analysis:

"If Mr. Rockefeller had been an ordinary man the outburst of popular contempt and suspicion which suddenly poured on his

head would have thwarted and crushed him. But he was no ordinary man. He had the powerful imagination to see what might be done with the oil business if it could be centered in his hands—the intelligence to analyze the problem into its elements and to find the key to control. He had the essential element to all great achievement, a steadfastness to a purpose once conceived which nothing can crush. The oil regions might rage, call him a conspirator and those who sold him oil traitors; the railroads might withdraw their contracts and the legislature annul his charter; undisturbed and unresting he kept at his great purpose. Even if his nature had not been such as to forbid him to abandon an enterprise in which he saw promise of vast profits, even if he had not had a mind which, stopped by a wall, burrows under or creeps around, he would nevertheless have been forced to desperate efforts to save his business. He had increased his refinery capacity in Cleveland to 10,000 barrels on the strength of the South Improvement Company contracts. These contracts were annulled, and in their place was one signed by officials of all the oil-shipping roads refusing rebates to everybody. His geographical position was such that it cost him under these new contracts 50 cents more to get oil from the wells to New York than it did his rivals on the Creek. What could he do?

"He got a rebate. In spite of the binding nature of the contracts signed in New York on March 25 by representatives of all the railroads, before the middle of April the Standard Oil Company was shipping oil eastward from Cleveland for $1.25—this by the sworn testimony of Mr. H. M. Flagler before a commission of the Ohio State legislature, in March, 1879. How much less a rate than $1.25 Mr. Rockefeller had before the end of April the writer does not know. Of course the rate was secret, and he probably understood now, as he had not two months before, how essential it was that he keep it secret. His task was more difficult now, for he had an enemy active, clamorous, contemptuous, whose suspicions had reached that acute point where they could believe nothing but evil of him—the producers and independents of the oil regions. It was utterly impossible that he should ever silence this enemy, for their points of view were diametrically opposed.

"They believe in independent effort—every man for himself and fair play for all. They wanted competition, loved open fight. They considered that all business should be done openly—that the railways were bound as public carriers to give equal rates—that any combination which favored one firm or one locality at the expense of another was unjust and illegal.

"Mr. Rockefeller's point of view was different. He believed that the 'good of all' was in a combination which would control the business as the South Improvement Company proposed to control it. Such a combination would end at once all the abuses the business suffered. As rebates and special rates were essential to this control, he favored them. Of course Mr. Rockefeller knew that the railroad was a public carrier, and that its charter forbade discrimination. But he knew that the railroads did not pretend to obey the laws governing them, that they regularly granted special rates and rebates to those who had large amounts of freight. That is, you could bargain with the railroads as you could with a man carrying on a strictly private business depending in no way on a public franchise. Moreover, Mr. Rockefeller knew that if he did not get rebates somebody else would; that they were for the wariest, the shrewdest, the most persistent. If somebody was to get rebates, why not he? This point of view was no uncommon one. Many men held it, and felt a sort of scorn, as practical men always do for theorists, when it was contended that the shipper was as wrong in taking rates as the railroads in granting them.

"Thus, on one hand there was an exaggerated sense of personal independence, on the other a firm belief in combination; on one hand a determination to root out the vicious system of rebates practised by the railway, on the other a determination to keep it alive and profit by it. Those theories which the body of oil-men held as vital and fundamental Mr. Rockefeller and his associates either did not comprehend or were deaf to. This lack of comprehension by many men of what seems to other men to be the most obvious principles of justice is not rare. Many men who are widely known as good share it. Mr. Rockefeller was 'good.' There was no more faithful Baptist in Cleveland than he. Every enterprise of that church he had supported liberally from his youth. He gave to its poor. He visited its sick. He wept with its suffering. Moreover, he gave unostentatiously to many outside charities of whose worthiness he was satisfied. He was simple and frugal in his habits. He never went to the theater, never drank wine. He was a devoted husband and he gave much time to the training of his children, seeking to develop in them his own habits of economy and of charity. Yet he was willing to strain every nerve to obtain for himself special and illegal privileges from the railroads which were bound to ruin every man in the oil business not sharing them with him. Religious emotion and sentiments of charity, propriety and self-denial seem to have taken the place in him of notions of justice and regard for the rights of others."

LETTERS AND ART.

THE EVOLUTION OF AMERICAN CULTURE.

IT has frequently been asserted during late years that American literature and American culture in general are on the down-grade. But there are many, and those whose word can not be lightly set aside, who hold a different view. Dr. Edward Everett Hale, in his book, "The Memories of a Hundred Years," is strikingly optimistic in his opinions. He writes:

"My father was a printer. He printed, by the water-power of the Back Bay in Boston, editions of the Bible from stereotype plates. He printed for the owners of such plates many other standard books. He also printed the Boston *Daily Advertiser*, *The Semi-Weekly Advertiser*, and *The Weekly Messenger*. The circulation of these papers was as nothing to the circulation of newspapers in our time; but *The Advertiser* appeared six times and the semi-weekly twice a week. The size of these papers would now be called diminutive, but there were a great many of them. When he died in 1863, I had the curiosity to calculate the number of pages, and even of words, which he had printed, and I satisfied myself that he printed more words in that half-century than would have been found in all the libraries in the world the day the century came in.

"Or compare colleges and schools. Massachusetts has stood as well as any State in arrangements for education. In 1800 she had two colleges, and in both there were hardly 200 students. In the same State there are now 13 colleges, of which the largest has now 5,124 students and teachers, and the smallest, I suppose, 400. The average attendance of collegiate students is probably one hundred times as large as it was then. In more than twenty towns in Massachusetts there are now well-equipped buildings for high schools, each more costly and on a larger scale than any building which Harvard College had when I graduated in 1839.

"In 1775 there were thirty-seven newspapers in the United States. One was published twice a week, the others were all weeklies. It would be an over-estimate if we guessed that the weekly circulation of them all was forty thousand copies. One New York paper now prints more than five hundred thousand copies every day of the three hundred and sixty-five, and every copy contains more of what is called 'matter,' by a certain satire, than any one of the 1775 journals printed in a year. Twenty-two thousand newspapers are now regularly published here.

"The increase in population in the same time is fourteenfold. The census of 1800 showed a population of 5,300,000, that of 1900 showed 75,000,000.

"These fragmentary statements are enough to show that the enlargement of the life, whether of individual men and women or of the country, has advanced in directions which are utterly outside of the mechanism of statistics. Now one does not pretend that reading, writing, and arithmetic are the signs of spiritual life or moral victory. But they are excellent tools for a child of God to handle, and we who are trying to study the century, so as to find out whether the kingdom of God or the chaos of the devil has made headway, may pay some such attention to the tools which men and women have had in hand as the century went by.

"Without counting words or pages, it is enough if you will try to read the publications of 1800. Compare the exhibition which they give of the real life of men and women against what we know of the lives of men and women now, and we shall begin to see how it is that the living men and women of to-day came to control the senseless giants of physical power which in a hundred years God and His children have called into being.

"Among a hundred illustrations, the change in literature is one of the most interesting. Its importance must not be overrated, but it is not to be slightly spoken of.

"It is, for instance, easy to see that whenever an American wanted to enlarge his life and study, he went, of course, to England. It was precisely as Martial went from Spain to Rome. Washington Irving, as soon as he had felt his own power, went in 1804 to the South of Europe. At Rome he made the friendship of Washington Allston, and in eighteen months he had traveled through the continent of Europe. He came back to America and tried to live here, but after eight years, in which he joined in the Salmagundi and published 'Knickerbocker,' he went to Europe again. He then lived there seventeen years. Simply this means that he could not live here. For a man like him, the intellectual, spiritual, esthetic, and literary life of England and the rest of Europe offered advantages, not to say temptations, which America could not offer. That is one instance, which could be multiplied indefinitely, which shows the intellectual desolateness of our own country for the first quarter of a century.

"Joel Barlow, as a matter of course, had published his poem in London. As late as 1821 Alexander Hill Everett published his 'Europe' in London and reprinted it in his own country. The remark of Sydney Smith's, so often cited, 'Who reads an American book?' has been bitterly resented here. But it implied what was substantially true, and it is a convenient enough guide-post to show where the roadway of that time led men. One has only to look at the early American book catalogs and advertisements, say at the droll list which the great house of Harper published in its first five years, to see that in truth there was no important American literature."

MR. SOTHERN'S TRIBUTE TO JOSEPH JEFFERSON.

THE name of Sothern recalls two generations of American actors. During both these generations Joseph Jefferson has been a regnant figure. Mr. E. H. Sothern pays a kindly tribute (in *Leslie's Monthly*, February) to this "stanch veteran of the dramatic profession, whose gentleness has shone for so many years through the characters of 'Rip' and 'Caleb,' 'Mr. Golightly' and artful 'Fighting Bob Acres.'" He says:

"To write of Joseph Jefferson as I have known him . . . must needs be to write with enthusiasm. He represents to-day, as he has represented for a long, long time, that so-styled old school in which a gentle personality, a tender humor, and a genuineness of heart and soul were the chief charms of comedians, and when Florence and Raymond, Owens and E. A. Sothern—as well as many others—were known and loved for their kindly, courteous, and gentle ways None of us seem to have much gentleness nowadays. We all have bicycle faces—hard and set, tense and eager-looking, and suggestive, I fear, of the thought that we have full opinions of our own worth—a fact borne out, I am bound to admit, by some of the advance notices one reads. And well may we ask, What is the matter with the present generation of players? Perhaps, tho, in this day of 'big things,' from the organization of trusts to the staging of plays, it has become necessary to assert oneself more or suffer the humiliation of being thrust into the rear ranks.

"It wasn't so in Jefferson's day. An actor took his art seriously then, and did not depend to such an extent upon scenic embellishments and the graceful exaggerations of the press-man ahead."

The radiance of an art like Jefferson's, Mr. Sothern continues, is "felt with a gratitude that must be a powerful plea for the theater as a good influence everywhere." He writes, in conclusion:

"It is inspiring for other actors to contemplate one of their craft far on in years still holding the affectionate attention of a great people, commanding honor, love, obedience, troops of friends, and all that should accompany old age. And all this without having recourse to sensational sword-fights or special trains, or Carmen kisses or live animals on the stage, or rows in public places—even without denouncing other actors. Just the reward of practising the gentle art of acting—and what a gentle art it is—when practised by gentle folk. Jefferson's 'Rip' is a book of poems. I am quite sure people will remember a look, or a wink, or a smile of his lips, when they will be quite unable to recall many now familiar verses.

"The quality that breathes of poetry and tenderness in painting, or writing, or acting must have the true ring of simplicity. The ease of execution which alone makes all art natural comes from a devotion to the work which many of us can command; but this other thing, this poetic spirit, is a gift and one not often

given. How many try hard enough—but yet can never be tender or true or simple on the stage? 'He is clever—but cold. She is brilliant, but she does not move me at all.' One often hears this. And that very man or woman has been sobbing bitterly, shedding real tears, feeling the scene to the heart of them. Why can't they convey that gift to the auditor then?

"Or people say, 'I can't laugh at that man, he's trying too hard to be funny.' The poor man feels the humor of his lines, why can't he make the audience laugh?

"The actor must make the observer feel his exhibition of feeling. The whole victory does not consist in putting on a suit of strange-looking clothes and an outlandish wig. The outward and visible sign is nothing without the inward and spiritual grace.

"The art of Joseph Jefferson does not strike you in the face and demand your approval or your life. It reaches out across the footlights and puts its arms about your neck, draws you close to its heart, and comforts you. And well might we borrow a thought from the master of literature and declare that his life is gentle and the elements so mixed in him that nature may proclaim to all the world that her pride, her love, and her respect for such a man will live through all eternity."

CONTEMPORARY FRENCH FICTION.

THE charge is often made against French fiction that it deals too exclusively with questions of sentiment and passion, and that it gives to these questions an importance out of all proportion to their actual influence upon life. M. Edouard Rod, the well-known French critic, is compelled to admit that this charge has a basis in truth. He writes (in *The Booklover's Magazine*, January):

"It is a fact that during a long period the French novel has selected as its favorite theme questions of sentiment, passion, or married life, and that in many of its most successful specimens the utmost care has been devoted to the portrayal of love, the psychological disturbances which accompany it, and the social or personal disasters which it occasions. To give but a few recent examples, among the host of others, I will mention: 'L'Idylle Tragique' and 'Le Fantôme,' by Paul Bourget (and almost all preceding novels by this author); 'Le Jardin Secret' and 'L'Heureux Ménage,' by Marcel Prévost; 'Le Calvaire,' by Mirbeau; 'Henriette,' that little masterpiece by Coppée; 'Peints par Eux-Mêmes,' by Paul Hervieu; 'La Cendre,' by Vandérem; 'Le Stérile Sacrifice,' by André Gladès; 'L'Oiseau d'Orage,' by Marcelle Tinayre; 'Comme une Rose,' by Ernest Tissot; 'Chair et Marbre,' by S. Cornut.

M. EDOUARD ROD,
French critic and lecturer, who exerts an important influence in French politics.

"To understand this tendency of the French novel let us recall that it is the very essence of tradition. From its very beginning and in its most flourishing epochs, French literature has been especially devoted to the observation of passion and to the delineation of character. Now it is very evident that love is the 'romantic' passion *par excellence*, and that if the period of love does not fill the lifetime of man, nor even that of woman, it is at least the period in which characters stand out in clearest relief.

"At an epoch when the novel was still considered a work of an inferior order, our great tragedians were advancing with incomparable brilliancy in the path which contemporary novelists still follow; all Racine's secular tragedies turn on love. And the novel of character—the branch of the novel most essentially French—is in the final analysis only the continuation of the tragedies, whose episodic character and simplicity it keeps, whose regular and methodical development it tends to reproduce. This filiation seems to me to be incontestable, and explains in itself the leading tendency of the French novel."

M. Rod proceeds to point out, however, that side by side with the novel of character has always existed "the novel of manners and morals," and that "within the last few years the novel of manners and morals has been developed to such an extent that it occupies a still more important place than the novel of character in the *ensemble* of present-day literature in France." We quote further:

"Perhaps the cause of this fact may be partly attributed to the naturalism of Zola, who has always shown more interest in masses than in individuals; perhaps also to the recent growth of thought and democratic institutions; and again to the arduousness of the struggle for existence, which is daily becoming more complicated, more violent, and consequently more fertile in dramatic events. Since the industrial and commercial transformation is curtailing the part played by sentiment in real life, which is becoming more and more devoted to action, it is natural that this part should be curtailed in literature as well, for literature is always to a certain degree the reflection of reality.

"At any rate the fact is undeniable. Side by side with the novels of love and sentiment, of which I have cited a few examples, I might mention a much larger number of novels worthy of attention, turning on subjects of an entirely different order, and in which love plays but a very minor rôle. Such are the novels in which the brothers Paul and Victor Marguerite outline the tragic pictures of the war of 1870 ('Le Désastre' and 'Les Tronçons du Glaive'); those of Maurice Barrès, who narrates the intrigues of recent politics with a certain paucity of plot but with great strength and salience ('Les Déracinés,' 'L'Appel au Soldat'); the satirical novels of Léon Daudet, whose acidity has sometimes been likened to that of Swift ('Les Morticoles'); the novels with so cial tendencies ('Daniel Valgraive') of the brothers J. H. Rosny, to whom we are also indebted for those 'prehistoric' novels of such singular savor ('Vamireh,' 'Eyirmah'); the vast compositions of Paul Adam, so full of detail ('La Force,' 'L'Ame des Foules'); the two best novels of Marcel Prévost ('Frédérique' and 'Léa'); the vigorous books of Edouard Estaunié ('L'Empreinte' and 'Le Ferment'); the novels of R. Bazin, full of such penetrating charm ('La Terre qui Meurt,' 'De Toute son Ame'); the political or administrative scenes of G. Lecomte ('Le Valet,' 'Le Carton Vert'); the rustic novels of Pouvillon ('Jean-de-Jeanne,' 'Les Antibel'); the rural novels of André Theuriet ('Sauvageonne'); and the business novels of Masson-Forestier ('Remords d'Avocat')."

During recent years France has witnessed something like a revival of the historical novel, and of the philosophical and satirical tale which the eighteenth century delighted in. These tendencies are illustrated in the writings of such authors as Maurice Maindron, André Lichtenberger, Paul Fort, Anatole France, and Henri de Régnier. M. Rod concludes:

"I believe that the novel of manners and morals with social tendencies, and the corresponding drama, is the most interesting product of our age. There must, in fact, be a sort of harmony between the men and women of each period and the characters of its literature. Now it seems as if the period on which we are entering must be democratic, industrial, commercial, and scientific, rather than esthetic or philosophical. With the breadth of its frame, the pliancy it admits of, the public to which it speaks, the novel of manners and morals seems marvelously suited to a society so constructed.

"Certain people claim nowadays that the novel has passed its zenith. I believe, on the contrary, that it is still capable of a long continuing development, and that its influence will but increase. After all, the novel is the only truly democratic form of literature: thus the probable future of our society seems to hold in reserve for it a glorious destiny."—*Translation made for* THE BOOKLOVER'S MAGAZINE.

TENNYSON RECONSIDERED.

SIR ALFRED LYALL tells us in his new book on Tennyson that he has aimed "to combine a short biography of the English poet with "a running commentary on his poems as they illustrate his intellectual habit and the circumstances of his life." With few other poets, it may be said, would such a mode of treatment promise more signal success. It will be remembered that Tennyson had a special distaste for matters of purely personal revelation which make so large a part of modern biography. "We know already," says Sir Alfred, "what he really was; we are aware of his susceptibilities; and by respecting them with the deference which they would command were Tennyson alive we shall best honor the memory of an illustrious Englishman and a true and noble poet." Such restraint, in the opinion of some of the critics, has tended to mar the biographical excellence of the work. Mr. Bliss Carman declares (in the New York *Times Saturday Review*): "I must say that I can not care very greatly for a biography that does not come nearer to the core of the man than this. For biography, like all art, has for its purpose the presentation of personality."

SIR ALFRED LYALL,
The author of a new study of Tennyson's poetry.

This volume, the fifth of the new "English Men of Letters" series, contains much discriminating criticism that will aid the reader to a better understanding of Tennyson. The author states it as his opinion that "Tennyson's war poetry is not equal to his poetry of peace. One may add that neither irony nor fierce invective suits Tennyson's genius very well; they carry him too near the perilous domain of rhetoric. It is to the lays of love and heartrending lamentation in 'Maud,' with their combined intensity and refinement, that unqualified praise may be accorded for their romantic grace and soft cadences, in which the melody seems inseparable from the meaning."

In another place he says: "That Tennyson, the mystical romancer, the dreamer of fair women, should also have written spirited verses full of rude and quaint humor, sometimes too redolent of the soil, is a notable example of his versatility." Proceeding to a consideration of Tennyson's pastorals, Sir Alfred Lyall writes:

"These poems aim at and do not fall short of the 'simplicity of diction' which Wordsworth affirmed he had introduced into English verse as the proper medium for rendering the elementary feelings of the country-folk, and showing the poetic aspect of common things. Wordsworth's principle, as explained in his Preface to the 'Lyrical Ballads,' was to choose incidents and situations of rural life, and to describe them as far as possible in the language really used by the people, purified indeed from grossness and uncouth provincialisms. Good prose, he maintained, was the proper vehicle for this kind of poetry; his object was to clothe the thoughts and characters in plain close-fitting words, adapting the speech to the situation. It was not difficult for Coleridge to prove, in the well-known criticism that is to be found in his 'Biographia Literaria,' that language so purified was very different from the true vulgar tongue—that Wordsworth, in fact, used good plain English vivified and elevated poetically, and was at his worst in the lines which came nearest to commonplace rustic conversation. Moreover, Wordsworth, tho he did good service in discarding finally the old conventional pastoral, diverged habitually into philosophic reflections that were manifestly and intentionally out of keeping with his rustic characters. In his two poems of 'The May Queen' and 'The Grandmother' Tennyson makes no pretense of imitating the language of his villagers; his object is to translate their genuine feelings poetically; he simplifies his diction and strips it of superfluous ornament; but no man knew better that real idiomatic vernacular is a very different thing. What this is, and the use that can be made of it, he has shown separately. He does not relate a story and moralize upon it, as Wordsworth usually did; he exhibits dramatic impersonations that portray the homely joys and griefs of the peasantry, that show how they act and what they say in language that is nevertheless refined, correct, and vivid, and in a style which is the poet's own."

Perhaps the most interesting portion of Sir Alfred's work is that which deals with Tennyson's philosophy of life. He points out that the irresoluteness of his religious sense stayed with him until the end. His faith never found a secure resting-place. The shade which perpetually hung over his brooding mind had become darker in the late evening of his days.

"The tremendous expansion of the scientific record in these latter days seems to have affected Tennyson like a sentence of inflexible predestination, overshadowing his delight in the world's glories by a foreknowledge of its inevitable doom. The vision which unrolled itself before his imagination, of the blind mechanical evolution of a world 'dark with griefs and graves,' of human energy squandered on a planet that is passing from fire to frost, evidently fascinated his mind more and more, and possessed it with dismay. That mankind and their works must perish, slowly or suddenly, leaving not a wrack behind, has been the warning of all religions, the foundation of all beliefs in a future life; the poem of 'Vastness' gives the same warning in the terms of science, but without the same clear note of intrepidity, or of confidence in revealed promises. Yet Tennyson has his antidote to despair. Amid the general shipwreck of positive creeds, formal theologies, political and philosophic systems, all of them seeming powerless to affect man's ultimate destiny, we have gleams of spiritual illumination seen on the distant horizon; we have a profound faith in the moral direction of cosmic laws, in a spiritual basis of all being, in a kinship and affinity between the spiritual element in man and the divine soul which moves the universe."

HENRY G. MARQUAND AS AN AMERICAN ART PATRON.

THE recent sale in New York of the late Henry G. Marquand's art possessions, while it represented, in its outward aspect, simply the auctioning of the household effects of a private citizen, is yet regarded as an event of national significance. "Sooner or later," observes Mr. Ernest Knaufft, of New York, "every one of the two thousand articles disposed of may become an object-lesson for American art workers." Mr. Knaufft says further (in the American *Review of Reviews*, February):

"Men of discernment can see in the proclivities of certain of our rich men to form art collections an incalculable benefit to the American artisans and art manufacturers of the future. For they see that art patrons like Mr. Walters, of Baltimore; Mr. Layton, of Milwaukee; Mr. Corcoran, of Washington; Mr. Searles, in San Francisco; Messrs. Morgan and Vanderbilt, of New York, and hundreds of others who have donated small collections to art-galleries like the Art Institute in Chicago, the art academies of Philadelphia and Cincinnati, and the art museums of New York and Boston, in their act of obtaining masterpieces of art of the past from Europe are performing a most salutary function in the education of public taste. . . . . .

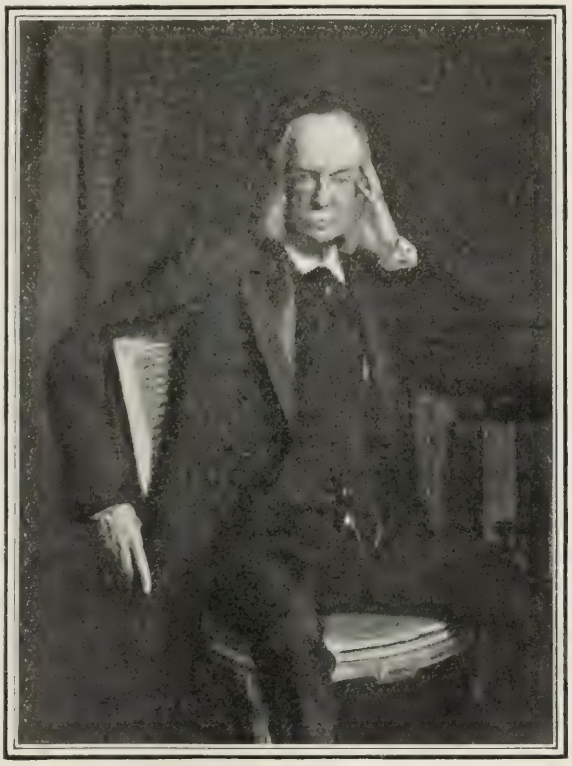
"Mr. Marquand's beneficence upon the American art worker was by no means wholly the indirect one that accrues from the distribution throughout the country of his collection sold last month. His memory demands an inscription in the hall of fame

SCREEN OR RETABLE FOR ALTAR,
By Leonard Limousin, dated 1543. Sold for $26,000.

GOBELIN TAPESTRY, LOUIS XV. PERIOD.
Episode from Tasso's "Jerusalem Delivered." Sold for $15,000.

of art patrons because of his interest in the Metropolitan Museum of Art, of which he was president from 1889 to the time of his death, 1902, and to which he presented the superb collection of old masters which hangs in Gallery No. 6, designated as 'The Marquand Room.' Here is Rembrandt's superfine 'Portrait of a Man,' Van Dyck's elegant figure of 'James Stuart, Duke of Richmond and Lenox,' vivid portraits by Frans Hals, Velasquez, and Terburg, and valuable examples of Van Dyck, Metsu, Cuyp, and Van der Meer of Delft. There are, besides, in the sculpture-halls and in other galleries rare art objects donated by Mr. Marquand, that attest his concern for the welfare of the museum.

"Henry Gurdon Marquand was born in New York, April 11, 1819; he was educated at Pittsfield, Mass., and was for twenty years manager of his brother's real-estate interests, and later, for ten years, a banker. He was president of the Iron Mountain Railroad. Besides his gifts to the Metropolitan Museum, he presented a chapel and (with Robert Bonner) a gymnasium to Princeton University; with his brother, he gave a pavilion to Bellevue Hospital."



HENRY G. MARQUAND.
From the painting by John S. Sargent.

Mr. Marquand's collection realized the enormous total of $706,019. The largest price for a single article was $38,000, this sum being paid for a royal Persian rug of the fifteenth or early sixteenth century. There are, it is said, only six such rugs in the world. Alma-Tadema's painting, "Homer," brought $30,000, and his smaller picture, "Amo Te, Ama Me," $10,600. A piano designed and decorated by the same artist was sold for $8,000. John Hoppner's portrait of Mrs. Gwynn went for $22,200. Two of the most precious objects in the collection were a Limousin "Screen or Retable for an Altar" (1543) showing twenty-one figures in blue, red, and gold; and a Gobelin tapestry (Louis XV. period), entitled "Jerusalem Delivered." The former brought $26,000, the latter $15,000. The sum of $42,885 was realized on

"A READING FROM HOMER." (Alma Tadema.) Sold for $30,000.
Photographs from Private Collection of Mr. Thomas E. Kirby.

engravings, silver, and cabinet objects; $26,938 on vases and Japanese lacquers; and $22,637 on Chinese porcelains.

The New York *Sun* comments:

"The Marquand sale is the most successful sale of the class of objects represented in Mr. Marquand's collection which has been held in New York. The great Mary Jane Morgan sale of 1886 went well beyond the million-dollar mark in its total receipts, but were it held to-day it would be pronounced unhesitatingly a freak sale, exactly as the collection itself was made up of freak purchases by its lavish and erratic owner.

"For the sale of Henry Gurdon Marquand's collection to reach a total of nearly three-quarters of a million of dollars is a distinction which will make this sale memorable in art annals not only here but abroad.

"The eager bidding and the high prices went a step further in marking the no longer disputable fact that New York is one of the great art centers of the world. Instead of American collectors and dealers having to go abroad for rare treasures, European dealers have been obliged to come here to make purchases to carry home with them; and they have many times bid in vain when they have made their most liberal offers.

"Another lesson which the Marquand sale has taught, which there are evidences that people needful of information have taken to heart, is that it is not to a dealer's profit to malign the treasures of an art collector's possessions, with the dubious aim of obtaining choice objects below their value.

"The Marquand sale has shown that Americans have the taste and the money to take works of art such as Mr. Marquand got together at prices which will prevent all but a few of them going out of the country."

PESSIMISM OF RUSSIAN LITERATURE.

MANY have attempted to explain the intense pessimism of Russian literature, but none has yet succeeded in solving the problem satisfactorily. Even that versatile French littérateur M. de Vogué, in analyzing the work of the Russian novelist Chekhoff, is somewhat astonished at the rather monotonous tendency of Russian literature during the last forty years. "With the freedom of the serfs," he asserts, "society had the right to demand cheerful sentiments from its authors; but, instead, the opposite resulted. The gloomy spirit has enwrapped Russian life more and more. Forty years have passed since then, but the new writers have become more venomous and more gloomy." The Russian critics themselves are at a loss to understand the pessimistic spirit of their literature, if we may judge from a recent discussion in the St. Petersburg *Novosti*. In an article in that paper entitled "The Pessimism of Authors and the Optimism of Critics," M. Engelhardt observes that Chekhoff and his many imitators, who picture Russian society as a "graveyard filled with bodies of prematurely buried people," bring nothing new to Russian literature. They are simply the latest mouthpieces of the deeply ingrained pessimism of Russian life. He writes further:

"For the last forty years there has not appeared one writer who pictured life in different colors. Pomjalowsky, Levitoff, Uspensky, Garhsin, Chekhoff, and Maxim Gorky—all show us a cemetery; their heroes are either the spiritually dead, the living dead, or those thrown overboard—people cast off by society. Moreover, writers of the last epoch—Turgéneff in his later works, Count Tolstoy after the writing of 'Anna Karénina'—give us the self-same picture.

"In essence, Uspensky's pictures of Russian life do not differ from those of Chekhoff. In vain did Uspensky seek a living person. He found only people whose 'souls had been eaten out,' only Chekhoff heroes. But Uspensky injected life into his pictures, gave hope for the future, and created whole sociological theories. His creations did not produce such a hopeless impression as the works of Chekhoff—cold, apathetic, entirely objective.

"An artist can infuse even into somber pictures elements of hope and the promise of a better future. Chekhoff does not find such elements in Russian society. His productions embrace all strata of Russian society—from the 'intellectuals' to the peasants and factory workmen—yet everywhere appear the same gatherings of paralytics, the spiritually lost and the morally weak—superfluous people.

"And others are not better. Maxim Gorky is a writer of a temperament quite different from that of Uspensky or Chekhoff; and what does he paint? In essence the very same picture. Not in tramps are to be found elements of progress and regeneration. These are elements renounced and cast off by life. The more, positive types end in idiocy like Fóma, or in impotent wickedness and drunkenness like Ezhov. . . . Who remain? Unconscious 'Darwinians' of different colors and species. It is rather characteristic that when Gorky tried to create a positive type not a 'Darwinian' (muzhik), there issued forth something in the order of the reasoner of our old writers. Instead of a living thing, the result was a manikin so clumsy that the author himself cast it aside unfinished.

"The cheerlessness of Chekhoff's pictures is explained sometimes by their fragmentary style and brokenness. He draws separate bits of life, which can not be combined to form one picture. Life as a whole is by no means so dark and monotonously weary as it seems when examined in details. It is necessary to rise somewhat above it and to grasp it more widely. And yet, when we turn to such a complete, general picture as Tolstoy's 'Resurrection,' what do we find? . . . This romance should be called not 'Resurrection,' but 'Burial.' Tolstoy has placed us in a coffin, nailed down the lid, and lowered it into the grave."

It is evident, continues the writer, that the pessimism of Russian literature can not be explained by accidental or personal reasons, such as the temperament of any given writer or the frame of mind he is in at a certain moment. The universal and unchangeable character of this phenomenon excludes the possibility of such explanations. He adds:

"If all our writers picture life in 'dark-black' colors, they do so because they are unable to draw any other picture. They are unable for the reason that they fail to find joy or brightness in life.

"It is not rational to look for the appearance of a cheerful writer who would show us different pictures. If such a writer should arise, possessed of real artistic talent, he could but show us that which he finds in actual life, and a forty-year test of authors of different characters, temperaments, tendencies, and views has already shown us that, ...

"My main purpose is to call attention to the fact that all our writers picture life in essentially the same way. Therefore their pictures must have a basis in life. I presume that to artists life is more intelligible than to other people.

"It is therefore unjust to accuse any one author of pessimism; it is also inconsistent to attempt to explain this fact with groundless reasons, and it is useless to say that life is not so dark as it is painted. There is no room for optimism. The optimist must give notice: 'All our writers suffer from blindness. To correctly draw Russian life one must be an artisan and not an artist. Talent causes our writers to make an untruthful portrayal of life.' Who would believe this?"

Another writer in the *Novosti*—A. Skabichevski—goes even further. The gloomy tendencies in Russian literature he traces back to a period antedating that mentioned by M. de Vogué and Engelhardt. Lermontoff, Griboyedoff, Gogol, Pushkin—in fact all the leading Russian writers—are accused of literary pessimism. But then, asks M. Skabichevski, are not all realists, of whatever country, pessimists?—*Translations made for* THE LITERARY DIGEST.

FIRST BOOKWORM: "How do you like these popular novels that the publishers are now printing so many million copies of?"
SECOND BOOKWORM: "Can't say. They never last long enough for me to get a taste."—*The Bookman.*

SCIENCE AND INVENTION.

WILL-POWER IN EVOLUTION.

HAS a conscious being anything to say about his own progress in evolution? M. Marey, the French expert on animal movement, thinks that recent experiments indicate that men, and even the lower animals, are not altogether passive instruments in the hands of nature in the upward trend of their development. He believes that their own desires and strivings may influence their course. In other words, he goes back to an earlier school of evolution than that of Darwin—that thought of by Emerson when he wrote that—

> Striving to be man, the worm
> Mounts through all the spires of form.

According to those who consider themselves strict Darwinians, the "striving" has nothing to do with it, nor can any acquired characteristic become by inheritance part of the permanent heritage of the race. M. Marey points out, in a recent article in the *Revue Scientifique*, that modern biology is master of numerous new and powerful methods of investigation, such as instantaneous photography and the mechanical registration of physiological facts like muscular contraction, the flow of the blood, or the speed of the nerve-current. By chronophotography, in which method M. Marey himself was a pioneer, many interesting laws have been brought out, and among them, as he claims, that if an organ is forced to do its work in unaccustomed conditions, it will change its form or adapt itself to its environment, and that this change can be transmitted by heredity. This is the much-disputed question of the inheritance of acquired characters. But M. Marey does not claim that all such characters can be inherited; only those that arise, to begin with, in brain or nerve action—there must be a psychological element in the change. Without quoting at length from the writer's description of the experiments that he thinks established this view, we quote his concluding paragraphs, which are as follows:

"In all species of animals, when we know the nature of the movements of locomotion we can foresee the form, the curvature, and the extent of the articular surfaces. These forms are exactly what friction would produce on a surface capable of yielding to it.

"Thus, the muscle, the organ of production of mechanical force in living creatures, fixes the form of the bony skeleton, adapting its different parts to the best execution of the functional movements. Simple laws govern these adaptations; they enable us to understand, predict, and bring about experimentally changes of form of the organs, by modifying their function.

"The muscle itself regulates its volume and form by the acts that it habitually produces. But in doing this it only obeys in its turn; for it is subject to a ruling power, that of the nervous system. It is in the nervous centers that the muscular movements are conceived, willed, brought about, and regulated.

"Now whatever we may think of the initiative of the nervous system, it is certain that the desire to live and to perpetuate the race governs in living beings most of the acts that they accomplish. By incessant nagging, the nervous system makes itself master of the muscles, imposes new acts upon them, and consequently alters their forms.

"So when zoologists find in certain marine creatures, such as the whales, the characteristics belonging to the mammals with appearances that resemble those of fishes, they have regarded these strange beings as ancient terrestrial mammals, which, finding that in the sea food was more easily procured, became swimmers and divers. This new mode of life modified their organs, leaving only vestiges of those that were no longer of use, and developing the others, adapting them to the necessities of aquatic life. Does not this logical conception of the transformist naturalists find its complete confirmation in the experiments that have been described?

"But in attempting to prove the hereditary transmission of acquired characters, the final desideratum of the doctrine, special difficulties present themselves. Time alone can furnish such proof, for we must follow for long years the animals experimented upon."

Experiments of this kind, M. Marey tells us, have been undertaken by himself and his assistants, who will follow a succession of animals for generation after generation, and endeavor to see, by the most careful comparison, whether acquired variations are transmitted and accumulated. He has no doubt, he says, that these experiments will be successful in dissipating all doubt of the transmissibility of acquired characters. Previous attempts in the same direction were not properly directed, he thinks, as, for instance, when animals were mutilated and their offspring examined for some trace of the mutilation. Of this M. Marey says:

"The mutilation of an individual does not adapt it to new functions. The real adaptation requires a chain of physiologic acts in which the nervous system is the prime mover and commands the series of acts that modify the organs. The remarkable experiments of Brown-Séquard have already shown that lesions of the nervous centers or the nerves bring about consecutively modifications of the muscles and of the bones, and that these modifications are transmissible: he was able to follow them for several generations.

"We need now to ascertain in addition whether, apart from all mutilation of the nervous system, a continued effort of the will-power of the animal will produce similar effects. As far as our race is concerned, the vestiges of primitive man show how much we differ from these vanished ancestors. We have altered by evolution, and we shall continue so to alter, like everything else in existence.

"Shall we yield passively to the current that carries us along? It would seem that in the light of natural science we shall discern better and better in what consists the physical, intellectual, and social perfection of our race, and that this light will aid us in pursuing and in hastening by our efforts the realization of our ideal."—*Translation made for* THE LITERARY DIGEST.

THE PSYCHOLOGY OF SELF-ACCUSATION.

SENSATIONAL murders or other notorious crimes are often followed by the appearance of persons who offer to give themselves up to the police on the ground that they are the culprits. In *La Semaine Médicale*, M. Dupré has published an interesting study of such self-accusers from the medico-legal standpoint, which is thus abstracted in *The British Medical Journal*:

"These persons are regarded by the author either as insane or as suffering from some form of mental disequilibrium which brings them to the borderland of insanity, and various types are recognized of the auto-accuser. . . . In the melancholiac, says M. Dupré, the general feeling of misery and depression is combined with ideas of unworthiness and wickedness; the patient condemns himself or herself for having committed sins, including 'the unpardonable sin,' until his belief grows into a fixed and permanent delusion. The majority of such patients of the female class accuse themselves of infanticide or having caused shame and disgrace to their children. The mental attitude of the self-accusing melancholiac is sincere, anxious, and repentant. Self-accusation in 'degenerates' with weak and ill-balanced minds may be developed as a curious and bizarre mental process. The desire of such persons is often to pose as the hero of some extraordinary romance, wonderful achievement, or astounding crime. The mental atmosphere is in such cases lucid, conscious, vain, and mendacious. Degenerates with mental weakness may become self-accusers by allowing their minds to dwell on crimes or misdeeds which have aroused public attention but have not as yet been traced to the authors thereof. These persons seem to have the faculty—partly born of ignorance, partly of a weak imagination, and partly of an abnormal susceptibility to 'suggestion'—of developing delusive ideas with great facility, as, for example, in the case of many persons who from time to time have given themselves up as Vacher or Jack the Ripper. Degenerates with moral deficiency invent romances and weave lies most plausibly. In some cases the auto-accu-

sation follows upon the development of mental obsessions and delusions of slow evolution, in which case the existing mental anomaly (psychopathy) is complicated with melancholia, hypochondriasis, or definite obsessions. Alcoholic degenerates are especially prone to become self-accusers. In hysteria self-accusation is extremely rare, but accusation of others—often highly colored and specious—is not uncommon."

A NEW THEORY OF VOLCANIC ACTION.

A SUGGESTION that may throw light on some hitherto unsolved mysteries of volcanoes has recently been made by M. A. Rossel before the Swiss Society of Natural Sciences. The considerations offered by him are based, says the *Revue Scientifique*, on experiments with the electric furnace, which have opened a new horizon for the explanation of chemical combination. The high temperatures obtainable in this furnace have made possible the preparation of hitherto unknown minerals, and the discovery of new properties. Says the writer:

"Thus a quartz crystal heated in the electric furnace at the relatively low temperature produced by 70 volts and 400 to 500 ampères, is completely volatilized; it is even easy to vaporize lime, magnesia, and in general all compounds containing oxygen, such as silicates, carbonates, etc.

"Nevertheless, these may undergo a process of reduction; when we heat in the electric furnace silica with alumina, carbon, iron, etc., new refractory substances are formed, which remain in the furnace while the oxygen is disengaged in the gaseous state. These stable compounds are carbids, silicids, phosphids, etc., which resist high temperature, but are all decomposable by water.

"If we apply this reaction to the formation of the earth by cooling, we must admit that the first minerals produced were compounds of elements . . . free from oxygen. These minerals remained in this condition, forming the first terrestrial stratum, until circumstances permitted the formation of water or water vapor; as soon as they came in contact with this, a very active reaction must have taken place, whose result was the formation of oxids—lime, alumina, magnesia, etc., together with inflammable gases, whose combustion then gave rise to other reactions. . . . . .

"There were thus formed, on the one hand, earthy metallic oxids, and, on the other, the oxids that form the acids of the important earths—silicic and carbonic acids. The explanation of the formation of the silicates and carbonates is hence not far to seek.

"Now we may apply what precedes to the explanation of certain volcanic phenomena.

"The earth cools progressively. This cooling gives rise to folds in the terrestrial crust and fissures may result. Through these fissures water is introduced and minerals containing water of hydration may penetrate to a great depth. Then very energetic chemical reactions take place, producing gases that will burn in air, and also metallic oxids. These reactions may cause earthquakes and volcanic eruptions.

"In any case, M. Rossel regards it as certain that if the earth has reached its present state by progressive cooling, and if the interior of the globe is now at a sufficiently high temperature to volatilize oxygenated bodies, oxygen should be entirely wanting at these depths. The oxygen will all be found at the surface of the globe, in the atmosphere and in combination in water and oxygenated minerals, which are all decomposed volcanic ashes. It would then seem inexact to say that the globe is composed of about four-fifths oxygen and one-fifth other elements. Besides, this hypothesis is not in harmony with what is known of the earth's specific gravity."—*Translation made for* THE LITERARY DIGEST.

Sahara-Dust in Switzerland.—Some dust that fell in Switzerland last year was thought to have come from the eruption of Mount Pelée in Martinique, and Forel, the eminent geologist, was asked to examine it. He has recently published his report on the nature and probable origin of this material. The first series of specimens, collected in May at Berne, Morges, Lausanne, and other places, has, according to the writer, an indigenous origin. Says *Cosmos*:

"The dust in question has no analogy with that of Martinique; it comes wholly from Switzerland. The same is true of the dust collected at the time of a dust-fall at Frauenfeld in June. The fall of August, noted at Monthey, Aigle, Morges, and at the Glacier du Géant was not of local origin, but it did not come from Martinique. It has all the characteristics of Sahara sand, which often comes over into Europe, especially in Italy and Sicily. A very notable fall took place on March 11, 1901, in these countries, but the sand went still farther north; it was collected in the Tyrol, and even in Denmark. The fall of August, 1902, was not particularly abundant, but it was sufficient to cover several glaciers, like that of the Géant on Mont Blanc, with a thin brick-yellow layer, which altered the color of the ice visibly, to a practised eye. So the ashes of Martinique have not been traced to Switzerland—such is M. Forel's conclusion."—*Translation made for* THE LITERARY DIGEST.

NECESSITY THE MOTHER OF INVENTION IN AMERICAN INDUSTRY.

THE old adage has had another illustration recently in a speech made by George Westinghouse at a dinner given by him in London (January 9) to a large company of British railway managers, financiers, and scientists. According to Mr. Westinghouse, our short-handedness in this country is responsible for our great use of labor-saving machinery. We had not enough men to do our work, so we had to devise some method of doing it without them. Said Mr. Westinghouse, as reported in *The Railway and Engineering Review* (Chicago):

"In America we have always been short-handed with regard to labor. We have been obliged to find methods whereby one man may accomplish the work of two or three men as compared with your practise here. We have had the best men from Europe: Englishmen, Germans, French, everybody—skilled men, highly trained men, as well as laboring men; we have combined their experience with our own, coupled it with our necessities, and have thus accomplished results unattainable in a country like this, where you have more labor than you can well keep employed.

"As an illustration of what has been accomplished by the use of electricity in a great industry, I may cite the Homestead Mills of the Carnegie Company . . . where they produce with about 4,000 men three times as much steel as the Krupp works produce with 15,000 men. The results are simply wonderful. You can start there to-day, in a building containing steel-melting furnaces, and you will there see three men mounted on a car with the charging apparatus which is moved and operated by electricity. With a few movements of this ingenious contrivance three men charge twenty furnaces, which prior to the use of electricity would have required the labor of over 200 men.

"I took some English friends to Homestead. Mr. Schwab, after guiding us through several departments, said: 'I will now show you where we turn out 750 tons of plate girders per day.' The mill was in the shape of an 'L.' We went into the short end of the 'L' where the furnaces were fed by natural gas, of course requiring no stokers. The end at which we entered had a rather low roof, and there was in sight a contrivance like a battering-ram in front of the furnaces; two workmen were sitting down eating their dinners near by; no one else was present. I thought: Mr. Schwab has made a mistake, he has asked us to see a mill that is not in operation.' But we went through the mill, which was about 200 feet long; and suddenly we heard a rattle and then saw a truck approaching loaded with a big ingot. No one touched the truck or the ingot. The load came to a platform, the crane overhead dropped a pair of tongs and quickly put the ingot on the roller-table, and as it moved to the great rolls, it was automatically kept in place. The adjusting screws of the rolls were turned by little electric motors, and not a man in that house did a bit of work. It was just as easy as what you are doing now—looking on! We went back to the furnaces. There was a fifteen-year-old boy seated in a little place called the 'pulpit.' He was able, merely by the movement

of levers, to open at will any of the furnace-doors and move the car along. And we saw this car come in front of a furnace and the charging machine approach, and take out of the open furnace a hot ingot which was dropped on the car and moved off to its work. There was this boy doing absolutely no hard work, and his mill was turning out 750 tons of steel-plate each day. My English friends said: 'England has no chance in competition with such methods.'

"Now all this sort of thing came about in America because of our necessities. We hadn't men enough to do our work. There was a premium in favor of those who could invent machines to work and thus supply the deficiency."

A NEW LAW OF HEREDITY.

THAT a child resembles in some degree each of its parents we all know. We generally express this by saying that the offspring is intermediate in character between its parents and that a hybrid race is intermediate between the parent races. This, however, is not the way to put it, if we are to credit a law or formula that has been attracting attention among biologists. This law, tho deduced and stated in 1865 by Mendel, an Austrian abbé, was buried until recently in the records of a local scientific society. Mendel believed that his experiments showed that hybrid offspring behave in a definite way, each parental 'character' (that is, each mark or attribute) reappearing in definite numerical ratio; he considered that each character remains pure in the hybrid offspring, and that true intermediates do not occur. Writing in *The Independent* (New York), Prof. L. H. Bailey, of Cornell, the eminent authority on horticulture, gives the following description of Mendel's results and their meaning. The experiments were performed on the ordinary garden-pea, and the shape of the seed was chosen for observation. Says Professor Bailey:

"The seed-shape characters were roundness and angularity—the former being the 'smooth' pea of gardeners and the latter the 'wrinkled' pea. Let us suppose that 25 flowers on round-seeded plants were cross-pollinated in the summer of 1900 with pollen from angular-seeded plants, or *vice versa*, and that an average of four seeds formed in each pod. With the death of the parent plants the old generation ended, and the 100 seeds that matured in 1900—the year in which the cross was made—began the next generation, and these 100 seeds are hybrids. Now all these 100 seeds were round. Roundness in this case is 'dominant.' These seeds are sown in the spring of 1901. If each seed be supposed to give rise to four seeds—or 400 in all—this next generation of seeds (produced in 1901) will show 300 round and 100 angular seeds. That is, the other seed-shape now appears in one-fourth of all the progeny; this character is said to have been 'recessive' in the first hybrid generation. If the 100 angular seeds, or recessives, are sown in 1902 it will be found that all the progeny will be angular-seeded or will 'come true'; and this occurs in all succeeding generations, provided no crossing takes place. If the 300 round seeds, or dominants, are sown in the spring of 1902, it will be found that they behave as before, one-fourth giving rise to recessives and three-fourths to dominants, and this occurs in all succeeding generations provided no crossing takes place. When these three-fourths of dominants are again sown, however, it is found that one-third of them remain constantly dominants and two-thirds split again into dominants and recessives in the proportion of three to one. That is, there is constantly appearing one-fourth part that are recessives, one-fourth part that are constant dominants, and one-half part that are dominants to all appearances, but which in the next generation break up again into dominants and recessives. This one-half part that breaks up into the two characters are the true hybrids; but they are hybrids only in the sense that they hold each of the two parental characteristics—roundness and angularity—in their purity and not as blends or intermediates; and these two characteristics reappear in all succeeding generations in a definite mathematical ratio. . . . . .

"This formula for the hybrids is Mendel's law. In words it may be expressed as follows: Differentiating characters in plants reappear in their purity and in mathematical regularity in the second and succeeding hybrid offspring of these plants: the mathematical law is that each character separates in each of these generations in one-fourth of the progeny and thereafter remains true. In concise figures it is expressed as follows:

1D : 2DR : 1R

1D and 1R comes true, but DR breaks up again into dominants and recessives in the ratio of 3 to 1.

"Mendel found that this mathematical law holds for the other characters that he studied, as well as for the seed-shape. He did not conclude, however, that it holds good for all plants, but left the subject for further investigation."

Mendel attempted to account for this result by a theory of what he called "gametic purity," according to which hybridity follows a law of regularity of averages, the paternal and maternal elements combining according to mathematical probability. Where the two elements are of like character the progeny is constant; when they are unlike it is inconstant; but only one characteristic comes out in any one instance, the other remaining obscured. Says Professor Bailey of this theory:

"This teaching strikes at the root of two or three difficult and vital problems. It presents a new conception of the proximate mechanism of heredity, altho it does not afford a complete hypothesis of heredity since it begins with the gametes after they are formed and does not account for the constitution of the gametes nor the way in which the parental characters are impressed upon them. This hypothesis will focus our attention along new lines, and I believe will arouse as much discussion as Weismann's hypothesis did, and it is probable that it will have a wider influence. Whether it expresses the actual means of heredity or not it is yet much too early to say. . . . . .

"The wildest prophecies have been made in respect to the application of Mendel's law to the practise of plant-breeding, for the mathematical formulæ express only definiteness and precision. Unfortunately, the formulæ can not express the indefiniteness and the unprecision which even Mendel found in his work. He found that individual plants varied greatly, altho the averages were fairly uniform. My own feeling is that the greatest benefit of Mendel's work to the plant-breeder will be in improving the methods of experimenting. We can no longer be satisfied with mere 'trials' in hybridizing; we must plan the work with great care, have definite ideals, 'work to a line,' and make accurate and statistical studies of the separate marks or characters of plants."

Does Gold Grow?—Some reasons for answering this question in the affirmative are given by *Popular Mechanics*, which warns the reader, however, that he must not expect to grow gold eagles from dollars. Says the writer:

"It has been found that gold nuggets under favorable conditions actually increase in size. Gold is known to have grown on mine timbers which have long been immersed in mine water. In the California State Mining Bureau Museum there is a specimen of a piece of jointed cap and post taken from the Comstock, where it had been under water for years, in which gold has formed in the joints and pores of the wood. Gold is constantly being formed in rocks and veins and placers. Just what it is that the baby gold formation feeds on to effect its growth is not known; if it were, a new and wonderfully lucrative industry might be born and all other kinds of farming save the growing of gold might temporarily be abandoned. The formation and growth are due to mechanical and chemical action. As in the case of the animal or vegetable, existing gold has existed in some other state before assuming its present form. Waters which percolate through the earth's crust are said to contain substance from which gold is formed. Thus gold, like the animal and vegetable, must have water in order to thrive. The gold in the water is deposited when it meets the proper precipitant. The precipitant may be an earth current of electricity, some vegetable growth or chemical in the rocks. It has been claimed that the nuggets found in placers are the formations from the waters that percolate through the gravels and are not from decomposed quartz as generally supposed. Those who so contend cite the fact that in the center of nuggets can be often found a small grain of iron sand. This was the nucleus around which the

earth current of electricity created or deposited gold from the substance in the waters, just as it is deposited in electroplating. During long ages this influence was at work causing the gold to form around the little grain of iron ore and then grow to become a bright, shining nugget of gold much larger and purer than any ever found in the veins of ore."

WANTED: WORKERS IN SCIENCE.

THE great need of science in this country, we are told by a writer in *The Popular Science Monthly*, is not so much buildings or endowments, but men. There are not nearly enough workers to investigate properly all the new objects, facts, and principles that are coming to light every day. Science has work cut out for the whole lifetime of many more investigators than are willing to devote themselves to her cause. All of which means that we are after the dollar, first, last, and all the time. Says the writer:

"After all, the real question is, not whether we are doing as much as other people, but whether we are doing what we might and ought. From this standpoint our deficiencies are serious enough. We are not, as yet, nearly able to cope with the work that lies ready to our hands. When the writer was a boy, he used to read and reread such works as Wallace's 'Malay Archipelago,' and look forward to the time when he too would travel, and would discover something new. To-day, in New Mexico, he would undertake to find something new every day of the year, if he had no other occupation; and hardly a day passes in the laboratory without the determination of some new fact. But alas, thousands of specimens remain in closed boxes because there is nobody to work upon them; dozens of promising investigations are never undertaken because there is nobody to undertake them. Buildings, apparatus, and books are well enough in their way; but the great need is for workers to make use of what is already gathered and ready for use, and to take up the threads of thought which flow from every investigation and follow them to the end. While we are seeking to add to the number of workers, something should also be said about their quality. Undoubtedly, there is too much narrowness, and too little general culture, an outward and visible sign of which is the bad Latin published by many of the younger men in the form of zoological names. At the meetings of the American Association for the Advancement of Science, there are sections of zoology, botany, geology, anthropology, etc., all in session simultaneously. The writer found it extremely annoying that he could not be in two or more places at the same time, but very few seemed to see any objection to the arrangement. This indicates limitations which must be regretted, and it is hard to believe that they are inevitable. When the zoologist ceases to know anything about the plants animals eat, or the physical environment in which they live, or even the animals of other groups than his own specialty, the broader ideas of biology will become obscure and evolution itself will cease to be intelligible, just as architecture is nothing to him who studies only single and isolated bricks."

Cud-Chewing Human Beings.—There appear to be authentic cases of rumination in human beings, but they are certainly rare enough to be interesting and worthy of note. Dr. L. R. Müller, of Erlangen, in the *Münchener medicinische Wochenschrift*, records three cases in one family—a father and his two sons. In the father's case the act first began at the age of six years and persisted till the death of the patient in his fiftieth year. Says a reviewer in *The Lancet* (January 24):

"He had always been a rapid feeder, swallowing his food incompletely masticated, while about fifteen to twenty minutes after the end of the meal the act of rumination commenced and lasted for from half an hour to one hour. The food substances were returned to the mouth at intervals of from three to four minutes, were masticated, and reswallowed; they possessed their natural taste, and only during and after this process did the patient derive any sense of enjoyment from his food. If the act were voluntarily prevented a disagreeable sensation in the stomach supervened."

In this case an autopsy showed that the stomach was shaped like an hour-glass. The writer says further that two sons of the patient, the younger of whom was twenty-two years old, had also regurgitated and remasticated their food, altho the father was not aware of this. Another case is recorded by Dr. Ferrannini in the *Riforma Medica* (October 11) of a young man of neuropathic tendencies in whom both solids and liquids returned; as in the former case the regurgitated materials had their natural taste; they were alkaline in reaction. The motor, digestive, and absorbent properties of the stomach were otherwise natural. *The Lancet* adds that cases of rumination or merycism in the human subject have been known since the time of Fabricius in 1618, and considerably more than 100 cases have now been recorded. The first case above recorded is typical of the condition, except that an hour-glass form of stomach is very rarely found.

Pulsation of the Heart after Death.—It is known to physiologists, we are told by a writer in *Cosmos*, that the heart of an animal continues to beat for some time after death. The duration of this phenomenon has been investigated by several scientists, and it has been observed in criminals thirty hours after decapitation. Says the writer:

"When these movements stop, it has been found possible to renew them by injections of arterial blood in the coronary arteries. M. A. Kuliakohas made experiments along this line, first on animals, then on human beings. He has succeeded, by establishing artificial circulation of a warm physiological serum saturated with oxygen, in reviving the heart-beats of an infant of three months, who had died of double pneumonia. This took place between August 3 and August 16, 1902. He has repeated his experiment on human hearts and has several times succeeded in provoking pulsations in the tissues thirty hours after death, in spite of the formation of large blood-clots in the heart."
—*Translation made for* THE LITERARY DIGEST.

SCIENCE BREVITIES.

MAGNETIC CONTRACTION AND EXPANSION OF METALS.—The change of volume of various metals under the influence of magnetism, called by recent writers on the subject "magnetostriction," has been carefully investigated by two Japanese physicists, Messrs. Nagaoko and Honda, of the Tokyo College of Science. Says a writer in the *Revue Scientifique:* "The results are curious, for the effect of the magnetization is not uniform. Steel, iron, and nickel expand, while cobalt contracts." The writer says that divers other magnetic phenomena have recently been studied at Tokyo by Japanese investigators, and he notes that there is a very pronounced activity in that city in scientific work. The Japanese have learned well their lesson in Western civilization, and they bid fair to put their masters to the blush in more than one direction.

THE recent discovery that the growth of pearls is, in some instances at any rate, the result of irritation by a parasitic worm leads H. Lyster Jameson to assert, in *Nature* (January 22), that "the artifical production of marketable pearls in large quantities should present no great difficulties." He says: "The fact that trematodes have been ascertained to be at least one cause of pearl formation in several of the molluscs that produce the marketable gems gives us every reason to hope that, by learning the life-histories of these parasites, we may be able to infect any number of pearl-oysters or pearl-mussels to any desired extent, without any operation on the individual molluscs, by simply placing them in the proper surroundings in company with infected examples of the first host. Once infected, the molluscs could be bedded out on suitable grounds, and left to care for themselves, until the pearls formed in them were of marketable size.

"THERE is a prevalent idea in the [medical] profession," says *The Dietetic and Hygienic Gazette*, "that foods can be concentrated. This thought finds its reflection in the advertising pages of medical journals in the highly colored claims of manufacturers of prepared food. The three main constituents, proteid, carbohydrate, and fat, are represented by such typical examples as meat, sugar, and fat. Meats may have their water driven off and be reduced to powder form; in this way their bulk is diminished to about one-fifth their former quantity; but in order to be taken and absorbed they must have the water restored to them. Sugar is practically water-free, and represents the most concentrated form of carbohydrate available. Fats in the form of butter contain nearly ninety per cent. of carbohydrate. A greater concentration of fat than is contained in these natural products is not possible, and for the most part the manufactured food products contain far less units of energy than do the natural products."

THE RELIGIOUS WORLD.

WHAT IS RELIGION?

MOST people would feel qualified to give some kind of an answer to this question, but how many are able to define religion in terminology at once scientific and comprehensive? Prof. Ira W. Howerth, of the University of Chicago, points out that "the divergent and contradictory uses of the word religion are due not only to the difficulty of understanding the nature of religion, but also to the disposition of those who have written upon the subject to further an ulterior purpose by the definitions they propose." He says further (in *The International Journal of Ethics*, January):

"Current definitions of religion, especially those of a theological character, are usually expressed in terms of belief. Occasionally religion is defined in terms of feeling, and sometimes in terms of conduct or conation, but the popular idea is that religion and belief are identical. The prevalence of this idea is chiefly due to the definitions presented in the writings of a few philosophers and theologians. James Martineau, for instance, defined religion as the 'belief in an ever-living God, that is, a divine mind and will ruling the universe and holding moral relations with mankind'; Bishop Butler, as the belief in one God or Creator and Moral Governor of the world and in a future state of retribution implying immortality; and many writers, among whom is the philosopher Immanuel Kant, have made the belief in immortality the sole basis of religion. The demand of the church for belief, and the constant association in the New Testament of belief with salvation, and unbelief with its opposite, encourage popular acceptance of these definitions."

The great objection to a definition of religion stated in terms of belief—whether it be belief in God, or in immortality, or in spiritual beings—lies, according to Professor Howerth's view, in the fact that such a definition tends to make religion synonymous with a particular form of belief and thus to narrow its scope. We quote again:

"Monotheism is a comparatively recent development in the history of religious thought. It is sometimes said, to be sure, that 'all human beings have the idea of God,' but this is a pleasant fiction invented for theological purposes. 'There is no evidence,' says Darwin, 'that man was aboriginally endowed with the ennobling belief in the existence of an Omnipotent God. On the contrary there is ample evidence, derived not from hasty travelers, but from men who have long resided with savages, that numerous races have existed, and still exist, who have no idea of one or more gods, and who have no words in their languages to express such an idea.' Again, Sir John Lubbock, after citing a score or more of illustrations to prove the point, says that 'those who assert that even the lowest savages believe in a supreme Deity, affirm that which is entirely contrary to the evidence.' This is a different question, of course, from that of the universality of religion, with which we are not at present concerned. All we are now trying to show is that by defining religion as the belief in a Supreme Being we exclude from the category of religious the vast majority of the human race. Not only do primitive religions fall outside of the definition, but also one of the world's great religions, namely Buddhism, which numbers more adherents than any other. Sir Monier Monier-Williams, the learned professor of Sanscrit at Oxford, does indeed declare that Buddhism is not a religion; but this surprising opinion must be due to his desire to be consistent, for he holds that 'a religion, in the proper sense of the word, must postulate the existence of one living and true God of infinite power, wisdom, and love, the Creator and Designer and Preserver of all things visible and invisible,' and that it 'must take for granted the immortality of man's soul or spirit.' 'Christianity,' he asserts, 'is a religion, whereas Buddhism, in at least its earliest and truest form, is no religion at all.' If Buddhism is not a religion, pray what is it? Of what value is a definition of religion which includes only Christianity? However convenient it may be for controversial purposes, it does not satisfy the requirements of science."

The really stable and universal element in all religions, says Professor Howerth, is the "perception of a power not ourselves"; and this power is the "objective factor in religion." We quote, in conclusion:

"Given the perception of a power manifesting itself in the world, and a feeling of dependence upon it, an inevitable result will be the desire of the individual to be in right or personally advantageous relations to that power. Conscious religious activity is always in obedience to this desire. What is sacrifice, fasting, prayer, and all the other forms of propitiation but the effort of men to put themselves in right relation to the power which they apprehend, but do not comprehend? The desire of religion, therefore, is a desire for rightness, for adjustment to the universal order, for harmonious relations with a power objectively conceived.

"We may suggest, then, as a tentative definition of religion, the following: *Religion is the effective desire to be in right relations to the power manifesting itself in the universe.*

"While this definition of religion is not put forward as final, the writer making no pretensions to expert psychological knowledge, it may be affirmed that no narrower definition will include all manifestations of religious life."

A MILLION AND A HALF OF CONVERSIONS.

THE "twentieth-century" crusade of the Methodist Episcopal Church was to achieve a double object—the collection of $20,000,000 and the conversion of 2,000,000 people. The dollars have been secured, but not the conversions. A Methodist clergyman writes to the Chicago *Northwestern Advocate*: "We are all rejoicing over the $20,000,000 secured; but what about the 2,000,000 converts? Are we not saying but little—too little — about these?" This question is repeated by several others, and elicits from *The Advocate* the following statement:

THE ROYAL AQUARIUM, LONDON.

Which has been acquired by the English Wesleyans, the site to be used for a great Church House. It cost £300,000 and was bought out of the twentieth-century "million-guinea fund."

"The case is far better than these brethren and other writers seem to suppose. The writers have all evidently taken the reports of the small increase in the aggregate membership of the church as indicating the number of converts during the four years of the

twentieth-century thank-offering movement. The fact is, there have been at least 1,500,000 conversions during these years and possibly not far from 2,000,000. . . . The general minutes of the church report that during the past four years the number uniting with the church on probation has been as follows:

[illegible]

"These figures for the past four years show the number of probationers at the time the reports were prepared for the conference sessions, but they do not show the actual number who united with the church on probation during each year. To this number might reasonably be added at least 500,000 more who united with charges in the fall conferences and were admitted into full membership before the statistics were prepared for the conferences.

"The number of accessions on probation during each of the last three years has been greater than the number of accessions in any year during the entire history of 129 years of the Methodist Episcopal Church, with the exception of the years 1894 to 1898, inclusive."

These statistics, observes *The Advocate*, "show that Methodism maintains its character as an evangelistic church. So much has been said about its decline that many have come to believe that it has really lost its evangelistic zeal and power; but such persons have not investigated the records to learn the facts. It is still a soul-saving organization."

A TWENTIETH-CENTURY SYMPOSIUM ON IMMORTALITY.

ONE year and a half ago Mr. Robert J. Thompson, a well-known Chicago gentleman, who at one time served as a diplomatic envoy from the United States to France, was induced by the death of his brother to give prolonged and serious consideration to the problem of immortality. He conceived the plan of publishing a "twentieth-century bulletin" on the subject, presenting the evidence advanced by "science, philosophy, and common sense" to show that there is a future life. With this object in view, he addressed the question, "What is the strongest and best reason known to the world for the belief that man's soul lives on after the death of the body?" to a number of eminent scientists, philosophers, and theologians in America, England, France, Germany, Italy, and Russia.

MR. ROBERT J. THOMPSON.

The editor of an interesting "twentieth-century bulletin" on immortality.

The result of Mr. Thompson's investigation is embodied in a book entitled "The Proofs of Life After Death," which is composed, in large part, of the expressions of opinion evoked by his inquiry. We quote the following representative extracts:

DR. CESARE LOMBROSO, of the University of Turin: "The question you put to me is not one that has as yet been solved with scientific certainty. But there is a great probability now given us through psychical and spiritistic researches that there is a continued existence of the soul after death, preserving a weak identity, to which the persistent soul can add new life and growth from the surrounding media."

SIR OLIVER LODGE, president of the English Society for Psychical Research: "If any one cares to hear what sort of conviction has been borne in upon my own mind, as a scientific man, by some twenty years' familiarity with these questions which concern us (Psychical Research), I am very willing to reply as frankly as I can. First, then, I am, for all personal purposes, convinced of the persistence of human existence beyond bodily death; and tho I am unable to justify that belief in a full and complete manner, yet it is a belief which has been produced by scientific evidence."

PROF. J. H. HYSLOP, of Columbia University: "When I look over the whole field of the phenomena, and consider the suppositions that must be made to escape spiritism, which not only one aspect of the case, but every incidental feature of it strengthens, I see no reason except the suspicions of my neighbors for withholding assent."

CAMILLE FLAMMARION, secretary of the French Astronomical Society: "What we call 'matter' vanishes when scientific analysis thinks to grasp it. But we find as the support of the universe and the origin of all form, Force—the dynamic element. The human being has for essential principle the soul. The body is visible and transitory. Atoms are indestructible. The energy which moves atoms and governs the universe is indestructible. The human soul is indestructible."

DR. PAUL JOIRE, president of Society for Experimental Psychology, Lille, France: "The spirit of man progresses every day as his bodily forces decline, and far from growing old, it broadens, develops, and fortifies itself day by day. Medical observation shows that when, at a given time, the organ whose use is to bring in evidence this intelligence is no longer apt to fulfil its functions, it is not intelligence that disappears, but the link that connected it in its relations with the outside world; the phenomenon that takes place is analogous to that of sleep."

ALFRED RUSSEL WALLACE, English scientist and spiritualist: "It (Psychical Research) further demonstrates, by direct evidence as conclusive as the nature of the case admits, that the so-called dead are still alive—that our friends are often with us, tho unseen, and can give direct proof of a future life, which so many crave, but for want of which so many live and die in anxious doubt."

PROF. SIMON NEWCOMB, American astronomer: "I am sorry to say that I have never been able to think out any satisfactory theory on the subject of the continuance of the conscious soul of man after death."

ELMER GATES, professor of psychology and psychurgy, Washington, D. C.: "All possibilities are opened to consciousness, and the possibilities of the universe are infinite; and among these possibilities are those of an endless progressive existence in a universe at whose head is an Infinite Mind, of which we are functional parts."

ANDREW LANG, English littérateur: "I do not think that the question of a future life can be investigated except by the ordinary methods of psychological inquiry. At present I think there is a fair presumption that in time data for the formation of an opinion may be collected."

BISHOP POTTER, of New York: "Apart from Revelation, I do not know any argument likely to be of more service to you than that of Prof. N. S. Shaler, of Harvard University, in his volume, 'The Individual: A Study of Life and Death.'"

REV. R. HEBER NEWTON, of Stanford University: "If I were to say in a word what impresses me most habitually and strongly, it is the impossibility of conceiving of the universe as a cosmos, a beautiful order, a sane and rational system, without immortality."

CARDINAL GIBBONS, of Baltimore: "The belief in man's immortality is universal. . . . God would never have planted in the human heart this craving after perfect felicity, unless He had intended that the desire should be fully gratified; for He never designed that man should be the sport of vain and barren hopes."

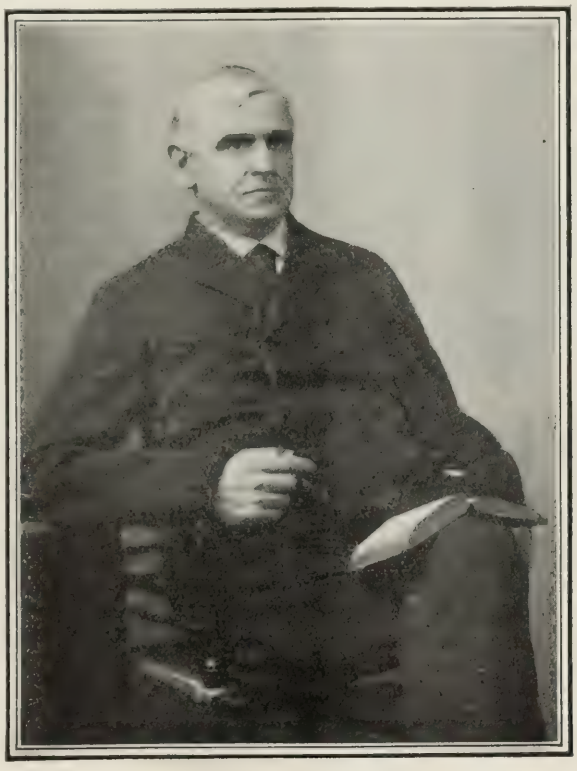
WILLIAM JENNINGS BRYAN, of Lincoln, Nebr.: "If the Father deigns to touch with divine power the cold and pulseless heart of the buried acorn, and make it to burst forth from its prison walls, will He leave neglected in the earth the soul of man, who was made in the image of his Creator. . . . Rather let us believe that He, who in His apparent prodigality wastes not the rain-

drop, the blade of grass, or the evening's sighing zephyr, but makes them all to carry out His plans, has given immortality to the mortal."

DR. WASHINGTON GLADDEN'S ESTIMATE OF PHILLIPS BROOKS.

"IF I were called to name the highest and finest example of Christian manhood which this age has brought forth, my choice would rest on Phillips Brooks. He seems to me to have comprehended and expressed and incarnated, better than any one else I know, the Christianity of the last half of the nineteenth century." These words are Dr. Washington Gladden's, and they are taken from a twenty-five page article in *The North American Review* (February), which appropriately appears at at a time when Boston is commemorating the tenth anniversary of the great preacher's death. The framework of this article is supplied by Prof. Alexander V. G. Allen's "Life of Phillips Brooks"—a book which Dr. Gladden declares that "no intelligent student of the Christian religion—certainly, no minister of the Gospel—can afford to leave unread."

Passing by the wealth of biographical detail which Dr. Gladden embodies in his article, we quote from his concluding paragraphs:



PHILLIPS BROOKS.

From a photograph by Elliott and Fry.

"Phillips Brooks, the man—how large he was! His commanding and beautiful figure was no unfit symbol of his magnanimity, his generosity, his nobility. Of his rare reticence I have spoken; but that was no bar to a most cordial companionship. No man ever needed friendship more or prized it more highly. If there were secret chambers in his life where he dwelt alone with God, there was still large room outside of them, to the freedom of which he welcomed his friends with a glad heart. He was not only courteous and cordial, he was jovial and hilarious, the merriest of companions, bubbling over with fun. This temper seems to have deepened as his hold upon the great spiritual realities grew firmer; the more sure he was of the divine Fatherhood, the freer and the lighter hearted he became. As his biographer says:

"He was bearing testimony to the truth of his own experience, that the joy of living, the pleasure of social converse, the talk which turned upon little things, the wit and the humor natural to man, were not incompatible with religion; that to turn from the one to the other, or always to be ready for either, was only to recognize the divine purpose in God's creation."

"He was a blameless knight of God," continues Dr. Gladden; "no shadow of suspicion ever rested on his character. . . . He stood before the world the one conspicuous figure of the century whom calumny could not touch nor envy belittle." We quote further:

"Of Phillips Brooks as preacher, it is safe to say that he is the greatest of his generation. This appears to be the verdict of the public, for his printed sermons have had an unprecedented circulation. In his manner there was no attempt at what men call oratory; the great majority of his sermons were written and read from the manuscript; there was almost never any gesticulation; his voice was not particularly musical, and his delivery was in defiance of all the rules of elocution; nevertheless, he held and swayed his audiences as few preachers have done in any age.

"Few have been better qualified to speak of him as a preacher than James Bryce, the great English interpreter of America. After alluding to other great preachers he had heard, Bishop Wilberforce, Dr. Candlish, Mr. Spurgeon, Dr. Liddon, and Henry Ward Beecher, Mr. Bryce goes on:

"All these famous men were, in a sense, more brilliant, that is to say, more rhetorically effective, than Dr. Brooks, yet none of them spoke so directly to the soul. With all of them it was impossible to forget the speaker in the words spoken, because the speaker did not quite seem to have forgotten himself, but to have studied the effect he sought to produce. With him it was otherwise. . . . The listeners never thought of style or manner, but only of the substance of the thoughts. . . . In this blending of perfect simplicity of treatment with singular fertility and elevation of thought, no other of the famous preachers of the generation that is now vanishing approached him."

Phillips Brooks's teaching, we are reminded, was "always positive and constructive, never critical or controversial. . . . He was no satirist, no censor; he did not spend his life in pointing out the errors and shortcomings of his fellows; he showed men the better way; he supplanted error with truth; he overcame evil with good."

"And what, in fine, was his message? It was that simple Gospel of Christ which he outlined in his first sermon—the truth of the divine Fatherhood and the human brotherhood; the truth of the presence of God in His world and in the lives of His children; the truth that 'the moral life is the expression of the divine Will'; above all, the truth that Jesus Christ is the revelation of God, and also of man; so that if you want to know God you must look at Him, and if you want to find God you must follow Him; and in looking to Him and following Him, you come to yourself, you realize your own manhood. These elementary Christian truths, which, in our theologizing, we have so grievously qualified and mystified, he brought to light and clothed with power. He made men believe that they not only may be but are the children of the Father in heaven, capable, indeed, of disobeying Him and ruining themselves, but His children still, and sinning against His love every moment they stay away from Him.

"'The Incarnation meant to him,' says Mr. Allen, 'that God and man had met together in the person of Christ—the fulness of God and the complete perfection of humanity.' And this was no incomprehensible thing. 'This new life,' he says, 'into which God comes, seems to be the most quietly natural human life that was ever seen upon the earth. It glides into its place like sunlight. It seems to make it evident that God and man are so near together that the meeting of their natures in the life of a God-man is not strange.' Therefore, his whole conception of the Christian life is that it is as natural as green grass and daisies and blue skies; that it is as simple and wholesome as daily bread; that it is human as mother-love and the trust of childhood; that it is simply coming to ourselves; getting possession of our own powers; becoming what God made us to be, and stands by, at every moment, to help us to be. That was about the whole of it."

In brief, says Dr. Gladden, "he took the religion of Christ, stripped it of the traditions and confusions and heathenisms with which men have bound it, penetrated to the heart of it, clearly taught it, and gloriously lived it. If any one should ask me to

give him my idea of the Christianity of to-day, I should bid him read the sermons and study the life of Phillips Brooks."

THE PROBLEM OF THE "DIVIDED CHURCH."

A SIGNIFICANT sign of the times is found in the changing temper of Christian thought with reference to denominationalism and its problems. The idea of church unity is "in the air," and is a leading topic at church congresses and in the religious press. Canon Hensley Henson, of Westminster Abbey, is the foremost advocate of Christian union in England, and his plea for a common Protestant communion-table has been approved by many influential Anglicans. In Canada the Methodist Church has gone on record, at its recent General Conference in Winnipeg, as favoring organic unity of all the Canadian evangelical denominations. At the meeting of its Federal Assembly in Melbourne, in October, the Presbyterian Church of Australia submitted a tentative basis for union of Presbyterians and Congregationalists. In this country the same tendency is reflected in the appeal issued last August by prominent members of the United Brethren Church, and in the current discussion regarding a possible Presbyterian union. A convention of the New York "Federation of Churches and Christian Organizations" has just been held for the purpose of promoting a plan of "working unity" among Christians; and similar movements are reported from all the leading cities.

Mr. E. I. Lindh, A.M., contributes to the Boston *Transcript* a timely paper on the problem of the "divided church." The first definite step toward a solution of this problem lies, he thinks, in the gradual elimination of the smaller bodies of the various American denominations—the twelve kinds of Presbyterians, the seventeen kinds of Methodists, the thirteen kinds of Baptists, etc. He writes on this point:

"Three phases of the eliminating process are discernible. First we have the gradual but inevitable dwindling of some of these smaller bodies. These are really making no progress whatever. Annual statistics tell their fatal story year after year. Heroic measures are frequently resorted to as a check to the decaying process, but all in vain. The young people especially leave the smaller branch; the rising generation identifies itself with other sections of the church; the older people are passing away. It is only a question of time when these minor divisions will have dwindled to a point where they no longer remain factors in the problem.

"A second phase of this eliminating process is the growing sense of the unimportance of many of the minor articles of faith. The one-sidedness inherent in denominationalism has led to a positive distortion of proportions, a want of harmony in the correlation of various elements of faith. Growing civilization is step by step correcting these faults, and the symmetry of the Temple of Truth is beginning to emerge. Hence the undue emphasis on some purely minor detail of decoration is coming to be taken at its true worth, and the result is a growing sense of the utter unimportance of much which has served as denominational shibboleths. This tendency is noticeable in the main divisions themselves, but in the subdivisions it is particularly serious.

"A third phase tending toward the elimination of the minor divisions of the church is found in the changes taking place in the main divisions. A striking instance of this is the weakening of the regular Baptists on close communion, thus gradually approaching the Free Baptists. Very few churches have as yet taken any definite action on the question, but a spirit of tolerance of open communion is everywhere apparent. In many churches unimmersed Christians, members of other denominations, regularly commune, and nothing is said about it. Large numbers of the Baptist laity believe in open communion, and many pastors, too, personally favor it. One church in Rhode Island has within a year officially voted to invite all Christians to the Lord's Supper. Neither association nor state convention took any action on the matter, and many of the ministers in both bodies, personally known to the writer, sympathized with the step. It is only a matter of time when no communion question will stand between the Regular Baptists and the Free Baptists. What then should hinder the merging of the two?"

The second main step in the solution of the problem of denominationalism Mr. Lindh finds in "the gradual *rapprochement* of the main branches of Christendom." We quote again:

"Genetic and intellectual affinities obtain among the denominations, as elsewhere. They can be grouped and classified, according to their historic cleavages or their thought affinities. Kindred types and groups of denominations fellowship more readily than the unrelated or remotely related. That there is a growing spirit of interdenominational fellowship is undeniable. The churches of the evangelical type are certainly nearer in spirit to-day than ever before. The ritualistic types are likewise approaching one another. The Church of England well illustrates this. The extreme High Church is gravitating inevitably toward Rome, and the extreme Low Church toward non-conformity. Disestablishment is the talk of the day, and the time can not be remote when even that long-agitated step will have been taken. The kinship of thought and sentiment will not be denied. Actual unification has already been attained in the recent merging of the Free Church and the United Presbyterians of Scotland."

A third factor is "the growth of a spirit of Christian fellowship capable of detecting kinship amid divergence of forms."

"The most desirable union, after all, is one of heart and soul, rather than of form and function. In this respect there has been a decided advance in recent years. No longer is it customary for ministers to attack other communions. The rights of others are recognized, and a cordial spirit of friendship is discernible. Union meetings are quite customary, and interdenominational gatherings of ministers are frequent. Notable pulpit exchanges are far from rare among ministers of differing churches; even Congregationalists and Unitarians have begun to exchange within the historic domain of Massachusetts."

That all the Christian denominations will be finally merged into one, Mr. Lindh does not believe. He looks toward "an ultimate situation of denominationalism wherein there will be a few grand types—the ritualistic, the non-ritualistic, the evangelical, the liberal," etc., and holds that "such grand divisions will abide so long as the church exists, and human nature remains essentially as at present."

The Roman Catholic position in regard to the "reunion of Christendom" is stated in *Ave Maria* (Notre Dame) as follows:

"Unless Protestantism throws overboard its cardinal principle as to the right of private interpretation of the Bible, it is difficult to understand how the various sects are to be drawn together in any union that will be other than nugatory and fantastic. Apart from the fact that they all style themselves Christians—tho not all admit the divinity of Christ—their distinctive doctrines are clearly incompatible with one another—are, in a multitude of instances, absolutely contradictory. United Protestantism is, and from the nature of Protestantism's fundamental principle must be, a pure chimera, hardly conceivable in theory and assuredly not practicable in fact. The only real union of Christendom logically possible will occur when the multifarious Protestant sects humbly submit, as sooner or later they will, to the one true church which Christ founded and which his legitimate vicar has uninterruptedly ruled through more than nineteen hundred years."

RELIGIOUS NOTES.

What is said to be the oldest Biblical manuscript extant was lately discovered in Syria, and is now in safe-keeping at Cairo. It comprises the Pentateuch, written in Samaritan characters on gazelle parchment, and its date is the year 116 of the Moslem era, which is equivalent to the year [illegible].

PROFESSOR DELITZSCH, whose lecture before the German court last year on the Babel-Bible origins of the Old Testament created quite a sensation in theological circles, was invited by the Kaiser to deliver another lecture on the same subject a few days ago. "Emperor William's patronage of these views," remarks the New York *Sun*, "is giving impetus to the attention directed to them, and is causing grief to those attached to traditional orthodoxy, of which his Majesty has been regarded as the [illegible]."

FOREIGN TOPICS.

CANADIAN PRESS COMMENT ON THE ALASKAN DISPUTE.

ALL on account of Alaska, Canada finds that now is the winter of her discontent. The press of the Dominion complains of every phase of the recent treaty for the settlement of the Yukon-Alaska difficulty by a commission of six jurists, three to be appointed by the United States and three by Great Britain. If it be well to see ourselves as others see us, Canada has rendered the United States a distinct service through the medium of her newspapers. Those candid sheets refer to "the obstinacy of the Americans," "their utterly preposterous claims," "the discreditable condition of affairs created by United States bad faith," "a member [of Congress] from Missouri . . . who must surely have been drunk, in speaking of the Alaska matter," and other points calculated to assist the British ambassador at Washington in promoting Anglo-American concord. The last extract quoted above is from *The Daily Witness* (Montreal,) which thus drives the thrust home:

"Constituted as it is, the House of Represenatives [at Washington] is as far as speech goes an irresponsible body, talking to please the lowest passions of the constituencies. There seems to have been no one on the floor of the House to resent such a damaging reversal of facts [as that of the member 'who must surely have been drunk']. Such being the case, we submit that no other vindication was possible, and none could have been more appropriate, than the shout of 'You lie!' by a lady in the gallery. Let us be grateful to the friends who induced her to depart before spoiling her eloquence by being further carried away. Cochran is from a remote State, noted for lynching negroes and other erratic forms of civilization; but, as if to show that the disease is universal, a man named Sulzer, from the State of New York, said there was no doubt of the title of the United States to the disputed territory. He did not seem to see he was convicting his nation of barefaced bullying."

HOW IT LOOKS TO CANADIANS.

TWIN BULL (of the British-German Siamese twins): "I 'ope you ain't ablamin' me for the scand'lous w'y the h'other twin's conductin' of 'imself, Sammy. By the w'y, 'ere's a little concession for you."

—*The Toronto World.*

Canadian discontent asserts itself along definite lines. Our contemporaries across the border object that Great Britain, or the Government thereof, is willing to sacrifice Dominion territory to gain the good-will of the United States. This is one grievance. Another is that mere Englishmen may go on the new commission, whereas only Canadians should be appointed by Great Britain. A third grievance is "that the best means of access to the Yukon is yielded to the United States before the arbitration begins" inasmuch as "existing settlements on the tide-waters of the coast" shall "in any event continue to belong to the United States." *The Evening Telegram* (Toronto) uses the following straightforward English:

"The United States carries into diplomacy the arts, graces, and appetites which are exhibited by the highway robber in private life. Great Britain does not want to fight, and perhaps Canada would not want to go to war over the 'few arpents of snow' in the disputed territory. Canada had either to fight or be robbed, and Britain has decided that submission to robbery is cheaper than war. Britain is probably right."

Some newspapers in the United States "fall conspicuously below a proper standard of good taste" in commenting upon the Alaska matter, thinks *The Globe* (Toronto), which throws moreover the following light upon a chapter in American history:

"Those who know how undying is the indignation against the weakness that gave away in 1783 the part of Canada north of the Ohio River, and gave Canada less than she was entitled to in the boundary settlement of 1842, will readily believe that anything like a causeless surrender of our Alaska boundary claim would arouse a strong and dangerous feeling of resentment, not against the United States, but against Great Britain. This is not a question of political expediency; it is a question of historical fact and legal interpretation."

Canadian papers make a great deal of the unwillingness of the United States to call in continental Europe to help settle the matter. There is a great desire across the border to fall back upon The Hague tribunal, while the United States proposal to invite a South American jurist's aid is thus characterized by *The Advertiser*, of London, Ontario:

"The South American republics are under the tutelage of the United States, and in the presence of the Monroe Doctrine it was not likely that a Spanish-American representative would decide in favor of a European Power, no matter what the merits of the dispute might be. The American commissioners also desired to make it a condition precedent to arbitration that all towns and settlements on tide-water then under the jurisdiction of the United States should remain within United States territory, whether within British territory or not. The British commissioners would not agree to this. They took the ground that to recognize that all towns or settlements in tide-water then under United States jurisdiction should remain within the territory and jurisdiction of the United States was a marked important departure from the Venezuela boundary reference."

The Canadians are practically unanimous, too, in objecting to the structure of the new commission. They are displeased by the "three on a side" arrangement as conducing to deadlocks. *The Telegram* (Winnipeg) says:

"When diplomacy failed to bring about an agreement within the commission, the British members proposed that the question should be referred to arbitration on exactly the same lines as those adopted in connection with the Venezuela dispute. The United States had proposed a form of arbitration between Great Britain and Venezuela which Great Britain had accepted. What was fair in that case should have been fair in the Alaskan boundary case. And as the scheme was one proposed by the United States itself in the former case, it should have been acceptable to that country in the latter case. When the British commissioners made this proposition, therefore, they did what was eminently fair and what should have been acceded to. The United States, however, refused to accept that form of settlement."

The whole plan of settlement is a "surrender" to the United States, as more than one Canadian paper puts it. The Toronto *World* sums up this view neatly thus:

"Surrender is the only word that describes the conditions upon

which Britain has arranged arbitration of the Alaskan boundary. The identical terms which were refused by the British representatives on the Anglo-American commission have now been recognized by the British Government. Skaguay and Dyea, and all other ports on tide-water, are excluded from the scope of the arbitration. The United States retains these strategic keys to the Yukon. What is there left to make it worth Britain's while to arbitrate? If Canada's contention is sanctioned by the Board of Arbitration, a *World* special from Washington says we shall have one port while now we have none. It is a very large IF, and where is the port that Canada has such a wild chance of securing? It is a port in name only, and is absolutely worthless to this country as a basis for controlling the trade of the Yukon. The truth is that Britain has tied her hands before leaving the Alaskan boundary with the arbitrators."

French-Canadian opinion is equally discontented, being epitomized in the assertion of the *Patrie* (Montreal) that "England needs the aid and support of the United States in the development of her world-politics. The result of recent events shows that it is time for us to have a definite policy of our own."—*Translation made for* THE LITERARY DIGEST.

ANOTHER GENERAL ELECTION IN JAPAN.

ALTHO the voters of Japan emerged but recently from the throes of an exciting general election, they now find themselves plunged into the distraction of another. It is to take place on March 1, the Emperor having found himself obliged to dissolve the lately elected Diet last December. This crisis is the first fruit of the Anglo-Japanese alliance, altho its direct cause was the land tax. The Japanese land tax must not be confused with the Japanese house tax. The land tax is paid by the Emperor's subjects, and its reduction to certain limits was promised by a ministry no longer in power. But the naval expansion entailed by the Anglo-Japanese alliance prompted the present ministry to base its budget upon a maximum rather than upon a minimum land tax. The opposition parties in the new Diet would not tolerate this policy. Compromise was found impossible. Party feeling is very warm and the Government is accused of bad faith. On this point *The Japan Weekly Mail*, a British paper published in Yokohama, says:

"We observe that journalistic controversy still continues about the question of the increased land tax and official *bona fides*. It is asserted by one party to the controversy that the Government is guilty of a breach of faith in asking the Diet to vote for an increase of the land tax from January 1, 1904, in spite of the pledge given in 1899 that the tax should revert to its original figure at the close of 1903. That appears to us to be an argument based on a misconception. The Government gave no pledge of any kind. It merely agreed that a bill providing for a permanent increase of the land tax should be altered so as to limit the increase to five years. The Government has no power to make any hard-and-fast promise in such a case, for the decision whether a tax shall or shall not be increased or imposed rests ultimately with the Diet. The Diet insisted on setting a certain limit in 1899 and the cabinet necessarily agreed. That is all. And now the Government comes to the Diet and asks it to agree that another increase of the tax shall be made from 1904. Truly it seems absurd to talk of breach of faith in such a context."

Naval extension is the real issue of the coming election. All authorities agree upon that. But can naval extension be had without maintaining the increased rate of the land tax? Down with the land tax! cry the opposition parties, and pay for the new navy with money from other sources. *The Kobe Chronicle*, a leading British paper in Japan, observes:

"After succeeding very effectively in keeping its own counsel for some days, the Government dissolved the Diet . . . having failed to come to an agreement with the opposition parties in the matter of the continuation of the increased rate of the land tax. There appears to be a general inclination in the Japanese press to blame the Katsura ministry for its action, tho the Government is not without its defenders, who allege that the opposition was animated entirely by party spirit in the action taken to thwart the Government's plans. It is unfortunately only too true that the Constitutional party has taken up a very doubtful attitude on the questions in dispute, its leaders alleging that they are not opposed to naval extension *per se*, but merely to the retention of the increased rate of the land tax as a means of paying for such extension. We have already stated that in our view the Constitutionalists were in the right in asking for the fulfilment of a pledge given by a previous ministry in the matter of the land tax; but when the leaders of that party urge that the naval extension should be proceeded with at the cost of railway construction, it seems to us there is very little to choose between the two disputants."

GERMANY'S ALLEGED PLAN TO ALIENATE GREAT BRITAIN FROM THIS COUNTRY.

THE most surprising feature of Emperor William's recent change of ambassadors in Washington is the series of positive statements in the European press as to what it all means. But these positive statements, unlike the pieces of a Chinese puzzle, can not be fitted together. English organs, for instance, insist that Emperor William, having formed a deep plan to alienate Great Britain from the United States, found Ambassador Holleben a clumsy instrument and sent Baron Speck von Sternburg to take his place in Washington. German organs, without saying just why von Holleben left—altho mentioning his influenza—declare that the British press is simply using the incident to poison the American mind. French papers have evolved a third hypothesis, according to which Emperor William is irritated by the Monroe-Doctrine checkmate to his Venezuela campaign and changed his Washington representative as a means of letting the American people know his mind. It may mean much or little that throughout this maze of foreign press conjecture the London *Times* has refrained from uttering a word editorially on the subject. It has, however, permitted its correspondent in the United States to send some unusual despatches—so unusual, indeed, that the London *Spectator* comments upon them. "For trenchancy and plain speaking," it says, "they were in every sense noteworthy." Furthermore, "an abler or more powerful piece of special correspondence . . . . could hardly be found in the history of telegraphic journalism." Further:

"*The Times* deserves the gratitude of the nation for its courage and good sense in allowing its New York correspondent to use language so unmistakable. That he is well advised in what he says, we can not doubt. German ambassadors, we may be sure, do not venture upon such action as Dr. von Holleben took at Washington unless they are fulfilling the will of their Emperor. But tho we agree with *The Times* correspondent as to the cause of Dr. von Holleben's recall, we can not but feel a certain sympathy with him in his fall. It is true he told the Kaiser the things that the Kaiser wanted to hear rather than the things that were, but that is the common result when a subservient agent is working for a headstrong, self-willed master. *The Times* correspondent says Dr. von Holleben failed to acquaint the Kaiser with the true state of American feeling, and that he reported what he thought would be pleasing; that he allowed the Kaiser to offer a statue of Frederick the Great to the United States, and failed to warn him that it would be coldly received; and generally that he did not keep the Kaiser from making blunders in his treatment of America. No doubt; but can we feel sure that if he had spoken the plain truth it would have been believed, or even well received? It might merely have hastened his recall. It is not every one who can 'smell the parasite through the prophet' when the prophet is prophesying things that please the royal ear."

Here is an extract from one of these despatches of the correspondent of the London *Times*, who is allowed just now to indulge in much plain speaking:

"At least so long ago as 1898 the Emperor seems to have con-

ceived the plan of alienating England and the United States. It was probably much earlier, but then it took definite shape. It is difficult to see how Dr. von Holleben could have sent the account he did of Lord Pauncefote's action with reference to Spain unless he understood that the Emperor wished to have a statement he could use against England. In dealing with that matter I have always preferred to consider Dr. von Holleben as the instrument, not as the original author, of those astounding perversions of facts. They did some mischief. They gave Anglophobe journals a pretext for calumnies against England. They hastened Lord Pauncefote's death. But if the Emperor believes that kind of advantage worth the discredit it buys let him consider what has happened since. The reaction against those perfidies from Berlin has been one cause of American distrust of Germany and of her Emperor."

"The Kaiser's conception of America and of what can or can not be done here," says this same authority, "is essentially a false conception," a thesis which is developed in the following candid fashion:

"American opinion is not amenable to certain diplomatic influences nor to the innuendos of a reptile press. With trivial exceptions there is no reptile press here. A paper that can be bought is not worth buying. True, one other embassy in Washington is believed to employ methods of approaching the American mind not unlike those which are found useful on the banks of the Spree or the Neva. But they accomplish little, accomplish nothing of permanent value. Nobody knows better than Baron Speck von Sternburg, who is expected to succeed Dr. von Holleben, the futility of the scheme which the Emperor appears to cherish. The real obstacle to the success of his policy is to be found not in Washington, but in Berlin. Let him make a change there if he wishes a change here. The imperial palace, not the Washington embassy, is the root of the mischief. Probably Dr. von Holleben's fault was in his misunderstanding of the conditions here. He misled his Emperor on some points innocently. But it is quite certain that present imperial methods will never answer."

Having thus published the first instalment of his exciting serial, the correspondent a day or two later brought it to a conclusion which is anything but lame and impotent in English opinion. Here is what he said:

"The usual inspired denials of the universally credited reason for Dr. von Holleben's recall come from Berlin and Cologne. Nobody heeds them. They are not believed. This or that cause among the half-dozen alleged may or may not have contributed to Dr. von Holleben's fall. The broad fact remains. The Emperor set him a task which he failed to perform. He was to win American good-will for Germany and estrange the United States from England. It was an impossible task. American good-will to Germany may be had at a price, but not at the price of alienation from England. There is enough friendship here for both, tho in differing degrees. There is none at all for him, be he ambassador or emperor, who thinks to secure it by underhand means, by intrigue, by supplying 'cooked' news to complaisant and therefore unimportant newspapers, by clumsy compliments, or by clumsily disguised ambitions, notoriously incompatible with settled American policy."

One Parthian shaft the correspondent could not resist the temptation to let fly:

"It is suggested by the Paris *Temps* that the Emperor may really have wished to signify by the withdrawal of his ambassador his displeasure with America. We could endure even that, but we have had to be told of it from Paris. It has occurred to no one here. On the contrary, one of those innumerable inspired German newspapers whose eager explanations are cabled daily for our enlightenment declares with emphasis that the attitude of their Government has been not merely correct but friendly. Why should it be otherwise? In this present game of diplomacy in which Germany and the United States have been engaged every point thus far has been scored by the President, not by the Emperor. It is not usually the winner who loses his temper. If, as the *Temps* believes, the Emperor relieves his irritation against us by rebuking his own ambassador, we think we get off cheaply. We are willing to atone on the same terms to any other Power for any other sins we have not committed."

Press comment on this topic, it will be observed, unfolds itself upon the principle of those toy eggs which when opened are found to contain another toy egg, and so on indefinitely. It was the London *Spectator* that sent us to the London *Times*, and now the London *Times* sends us to the Paris *Temps*, which has this to say:

"The sudden recall of the German ambassador, Dr. von Holleben, has been politely but vainly accounted for on the plea

GERMANY AND THE UNITED STATES.

Whether the Panama or the Nicaragua Canal is built, the interest of these two friends will always conflict.

—*Fischietto* (Turin).

TWO OLD FOXES.

UNCLE SAM TO JOHN BULL: "It's no use your pushing Venezuela and coming with your hands full of arguments. Your weapons will never be as powerful as those in my arms just now." —*La Caricature* (Paris).

CARTOONS: UNCLE SAM, JOHN BULL, AND THE KAISER.

of health. Every one knows that it is to a wholly diplomatic complaint that this eminent personage owes his retirement. Herr von Holleben resumed his post a few months ago after a long absence. It can be only with manifest inconvenience that a diplomatic representative is changed in the middle of a delicate and complicated negotiation. No doubt the new representative, Baron Speck von Sternburg, is thoroughly familiar with American diplomacy. He lived long in Washington as first secretary, and he married an American woman. His transfer to Samoa as commissioner there did not take him far from the sphere of United States interests. None the less Herr von Holleben was in authority, a representative chief. He held all the threads of the skein in his hand, he was long accredited to Washington, and he seemed in a better position than any one else to fulfil a delicate mission. The Emperor suddenly recalls him. The first question that suggests itself is, What does this step mean? Is the ambassador himself being punished? Is the United States Government receiving some hint? It is well known that the recall of an ambassador can, without suspending diplomatic relations, indicate a certain coolness between two countries. Does William II. want to show that he is aroused by the tone of the American press, at the distinction which it draws, between Great Britain and himself?"

The idea is not very plausible, in the opinion of the Paris organ. "One does not fly in the face of a country like the United States in the very middle of an international difference. Must we then believe that Herr von Holleben alone is receiving punishment? Yes and no":

"This diplomatist had evidently ceased to be an acceptable person in Washington if he ever was such. He was mixed up in the retrospective polemics over the war with Spain. It was he—acting probably under orders—who, irritated at seeing history falsified in the interest of an Anglo-American understanding, recalled, by the publication of an authentic document the anything but friendly part played at the conference of diplomatists by Lord Pauncefote, the British ambassador."

It is odd that American opinion attached such little weight to this revelation, continues the *Temps*. The United States continues to be grateful to Britain for a service never rendered:

"This sword-thrust into the water greatly surprised and irritated William II. He vented his wrath for the failure on Herr von Holleben. Prince Henry's trip did not mend matters. The Yankees are acute enough not to care to have people rush into their arms, embrace them effusively, or think they can be won by treating as a princess of the blood a young lady who as daughter of the Chief Magistrate can have neither rank nor title—and, finally, embarrass them by forcing their hand with the gift of a statue of Frederick the Great that they do not know how to dispose of. . . . American opinion has regarded Germany's course in Venezuela as an attack upon the rights and the security of the New World, while it sees nothing to complain of in the course of Great Britain. President Roosevelt and Mr. Hay have, by a mere wave of the hand, overturned the plans and combinations of William II. This leaves him in an unfortunate plight in the eyes of the world and of himself. Such ill-humor was natural. Herr von Holleben is the instrument, but the United States is the real object. It is across the body of his ambassador that the Emperor of Germany makes a gesture of irritation at the great republic."

It seems to be the doom of the German press to exist in a state of perpetual wonder at the perfidy of Great Britain. In no organ does this wonder find more adequate expression than in the *Kreuz Zeitung* (Berlin), an exponent of Conservative, Agrarian, and bureaucratic opinion. That paper has discovered an "international group of conspirators" actuated by "hatred of Germany" and having "ramifications" all over the world. London, however, is the headquarters, altho the British Government takes no part in the business. Unfortunately, however, "the English ministry has lost its nerve" in regard to Venezuela, or seems to have done so. The Berlin paper also expresses indignation at "the slanders which English society and the English press permit themselves to indulge in on the subject of Emperor William." The *Neueste Nachrichten* (Berlin) is plain-spoken regarding insinuations that the German Emperor seeks to estrange "the Anglo-Saxon brethren," denouncing all such comment as calumnies of the British press. It adds:

"We could also quote many American papers that treat us no better in spite of last year's fraternizings. These American papers ascribe the basest motives to Germany, altho they must know that their repulsive allegations are without foundation. But we shall rest content with merely alluding to these matters, for it is not our business to teach our British and American foes better manners or to return their unworthy insults. Let us rather learn from them a lesson as to Germany's future course."

The assertion that Herr von Holleben made it his business to alienate Great Britain from the United States is an English slander, says the *Vossische Zeitung* (Berlin), which finds consolation in the personality of the new German diplomatic representative in Washington, Baron Speck von Sternburg. That gentleman has evidently no objection to communication with the newspapers. The German organs quote his utterances at length, and what he especially admires in us would comprise quite a catalog. A few of the items are our "liveliness of disposition," our "fair and brilliant women," "the ease" with which we "do immense things," and our "genius." The *Hamburger Nachrichten* says "it is permissible to hope that he will not talk too much on the other side," and the *Independance Belge* (Brussels) thinks his task a great one:

"The truth is that the cordiality of these [German-American] relations is seriously affected and the Berlin Government must put a good deal of water in its wine to change the feeling of suspicion with which it is regarded in Washington. This suspicion is easily understood. In the first place Germany is the principal industrial competitor that the United States has in Europe. In the next place Germany is the only European Power that seriously aims at extending its influence in South America and which might therefore affect the integrity of the Monroe Doctrine. To change ambassadors under such conditions does not signify much. It is a complete change in German policy that is necessary, but for our part we greatly doubt if Berlin will resign itself to that."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

GREAT BRITAIN AND GERMANY.—The international relations of Great Britain and Germany, according to the *Zeit* (Berlin), are to-day more strained than they ever were before.

MACEDONIA.—Russia is seriously thinking of taking Macedonia in hand, says the *Politische Correspondence* (Vienna). The plan is to exclude as much as possible all influence but that of the Czar's Government.

DEJECTED FRANCE!—France has lost faith in herself and in her future, says the *Libre Parole* (Paris). When anything important happens in the world France must ask herself not what is she going to gain but what is she going to lose.

SOCIALISM.—The evolution of Socialism into a practical working political system and the dissolution of the old "scientific Socialism" of the past, more theoretical than anything else, is the great fact of our time, says the *Économiste Français* (Paris). One result of this tendency is a division of the whole Socialist movement into two almost hostile camps.

WHO KARDORFF IS.—The name of Kardorff has become as much associated with tariff legislation in Germany as was that of McKinley with the same species of legislation in this republic. The *Nouvelle Revue* (Paris) favors the world with this thumb-nail sketch of the some time president of Germany's tariff commission: "The commission had at first very stormy sessions presided over by Herr von Kardorff, an old reactionary from the country, with a much-scarred visage, irascible, and celebrated for his misadventures in the management of his own estates. An effort was made to override the minority, but so clumsily that von Kardorff always found a majority against him. A series of adverse votes finally impelled von Kardorff to resign."

THE PRINCE OF WALES' BABY.—The Prince of Wales has become the father of another fine boy, whereupon London *Public Opinion* says: "Congratulations to the Prince and Princess of Wales on the new arrival at Sandringham! An excellent Christmas present to the royal family and the nation! There are now no fewer than five princes to guarantee the direct succession to the throne. It is impossible not to think of another royal family [that of the Czar, presumably] to whom the appearance of a baby boy would bring something more than satisfaction. To those who have shall be given, seems to apply in the matter of heirs as of riches. The birth of the Prince of Wales's fourth son rounds off the momentous coronation year of his imperial grandsire."

NOTABLE BOOKS OF THE DAY.

MR. BANGS AGAIN.

MOLLIE AND THE UNWISEMAN. By John Kendrick Bangs. Cloth, 5½ x 8 in., 198 pp. Price, $1.00 net. Henry T. Coates.

THE publisher's announcement of this little brochure of whimsicalities suggests that it is sure to recall the immortal adventures of "Alice in Wonderland." The suggestion is scarcely felicitous; firstly, because the reader would be pretty sure to discover this for himself, and, secondly, because the needless reminder only tends to keep him the more actively conscious of the quite different merits of the two respective stories. No critic, probably, has ever yet succeeded in classifying satisfactorily the qualities that go to make up the charm of Lewis Carroll's "Wonderland." The safest definition to arrive at perhaps is to dub it a dream of the subconscious mind at its airiest, sportive, irresponsible best, and let it go at that.

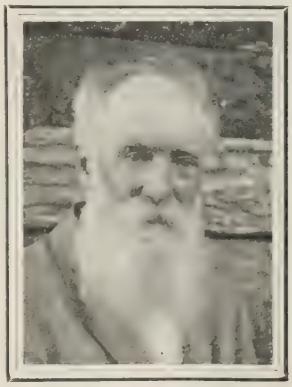
JOHN KENDRICK BANGS.

Viewing it from this point, Mr. Bangs's latest effort at juvenile mystic humor falls a long way behind that of his famous predecessor, for the humor of "Mollie and the Unwiseman" savors not the least of subconscious creation; on the contrary, it smacks distinctly of the active workaday mind, of the will to do rather than of the temperamental impulse that *willy nilly* must give play to its own surging conceits. Mr. Bangs's humor for grown-ups is of much better stuff than is this little volume of childish conceits. His play upon the actual or possible in daily happenings is always good, and he often hits the humorously unexpected. In this latest venture the surprises are rare and the labor too much in evidence, while the would-be wisdom lurking beneath the child nonsense of the situations strikes the reader as more childish than child-like.

QUIET MUSINGS OF A PENMAN.

LITERARY VALUES. By John Burroughs. Cloth, 5 x 6¾ in., 250 pp. Price, $1.10 net. Houghton, Mifflin & Co.

MR. JOHN BURROUGHS long since won his place in the hearts of his readers by writings that showed his sensitive and devoted allegiance to the little mysteries of animal and vegetative life. In this book he brings the same placid, subjective kind of mind to a consideration of the qualities which mark, or should mark, written thoughts. He is not as explicitly didactic as such a title might indicate, and his tranquil distillation of the literary grapes has a slight flavor of dogmatism. In fact, to one who has ever studied a good book on rhetoric and is familiar with the standard critics, this little volume of Mr. Burroughs will little profit. Its charm and merit lie in the exposition of his views, rather than in the views themselves. He does not bring much that is new, illuminating, or instructive; but he talks pleasantly on subjects which are close to the heart of a book-lover.



JOHN BURROUGHS.

A few of the essays comprised in this volume are not on literary subjects: for instance "Thoreau's Wildness," "The Spell of the Past," "The Secret of Happiness." In the article, "Criticism and the Man," Mr. Burroughs might be holding a brief for himself. He regards the individual note, the idiosyncrasy of the critic, as more valuable, more profitable, than his impersonal judicial quality. "Positive judgments in literature, or in art, or in any matters of taste, are dangerous things." However "dangerous," they are the judgments most desirable. A reader wants to know what the critic believes a work to be, and the more positive and unmistakable his expression of opinion is, the better. Not, of course, that this implies correctness. The best critic may err, the poorest may chance on the truth; but surely, if we are seeking somebody else's estimate of a work, we want to get it as clearly and as indubitably as possible.

In his remarks on "Recent Phases of Literary Criticism," "Thou Shalt Not Preach," and "Democracy and Literature," the leaven of religious and metaphysical views in Mr. Burroughs's own mind enters into his point of view with more disturbing influence. His treatment of "Poetry and Eloquence" is more satisfactory. In referring to George Meredith's occasional obscurity in expression, he says: "There is a large blind spot in his mind, so that at times an almost total eclipse passes over his pages." Few, if any, will deny that Meredith is often obscure, but how about this next statement: "The difficulty is never innate in his subject, but is in the poet's use of language, as if at times he caught at words blindly and used them without reference to their accepted meanings, as when he says of the skylark, 'He *drinks* his hurried flight and drops.' How can one adjust his mind to the notion of a bird drinking his own flight?" One is loth to enter the lists with Mr. Burroughs in the matter of skylarks, but there are probably "adjusted" minds that will grasp Meredith's metaphor, even if not caring for it very much when grasped.

His comment on Poe is that "one's sense of artistic forms and verbal melody are alone appealed to." But the author's special predilections are Walt Whitman and Emerson, and the democratic vigor and modern trend of religious thought would appear to have a strong influence on his sense of literary values.

BROADSIDES AND TURRETS.

TWENTY-SIX HISTORIC SHIPS: THE STORY OF CERTAIN FAMOUS VESSELS OF WAR, AND OF THEIR SUCCESSORS IN THE NAVIES OF THE UNITED STATES AND OF THE CONFEDERATE STATES OF AMERICA; FROM 1775 TO 1902. By Frederic Stanhope Hill, late United States Navy. With an introduction by Rear-Admiral George Eugene Belknap, United States Navy, LL.D. (Retired). Cloth, pp. xlix + 515. Illustrated. Price, $3.50. G. P. Putnam's Sons.

CAPTAIN STANHOPE HILL comes by inheritance and inevitably to his calling as a sailorman, and as a writer about ships and broadsides and "the weather gage," armor and turrets, steam-guns and "rams." His paternal grandfather was a notable sea-captain a hundred years ago; and on his mother's side he shows a famous ancestor in that Admiral Blake who defeated Van Tromp in the English Channel, and burned the Spanish galleons in the harbor of Santa Cruz. Mr. Hill went to sea in his thirteenth year, was in command of a ship at twenty-one, and made his record under the eye of Farragut.

FREDERIC STANHOPE HILL.

On the threshold, this sailor-author signals the significant fact that our naval history—all of it that is important and conclusive—up to the time of the Civil War (with the exception of the actions on the Lakes), "has been made in duels between single ships." The story of such an encounter, he thinks, should stir the blood like a heroic poem; and the memoirs of such historic ships should have the personal note of a biography. It is in this spirit that he has gathered his incidents from friends and foes alike, from British or American, from Federal or Confederate authorities. In this generous view of the task he has set himself, he has the approval and support of Rear-Admiral Belknap, who reviews the development and "transitions" of our naval power in an introduction which can not fail to command the interest of the reader by its coherence and its suggestiveness—especially at this time, in view of a possible international emergency, claiming a conspicuous place in patriotic discussion, when it behooves us to consider that (in the words of Senator Hoar) "our independence in the Revolution was won on the sea." For England was to learn—and having learned, to *remember*—that the men of Devon who sailed with Drake and Hawkins, and other stout captains of Elizabeth's day, were no hardier, nor better skilled, nor of more heroic mold, than the seamen of Portsmouth and Salem, Marblehead and Gloucester, of Long Island Sound and the Chesapeake and the Carolinas, in her later tugs of war.

And so this handsome volume may be commended as good and timely reading for gentlemen of the Senate and the House who may be moved, at this juncture, to refresh their memories with its lively stories of the *Reprisal* and the *Ranger* and the *Bonhomme Richard*; of the *Wasp*, and the *Hornet*, the *Enterprise* and the *Essex*—and *Old Ironsides*. There is a certain convincing timeliness in Admiral Belknap's showing of the formidable argument delivered by these early ships—reminding us that, in every year after the Declaration of Independence, we had at sea, in our cruisers and letters-of-marque, from 40,000 to 50,000 men—more than Washington ever had at any one time under his command in Continentals, French contingent, and militia. It was not the French alliance, said Senator Hoar; it was not Rochambeau's column; it was the rate of insurance on British vessels in the Mediterranean, forced up to twenty-eight per cent. by the ubiquity and audacity of American seamen. It was Admiral Sir Charles Napier who wrote from Bermuda in 1813: "Two packets are quite due, and we

fear they have been taken; for the Yankees swarm here, and when a frigate goes out to drive them away they take her. Yankees fight well, and are gentlemen in warfare. Decatur refused Carden's sword."

Coming down to the Civil War, Captain Hill writes of the *Hartford*, the *Monitor*, and the *Kearsarge* on the Federal side, and the *Merrimac*, the *Alabama*, and the *Tennessee* of the Confederates—with all that large-heartedness and generous enthusiasm which we learn to look for from the man before the mast and the man behind the gun, be he "Yankee" or "Rebel." Admiral Belknap counts it no exaggeration to affirm that but for the splendid cooperation of the navy with the Union armies in the field, "there would never have been any surrender at Appomattox." Nor does he shrink from asserting that "there is no naval or military man in Europe, of any reputation as a seaman or a soldier," who does not hold to the opinion that, had the Confederates been able to export their products freely, and to import supplies, recruits, and munitions of war—"the Confederacy would have become a fixed fact."

WAITING FOR HIS OWN EXECUTION.

THE ROOM WITH THE LITTLE DOOR. By Roland Burnham Molineaux. Cloth, 5 x 7½ in., 263 pp. Price, $1.50. G. W. Dillingham Company.

A UNIQUE volume certainly is this among the publications of the opening year. Many doubtless have tried to imagine what are the actual feelings of a prisoner condemned to death during the days and nights of his incarceration. This is precisely what the author tells, together with his sensations, hopes, fears, and revulsions during the period of his two respective trials for murder, and also the actual conditions and occupations of the inmates of "the room with the little door" which leads to the death-chair.

ROLAND B. MOLINEAUX.

Few prisoners who have passed through the same experiences known to young Molineaux during the past four years would have had the early training and association to have fitted them so well to portray the situations he here describes. That he is not a man of distinctive literary training, his work gives ample evidence. There is no attempt at effective passages or graceful terms of thought. The style is scanty, bold, almost crude, at times; the thought thrust forth as if the writer was under a nervous tension and pressure to get through with it. But this apparent haste gives it a terse force of its own; it is exceedingly graphic. There is not an atom of self-pity or maudlin sentiment, and some of the stories told hint at possibilities of the story-telling art yet to be unfolded.

Some of these stories of prison life are—as the author confesses—figments of the imagination, possibilities that might have been or, perhaps, were in the case of others. "The Little Dead Mouse" is a sketch setting forth the last resource of a prisoner to escape the ignominy of the chair, and which Molineaux nursed as his own last hope. It is a grim bit of fiction, which might be expanded into highly tragic form and scope. Another sketch, entitled "Shorty," giving the life story of an Italian prisoner, shows dramatic force of no common order. The circumstances are so true to Italian temperament that one feels the author must have studied them at close range. The intensity, terseness, and unrelenting reality remind one of some of the French masters of short story. Indeed, the writer's temperament and methods, so far as they go, are wholly of that school, and after he has conned the pen trade further, there is much to give promise of future success.

The writer dedicates this volume of unique lore "with reverence" to his father. It is worth reading if only for its suggestions of the stoical, desperate indifference that may possess a man's soul even when he believes it is "all up" with him.

THE LIFE OF A FAMOUS SAINT.

ST. AUGUSTINE AND HIS AGE. By Joseph McCabe. Cloth, 5½ x 8 in., 516 pp. Price, $2.00 net. G. P. Putnam's Sons.

AUGUSTINE of Hippo stands out conspicuous amongst his ecclesiastical contemporaries, and his name is more familiar to the mind of the general reader than that of either Ambrose or Jerome. Yet Ambrose was superior to him in statesmanship and sagacity, and Jerome infinitely above him in learning. It is the unique personality of Augustine that endeared him to such different men as Boccaccio, Calvin, and John Henry Newman. The bishop of Hippo is less known as the crusher of the Donatist schism and the antagonist of Pelagius than as the author of the "Confessions" and of the "City of God."

Mr. McCabe, in this learned and fascinating work, has given us a fresh and vivid portrait of the great Father of the early African Church. He very acutely points out that the Augustine of the "Confessions" was not the reckless youth he appeared to the pious bishop who had parted forever with the paganism of earlier days, before the ideal of a new religion had projected itself into an Apocalyptic vision of the "City of God." In addition to the genuine erudition exhibited by Mr. McCabe in this biography, he has grouped his material with so fine a sense of proportion and with such broad spiritual sympathy that the environment of the great church champion in Africa, at Rome, at Milan, and finally at Hippo rises before us with an impression of life-like reality. The passing away of the old religion and the establishment of the new, the last days of the empire crumbling before the inundation of triumphant barbarism, are set down with clear and picturesque detail. Mr. McCabe's style is vigorous and highly wrought, and under his graphic pen Augustine stands forth with somewhat of the cold, rugged features of Calvin, altho his Predestinarianism is that of St. Paul and not that of the Genevan logician. Augustine the man makes, indeed, a figure in history much more important than Augustine the theologian. As Mr. McCabe has judicially said:

"In the world of thought and letters Augustine has left an enduring memorial of his great powers. With the advance of our knowledge of the vast theater in which human life is enacted, and with the increasing penetration of humane feeling and ethical control into religious thought, even Catholic theology is departing more and more from Augustine's conception of the Gospel message. It may be that his distinctive opinions will eventually be abandoned by all but the historian or the pathologist of ideas. But, whatever judgment they pass on the convictions that inspire his actions and the results that followed them, men will not refuse their admiration to one who devoted his great ability so strenuously to the unselfish prosecution of a high ideal in a world of deep corruption."

This scholarly and important work is enriched by a bibliographical chapter of great value.

A BELLOWS-MADE WHIRLWIND.

THE WHIRLWIND. By Rupert Hughes. Cloth, 5 x 7½ in., 405 pp. Price, $1.50. Lothrop Publishing Company.

MR. HUGHES has built up a romance which calls for small praise and less criticism. It is "made-up" throughout; it is a wearisome thrashing out of Civil War facts and data; the style is exuberantly sophomoric, and the character-drawing is of the crudest order. To offer so many pages—half a thousand!—to a reader to-day with no more justification is something more than temerity.

A pauper boy, whose parents are illiterate and uninteresting, manages to get a schooling in the most wretched of village schools; becomes a soldier with no knowledge of tactics, and at the end of the war is a general; is a tall, homely fellow, and wins the love of a refined girl of social standing, and is nominated for the Presidency, shot down by a crazy man, and dies. That is the story. There are no complications of "plot," altho this sturdy, rock-hewn man, both while engaged (practically) to the refined girl and several years after their marriage has a flirtation, and, presumably, something more, with another woman, a frivolous Southern flirt, and his wife leaves him.

RUPERT HUGHES.

There are no subtle developments of character, no splendid descriptive passages, no great emotional moments. Mr. Hughes is a literary man of some repute, knows something about music, and has done a little at playwriting and critical essays. Surely, he should have known that this first novel of his, "Whirlwind," is sorry stuff!

As if to impress by his "tall writing" at the start, this example from the very opening of the book shows how he deals with a summer storm:

"The sun was meditating rain. The earth was restless with waiting. In a dry, leaf-choked little gutter at the side of the shiftless, dead-silent country road there rose a quiver of motion; tremulous leaves scurried in their beggarly rags of last year; they reeled in a mad dance, rising higher and higher in widening circles. With them rose handfuls of dust, agitated with the same invisible wakening breath of joy. And now the tiny spiral forsakes its dingy birthplace, it moves swirling along the road, up the hill-slope. It gathers earnestness as it grows. Taller and taller it rises, swifter and wider is its swathe. When it has swept to the hilltop and beyond it is a tall man, a towering giant of strength and energy, a splendid power, tho shaped only by the democratic air and every-day dust and shabby leaves. Many are these twisting columns that every storm whips up along the many highways of the world. As many are their destinies."

? TWO ?
VITAL QUESTIONS

Regarding our now-famous investment proposition

"$10 Secures a $510 Lot in Greater New York"

YOU have asked them—WE will answer them

For we do not believe there is a single objection which a reasonable person could raise, in connection with this offer, which cannot be satisfactorily disposed of by the facts—by proof—bearing out our contention as to the remarkable value of this investment.

QUESTION ONE

"If the property you have advertised is so desirable, why don't you sell it to New Yorkers, who are in the best possible position to judge as to the value and desirability of your property?"

ANSWER ONE

The proportion of our total sales of New York property is about as follows: Sales to residents of New York and Brooklyn 68%, to non-residents 32%. A large proportion of local buyers purchase with the intention of ultimately building. This leaves the out-of-town buyers to benefit by this development, and later to sell at a profit when the ever-increasing demand of the New York buyers for home-sites finally forces the latter to pay the price, which will bring the enormous return that we are confident every investment purchaser must enjoy. Our sales to out-of-town people are almost entirely confined to the winter months, when our local business is duller than in summer.

QUESTION TWO

"If the lots you have advertised in THE LITERARY DIGEST during the past two years are all you represent them to be, why don't you keep them yourselves?"

ANSWER TWO

Increase in the value of real estate is entirely dependent upon development, and the only way a satisfactory development—and by that we mean a great number of residences and inhabitants—can be secured, is through diversified ownership. If we held our $4,000,000 worth of property without improving it or without inducing people to live on it, it would only increase in value in proportion to the pressure of development about it, and probably not one-tenth as fast as if it were improved, distributed in lots, built upon and inhabited. Then, too, the burden of carrying large tracts of vacant land would be more than any prudent operator should care to undertake. We are in the land business just as John Wanamaker is in the dry-goods business. He buys large quantities of goods, advertises them, sells them at a reasonable profit, and all are benefited. We buy land at wholesale, thereby securing it at the very lowest prices, lay it out in lots and retail it at a fair profit. We spend a large proportion of the receipts from our sales in making extensive improvements and, as Mr. Wanamaker does, we reinvest our surplus and so continue business indefinitely.

Remember, we own over 1,800 acres of Brooklyn land in the small portion of the city now unbuilt upon. Some of this **must** be sold in order to get the maximum prices for the remainder.

These are our answers. Have we made ourselves clear? There is much more to tell if you will only give us the chance. You want to make money without risk? Everybody does, and you'll never get a better opportunity than this. **Write us to-day.** Don't put it off *lest you forget.*

CURRENT POETRY.

Recompense.

By E. E. H.

What shall we have who toiled all night through tempest,
At nets let down in vain, or laboring oar?
Yonder, the morn breaks, and, beyond the breaking,
A Watcher and a welcome on the shore!

What shall we have whose little hoard of twilight
Came nearest to the light of others' day?
God gave to all the blue dome of His building—
Only earth's clouds between were sometimes gray.

What shall we have who missed life's loveliest meanings—
Who bore the burden of the incomplete?
There is a wider room for our probation,
And we shall know our missed things when we meet!

What shall we have on whom Time laid for guerdon
The pricking brier and the grieving thorn?
How many an earthly trail of piercing shadow
Hedged up in bud a heavenly rose unborn!

What shall we have whose ghostly galleons foundered,
No man may know in what unfathomed seas?
All seas give up the dead things in their keeping;
Even our ships of dream? Yea, even these!

—In London *Pall.*

Russell Sage, the Great Financier

Russell Sage says, "I do not think the future of New York can be depicted in terms any too glowing. . . . A man who buys real estate in any of the five boroughs of New York City—of course exercising average good judgment—has a fortune before him."

No suburb of New York offers better advantages than Westerleigh for a home or an investment. See Washington's Birthday Offer, page facing reading in front.

There is No Danger

of being unable to stop suddenly in any emergency if yours is a

Winton

To meet with conditions like the one illustrated above does not, therefore, justify the slightest alarm. A Winton Touring Car may be going ever so fast but the operator, quick as a flash, with a single forward stroke of the right arm, can disconnect the power from the transmission and apply a wheel-locking emergency brake. Absolutely no chance for confusion—only one thing to do, and the means for doing under direct command. Simple, isn't it? Of course there are two other brakes, either of which would hold the car, forward or backward, on the steepest hill, but the convenience of this positive-acting emergency brake is a big feature when considering the matter of safety.

Everything about the Winton combines to insure safety, comfort and speed. It's the handsomest car on the market, too. Possesses many inherent advantages which make it the unquestioned triumph of the 1903 season. It is appreciated by those who recognize superiority, and whose good judgment enables them to differentiate between practical construction (with the embodiment of the best and most expensive materials) and superficial qualities.

The new 1903 Winton Touring Car has a 20 horse-power motor, a substantial increase over the 1902 model. The price, everything complete, is $2500. Visit any of our branch or agency depots, and the many features of Winton excellence will be fully demonstrated.

The Winton Motor Carriage Co., Berea Road, Cleveland, U.S.A.

Lincoln.*

(An Ode for the Twelfth of February.)

By Bliss Carman.

My years and generations [illegible] year brings round again
One of the whitest feast-days known to fame.
Our hope, our faith, our love could place no day above
This one we set apart in Lincoln's name.

This day Kentucky bore that great, true man, who wore
His manhood with such sweet simplicity,
That every saving grace and instinct of his race
Throbbed through him as the tides throb through the sea.

Consider all his ways, indifferent to praise;
No smug conceit, no pompous pedantry,
No selfishness, no greed, no impulse but to heed
That hidden word—man's utmost destiny.

In his deep human heart bitterness had no part,
Nor overhaste, nor malice, nor disdain;
Tender he was and strong, hating the mean and wrong,
Yet understanding the frail human strain.

. . . . . .

And what did Lincoln do, but dare be simply true
To that great love which welled in his great heart:
That ancient, homely lore he lived and labored for—
His only wisdom and his only art.

He was too near the earth in his keen, kindly mirth,
To palter with ambition and cold pride;
And yet his lonely soul walked too near heaven's goal,
Ever to lay ideals once aside.

And so he kept his poise through sorrows, hopes, and joys,
A loved, humane, large, rough-hewn shape of clay—
The figure of a man we call American,
Our only plea for greatness in our day.

And how shall we, my friends, best honor him? What ends,
What aims, what aspirations make our own?
What cause would he approve with his great human love,
Now his revered republic is full grown?

. . . . . .

With beauty we must store the good world more and more,
This very day be artists, every one,
Till we have longed and wrought with truth in every thought,
And without gladness not a hand's turn done.

And what does this imply? What part have you and I
With Lincoln and the cause of liberty?
Are there no slaves to-day? While we sit here at play,
Have we no brothers in adversity?

*Copyright, 1903, by Bliss Carman.

The Prudential's 27th Annual Statement.

The Prudential Insurance Company of America has made great progress during the past year. The following figures speak for themselves: Over Two Hundred and Seventy-two Million Dollars of life insurance was written and paid for during the year; a grand total of over Eight Hundred Million Dollars is now carried on the lives of policy-holders; the income during 1902 was over Thirty-three Million Dollars, and the assets now exceed Sixty Million Dollars. The Company commenced business in 1875. To-day it ranks among the leading life insurance companies of the world.

None sorry nor oppressed, who without hope or rest
Must toil and have no pleasure in their toil?
These are your slaves and mine. Where is the right divine
Of idlers to encumber God's good soil?

There is no man alive, however he may strive,
Allowed to own the work of his own hands.
Landlords and waterlords at all the roads and fords,
Taking their toll, imposing their commands.

Not until every man is free to choose and plan
What service he will do for beauty's sake,—
How vent that one supreme desire, the artist's dream,
Bidding new wonders at his touch awake,—

Not until he is made the lord of his own trade,
Can any man be glad or strong or free.
There looms the coming war. Which captain are you for,
The chartered wrong, or Christ and liberty?

—In *The Literary World.*

To James Whitcomb Riley, Gardener.

By HENRY VAN DYKE.

Yours is a garden of old-fashioned flowers;
Joyous children delight to play there;
Weary men find rest in its bowers,
Watching the lingering light of day there.

Old-time tunes and young love's laughter
Ripple and run among the roses;
Memory's echoes come murmuring after,
Filling the dusk when the long day closes.

Simple songs with a cadence olden—
These you learned in the forest of Arden:
Friendly flowers with hearts all golden—
These you borrowed from Eden's garden.

This is the reason why all men love you,
Remember your songs and forget your art:
Other poets may soar above you—
You keep close to the human heart.

—In February *Scribner's Magazine.*

Poems.

By VIRGINIA WOODWARD CLOUD.

[The following are taken from a volume of verse by Virginia Woodward Cloud (Richard G. Badger), entitled "A Reed by the River."]

INTIMATION.

As the sunlight finds the willow, whitening, trembling 'neath its dart,
As the young moon on the meadow,—so is springtime to the heart;
As the hush of tree-tops resting where the sky's red pulses start,
Ere a bud hath broken bondage,—so is springtime to the heart.

Mystery of boughs that show not bud nor blow nor any leaf;
Twilight solitudes that know not if awaiting joy or grief,
Dream that wakes not lest the morrow hold of pain its keener part,
Bliss, whose sweetest depth is sorrow—such is April to the heart.

TO A POET.

The pipe of one undying river reed
Borne down on myriad summers' magic breath
Wakes to thy playing, the immortal seed

PERFECT Permanent Binder for Magazines and Books. Lasts a lifetime. Simple magazine to be sent prepaid for examination. MAGILLIAN ART PRINTING COMPANY, Magillian Bldg., Cohoes.

Of Eden's rose, through gates of life and death,
Blooms in thy song; to make thy fragile mood
The loves of gods were slain and mortals died;
A thousand dawns are thrilling in thy blood,
A thousand darks are blackly multiplied
In thy despair; a thousand souls shed tears,
Their passions pour through time to thine;
Thy heart is heritage of all the years
That fed upon Elysian oil and wine—
Then with no lesser fare of love keep tryst,
Lest the lips starve where gods have warmly kist.

BIRD SONG.

I'm a merry vagabond, I'm a reckless rover!
Give me but a hedgerow, give me but a tree,
Mine is the shy grass, mine the lissome clover,
Mine the blue, untraveled far, the hilltop dim and free.

Every one his song has, mine is but of gladness;
Little wit or wisdom, mayhap, when all is told,
But if thine is weary, if it smack of sadness,
Take a note of mine along, 'twere worth its weight in gold.

All the world is orchestra to this reckless rover,
And half of all my having were wealth enough for me,—
Mine the stream's clear heart, where lonely pines brood over,
And mine the secret throbbing at the heart of every tree.

CHILDREN.

We are but children, with a work and playtime,
A little hour for laughter and for tears,
A little clinging to the waning daytime,
A little yielding unto futile fears.

We are but children, filling Time's great measure,
Breaking a toy to weep when it is done;
Forth from morn's meadows do we reap of pleasure
Little to bear hence at set of sun.

We are but children, weary with pursuing,
Building awhile beside the Bar of Pain;—
Lord, in Life's dusk, forget Thou all misdoing,
And gather us unto Thy heart again!

Forsworn.

By THEODORE ROBERTS.

The Sea, my mistress, called to me out of the night,
When the streets of the town were narrow, and the lips of the tide were white,
And the hearts of men were hostile, and dreams were as driven spray.
She called, and I went to her arms before the turning of day.

Many a secret she taught me, of headland, and mist, and star.
Joy I learned of the canvas, and joy of the dizzy spar.
And I swore, in the starlit watches, by the only God and the Sign,
That never did man love woman as I this mistress of mine.

I buried regret in the North (regret for my deeds amiss)
I forgot that the towns were cold. (Blood-warm is the Great Sea's kiss!)

Send for our new catalogue of dialogues and entertainments, free to any address.

WALTER H. BAKER & CO.

5 Hamilton Place, Boston, Mass.

RAZALL LOOSE LEAF SYSTEM

Write for our book, Systematic Accounting, which explains and illustrates the system. **H. G. Razall Mfg. Co., 413-415 E. Water St., Milwaukee, Wis.**

And I took the gulls to witness, and the birds of the farther flight,
That never the breast of a woman was white as her breast is white.

. . . . . .

Queen Sea, you have had *such* lovers—Cook, and Nelson, and Drake—
Heed not the words I pray, heed not the songs I make.
Queen Sea, I swear by the trade-winds, the tides, and the flush of morn,
That a sweeter love has found me!—and I laugh, who am all forsworn.

—In the *Canadian Magazine*.

PERSONALS.

A Great Japanese Reformer.—"Rarely in any age or nation has it been given to one man so to change the mental outlook of his country as did Fukuzawa that of Japan (1834-1901)." Such is the opening sentence in a review, in *The Nation* (January 22), of a little book of less than 200 pages, entitled "A Life of Mr. Yukichi Fukuzawa," by A. Miyamori (Z. P. Maruya & Co., Tokyo). Continuing, the reviewer condenses the story of the book as follows:

"As teacher, editor, author, he became the intellectual father of half the thinking men of Japan in this generation. The copies of his printed books ran into the millions. Refusing the sword or office, titles or decorations, absolutely honest and fearless, he toiled as the soldier of culture and righteousness to transform a nation. Stepping down out of the ranks of the gentry, his life was spent in lifting up the masses. He was the liberator of his people from Confucianism and other Chinese cramping notions, and from insular narrowness and bigotry. He led the Japanese into the intellectual freedom of the West. He was the exalter of woman. He cared little or nothing for dogma: his one idea was to know truth according to reason. His ethics were summed up in 'independence and self-respect.' For forty years the 'Great Commoner' wrought in the same field with Okubo, Saigo, Ito, and Shibusawa, as well as with Hepburn, Brown, Verbeck, and Greene, to make and keep Japan one of the nations in the van of progress. . . .

"When Yokohama was opened, he found that, with all his Dutch, he could not read the signs or labels, for they were in English. Happily, he was able to take a voyage to America in the first Japanese steamer which the once hermits navigated across the Pacific within seven years after they had first seen coal-smoke from a ship's funnel. Afterward he visited Europe, and again the United States. His book on 'Western Countries,' read by all classes, was like the building of a great window in the dead wall of the national intellect. Yet for years Fukuzawa had to live amid assassins who hated 'evil opinions.' Often he was in the very jaws of death. Seeing how eagerly the soldier and the office-seeker sought to ply their trades—in each case with blunting of the moral sense—he resolved to avoid both battle and boodle. He consecrated himself to the idea that 'the independence of a nation consists in the independent spirit of the individuals composing it.' In a word, he struck at the core of the Confucian social system. On the day of the great battle at Uyeno, in Tokyo, within sound of the cannon, he began the teaching of Wayland's 'Moral Science'—the books having arrived that day. He foretold the rush for office, by

Edwin Markham and Florence M. Kingsley two well-known Authors

Edwin Markham says, "I live in Westerleigh, . . . the most charming suburb of New York City." Florence M. Kingsley says, "The longer we live in Westerleigh the better we like it."

An exceptional offer for 55 lots in Westerleigh. See Washington's Birthday Offer, page facing reading in front.

hot a fighting parties, as soon as war was over. The Kano College which he founded (named after the chronological period, 1893–1903, etc.) a formidable and inspiring rival of the Imperial University, has now over 1,500 students. The *Jiji Shimpo*, which he began and for years edited, is, among its contemporaries, what the two or three greatest journals are in the English-speaking world. . . . His last work was an utterly destructive analysis of the Confucian principles underlying Kaibara's 'Great Learning for Women'—the standard in old Japan for the training or, rather, the subjection of women. It was written after ten years of constructive teaching in journal, book, and lecture, in which he assaulted sensualism and polygamy, and pleaded for the education and uplift of woman as man's companion. His death was mourned by all, from Emperor to laborer, and ten thousand people walked behind his bier."

The Taming of a Russian Bear.—Maxim Gorky has made his peace with the public of Moscow, where his play, "The Night Shelter," was recently performed with immense success. Two years ago, says the New York *Staats-Zeitung*, he had made an unpleasant and remarkable scene in the lobby of the same theater, where his workingman's blouse, collarless shirt, and great boots caused him to be stared at. Turning upon the elegantly dressed loungers, he exclaimed:

"Why do you stare at me so? Do you take me for a prima donna, or a balloon, or a corpse?"

The people applauded this outburst, but he turned his back on them. The newspapers criticized his rudeness, and he replied with the savage satirical sketch entitled "The Too Aspiring Author."

Now, at the performance of his drama, this same Moscow theater public called him before the curtain a dozen times—and he came. As before, he appeared in blouse and top-boots, his usual costume, but this time he had nothing to say. He was pale with emotion and hopelessly embarrassed before this chance audience; he, the poet of poverty, who rules the thoughts of the Russian populace and whose name is celebrated through both hemispheres.—*Translation made for* THE LITERARY DIGEST.

How She Kissed Depew.—To illustrate the ready wit of Senator Depew, Homer Fort tells, in *Leslie's Weekly*, of an incident which he witnessed while the Senator was president of the New York Central road. He says:

"I went to his office to interview him and was asked by his secretary, Captain Harry du Val, to go in and sit down a few minutes. I entered and sat down in a corner. Mr. Depew saw me, but a woman who had seen more than fifty summers sat facing him, not dreaming that a third person was in the office. She was talking animatedly, and her corkscrew curls, denoting spinsterhood, fairly shook underneath her hat. The Senator's clear-cut and often witty replies evidently delighted the woman. She rose facing him: 'And now, Mr. Depew, one more point: what would you advise me to do, invest in real estate?' He leaned back in his revolving-chair and replied: 'There are two

Health, Clear Skin and a Good Figure

I wish I could put sufficient emphasis into these words to induce every woman who sees this advertisement to at least write to me. I have spent 12 years in prescribing **reducing, developing** and **curative** exercises for women in person, and my marvelous success in my work and my desire to reach and help more women induced me to take up the course of physical culture by mail. I can take only a limited number of pupils because I give each one my personal attention, and no two lessons are exactly alike; each woman receives just the work adapted to her individual needs—no more. I know that I can give you Health, Strength and a Good Figure; relieve you from **Nervousness, Constipation, Headaches, Indigestion, Torpid Liver, Obesity, Leanness,** and all so called chronic ailments, and build up women who are run down. I prefer to let my students speak for me and the following extracts are from letters from my pupils:

"I am not nearly **so nervous.** My chest expansion is four inches and the best of all I am gaining in weight."

"My **height is increased a good inch.** My hip measurement has **reduced** from 44 to 38 in."

"It seems wonderful that the exercises could have helped me so much in a short time—the exercises for the **eyes** are as good as any all your other exercises."

"My husband, who has been away for six weeks, was so surprised and delighted over my **reduction** and my **improved figure.**"

"**I never felt or looked as well as at the present time.** I have not had an attack of **indigestion** and but one **headache** in 5 weeks and compared with previous weeks it is a miracle."

"**My constipation is entirely relieved.** I only wish I had known of your physical culture 6 years ago. I should have been saved ten or twelve years of suffering. Your **breathing exercises** are helping me greatly."

"I feel better in every way. **Lighter, brighter** and a **desire to live. My nerves** are better and my general health improved. My **carriage** is very materially better."

"Since I began working with you I have **increased my chest expansion 8 inches,** my diaphragm expansion from 2 to 5 inches, my **bust measurement** from 32 to 36. I have lengthened my front waist line 3 inches."

"My **deep breathing** has given my **skin** a new **life** and **color.**"

"Never in my life have I been as well as I am now, and I am indeed grateful to you. My sister who had not seen me for 3 months was surprised at my changed appearance."

Hon. Wm. T. Harris, LL. D., U. S. Commissioner of Education, says: "It is the glory of the present revival of physical exercises that it is led by educated physicians. It is a new movement of the highest importance. It means the end of the era of quackery in hygiene."

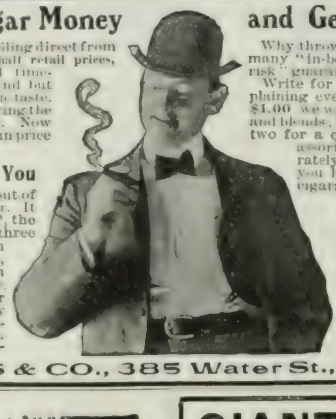
Dr. Frank W. Gunsaulus, D. D., LL. D., writes me: "Your thorough preparation for your work and your high aim must surely give you a worthy success."

My exercises cultivate the distinguished carriage and bearing which at once bespeak culture and refinement. Men cannot do this work for women. They do not understand our conditions nor limitations. Write to me. For 10 cents I will send you full information regarding my system, and testimonial letters from numbers of women who have worked with me; an instructive and interesting booklet, and a card for your dressing-table showing the correct lines of the woman's figure. Yours for a body expressing perfect health, perfect grace and perfect womanhood,

SUSANNA COCROFT, Dept. 178 Washington Street CHICAGO, ILL.

NOTE: Miss Cocroft is President of the Physical Culture Extension work in America. She needs no further introduction to the Public.

Save Half Your Cigar Money and Get a Better Smoke



We are making a great success of selling direct from factory to smoker exclusively, at half retail prices, thoroughly satisfactory cigars—all time-tested, tried-out brands; not one brand but many, guaranteed to suit every possible taste. We made a reputation for quality during the years we manufactured for dealers. Now we're making a reputation for saving in price as well, selling.

Direct from our Factory to You

The saving in price does not come out of the cigars—they are as good as ever. It comes from saving you the jobbers', the salesmen's and the retailers' profits—three profits in your pocket. The saving in price is clear to all. You can prove, without risk, how we'll please you in quality and critically satisfy your taste, for if you don't get as good a cigar or a better one from us for less money than you pay now—if you are not altogether pleased, you get your money back.

Why throw away one half your cigar money on many "in-between men" in the face of a "no risk" guarantee like this?

Write for our booklet "Rolled Reveries," explaining everything, or to hasten matters—for $1.00 we will send a trial assortment of 25 sizes and blends, for 75 cents twelve regular 5 cent and two for a quarter cigars; for 50 cents twelve assorted fives and tens, each cigar separately wrapped and described and showing you how two for a quarter and 10 cent cigars can be bought in boxes of 25, 50, or 100 for from 4 cents to 6 cents each, others from 2 cents to 3 cents each. All transportation charges prepaid.

Your own procrastination is all that prevents your becoming our steady customer and saving money.

things, madam, I know nothing about—real estate and women.' As quick as a flash she stooped and kissed him, said good by, and walked majestically out. He never flinched or seemed surprised, but as I advanced toward him he beamed as he said: 'Those are merely the perquisites of my office; no railroad president is exempt.'"

MORE OR LESS PUNGENT.

The Poets at a House-Party. — [A modern mortal having inadvertently stumbled in upon a house party of poets given on Mount Olympus, being called upon to justify his presence there by writing a poem, offered a Limerick. Whereupon each poet scoffed, and the mortal, offended, challenged them to do better with the same theme.]

THE LIMERICK.

A scholarly person named Finck
Went mad in the effort to think
Which were graver misplaced,
To dip pen in his paste,
Or dip his paste-brush in the ink.

OMAR KHAYYÁM'S VERSION.

Stay, fellow traveler, let us stop and think,
Pause and reflect on the abysmal brink;
Say would you rather thrust your pen in paste,
Or dip your paste-brush carelessly in ink?

RUDYARD KIPLING'S VERSION.

Here is a theme that is worthy of our cognizance,
A theme of great importance and a question for your ken;
Would you rather—stop and think well—
Dip your paste-brush in your ink-well,
Or in your pesky pasting-pot immerse your inky pen?

WALT WHITMAN'S VERSION.

Hail, Camerados!
I salute you,
Also I salute the sewing-machine, and the flour-barrel, and the feather duster.
What is an aborigine, anyhow?
I see a paste-pot.
Ay, and a well of ink.
Well, well!
Which shall I do?
Ah, the immortal fog.
What am I myself?
But a meteor
In the fog?

CHAUCER'S VERSION.

A mayde ther ben, a wordy one and wyse,
Who wore a paire of gogles on her eyes.
O'er theemes of depest thogt her braine she werked,
Nor ever any knoty problemme sherked.
Yette when they askt her if she'd rather sinke
Her penne in payste, or eke her brushe in inke,
"Ah," quo' the canny mayde, "now wit ye wel,
I'm wyse enow to know—too wyse to tel."

HENRY JAMES'S VERSION.

She luminously wavered, and I tentatively inferred that she would soon perfectly reconsider her not altogether unobvious course. Furiously, tho with a tender, ebbing similitude, across her mental consciousness stole a reculmination of all the truths she had ever known concerning, or even remotely, relating to, the not easily fathomed qualities of paste and ink. So she stood, focused in an intensity of soul-quivers, and I, all unrelenting, waited, tho of a dim uncertainty whether, after all, it might not be only a dubitant problem.

SWINBURNE'S VERSION.

Shall I dip, shall I dip it, Dolores,
This luminous paste-brush of thine?
Shall I sully its white-breasted glories,
Its fair, foam-flecked figure divine?

"Macey" SECTIONAL BOOKCASE { Patented—Other Patents Pending }

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL—There is never any risk in buying genuine "Macey" goods. We ship every article "On Approval," subject to return at our expense if not found at our **factory price** 40 to 60 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION—**Do not be misled** by the deceiving advertisements of **Imitators. No other** sectional bookcase has a **self-receding door** that is **absolutely non-binding** and **automatic**—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered a **sweeping decision in our favor.**

Book 25 A Free. DR. HAYES, Buffalo, N. Y.

O shall I—abstracted, unheeding
Swing swirling this pen in my haste,
And, deaf to thy pitiful pleading,
Just jab it in paste?

STEPHEN CRANE'S VERSION.

I stood upon a church spire,
A slender, pointed spire,
And I saw
Ranged in solemn row before me,
A paste-pot and an ink-pot.
I held in my either hand
A pen and a brush.
Ay, a pen and a brush.
Now this is the strange part;
I stood upon a church spire,
A slender, pointed spire,
Glad, exultant,
Because
The choice was mine!
Ay, mine!
As I stood upon a church spire,
A slender, pointed spire.

—CAROLYN WELLS in *Saturday Evening Post* (Philadelphia).

The Make.—FIRST CHAUFFEUR: "Whose make is your machine?"

SECOND CHAUFFEUR: "Well, about one-third the manufacturer's and two-thirds the repairer's."—*Puck.*

When?—"Bobbie, did you know I was going to marry your sister?" "Oh, yes. When did *you* find it out?"—*Life.*

The Retort Courteous.—"Why are you in mourning?" "Oh, for my sins." "I didn't know that you had lost any."—*Life.*

Motto for Decoration of a Room Dedicated to the Prevailing Scourge.—"Honi soit qui mal y ping-pongse."—London *Punch.*

Instead of a Feather.—

Yankee Doodle came to town,
Feeling mighty frisky;
He stuck a duster on his head
And said 'twas Paderewski.

—ELIOT KAYS STONE in *Lippincott's Magazine.*

Mass-Meeting in Microbehollow.—MR. CHAIRMAN: And now, gentlemen, I beg to move a hearty vote of thanks to our best friends, the promoter of the concentration camp (great cheers), and the landlord of the New York tenement (cheers), for the condition they keep these places in, which is so healthy for us. (Great cheering and vote unanimously and enthusiastically passed.)—*Life.*

Our Strange Language.—

When the English tongue we speak,
Why is "break" not rimed with "freak"?
Will you tell me why it's true
We say "sew" but likewise "few";
And the maker of a verse
Can not cap his "horse" with "worse"?
"Beard" sounds not the same as "heard";
"Cord" is different from "word";
"Cow" is cow, but "low" is low;
"Shoe" is never rimed with "foe";
Think of "hose" and "dose" and "lose";
And of "goose" and yet of "choose."
Think of "comb" and "tomb" and "bomb";
"Doll" and "roll" and "home" and "some,"
And since "pay" is rimed with "say,"
Why not "paid" with "said" I pray?
We have "blood" and "food" and "good";
"Mould" is not pronounced like "could";
Wherefore "done," but "gone" and "lone"?
Is there any reason known?
And in short, it seems to me,
Sound and letters disagree.—London *Tit-Bits.*

Fabulous Fortunes

The Street and Elevated Railroads of New York City earned last year $[illegible], passengers [illegible] more than the year previous, more than half as many people as the entire population of the world. Fortunes [illegible] have been made in marvelously short periods of time in Real Estate Investments in New York City. See Washington's Birthday Offer, page facing reading in front

BUFFALO LITHIA WATER

Is Offered to the Public Upon its Record of Results Accomplished. Nothing Save an Actual Test can be more Satisfactory to the Patient than the Testimony of Eminent Medical Men who have Repeatedly Tested its Merits in Bright's Disease, Albuminuria, Renal Calculi, Inflammation of the Bladder, Gout, Rheumatism and Uric Acid Troubles.

Dr. Roberts Bartholow, *former Professor Materia Medica and General Therapeutics in Jefferson Medical College, Philadelphia, and author of "Bartholow's Materia Medica and Therapeutics" and other well-known medical works, says:* **"It is used with great advantage in Gouty, Rheumatic and Renal Affections."**

Dr. G. A. Foote, *of Warrenton, N. C., ex-President Medical Society of North Carolina, formerly Member of the State Board of Medical Examiners, and also of the State Board of Health.* After reporting remarkable relief obtained from the use of this water in a case of **CHRONIC BRIGHT'S DISEASE** in his own person, Dr. Foote says: "From this experience in my own case, and observation of its action in similar cases in patients for whom I have prescribed the water, I have no hesitancy in expressing the opinion that **BUFFALO LITHIA WATER** is the **most powerful of known remedies in this distressing malady** so difficult of treatment."

Geo. Halsted Boyland, A. M., M. D., *of Paris, Doctor of Medicine of the Faculy of Paris, says:* **"There is NO REMEDY SO ABSOLUTELY SPECIFIC IN ALL FORMS OF ALBUMINURIA and BRIGHT'S DISEASE,** whether **acute** or **chronic,** as **BUFFALO LITHIA WATER** Spring **No. 2,** accompanied by a milk diet. In all cases of **Pregnancy** where **Albumin** is found in the urine as late as the last week before confinement, **if this water and a milk diet is prescribed, the Albumin disappears rapidly from the urine** and the **patient has a positive guarantee against Puerperal Convulsions. Used as a substitute for ordinary water during the period of Gestation it will be found invaluable as a preventive of Puerperal Convulsions** and other **disturbances** incident to this condition.

Voluminous medical testimony of the highest order showing the value of this water in the other diseases mentioned mailed to any address.

BUFFALO LITHIA WATER is for sale by dealers generally.

PROPRIETOR, BUFFALO LITHIA SPRINGS, VA.

Fire Insurance

like charity, begins at home. Putting hot furnace ashes into open barrels or cans is unsafe, and uncleanly. **Witt's Corrugated Can** is fire-proof, has close-fitting lid. Made of steel, galvanized. The only safe can for furnace ashes.

Sold by house furnishing and hardware dealers and

The Witt Cornice Co., Dept. K, Cincinnati, O.

The Quality of Light

is of vastly greater importance to your eyes than mere brilliancy. While the light of the **Angle Lamp** is as brilliant as gas or electricity, it has the beautiful, soft, restful quality of oil. All the splendid light is thrown directly downward without shadow, which insures every ray of light being available, and not wasted upon the ceiling. These are a few of the reasons that have made the **Angle Lamp** an indispensable adjunct to the comfort of homes. Other good reasons are its ease of operation, the absence of smoke and smell under any and all circumstances, and its great economy—eighteen cents' worth of oil a month is the average cost of maintenance. Our Catalogue "W" shows all styles from $1.50 up, and is sent free on request.

EVANS' VACUUM CAP
Will Make Hair Grow

MARIE JEANNE DU BARRY

SPECIAL OFFER

French Court Memoirs

FROM Henry of Navarre to and through the reign of Du Barry (whose personal memoirs occupy four of the volumes) this set of books covers the back-stairs-and-kitchen-gossip side of French Court history, much as Guizot covers its outward manifestations. And where so much was set afoot with secret and obscure design, where so little was open and above-board, where boudoir councils dictated treaties and the wounded vanity of favorites instigated campaigns, where a low-born woman's caprice could send forth the torch to lay waste the half of Europe, it is impossible to comprehend the curious events of history without knowing the intimate details of those underlying causes. It is a characteristic of these Memoirs that in dealing with the peculiar affairs which are associated in everyone's mind with French Court history of the period, their very simplicity and frankness purges them of all offense.

The undersigned controls a few sets of these personal French Court Memoirs (translated with fidelity into English) which can be secured, in complete sets only, at a very low price and on small monthly payments, if preferred, provided application be made at once.

These few copies are from a limited numbered and registered *de luxe* edition, bound up to sell at $10 a volume. But through a binder's error the leather of the volumes is imperfectly matched; consequently it becomes advisable to dispose of them outside of regular subscription channels, and at a price about equal to the value of the unbound sheets.

A booklet fully describing the edition will be sent, together with price particulars, if you sign and send the inquiry slip below *at once.* Address

J. B. Chadbourne, 11 East 16th St., New York

The last witness is heard by the Coal Strike Commission.

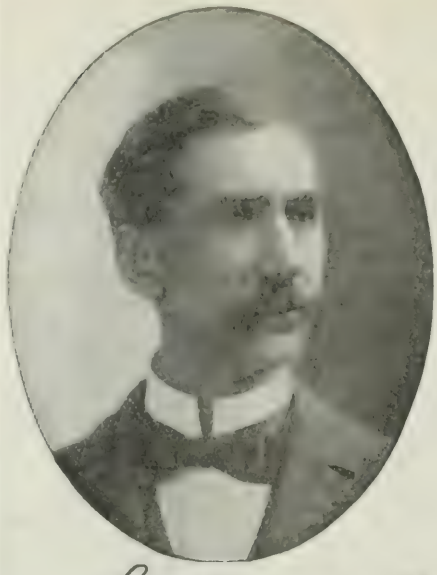
February 6.—The President refuses to act as arbitrator on the question of preferential rates.

Secretary Moody accepts Naval Constructor Hobson's resignation.

February 7.—The Venezuelan negotiators are working on the protocols providing for the reference of the preferential question to The Hague Tribunal.

M. Jusserand, the new French Ambassador, presents his credentials to the President.

The soft-coal miners accept the operators' offer of an average increase of 10½ per cent. in wages.



The Physician's Gazette said of him in 1892:

"*An astute student and sturdy character of Indiana, who reflects credit upon the medical science of that progressive state.*"

A physician who really conquered

RHEUMATISM.

FREE TEST TREATMENT

It is difficult to realize that a single preparation will conquer the worst cases of chronic and acute rheumatism. *But this is true.* Dr. Whitehall's Rheumatic Remedy, sold by druggists everywhere at 50 cents, is doing this in 95 cases out of 100. The doctor says: "*I pledge my word there is not one iota of exaggeration in this estimate; and to help you realize that this is true, I will forward on application, a free proof treatment, I do not guarantee a free cure, but I do guarantee to convince you that this remedy will conquer rheumatism.*" The free proof treatment will make you feel like a new being at once. No cost, remember, to be convinced of the realness of this grand fact that your rheumatism can be cured at home, easily, simply, pleasantly and at trifling cost.

A large practice, yielding from $100 to $500 each, for guaranteed cures, was brought to an end by success obtained in combining all the elements of this formerly expensive treatment into one single formula now selling to the public in drug stores everywhere at fifty cents a box.

Do right and write right **now.**

Wanted— Good Neighbors

Who Value Good Neighbors and a Good Neighborhood About Their Summer Homes.

I want a man—or rather three or four men with $3,000 to $4,000 each, who care as much for a beautiful summer home as I do, to write me and let me tell them of a property I am holding in the most beautiful part of Michigan, for myself and for them. I am not a real estate agent. I am just what I here profess to be, a seeker for a beautiful summer home for myself, with good neighbors. It won't cost you anything to write to me and let me send you some photographs and details. And write now, please, as I shall not care to advertise this again. Geo. Mills Rogers, 100 Washington St., Chicago, Ill.

Stomach Trouble Can be Cured!

STOP TO THINK

It is a fact and can be demonstrated to the entire satisfaction of any one interested. The fact that I am a specialist of twenty years' standing in these diseases ONLY should be sufficient to overcome prejudice and invite investigation for yourself or some afflicted friend. **I have no medicines or appliances of any kind for sale.** Send me your name and address on a postal card and I will send you instructions, without cost or obligation on your part.

Make Your Weakest Link Strong

DEAR FRIEND:

The accompanying photograph represents a man who by the use of natural food has filled his system with vitality, thus making his weakest link strong. He is now a wonderfully developed man **externally** and **internally.** Every function of his body is performed with ease and pleasure. He is free from worry or pain, and the chances are that he will continue to be in ideal health for fifty or seventy-five years to come.

Now that he is living in harmony with Nature, all Nature is working for his good.

WHAT HE SAYS ABOUT IT

813 SEMINARY AVENUE, CHICAGO, ILL.

DR. JULIAN P. THOMAS, 12 W. 93d St., New York.

I have been suffering from mal-assimilation for the last five years. During this time I have been under the care of the most competent athletic instructors in the West, but none of them could do me any good. Five weeks ago I commenced taking raw food and vibratory exercises, according to your system. I then weighed 139 pounds. Now my weight is 178 pounds, a gain of 39 pounds of firm flesh and muscle in five weeks. My strength and endurance have increased correspondingly. By following your theories I have been thoroughly fitted for the performance of my business, that of a professional athlete.

Yours truly, A. PEARSON.

A. PEARSON

P.S.—Three weeks later Mr. Pearson gained 14 pounds more, making a total of 192 pounds.

What has been done in this case can be done for you, if you have faith to try my methods.

Let me diagnose your case. Send for measurement blank and I will give my opinion of your case free.

Yours for Health,

Julian P. Thomas M.D.

Dr. Thomas' UNCOOKED BREAD

cures Constipation, Obesity, Lack of Vitality and Indigestion. Send, in coin or money order, **10 cts.** for sample, or **50 cts.** for 24 cakes. Wholesale rates on application.

If you have written me and have not received a reply, your letter has not been received. Try again.

THE H. C. COOK CO., 17 Main St., Ansonia, Conn.

who [illegible] the American won. Pillsbury awaited [illegible] P—Q Kt 3, and 2. B—Kt 2.

(c) Puts White on the defensive, as Black threatens to destroy White's center position. Very few amateurs would have made the K B P at this juncture. It looks risky; and it is if not followed by most accurate play.

(d) A critical position, which, we are informed, Lasker studied for thirty-five minutes. The threat of the loss of Q B P is not of so great importance as the play to compel Black to give his Kt for B. He avoided the exchange of his Kt for B, by a really master-stroke.

(e) White refuses to play B x P, probably fearing an onslaught on the Q's Pawns.

(f) Black sacrifices [illegible] gives White a weak P. Game adjourned at 11.15 P.M., with Black having a [illegible] advantage.

ON February 5, Dr. Lasker, in Boston, defeated Sussman, the New England Champion, and at night played twelve games simultaneously, winning [illegible] one draw and five mates.

PHYSICAL CULTURE

A TRIAL LESSON GIVEN ANYONE BY

BERNARR MACFADDEN

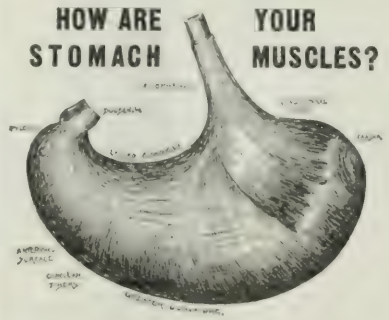
BERNARR MACFADDEN, the man who put physical culture on a scientific basis, will give to anyone who wants it, a trial lesson in physical culture as it teaches us, not merely for the sake of large biceps, but for the development of the entire body in every part, a lesson which would be adapted to the weakest invalid or the strongest athlete.

GENUINE PHYSICAL CULTURE means the building of strength in the internal vital organs, as well as the development of the outward muscular system. Strong arms are useful, but strength of the digestive, respiratory and other vital centers is still more important.

INTERNAL VITAL STRENGTH IS WHAT YOU NEED

Don't you know that your very life depends upon the strength of your stomach and other vital organs? Great strength of these internal organs means more vitality for the entire body, greater brain power and longer life. *(Sufferers from dyspepsia or other internal functional ailments should give this thought.)*

The lessons which Mr. Macfadden gives in his Magazine, PHYSICAL CULTURE, will tell you how to acquire and retain a strong, healthy stomach, healthy digestive organs, healthy heart, healthy lungs and splendid vitality, without dosing your entire system with drugs. Our sort of physical culture means, first of all, the acquirement and retention of health of the entire internal system. It also means superb, symmetrical development. In short, Mr. Macfadden's magazine,



PHYSICAL CULTURE,

which will contain during the coming year nearly **1,200 pages of reading matter** and about **1,000 illustrations**, is a thorough encyclopedia of true physical culture knowledge.

In order to enable everybody to study physical culture as it should be, Mr. Macfadden has prepared a course in body-building and health-making which can be practised at home without apparatus or expense, and which will appear in Physical Culture in monthly lessons without extra charge. By subscribing to this magazine you really get

A $2,000 COURSE FOR $1.

The series of lessons included in this Magazine contains about 150 photographic illustrations, posed by the author, and describing in the plainest manner possible how every part of the body can be strengthened and developed. Its preparation required an actual cash outlay of about $2,000, and a life's work on the part of Mr. Macfadden. Please understand that this special course of lessons costs you nothing. It is given as a free supplement, one big lesson every month, to PHYSICAL CULTURE, the subscription price of which is only $1.00. It teaches the healthiest person how to be healthier, the weakest invalid how to be strong. The young, the old, or the middle-aged, the novice, or even the strong athlete can be benefited. The complete magazine, including the course, will be sent to any one on receipt of $1.00, **which will be refunded without question** if you are not satisfied after receiving the first copy and lesson. If you prefer you can send 10 cents for one trial lesson. Please remember that this entire work is published under the direct supervision of the best known Physical Culturist in the world, Mr. Bernarr Macfadden, editor of three magazines—Physical Culture, Woman's Physical Development and Fair Play, and author of the following books: Strength from Eating; Fasting, Hydropathy and Exercise; Strong Eyes; New Hair Culture; Physical Culture Cook Book; Power and Beauty of Superb Womanhood; Natural Cure for Rupture and Virile Powers of Superb Manhood. *These books are well worth the price asked. $1.00 each, post-paid. Any book with the Physical Culture Course and 1 year's subscription to magazine, $1.50.* **Money refunded if requested.**

Address your letter at once, sending **$1.00** for the year's course, or **10 cents** for a trial copy and lesson to

Dept. 5, PHYSICAL CULTURE PUB. CO., 1123 Broadway, New York

THREE GREAT REASONS

Why SANDOW'S Mail System of Teaching Physical Culture Has Attained Such Marvelous Success:

FIRST—SANDOW'S method is superior to and more practical than all others; in fact, it is the only method that will give immediate relief to **constipation, indigestion, or disordered nerves, to women as well as men.**

SECOND—SANDOW'S charges are within the reach of all, and much below what others demand. **Free of all charge Sandow gives** to every subscriber to his magazine, at **$1.00 PER YEAR, a trial course.** This trial course is complete in itself, and will give you definite results.

THIRD In each of **SANDOW'S Courses of Exercises** (trial course included) **you receive an absolute individual prescription** made out for you and you alone, just as your physician would prescribe for your medicinal treatment.

SANDOW'S MAGAZINE will contain throughout the year an **original series of Anatomical Charts in Colors.**

IN ADDITION to my Correspondence School, I formally opened my **first American private college in Boston last month.**

Terms on application.

SEND $1.00 for the magazine, and **SANDOW** will immediately send you a blank for recording your physical requirements for the **trial course.**

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

HOW CONGRESS HAS TREATED THE TRUSTS.

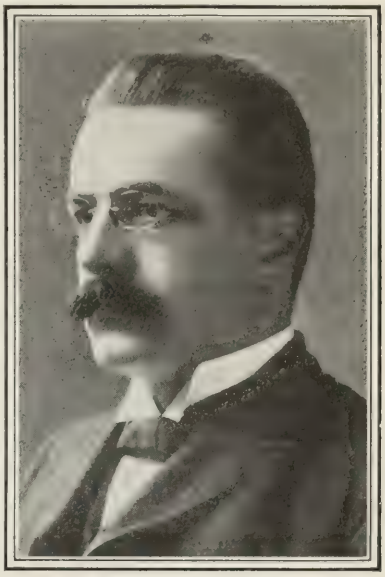
THE most varied comments mark the supposed completion of the trust program of the present session of Congress. "The Republican party has redeemed itself, the President is a winner, and the Democrats have lost their most effective war-cry; congratulations are due the Administration and Congress alike," exclaims the Brooklyn *Standard Union* (Rep.). On the other side we have such opinions as the following from the Philadelphia *Ledger* (Ind.): "In any direction that would lead to an immediate attack upon monopoly by removing the artificial support afforded by the tariff, Congress has declined to go. It is a lame and impotent conclusion to so much ferocious talk."

The three acts of Congress on the trust question are simple and clear. The first provides that suits brought under the Sherman anti-trust law shall have speedy trial before a full bench of circuit judges, and a direct appeal to the Supreme Court. The second (the Nelson amendment to the bill creating the Department of Commerce) provides for a commissioner of corporations in that department who

"shall have power and authority to make, under the direction and control of the Secretary of Commerce and Labor, diligent investigation into the organization, conduct, and management of the business of any corporation, joint-stock company, or corporate combination engaged in commerce among the several States and with foreign nations, excepting common carriers subject to 'an act to regulate commerce,' approved February 4, 1887, and to gather such information and data as will enable the President of the United States to make recommendations to Congress for legislation for the regulation of such commerce, and to report such data to the President from time to time as he shall require; and the information so obtained, or as much thereof as the President may direct, shall be made public."

The third is the Elkins act, making it unlawful to offer, grant, give, solicit, or accept any rebate of transportation charges, and providing a fine of from $1,000 to $20,000 for each offense. The Littlefield bill, which was supposed to embody the Administration ideas on trust control, was considered unconstitutional by Attorney-General Knox, and after being passed by the House of Representatives by unanimous vote was abandoned.

A scandal of first-class proportions was threatened for a time by a report, said to have emanated from the White House, that John D. Rockefeller had sent telegrams to nine Senators urging them to kill the Nelson publicity amendment. The amendment was promptly passed, and the attempt of the Standard Oil Company to influence trust legislation, if there was such an attempt, came to nothing. Altho at first considered preposterous, it now seems to be pretty generally believed that some such telegrams were sent by somebody. Both the New York *American* and the Philadelphia *North American* print what purports to be a facsimile of a telegram received in Washington, sent to Senator Quay by John D. Archbold, vice-president of the Standard, attacking the Nelson amendment, and several Senators have virtually admitted receiving such messages. As they were without effect, however, the furore has subsided. A number of trust magnates visited Washington while the legislation was pending, but whether for the purpose of influencing Congress or seeing the city has not been made public.



GEORGE BRUCE CORTELYOU,
Who has been appointed Secretary of the new Department of Commerce, which will have charge of the publicity feature of trust regulation.

This alleged opposition by the Standard Oil Company is considered by the Philadelphia *Press* (Rep.) the best proof that the trust legislation passed by Congress will be effective. It says:

"The shallow assertion made yesterday on the floor of the House that the anti-trust laws now passed by Congress are ineffective has a sufficient answer in the vigorous efforts of the Standard Oil and Sugar trusts to prevent their passage. If these laws accomplished nothing, why are Messrs. Rockefeller, Archbold, and Havemeyer so anxious to compass their defeat? If the public is buncoed, why are these men wasting their time, strength, and influence? . . . . .

"It is ineffectual cant to call legislation like this ineffective. No such revolution in the operations of trusts and railroads has been worked since the interstate commerce act was passed. Under it railroad favoritism to persons and corporations becomes hazardous as never before. All who use railroads are likely to discover that all privileges not paid for at tariff rates have become perilous.

"A reform like this may not suit demagogs. They desire to agitate and accomplish nothing. They are doubtless ready to deny that anything has been accomplished. Railroads and shippers, trusts and their managers know better. So will the people. As discussion continues and suits begin, it will be clear to all the world how long a step has been taken toward equality and justice in trade and the abolition of trust privileges by the anti-trust acts of 1903."

But there are other papers which take quite a different view. The New York *Journal of Commerce*, which opposes the trusts, expects little result from all this legislation, and the New York *Press* (Rep.) finds its greatest encouragement in the thought

that this is merely a beginning. The New York *Sun*, which is regarded as the chief trust organ in the country, seems well satisfied with what Congress has done, and the opposition papers regard *The Sun's* approval as equivalent to the approving smile of the "octopus" himself. The Baltimore *Sun*, an anti-trust paper, says:

"The trusts may profess to be frightened at the provisions of one or more of the bills known as 'Administration measures,' but there is good reason for the belief that they will be well satisfied with the situation which will prevail after the proposed legislation goes into effect."

The new Department of Commerce is to be made up of various bureaus detached from other departments. It is understood that Mr. Cortelyou, now secretary to the President, will be placed at its head. It will include the following:

Bureau of statistics from the Treasury Department,
Bureau of statistics from the State Department,
Department of labor, unattached,
Light-house establishment, from the Treasury Department,
Steamboat inspection service, from the Treasury Department,
Bureau of standards, from the Treasury Department,
Coast and geodetic survey, from the Treasury Department,
Bureau of immigration, from the Treasury Department,
Bureau of navigation, from the Treasury Department,
Census office, from the Interior Department,
Fish commission, unattached,
Shipping commission, from the Treasury Department,
And the newly created bureau of corporations.

ARGUMENTS BEFORE THE STRIKE COMMISSION.

THE week of talk before the coal strike commission in Philadelphia consisted largely of a rethreshing of the old straw that had been gone over during the taking of testimony. The newspapers confine their comments, therefore, almost entirely to Mr. Baer's proposition, made on Wednesday, for an increase in the miners' wages. He said:

"Now, what is my proposition? That the rate of wages now paid shall be the minimum basis for the next three years;

"That from the 1st of November to the 1st of April, 1903, all employees, other than contract miners, shall be paid an additional 5 per cent.;

"That on and after April, 1903, for each 5 cents in excess of $1.50 per ton on the average price realized for white-ash coal in the harbor of New York, on all sizes above pea, wages shall be advanced 1 per cent.; the wages to rise or fall 1 per cent. for each 5 cents increase or decrease in prices; but they shall never fall during the next three years below the present basis."

PUZZLE PICTURE: WHO PAYS?
—*The Ohio State Journal*, Columbus

Mr. Darrow, counsel for the miners, objected, in his closing argument, to the 1 per cent. increase proposed, and argued at some length to show that it should be more; but, aside from that objection, he did not seem to oppose the plan. In a colloquy a day or two before, Mr. Darrow appeared to admit that there are too many miners in the anthracite field for the work there is to do, and remarked that "if there are too many men there, you can not ask the coal consumer to support the men." These seeming concessions by each side are thought to point the way to an amicable settlement. But nearly all the newspapers ask, with Mr. Darrow, "Why did not Mr. Baer go to John Mitchell nine months ago as he came to this commission to-day," and make the same offer and thus avert the strike? The Pittsburg *Dispatch* expresses a sentiment shared by many other papers when it says:

NOT LONG TO WAIT.
And a little child shall queer him.
—*The Minneapolis Tribune.*

"It is absurd to suppose that the operators did not know as much about their ability to meet the demands of the men then as now. What did they hope to gain by forcing a suspension of work? What becomes of the lofty principles at stake which were said to have been the chief reason of the owners for refusing even to arbitrate with their employees? Are those principles no longer in danger, altho conditions are unchanged, or were they simply so much buncombe, used to deceive the public in the vain hope of defeating the miners, and abandoned when no longer found available?"

It was supposed, nine months ago, that the operators declined to make such an offer because they did not want to deal with the union. But the same difficulty faces them now. The New York *Journal of Commerce* says on this point:

"Suppose they all agree now to the plan proposed by Mr. Baer in the name of the Reading Company, which appears upon its face to be a fair one. According to their principle the party of the second part must be the men employed by the companies contracting in each case with their own employer. Another principle of the operators, and an altogether just one, is that union and non-union men shall be treated alike, and shall be protected in their equal rights. What chance is there that the employees of each company will enter into a separate contract? What means is there of securing joint contracts? What assurance is there that contracts would be observed? These ques-

tions merely suggest the difficulty of giving practical effect to Mr. Baer's proposal, while the men are organized or partly organized as they are, and affiliated with a combination which the operators have good reason for refusing to recognize. Can the commission find a way of applying the plan?"

Henry Demarest Lloyd, in his address before the commission, tried to show that the commission could bring no peace to the anthracite field that would be permanent, unless it provided for agreements with the union, and Mr. Darrow said in regard to recognition:

"You can do just as you please about recognizing the union. If you do not recognize it, it is because you are blind and you want to bump up against it some more; that is all. It is here. It is here to stay, and the burden is on you and not upon us. There is neither the power nor the disposition in this court, I take it, to destroy the union. It would not accomplish it if it could, and it certainly could not if it would. And if these wise business men, with the combined wisdom of business gentlemen and the agents of the Almighty, can not see the union, they had better blunder along still a few more years, and possibly after a while they will know it is here and recognize it themselves."

CHRISTIAN AND TURK IN THE BALKANS.

A QUARTER of the world where murder, brigandage, rapine, insurrection, and the burning and slaughter of entire villages are a part of the usual order (or disorder) of life, year in and year out, is brought once again to the attention of the American public by the cable despatches from Europe, which report that the usual situation has grown so much worse that it may result at any moment in open war. This unhealthful locality is Macedonia, in European Turkey, and the frequent fatalities are due to the unfriendly feeling between the Turkish officers and soldiery, who rule, and the Christian subjects. Here is a glimpse of life in Uskub, the chief town of the northern Macedonian province of Kossova, as given in *The Russian Messenger* and quoted in *The North American Review*:

"Murder is such a common occurrence in Uskub that people have agreed not to speak of it. The normal life of the city could not go on without it. The cynicism and license of the people have gone so far that they commit murder in sight of the consuls, or before their houses; and the consuls can only protest with horror. But under the present *régime*, these protests are rarely effective; for the most part, no attention is paid to them, and the consuls can only resign themselves, and accustom their nerves to these things, considering them as an unavoidable evil. In Uskub, no one talks about the daily murders. They are somewhat more interested in general cutting affrays and street battles, or in the open insurrections which are periodically renewed at intervals of less than a year."

The "open insurrections" are most active in the spring. Mr. Charles Johnston, who writes the *North American Review* article, says:

"With the disappearance of the snows there comes an opportunity to the Bulgarian mountaineers and peasants, who form the bulk of the population [of Macedonia], to take vengeance on their oppressors, the Turkish soldiery and police. Ambushes are set for the patrols, or for small bands of soldiers; men disappear among the caves and forests in the hills; villages are attacked and burned; murders are common everywhere throughout the three provinces. Then come the extreme heats of summer, when the contest slackens and dies away, to be revived in the coming spring. By that time, there are new outrages to avenge, new injustices and insults to be paid for; the insolence of office and the law's delays, bribery, corruption, violence, have opened new scores and added to old reckonings. Above all, and as the cause of all, stands the Turk's administrative impotence, the powerlessness of a dying race to conceive and carry out sound schemes of organization and order founded on large ideas and broad imaginative grasp; a lack of that collective insight and will which is the foundation-stone of settled government. With this power lacking, good or bad intentions, humane or savage impulses alike lead to anarchy; and throughout Macedonia anarchy has reigned for generations."

Such is the situation that "may lead to war." This possibility is due to the fact that the 4,000,000 people of Bulgaria sympathize earnestly with their Macedonian brethren, and would like to help them win their independence. Not feeling strong enough, however, to meet the Turk on the field of battle, the "Macedonian committees" of Bulgaria are sending out frantic appeals to the Powers to come over into Macedonia and help them. Russia, it is presumed, would be delighted to come and drive the Turk not only from Macedonia, but from Constantinople, and annex European Turkey to the Russian empire, but it is not believed that the other Powers would look on calmly at any such increase of Russian territory and power. What the attitude of the other Powers would be in the event of war is, in fact, the chief uncertainty of the entire problem. Many papers believe that the threatened war will not materialize. "Nothing

'POSSUM OR CHICKEN?

IS THE GAS OUT?
—*The Cleveland Leader.*

GREAT QUESTIONS IN CARTOON.

will come of the whole affair," thinks the New York *Commercial Advertiser*, which goes on to say:

"It is hardly conceivable that Russia at the present time would care to plunge into a conflict the issue of which would be very doubtful even tho Turkey stood alone. The war with Greece a few years ago revealed the fact that the Sultan has at his disposal a most admirable fighting force, splendidly equipped with the most modern weapons and drilled by German officers. Moreover, there is Japan in the Far East eager to take advantage of any embarrassment of Russia's. And, finally, there is the vista of endless complications which would be the inevitable outcome of a war with Turkey. The clashing aims of the Balkan States, the ambitions of Greece, and, finally, the public sentiment of England would all enter into the problem before the end was reached. For tho England would hardly go to war, her diplomacy would be exerted in a thousand subtle ways to hold in check those influences which might be detrimental to her commercial and colonial interests. We must therefore decline to credit the prophecy of an approaching clash, which seems to us, up to the present time, to be mainly an *affaire de presse*."

Such a conclusion, however, is to be compared with the practically unanimous opinion of the European correspondents of the American papers, who consider the possibility of a great war very real and threatening.

"THE FOOL-KILLER" AND THE TAX-PAYER.

BOLTON HALL, the single-tax apostle, has just given to the public, in a little book called "The Game of Life," a sheaf of fables that satirize modern customs and laws, and at the same time are intended to show how much better off we all would be under the reforms which Mr. Hall advocates. Among other things that rouse his indignation and irony is the spectacle of unemployed workingmen and idle land existing concurrently, with no effort by society to bring the two together. Mr. Hall satirizes this state of affairs thus:

"What's that?" asked the Fool-killer.

"That's an unemployed man in a vacant lot," said I.

"Why don't you have him work on the lot and produce something?" asked the Fool-killer.

"Because," I said, "we suffer from over-production already; and, besides, the owner of the lot won't let him work on it."

"I must get my club," said the Fool-killer.

"Hold on!" I said. "Pretty soon we will arrest the man, because he does not do anything; then the judge will fine him, because he has no money; and we will keep him idle in jail because he was idle out of jail; and the workers will tax themselves to pay for all that."

The Fool-killer gasped, "I must order a Gatling gun."

"Don't go off half-cocked," I said. "Those are our laws."

"Who made those fool laws?"

"Everybody, civilized men," said I.

"The men that pay the taxes?" asked the Fool-killer.

"Why, yes."

"I must swear in some deputies," said the Fool-killer.

"Stop," I said; "no one speaks like that about the laws; they are the accumulated wisdom of the ages, and must be treated with respect."

"Why don't some one tell the truth, and say the laws are stupid and wicked?" asked the Fool-killer.

"We kill such fools as speak the truth about such things," said I.

'Come," said the Fool-killer, "I will go and poison the water-supply."

On the way the Fool-killer asked again:

"What are those places?"

"That is a tobacconist's," I said, "and the other is a gin-mill. You see we poison our own drinking-supply—oh, the next is a drug-store, and beyond is a hospital——"

"I will go home," said the Fool-killer. "These fools are doing my work themselves."

LABORATORY FOR THE STUDY OF MAN.

A BILL has been introduced into Congress to provide for the establishment, in Washington, of a laboratory for the study of man. There are many men in Washington whom the newspaper editors would exult to see minutely studied and classified, and whose mental and ethical diagrams and formulæ they would be glad to inspect; but this laboratory is designed for the study of Man, not men, and, in the words of the bill, is intended for "the collection of sociological and pathological data, especially such as may be found in institutions for the criminal, pauper, and defective classes, and generally in hospitals and schools." Mr. Arthur MacDonald, who is active in pushing this project, says in a pamphlet that he is sending around to the press:

"As in machinery we must first repair the little wheels out of gear, so in society we must first study the criminal, crank, insane, inebriate, or pauper who can seriously injure both individual and community. Thus a worthless crank, by killing a prominent citizen, can paralyze the community. The injury from such action is often beyond calculation. Our Government pays out millions to catch, try, and care for criminals, but gives very little to study the causes that lead to crime.

"The study of man, to be of most utility, must be directed first to the causes of crime, pauperism, alcoholism, and other forms of abnormality. To do this the individuals themselves must be studied. As the seeds of evil are usually sown in childhood and youth, it is here that all investigation should commence, for there is little hope of making the world better if we do not seek the causes of social evils at their beginnings.

"The most rigid and best method of study of both children and adults is that of the laboratory, with instruments of precision in connection with sociological data. Such inquiry consists in gathering sociological, pathological, and abnormal data as found in children, in criminal, pauper, and defective classes, and in hospitals. Such experiments or measurements should be made as are of interest not only to sociologists, psycho-physicists, and anthropologists, but also to physiologists and pathologists.

"It has been proposed to conduct such investigations under our Government by the establishment of a laboratory; for to gather a large number of such data concerning a large number of individuals, and to compute, tabulate, and publish the results, could not easily be undertaken by an individual or by a university because of the expense involved.

"Since the field is necessarily very large, the investigation should be in those parts of it which promise to be productive of most practical results in the way of amelioration or prevention of social evils."

The American Lawyer (New York) says of Mr. MacDonald's plan:

"The defect in our present criminal law is, as we have before remarked, that it regards the crime and not the criminal. It presupposes that all mankind possess an equal power of resistance to anti-social tendencies. It practically lays down as an axiom that the child born of criminal parents, brought up in an environment of crime, is, until he has actually come within the jurisdiction of a magistrate's court, as equally desirable a citizen to all intents and purposes as he who has been reared in the atmosphere of the law-abiding. Until an offense has been committed the law does not recognize the offender. For it the prospective criminal does not exist. Unfortunately, there are some beings who are moral imbeciles. To confine our efforts to punishing crime when committed, rather than to preventing its commission, is like the proverbial locking of barn after stealing of horse. Nothing has been done by Government as yet to treat the matter scientifically; and when it is considered that $600,000,000 is the annual tribute which statisticians assure us society pays to crime, and that the United States has the highest murder rate of any civilized country in the world, one is almost tempted to long for a return to the condition of things when 160 offenses were punishable by death, tho it be conceded that the death penalty is one of the slightest deterrents to crime. The promoters of the measure have our best wishes."

GERMAN-AMERICAN FEELING FOR GERMANY.

"WE do not want German-Americans or Irish-Americans who figure as such in our social and political life," declared Theodore Roosevelt once upon a time, and this utterance has been preserved for posterity in the collected editions of his works. British organs have been asserting of late that German statesmen (in Germany) are opposed to the spirit of this declaration so far as German-Americans are concerned. Ambassador von Holleben was accused by the London *Spectator* and the London *Times* of having tried to foment German-Americanism of the political type in this country. In this he is declared to have acted in accordance with instructions from a high source and to have made an instrument of the German-American press. The *New-Yorker Staats-Zeitung* has been mentioned as a case in point, but it is not possible to quote any editorial utterance from that newspaper in support of the theory that it seeks to alienate German-Americans from their adopted land. It has, however, endeavored to promote friendliness of feeling between Germany and the United States in terms that have elicited criticism from the New York *Herald*. The attitude of the German-American daily is not, on the whole, quite friendly to the United States Government in the matter of Venezuela. It defends Germany at the expense of Great Britain. "In the beginning of this whole affair," it says, "we expressed the opinion that Germany made a great mistake in allying herself with England, and this view seems now to be confirmed." Secretary Hay is also attacked by this paper for his "ill-concealed hatred of Germany." His influence is said to have brought about a state of affairs prejudicial to Emperor William so far as American public opinion is concerned:

"We can not assert that without his [Secretary Hay's] intervention the matter would now be settled, but we do not doubt for a moment that his influence has been obstructive. The worst thing of all is that the interference of our Government in any form denotes a lack of loyalty that contrasts disagreeably with the openness of the Powers. We perpetually assert that we can not appear as protectors for the South and Central American states so long as territorial acquisition is not involved. We have repeatedly said as much in this affair. Yet the part of protector is now played behind the backs of the representatives of the Powers, and this, too, in a matter that involves no questions of principle now, but simply the method of defraying acknowledged obligations. That is a wholly false attitude and can not be defended at all. The Secretary of State should withhold his hand from the game even if he must thereby forego his longed-for opportunity of aiding his English friends."

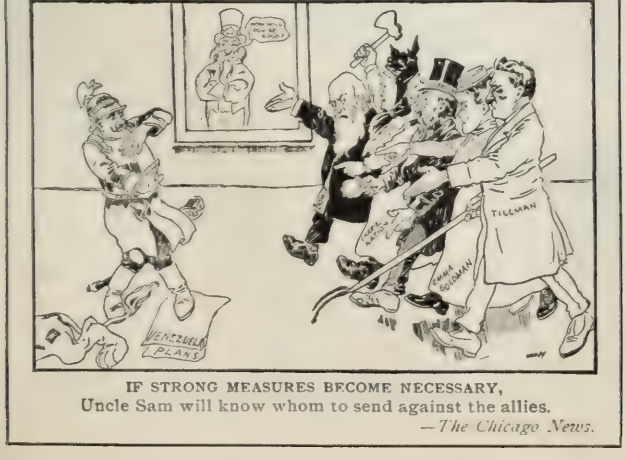
THE THREE MUSKETEERS ARE GENEROUS.
—*The Detroit Journal.*

OFF TO THE HAGUE.
—*The New York Herald.*

And a lot more in the same strain. Far more outspoken is the *Deutsche Correspondent* (Baltimore), which expresses indignation at the way Emperor William is "misrepresented":

"German-Americans know there is no need to hesitate or ponder over the Emperor's assurances. They know he has no intention of colonizing Venezuela. The Emperor understands German-Americans too well to utter the sentiment: 'Once German, always German!' as the New York *Herald* would have us believe he did. That newspaper assures its readers that the Bavarians, Saxons, and Wurtemburgers are no admirers of Prussian supremacy and Prussian methods as the Emperor seems to think. If, then, the Emperor has not all the Germans on his side, how can he expect support from German-Americans, who have tasted the sweets of freedom and have enjoyed the right of expressing their opinions on political subjects? In this tone is amplified the proposition that German-Americans are opposed to the Emperor."

Which is "stuff" in the opinion of the Baltimore paper. The New Jersey *Freie Zeitung* (Newark) is emphatic in a similar strain and lays stress upon the Emperor's friendliness to the United States during the war with Spain. The *Wächter und Anzeiger* (Cleveland) declares that the suspicion of Germany in the American mind is directly due to the jingoes, who wish to build up an imperial navy. The *Freie Presse* (Chicago) denounces "the slanders that the scandal press of the country aims at Germany," and it defends the general policy of the Emperor, even saying a good word for his treatment of the Poles. It refers to Minister Bowen as being "in the service of the robber chief Castro," and expresses great warmth of affection for Germany. "This wretch Castro," it says, "prates of morality and plays the part of defender of international rights against the allied Powers, and 'our' Bowen follows the example of his new boss!" The *Westliche Post* (St. Louis) dwells upon the German-American's love for his fatherland, and remarks that "the object Emperor William had in view when he made his gift of a statue of Frederick the Great was to strengthen the ancient traditional friendship between Germany and the United States." The *Germania* (Milwaukee) alludes to "the worthless articles by means of which the American jingo press daily seeks to



IF STRONG MEASURES BECOME NECESSARY,
Uncle Sam will know whom to send against the allies.
—*The Chicago News.*

arouse feeling against Germany." If "it comes to the worst," the fault will be with our Government for cooperating with the jingo press. The *Tägliches Cincinnatier Volksblatt* says:

"The Anglo-American press continues its attacks upon Germany on account of the Venezuelan affair. That these attacks are without any equitable basis needs no demonstration. Every communication from Berlin shows that the German Government is doing its utmost to maintain friendship with our country. . . . The Anglo-American press should explain what it means by its misrepresentations."

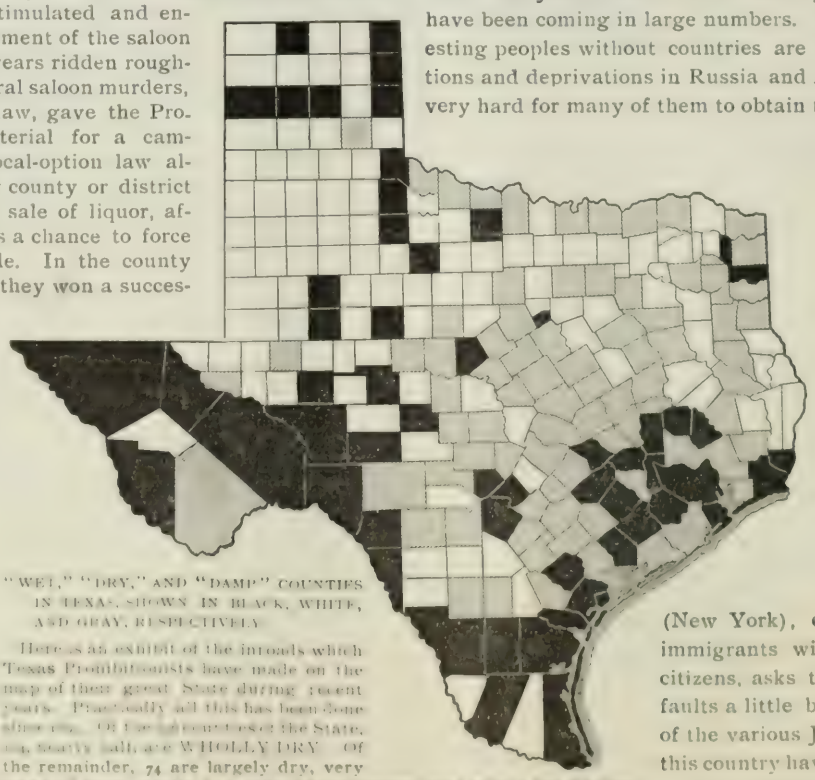
The unanimity of the German-American press in defense of Germany's policy in South America is very striking. The Socialist papers, like the *Volkszeitung* (New York), form an exception, and they denounce the Venezuelan episode as a plundering expedition of the Emperor's. The greater fraction of the German-American papers heap ridicule upon the idea that the United States could gain support from the Franco-Russian alliance against the combination formed by Great Britain and Germany.—*Translations made for* THE LITERARY DIGEST.

PROHIBITION MOVEMENT IN TEXAS.

THE newspaper paragraphers have long been in the habit of classing Texas with Kentucky as a State hopelessly addicted to the flowing bowl. A large part of Kentucky, however, is under local prohibitory law, and we are now informed by the New Orleans *Times-Democrat* that Texas is actually on the verge of prohibition—so near to it, in fact, that the liquor dealers are asking the legislature for severe restrictive laws that will close the more disreputable saloons, which are thought to be bringing the trade into disfavor. "One of the most radical liquor laws of the Union," says this paper, has been introduced into the legislature, "prepared by the liquor dealers themselves," who "frankly confess that this restrictive measure will alone save them from retaliation." The same paper goes on to say:

"But little over a year ago a stalwart prohibition movement struck Texas. It was stimulated and encouraged by the worse element of the saloon men, who had for some years ridden roughshod over the laws. Several saloon murders, due to violations of the law, gave the Prohibitionists splendid material for a campaign; while the State local-option law allowing the people of any county or district to vote for or against the sale of liquor, afforded the Prohibitionists a chance to force the issue before the people. In the county elections which followed, they won a succession of victories, far exceeding their own expectations. Nine out of ten counties holding local-option elections voted against licensing the sale of liquor. The saloon people saw their territory growing steadily more circumscribed and the Prohibitionists rendered more aggressive by success. Finally, as in Mississippi and other States, the Prohibitionists, having carried a majority of the counties, decided upon appealing to the legislature for a State election which would pass on the liquor question for the entire State. A few years ago prohibition would have been voted down in Texas by an overwhelming majority, but the movement is so strong now that the saloon people believe it could carry the 'Lone Star State.' They are afraid of the election, and are working to avoid it. In order to do so they have offered the bill to which we refer. It is a recognition of the fact that the liquor interests have suffered in public estimation from violating the law, and that unless they obey it, unless they repudiate and get rid of the lawless element which has aroused public opposition and led to the success of the Prohibitionists, they will all suffer from it. They propose, therefore, to assist the authorities in suppressing and punishing the lawless saloons, and showing how these saloons can best be reached. Every saloon-keeper in renewing his license yearly must make oath that he has violated no statute; that he has allowed no minors or students to drink in his saloon; that no gambling is permitted there; that the saloon is not kept open after hours or on Sunday, and that he has not violated any of the laws. If he does not so swear, or if he is detected in violating any statute, his license will be taken away from him and he will be prohibited from operating a saloon for two years. If he swears falsely, he is in danger of a long term in the penitentiary for perjury.

"There is nothing surprising in the Texas liquor situation. It comes sooner or later in all States where the liquor dealers believe that they can violate the laws with impunity. When by this course they have built up a dangerous opposition—as they built it up from nothing in Texas—they awake to the fact that they have brought serious trouble on themselves and try to undo it. The Texas liquor dealers have found how much more difficult it is to set right the evil now than it would have been at the beginning. They express their contrition and their willingness to obey all the laws now, but it is by no means certain that even these concessions will save them from the fury of the Prohibitionists."



"WET," "DRY," AND "DAMP" COUNTIES IN TEXAS, SHOWN IN BLACK, WHITE, AND GRAY, RESPECTIVELY.

Here is an exhibit of the inroads which Texas Prohibitionists have made on the map of their great State during recent years. Practically all this has been done since 1887. Of the 244 counties in the State, 144, nearly half, are WHOLLY DRY. Of the remainder, 74 are largely dry, very many of them wholly dry, save the county seat, and only 28 are wholly wet. The wholly dry counties represent a population of 725,816; the partly dry or, more correctly, largely dry, represent a population of 1,492,729, while the wholly wet counties represent a population of only 794,816. It is therefore safe to say that three-fourths of Texas is now under Prohibition.—*The New Voice, Chicago.*

PLEAS FOR JEWISH AND POLISH IMMIGRANTS.

MORE than eleven per cent. of the total number of immigrants into the United States during the last four years have been Jews, most of them Polish Jews. And the Poles, too, have been coming in large numbers. These two intensely interesting peoples without countries are subjected to such persecutions and deprivations in Russia and Austria-Hungary that it is very hard for many of them to obtain the small amount of money and education required for admission to the United States. So they are barred out. Others, confused and frightened by the questionings of our immigration officers, are excluded unjustly, we are told. "The present rigor at Ellis Island is a sneer at the torch-bearing woman down the bay," says *The Jewish Daily News* (New York); and *The American Hebrew* (New York), confident that the Jewish immigrants will make good American citizens, asks the officers to "be to their faults a little blind." The grand masters of the various Jewish fraternal orders in this country have sent a petition to Washington asking for fairness and justice at Ellis Island. We quote from the petition the following single sentence:

"Instead of executing the laws accord-

ing to the intents and purposes, a policy of restricting the volume of immigration by deporting unprecedentedly large numbers of immigrants has been adopted, and every right and privilege that the immigrant has hitherto enjoyed under the same law that is now in force has been taken away from him, so that the immigrant is no longer permitted even to be represented by counsel at the hearing before the Board of Special Inquiry, thus depriving him of a right to which even the worst criminal is entitled; that by the unusual despatch with which immigrants are being removed from the station to the steamer, two or three days before the departure of the steamer, the immigrant is even deprived of the opportunity to appeal to the commissioner-general of immigration, and in fact in some cases the commissioner's assistant refused to accept notices of appeal, altho the immigrant had not as yet been removed from the station; and further, that the special inquiries are conducted like star-chamber proceedings, so that the unfortunate immigrant, knowing nothing of our laws or methods or of the scope of purpose of the inquiry, is bewildered and confused, and is unable to answer questions with any sort of correctness or intelligence; and by this unfair and unjust method deportations have been increased in the month of December to an extent entirely unprecedented in the history of the bureau; and in pursuance of said policy to restrict and reduce the volume of immigration the judicial powers vested in the immigration officials to determine, upon proper evidence, whether or not certain immigrants may be included in the class of immigrants prohibited by law from landing, has been interpreted by the department to be an absolute power to deny immigrants the right to land, by unfairly and without cause whatsoever including them in the class of immigrants 'likely to become public charges,' the department paying no attention to the number and financial standing of the friends or relatives of such immigrants or to their own power to support themselves, so that immigrants who have been sent for by relatives of sufficient pecuniary ability to take care of them and provide for their comfort have been unjustly deported."

The real reason why the illiterates are barred out, *Zgoda*, a Polish paper of Chicago, thinks it has discovered. The Anglo-Saxons, Irish, and Germans in the United States, we are told, are affected by a feeling of intolerance for all other nations, and want to keep the control of this country in their own hands. So their have raised the cry of illiteracy to exclude the "healthy and honest illiterates," the "unpolished human gems" from southern Europe. To quote:

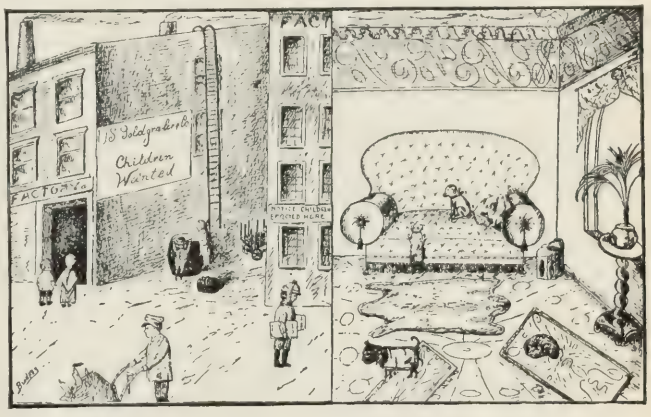
"Illiteracy rages, as we know, among the Slavonian and Latin peoples. The racial and religious peculiarities of these peoples do not suit the taste of the Anglo-Saxons, who are affected in America as well as in Europe with a disease peculiar to them, which is an intolerable vanity which blinds this otherwise intelligent, honest, and highly civilized race. All are acquainted with the vanity and conceit of the English, which bid the most stupid Englishman regard himself as infinitely superior to the most intelligent Frenchman or Pole. With this vanity is also affected the modern Yankee, who also refuses to regard people of other races as God's creatures. This abominable, pernicious vanity sprang up in the sixteenth century and the following two centuries, when the English nation indeed stood much higher in all respects than the other nations. The nineteenth century changed that position thoroughly, but it did not cure the English nation of its inveterate disease. This dislike to other nationalities is shared with the Yankee by the Irish. This is on its face a strange thing. A nation of the Celtic race, approaching in character more to the Slavonians and the Romance nations than to the Germans, continuously warring against the English, and standing at home by no means high as regards education, the Irish here in America swell like an empty windbag and strenuously proclaim themselves better than others. A third element in this country inimically disposed to the Slavonians and the Latin nations, is the German element. This numerous, intelligent, and wealthy element has been infected with the intolerance of its brothers in Europe and it applies that intolerance here on the common soil.

"Speaking in more general terms, it is verging in the United States to a dull conflict between the older Anglo-Irish-German element and the younger, but already very numerous, Slavono-Latin element. The former look with dislike and apprehension on the rapid growth of the latter, and they take advantage of their ascendency to retard, or wholly to restrain, the development, numerical, cultural, and consequently political also, of their opponents. Besides the racial question, there also enters here, in a certain degree, the religious question. The older element, mainly Protestant, does not willingly see the increase of the Catholic element."

Since it is not fit to speak too openly in Congress about such things, these reasons, which are, in the *Zgoda's* opinion, the true ones, are masked under solicitude for the good of the country. Hence a hunt is arranged for illiterates and other poor wretches of that kind, representing them as a dangerous and pernicious element.—*Translations made for* THE LITERARY DIGEST.

EDUCATION, CIVILIZATION, AND BABIES.

"RACE suicide, complete or partial," is the term applied by the President to the modern tendency, among the educated and well-to-do, toward small families. The President's words on this topic, quoted below, and a similar expression of sentiment by President Eliot of Harvard, have brought out some



TWO KINDS OF YOUNG ONES UNDER CAPITALISM.
—*The Seattle Socialist.*

interesting reflections in the press. President Eliot has found that 28 per cent. of the surviving members of the classes of '72 to '77 inclusive are unmarried, and that those who are married have, on an average, only two children living. As the number of children exactly equals the number of parents, the net result is a decrease of 28 per cent. President Eliot regards the length of the college course as one cause of this result, and advocates a shorter course. "Once let it become firmly fixed in the popular mind that college training leads to bachelorhood and its attendant evils," says the Brooklyn *Eagle*, "and hard-headed, homespun fathers will keep their sons out of colleges. In a generation the colleges would be crying out, not for endowments, but for students."

But a number of newspapers are prompt to reassure President Eliot that the course at Harvard was probably not the prime cause of the state of affairs discovered in the classes of '72–'77. To quote the Philadelphia *Press*:

"What President Eliot attributes to college graduates is true of all the advantaged, educated classes, whether they go to college or not. The conspicuous, wealthy, able, or exceptional lines and families in all countries tend to disappear. Our Presidents leave no families, or small ones. Of the twenty-five men who have held this post in 114 years, ten have to-day no descendants, and of them all the Adams line is the only prolific one. The British peerage would die out but for constant creations. Men of genius have notoriously no descendants, or few.

"Even of countries as a whole it is true that the birth-rate falls with civilization. The American birth-rate has been decreasing for a century. If the decrease which has gone on for

the past thirty years continues, by 1950 or 1960 our population will be nearly as stationary as that of France."

The President's strong words on this topic appear in a letter to Mrs. John Van Vorst, which is used as a preface to "The Woman Who Toils," a new book written by Mrs. Van Vorst and Miss Marie Van Vorst. He says, in part:

"I do not know whether I most pity or most despise the foolish and selfish man or woman who does not understand that the only things really worth having in life are those the acquirement of which normally means cost and effort. If a man or woman, through no fault of his or hers, goes throughout life denied those highest of all joys which spring only from home life, from the having and bringing up of many healthy children, I feel for them deep and respectful sympathy—the sympathy one extends to the gallant fellow killed at the beginning of a campaign, or the man who toils hard and is brought to ruin by the fault of others. But the man or woman who deliberately avoids marriage, and has a heart so cold as to know no passion and a brain so shallow and selfish as to dislike having children, is in effect a criminal against the race and should be an object of contemptuous abhorrence by all healthy people.

"Of course, no one quality makes a good citizen, and no one quality will save a nation. But there are certain great qualities for the lack of which no amount of intellectual brilliancy or of material prosperity or of easiness of life can atone, and which show decadence and corruption in the nation just as much if they are produced by selfishness and coldness and ease-loving laziness among comparatively poor people as if they are produced by vicious or frivolous luxury in the rich. If the men of the nation are not anxious to work in many different ways, with all their might and strength, and ready and able to fight at need, and anxious to be fathers of families, and if the women do not recognize that the greatest thing for any woman is to be a good wife and mother—why, that nation has cause to be alarmed about its future."

The New York *American* comes to the defense of the bachelor by imputing to him a feeling of altruism and explaining that the young man of to-day is often kept from marriage by the fear that he can not provide adequately for his wife and children. The same paper shows its versatility and ingenuity by discovering a connection between small families and tariff reform. Here it is:

"The President's reading can not have left him ignorant of the fact that there is a direct relation between the cost of living and the number of marriages and births. Since the tariff raises enormously the cost of living, Mr. Roosevelt, if convinced that 'race suicide' is impending, can help to avert that catastrophe by coming out for tariff revision, in which policy he would have the cordial support of a large and growing section of his party."

NEXT INSURRECTION IN THE PHILIPPINES.

WE learn from a new book by Edgar G. Bellairs, formerly chief Philippine correspondent of the Associated Press, that there is a general expectation among the Americans in the archipelago that the natives will rise some day in another insurrection. Because of his staff of local correspondents in various parts of the islands, Mr. Bellairs "was probably in a better position to get at the real facts as they existed in the provinces," he thinks, "than anybody else in the archipelago; better than the civil authorities, for they relied entirely upon the local governors; better than the military authorities, as their reports were entirely from army officers."

The time of trouble is coming, "in the opinion of nearly every army man who has lived in the provinces and has been behind the scenes," Mr. Bellairs warns us; and in view of the coming storm he questions the wisdom of our present policy of raising and arming a large force of natives, who may turn against us. He says:

"Will the scouts and constabulary be loyal, or will they not rather be an organized body ready to start the revolution for independence? Would they not rise and massacre every white officer, and with the organization take the leading cities in the provinces, and even Manila itself, before troops could be sent from the United States in sufficient numbers to retake the archipelago?

"Such a success on their part would bring to the front every man in the Philippines capable of bearing arms, for in four or five years they would no longer be a crowd of ignorant bolomen, but soldiers trained in the manual of arms. Before such an insurrection would be undertaken, an immense reserve supply of arms, sufficient to arm half a million, would be accumulated. Such a revolution would not be quelled as quickly as the last has been, but would cost an immense expenditure of blood and money, in addition to which there would be a massacre of whites throughout the archipelago, and there is little doubt that for a time, at all events, the Philippines would be in the hands of the Filipinos.

"This is no fancy sketch of a vague possibility, but is a grave possibility, in the opinion of several thousands of Americans who have been and are now in the Philippines. Time alone can prove whether it will come to pass or not. . . . . .

"In reading the story of the Indian mutiny, one is forced to the conclusion that the Hindus, like the Filipinos, are artists in dissimulation, for the very last people to believe that the rebellion was coming were those in the immediate command of the native troops. Colonels and officers who swore by their men, their loyalty, and their devotion were among the first to be massacred, and it is the same in the Philippines to-day. Members of the civil commission and the white governors of provinces are practically the only ones who do not see the distant storm signals,—not that in the opinion of the writer there will be another insurrection within the next five years, altho the average man in the Philippines puts it down at a much less time than that."

LETTERS AND ART.

"AT THE BOTTOM," GORKY'S NEW DRAMA.

HAVING succeeded with his first essay in dramatic art, Maxim Gorky has made another attempt to use the stage rather than the novel as his medium. In "Mestchanie," the first drama from his pen, he studied the life of the lower middle classes of Russia, venturing into a sphere cultivated by the great Ostrovsky. In his new play, entitled "Na Duie" (At the Bottom), he returns to the field in which he is an acknowledged master. This drama deals with familiar Gorky types—vagabonds, tramps, beggars, delinquents, outcasts, and chronic criminals.

It has been experimentally produced at Moscow, and the occasion was a triumph for the author-dramatist. The audience was moved and delighted, and the author, who was present, "received an ovation." The critics, however, are not a unit in appreciating the literary and technical and artistic qualities of the drama. All praise it, but not with equal warmth and enthusiasm.

The critic of the Moscow *Slovo* rhapsodically says of the play:

"This drama is a song; it is a hymn to humanity. It is awful and joyful. Seeing at the bottom decaying, abandoned people, you say to your conscience: 'They are already dead; they no longer feel.' And you are reconciled, at peace, whatever may happen to them.

"But suddenly you retreat in horror. They are still alive!

"A marvelous spectacle of indescribable beauty presents itself to our eyes. Beneath the mire, beneath filth, ugliness, vice, loathsomeness, horror, in a lodging-house, among the dregs—the human personality still lives!"

The argument of the play may be summarized as follows, tho some of the reviewers warn the reader against judging the interest of "Na Duie" by any skeleton of its plot:

In one of the cheapest and lowest lodging-houses there are found the very dregs of the submerged tenth of society. The keeper of the establishment, a woman of the vilest sort, has an illicit connection with one of the lodgers, Vaska Pepiel, a thief and the son of a thief. Vaska, however, is in love with the woman's sister, a young girl, of whom his mistress is jealous. The woman's husband is an old and miserly lessee of lodging-houses, and she urges her lover to "remove" him somehow. One day she overhears a mutual confession of love between Vaska and her sister, and in a fit of rage she empties over the young girl a kettle of boiling water. Vaska tries to kill the assailant, but somehow, in the confusion of the scene, manages to stab the old husband. He is promptly accused of deliberate murder by the jealous mistress whose love he had scorned.

These are among the characteristic scenes of the lodging-house. Quarrels, fights, brutalities are of daily occurrence. The lodgers drink, gamble, beg, steal; the hero of the place is the thief, for he gets money more easily than any one of the others.

Suddenly an old wanderer, an ex-Siberian convict named Louka, makes his appearance among these outcasts. This wanderer is a ray of light in the dark kingdom. Louka is not a propagandist or missionary, but a simple, guileless, kindly creature, who instinctively loves his fellows and possesses the faculty of bringing out the best, if dormant, qualities in them. He is natural and naïve, good-humored and shrewd, racy, witty in his own way, and irresistible.

He accomplishes wonders in this wretched abode of misery, vice, prostitution, and crime. He prevents a murder planned by Pepiel, and induces the latter to turn to a life of honest toil; he leads a confirmed drunkard to the path of temperance; he breathes a sense of human dignity into the most abandoned and shameless paupers; he reconciles a dying woman to her fate by reviving her hope in a better life beyond the grave; he elevates even a half-witted prostitute by expressing belief in her early purity and sincere affection.

How does he work his miracles? By soft answers, by gentle treatment and trust, by appealing to the soul of good in things evil. He never causes pain; he yields and returns kindness for abuse.

The writer in the Moscow *Slovo*, after this account of the play, adds: "Louka did not create human beings. They were there, but they were spiritually asleep. He awakens them." There is a spiritual resurrection.

A writer in the *Novoye Vremya*, while declaring his admiration for the truth and realism of the play, points out that it is essentially an imitation of Tolstoy's "The Power of Darkness." He says:

"In point of fact the Louka of 'Na Duie' is the Akim of 'The Power of Darkness.' All his ideas are Tolstoyan, and Tolstoy's Akim is merely the personification of the gospel of charity, love, and human nobility. Tolstoy's idea has become the source of various streams and streamlets. Who has not resorted to this spring? Gorky, with talent, ability, and deep feeling, has written a play which touches and stirs us. But there is no revelation in his 'At the Bottom.' Much of its substance is familiar to us through other works, of greater artistic merit.

"Gorky knows perfectly the life of the lodging-houses he describes, and his portrayal is vivid, striking, fine. His language is strong and expressive, and his phrases are memorable. The characters are firmly drawn, and are real, individual. But is this new for Gorky? And have not other writers taken us into the same world at the bottom of the social fabric?"—*Translation made for* THE LITERARY DIGEST.

NEW GLIMPSES OF EMERSON.

THE approach of the hundredth anniversary of Emerson's birth (which took place on May 25, 1803), and the plans already made to worthily commemorate that event, lend special timeliness to a couple of articles in *The Booklovers' Magazine* (February). The first, entitled "Personal Glimpses of Emerson," is from the pen of Julian Hawthorne; the second, "The Tribute of a Son," is by Mr. Edward W. Emerson, of Concord, Mass.

Mr. Emerson declares that his father "wished no disciples," but sought only "to teach young people to trust implicitly the word of the Spirit in its special revelation to them when they had learned to rightly listen." He says further:

"Reformers of all sorts came to Concord, attracted by his hospitality to thought. He fed and protected and heard them, but resolutely held to his belief in his special work and that one must not mistake others' chivalries for one's own. But the chivalry of freedom was universal and commanding, and in the long struggle against slavery Emerson early showed his colors and came, as a free lance, to fight beside Garrison and Phillips when it was dangerous to do so.

"Emerson read widely, was less of a student than many believed, but had a sure instinct for what was for him in a book—the rest he let go. But he studied men with delight, the 'men who can do things' in fields where the scholar is often helpless. Especially he honored the farmer:

> And I, who cower mean and small
> In the frequent interval
> When wisdom not with me resides,
> Worship Toil's wisdom that abides.

But he was not false to his class. He said that 'the scholar has drawn the white lot in life.' But everywhere he taught that the scholar must be ready to stand for the truth which he on his lonely watch-tower has seen, against the mob, well-dressed or in rags; also, that the scholar must toil unweariedly in his own fields of thought. 'To live without duties is obscene.' He eagerly listened to the talk of the tavern, the bank, the club, the laboratory. 'These men don't know what to do with their facts,' he said, 'but I know,' recognizing that truth is one, and natural facts but the embodiment of spiritual laws. Hence he was increasingly attracted to verse as the proper vehicle for his delighted perceptions of beauty, of harmony, of unity:

> And through man and woman and sea and star
> Saw the dance of Nature forward and far;
> Through worlds and races and terms and times
> Saw musical order and pairing rimes.

"He early celebrated the beautiful laws of Compensation, and

welcomed the doctrine of Evolution, as would be saw, not blind destiny, but the triumph of effort and hope, a confirmation of 'good out of evil,' his sure belief.

"Emerson's prose and poetry annotate and explain each other and should be read together. It was as a poet that he would have wished to be remembered."

Julian Hawthorne, another son of a famous father, writes most interestingly of his contact with Emerson's personality. Speaking of his own boyhood days in Concord, Mr. Hawthorne says:

"Often, on my way to Sanborn's school and back, I would meet him, walking with his head bowed forward, but keeping a bright lookout ahead of him (unlike Channing, whose eyes ever sought the ground), and, as we drew near, the unique Emersonian smile would glimmer in his face. . . . . .

"At other times I would see him, transiently, in his study, where the walls were all made of books in sober bindings, and there was a table strewn with papers and writings; but here I never lingered long, but went forward through an alcove which led into the parlor and dining-room. These study-glimpses of Emerson showed him mild and absorbed, and always, in the midst of his absorption, with a lovely expression of kindly welcome. Once in a while, when, at his son's invitation, I came in to lunch, he would sit at the head of the table, but with a manner as if he were the least considerable person there; and he would address many questions to the visitor, and listen closely to his replies, as if he looked for some wisdom, or at least information, from the unripe boy. His bearing toward his wife and daughters was of the most loving courtesy, and withal of deference, as tho he would take his orders from them. Surely there was never greater personal humility than in this man, who was one of the proudest and boldest avouchers of the inalienable dignity of human nature that ever lived.

H. ROSNY. J. K. HUYSMANS.

MEMBERS OF THE GONCOURT ACADEMY.

"Again, I would see him at friends' houses, in conversation with other famous dignitaries of New England—Alcott, Wendell Phillips, Channing, Thoreau, Hoar, and many others. He was inevitably the center of the group, and when he spoke all listened, tho he never spoke to all, but addressed himself to some single interlocutor, and seemed to wish that words so unimportant as his should not be magnified. But his friends were a unit against this modesty; there were freshness, reason, and beauty in all he said. Society, in the high sense, was always created where he was, and took on a dignity and value that prophesied of a Golden Age."

Mr. Hawthorne gives us the following vivid description of Emerson as he appeared in the winter Lyceum courses in Concord:

"He was dressed, on these evenings, in black broadcloth; either a very ill-cut dress-coat, or a buttoned-up frock-coat almost as ill-fitting; with a high, uncomfortable stock and an upright collar. Emerson's figure was naturally awkward; he had narrow and sloping shoulders, large arms and hands and feet, and he had a habit of projecting forward his head precisely as an eagle on the perch does, and with the same piercing look from his eyes. As he stood before the audience, behind the desk, he let his hands hang folded before him, or used them to turn the leaves of his manuscript; his gestures were very few; the one most often used was a clenching of the right fist, the fingers upward, and bringing down the forearm with a motion of power till it was at right angles with the upper arm; in its mingling of reserve with force, a very characteristic movement. He could hardly be said to read his manuscript; he probably knew it by heart; he would merely keep in touch with it as he went along."

"On the day of Emerson's funeral," concludes Mr. Hawthorne, "I walked with the rest of Concord, and with many men of eminence from all parts of the country, to the grave in Sleepy Hollow. It seemed to me that all of the old Concord was left in that grave. The crowd returned to their homes; but these streets and houses were no longer Concord in the deeper sense. The last of the great magicians had departed, and taken with him the spirit that is the life."

THE GONCOURT ACADEMY.

SOME ten years ago, the brothers Goncourt, of Paris, conceived the idea of founding a literary society which should outshine the French Academy. The society was to consist of ten—instead of forty—"immortals," and eight of these, including Alphonse Daudet and Octave Mirbeau, were nominated by Edmond de Goncourt, who died in 1896, leaving a handsome bequest to the new Academy. His relatives contested the will, but after six years of litigation the courts have decided in favor of the Academy, which now becomes a legalized institution. Says the New York *Times Saturday Review*:

"This Goncourt Academy is prohibited from discussing grammatical questions, making dictionaries, or trying to reform the public taste. Its ten members are to include neither poets nor critics, for Edmund de Goncourt hated both; they are to meet at dinner monthly; each to be paid $1,250 a year, and they are to confer an annual prize of $1,000 on some work of real literary merit, judged by the Goncourt standard.

"The present members are J. K. Huysmans, president; Gustave Geoffroy, Léon Hennique, Paul Margueritte, Octave Mirbeau, the brothers Rosny, Elémir Bourgés, Lucien Descaves, and Léon Daudet. The foundations of the French Academy have not yet been perceptibly shaken."

Mr. Edmund Gosse writes as follows (in the London *Daily Chronicle*) concerning the members of the Goncourt Academy:

"With the exception of M. Léon Daudet, these gentlemen are not very young. Few of them, I think, will see fifty again, altho none have yet seen sixty. Without resembling one another closely in detail, they have a certain likeness in their common leaning to the fantastic side of realism, in their enthusiastic study of the art of writing, in their comparative indifference to the public."

He says further:

"The parallel between living English and French fiction is too uncertain to enable us to conceive an Académie Goncourt in this country. But one may entertain oneself by fancying what

would have happened if it had been instituted and endowed amongst us. Imagine the seven original academicians convoked in 1900. I see them in my mind's eye: Mr. Conrad, Mr. George Gissing, Mr. Robert Hichens, Mr. George Moore, 'Mark Rutherford,' Mr. Wells, and Mr. Zangwill. Mr. Wells is chosen president, and then they proceed to elect three more members to make their number complete. After a really delightful conference, and the emission of some amazing paradoxes, the scrutiny would be made, with, shall we say, this result: Mr. Bernard Capes, Mr. Arthur Morrison, Mr. Benjamin Swift? Would that not be a very amusing little 'académie des talons-rouges Anglais'?"

RICHARD STRAUSS'S INFLUENCE UPON ORCHESTRAL MUSIC.

MR. HENRY T. FINCK, a recognized authority on musical matters, declared not long ago that the symphony, as a form of musical art, is "doomed to extinction," and he prophesied that it will be superseded by the "symphonic poems" of Liszt, Dvoräk, and Richard Strauss. This view is evidently shared by Mr. W. J. Henderson, the musical critic of the New York *Sun*, who points out (in *The Atlantic Monthly*, January) that recent developments in the musical world are turning the technic of orchestral composition "topsy-turvy," and are making orchestras "sing new songs." Mr. Henderson is deeply impressed by the vogue of Richard Strauss and the growing influence of his revolutionary musical theories. "Strauss has in certain ways discredited Beethoven and the prophets," he observes, "and has shrunk the orchestral wonders of Berlioz and Wagner to the dimensions of a Sunday-afternoon band concert." Proceeding to a review of the older forms of orchestral music, he says:

"Beethoven, striving to make the symphony a vehicle for emotional expression, was compelled to busy himself with changes in the form, and he gave no special study to instrumental effects. He used such new ones as readily suggested themselves to him, but they were nothing more than elaborations of the old conventions. However, the seed sown by Beethoven speedily bloomed in the growth of the new romantic school. The principal tenet of this school was that music must express emotions, and that the form must develop entirely from the emotional purpose and plan of the work. Two distinguished explorers of this new style devoted their highest efforts to the production of orchestral composition.

"Liszt endeavored to tell stories in music by erasing the dividing-line between movements and writing his work all in one piece. He retained the two contrasting themes of the old symphonists, but he asked his hearers to affix a meaning to each of them. Then he proceeded to handle them in much the same way as the symphonists did, working them out and varying them with much skill, tho always with a view to suggesting the development of the incidents of his story. To such a purpose the resources of orchestral color lent mighty aid, and Liszt was not slow to perceive this. He began to draw away from the conventions of the symphonists, and to seek for new and striking instrumental combinations. Nevertheless, in his compositions for orchestra Liszt was the debtor of two men much more remarkable than himself, namely, Wagner and Berlioz. From the former he got the idea of the use of themes with definite meanings attached to them. From the latter he obtained the suggestion of the employment of the orchestra to tell stories and much information as to its technics. Berlioz, however, continued the use of separate movements, and his attempts to use definitely representative themes were few and uncertain. He preceded Wagner, nevertheless, in the revelation of the resources of the orchestra, and he antedated Liszt in the use of the orchestra for romantic composition.

"Later imitators of Berlioz and Liszt failed to perceive anything except the vast color schemes of their orchestration. Borrowing a few of the conventional figures of the older writers, such as Haydn's sea-waves and Beethoven's thunder-storms, they asked us to see things through a kaleidoscope of instrumental color. They forgot that we could not understand them when they made no logical appeal to our intelligence."

Richard Strauss, standing upon the vantage-ground made for him by Berlioz, Liszt, and Wagner, has tried to combine all the best elements of their work. His "tone-poems"—"Don Juan," "Till Eulenspiegel's Merry Pranks," "Thus Spake Zarathustra," and "A Hero's Life"—seek to make the orchestra tell stories, but they do not ignore the fundamental principles of musical form which constituted the ground plan of the old symphony. Furthermore:

"Strauss has utilized themes with definite meanings attached to them, as Wagner did, without confining himself to two, as the older writers did, and as Liszt did in most of his works. He has returned in his later compositions to the fashion of clearly separated movements, while he has made them pass before the hearer without pauses between any two of them. He has developed his themes according to the principles laid down by the symphonic masters, and has striven to enforce their meaning with all the effects of orchestral color. And withal he has endeavored to compose only music with a purpose, never music for its own sake. In short, Strauss has shown that the principles of musical form which the earlier writers painfully evolved out of their attempts to produce nothing beyond musical beauty, not only can be, but must be, utilized by the composer who cares nothing whatever about musical beauty, and who aims only at making music a means of expression.

MR. W. J. HENDERSON,
Musical Critic of the New York *Sun*.

"This I believe to be Strauss's greatest and most significant achievement. It is the legacy which he will leave to his successors, and which will influence the progress of musical development."

STRENGTH AND LIMITATIONS OF JOHN RUSKIN.

RUSKIN has been the subject of so many articles, studies, and biographies that a new estimate of his life and work must, in order to justify itself, present a new point of view. This merit the London *Academy and Literature* concedes to Frederic Harrison's contribution to the "English Men of Letters" series, and it thinks that Mr. Harrison's conclusion that Ruskin was "a stimulus rather than an authority, an influence rather than a master," is one already sanctioned by time.

At the very outset Mr. Harrison defines his own position as being that of a sympathetic friend, and at the same time a critic, with a predisposition in favor of Auguste Comte, to whom Ruskin was hostile. "Tho an ardent admirer of the moral, social, and artistic ideals of John Ruskin myself," he says, "I am sworn in as a disciple of a very different school, and of a master whom he often denounced. As an humble lover of his magnificent power of language, I have studied it too closely not to feel all its vices, extravagances, and temptations. I am neither Socialist nor Plutonomist; and so I can feel deep sympathy for his onslaught on our modern life, whilst I am far from accepting his trenchant remedies." We quote further:

"Ruskin undertook to found a comprehensive scheme of the imaginative faculties on a creed which he had imbibed as a child and held with childlike fervor, without any solid study of its

philosophy, or its history, or its social fruits. When all this was forced on him by the prophetic homilies of Thomas Carlyle, and by the facts of society and art he witnessed in Catholic countries, and which he learned about Catholic ages, his rapid imagination and his sympathetic nature took fire and tore off, as did Sartor himself, 'the rags of Houndsditch,' as Carlyle called the Biblical orthodoxy of his youth. As in theology, so in history; as in art, so in economics, Ruskin was perpetually constructing *a priori* out of his own head new schemes and theories, without any serious or systematic knowledge of theology or history, or economics, or even art.

"But having said this, let me never forget that John Ruskin was a man of rare genius, of what one of his French admirers has called 'a palpitating imagination,' and withal he was a man of delicate moral sensitiveness, of acute human sympathy and vision.' He had some share of that Gift of the Ithuriel spear by which frauds are detected, which enabled men with such different spirits as Plato, St. John, and the Mystics, or Burke, or Shelley, to give us wondrous hints and guesses, beautiful consolations and hopes, even in their fancies, their paradoxes, and their illusions.

"All that genius and insight could do without systematic learning or patient reasoning, that John Ruskin did. From the point of view of a scientific historian, it would need long years, not a few crowded months, to master the history of Venice, much less that of Italy, for the whole Middle Ages. A serious archeologist would spend as many years as Ruskin could give of months to unearth all the seaweed-overladen and buried antiquities of St. Mark's, and the palaces of the Grand Canal. A man who knew little of theology except the Bible and the volumes of sermons that were admitted into a strict Calvinist household, was not equipped to lecture Auguste Comte, Mill, Buckle, and Herbert Spencer about the evolution of civilization or the history of religion. Nor was it quite decent to mock at the economists from Adam Smith to Henry Sidgwick with no more knowledge of their books than has any esthetic curate in deacon's orders. He never could be brought to understand this. His education in a kind of Puritan nursery, and the hard shell of egotism in which his whole early life was cribbed, made this impossible. And so John Ruskin went forth to take up his parable against them all—artists, critics, historians, philosophers, theologians, and economists, with all the fervor and devotion of an early Christian martyr in the Roman empire—and with the same result. He lived through a long life of contempt, and almost of persecution. But there was something in what he preached that has lived—which philosophers, theologians, and economists never could altogether supply."

The cause of Ruskin's vehement assertiveness, which Mr. Harrison explains was "a literary intoxication rather than a moral fault," is traced to circumstances of his early youth. The family practised "a sort of *égoisme à trois*," and Ruskin from infancy was "forced by parental affection and authority to regard his little self as a sublime genius destined to reform, inform, and direct the world." In pathetic contrast with this may be set a paragraph which reveals Ruskin's state of mind in 1869 when, dejected by "the public rejection of his social and economic teaching, the chorus of ridicule poured on him when he turned from esthetic criticism to life, society, and politics," he wrote, "Swift is very like me." Says Mr. Harrison:

"Words how full of pathos and truth. And that most strange bit of autobiography ('Sesame,' Preface, 21 par.) which ends, that 'in my enforced and accidental temper, and thoughts of things and of people,' he has sympathy with Dean Swift of all people. Strange parallel, singular coincidences! The most drab-colored with the most purple of all great masters of English; the most cynical with the most idealist maker of Utopias; the most foul with the most prudish of writers; the keenest politician with the most unpractical of dreamers; the bitterest hater with the most loving sentimentalist—and yet analogies in mind and in circumstance—they two so lonely in spirit, so like in their genius for sarcasm, so boiling with indignation for the people's wrong, so brave, so defiant, each gifted with such burning speech, both such Platonic lovers, yet so continually petted by good women, both once so much sought, often so hotly reviled, both ending in such a wreck, in something so like despair. John Ruskin, too, in his last years of decayed power, could have said, more reverently and less arrogantly, as he turned over the pages of his earlier books, 'My God! what a genius I had when I wrote that!' He too might have truly written as his own epitaph *sæva indignatio cor lacerabat*—yea, and could have added *et mentem conturbabat*."

A final paragraph may be given in which Mr. Harrison speaks of the period of the Oxford lectures as a time when Ruskin best exemplified his power to inspire:

"Curiously scanty and desultory as his scholarship had been as a student, we are continually struck in the Oxford lectures with the range of reading, the subtle comments, and the force of sympathy with which he had reached the inmost soul of so many classical writers, both prose and verse, Roman as well as Greek. Nor has any professor of Greek, of poetry, or of philosophy, touched with a wand of such magic power so many inimitable passages of Homer, Hesiod, Æschylus, Pindar, Aristophanes, Plato, Aristotle, Xenophon, Lucian; or again of Vergil, Horace, and Catullus. The Slade professor may have taught the students little enough of fine arts by his oral lectures; but he gave even the dullest and most unimaginative of his hearers new ideas of the place of art in life, higher ideals of both art and life, and an awakened interest in all that art might come to mean, if it were lifted out of the meanness and trading spirit in which it is too often sunk. Here and there when he does touch on art, there are some judgments on paintings and painters of wonderful acuteness for all that they look so paradoxical, as when he insists that Turner belonged to the Greek school. And when he is not thinking of art at all, there are passages of strange pathos and exquisite beauty. The startling paradoxes, falling in such inexplicable inconsequence, at least roused the mind of his hearers, and taught them things in ways impossible to the conventionally obvious. And the Slade professor, if he taught art only by stray crumbs that fell from the banquet of passionate satire on which his mind fed, at least planted deep in the hearts and brains of a few chosen men ardent ideals of a better world, and the yearning desire to strive toward its attainment."

NOTES.

A DRAMATIZATION of Rudyard Kipling's novel, "The Light that Failed," has been made by Miss Constance Fletcher ("George Fleming"). The play is being successfully presented in London by Mr. Forbes-Robertson.

The Bookman's February list of the six best-selling books of the past month is as follows:

1. Mrs. Wiggs of the Cabbage Patch.—Hegan.
2. The Blue Flower.—Van Dyke.
3. The Virginian.—Wister.
4. Wanted: A Chaperon.—Ford.
5. An Old Sweetheart of Mine.—Riley.
6. Glengarry School Days.—Connor.

SCIENCE AND INVENTION.

A NEBULAR MYSTERY.

THE astronomer is ever ready to bewilder the popular imagination by astounding calculations regarding the age, distance, and speed of the heavenly bodies, but it now seems that we are called upon to conceive of something more marvelous yet —a form of energy which travels many times faster than light, tho the velocity of 186,000 miles per second, which is assigned to light, is inconceivable enough to most minds. Prof. Simon Newcomb, the eminent astronomer, has been led to infer the existence of some such new form of energy by the facts which have been gathered in regard to the star Nova Persei, about which we have already published considerable matter in this department. It will be remembered that about a year ago this new star blazed forth with extreme suddenness. From the time it was first visible it increased in two or three days to a star of the first magnitude, but not long afterward it faded away as rapidly, losing half its brightness in a very few days. It was commonly supposed that some tremendous explosive conflagration had taken place, yet few people realized the significance of the suddenness and intensity of the illumination when the enormous distance of the star was taken into account.

In the course of an address before the Astronomical and Astrophysical Society of America on December 29, 1902, as reported in *Science* (January 23), Professor Newcomb said:

"In his study of what is going on among the stars, even the astronomer may for a time fail to grasp the true significance of what he sees, through leaving out of account the vastness of the field which he is surveying. A remarkable case of this is seen in the case of the new stars which have been known to burst forth from time to time. In at least two notable cases of this kind within the past ten years such stars have been found, within a few months after their outburst, to be changed into or surrounded by a nebula. Nothing could, at first sight, seem more natural or easily explained than this occurrence. To whatever cause we may attribute such a catastrophe as the sudden multiplication, within the period of two or three days, of the light of a sun by thousands of times, the cataclysm must result in throwing out a mass of incandescent vapor, rising with great speed. This vapor, expanding on all sides, will appear to us as a nebula surrounding the star and continually enlarging. That any difficulty can stand in the way of this view will first appear when we make an estimate of the probable extent of such a nebula. To do this requires that we know something of the distance of the star."

Professor Newcomb shows several reasons for assuming that Nova Persei belongs in the Milky Way, and that if this be admitted a conservative estimate of its distance from the earth would be 3,400 light-years—*i.e.*, a distance such that a ray of light, traveling at the speed of 186,000 miles per second, would reach the earth in 3,400 years. He goes on to say:

"Assuming, then, that the distance is of this order of magnitude, let us ask at what speed a nebula must rise in order that it may expand as rapidly as observation seems to show the matter around Nova Persei to have flown outward. Calculations would show this speed to beggar all our conceptions. The highest speed which matter has been known to reach is that attained by the eruption of hydrogen and other gases from the sun, which sometimes amounts to several hundred miles a second. But matter moving only with such a speed as this would require centuries [instead of a few days] to form a nebula of appreciable size at the distance we have assigned to the new stars.

"The application of this principle to the case of Nova Persei led to an ingenious suggestion by Kapteyn that the seemingly slow expansion of the nebula which surrounds Nova Persei was not a motion of matter at all, but only an illumination of nebulous matter already existing by the wave of light thrown out from the exploded star. At first sight the reply to this suggestion might be that the observed expansion can not come up to the light in speed. . . . But when we put the matter into cold figures, we find that the great difficulty in the way of accepting Kapteyn's explanation is the opposite of this. What we have to deal with is not the apparent slowness of the motion, but the inadequacy of the speed of light to explain the phenomenon. If the distance of this star is only 400 times that of Alpha Centauri [the nearest fixed star], the speed of the apparent expansion must have been ten times that of light.

"Of all agencies known to be propagated through space in time, light is the swiftest in its motion. We may, therefore, say that no known cause coming into action in February, 1901, could, within the twenty-two months which have since elapsed, have emanated from the star so as to make itself felt outside of a sphere which, at the distance in question, would subtend to our eyes an angle of more than four minutes in diameter. We seem, therefore, forced to the conclusion that either the illumination or nebulosity surrounding Nova Persei during the summer of 1901 existed independently of the outburst of the star, or there exists in the universe a cause susceptible of transmission with a speed several times that of light."

Since Kapteyn's hypothesis is still further negatived by other considerations—especially by photographs taken at the Lick Observatory which show that "the emanation did not go out in straight lines with uniform velocity, but branched off here and there, sometimes in one direction and sometimes in another, with varying speed"—we might naturally have recourse to corpuscular radiation (Roentgen rays, Becquerel rays, etc.). But here, if we accept the theoretical result of Prof. J. J. Thomson (see LITERARY DIGEST, January 17), says Professor Newcomb, we meet with the difficulty that these entities can not travel with a greater speed than light. Under these circumstances nothing seems left to us in the present state of our knowledge but to turn over to our successors the problem of explaining the phenomena.

TO PREVENT TELESCOPING IN RAILROAD WRECKS.

A DEVICE invented by a Chicago railroad man, George E. Dickson, with the object of preventing the "telescoping" of cars in railway collisions is described in the papers of that city, from which *Railway and Locomotive Engineering* abstracts the following. The idea, we are told, is to build passenger-cars with angular or curved ends, so that when the cars are on a straight track the ends will not be at right angles to the rails as they are now, but will stand at some angle, and these beveled car-ends will act as deflectors in case of collision. Says the writer:

"It is expected that cars so made will, under the stress of a heavy collision, have each its front end thrown to one side and its rear to the other. Instead, therefore, of the telescoping action, it is intended that the cars will really lie together *en echelon*, if we may borrow a military expression. To put it another way, if the cars were represented by a line of men in Indian file, all facing north before the accident, the position assumed after collision would be approximately represented by the line of men standing each three-quarters of a turn to the right. Details of the scheme provide for the protection of the sides of the cars from being crushed in, and also means to prevent the cars jumping upon one another."

Of this plan the paper just named proceeds to make the following criticism, suggesting that the remedy may be worse than the disease. It says:

"We have no desire to disparage earnest effort to make railway travel more safe than it is now; the road in that direction is wide; but it is quite possible, in avoiding the danger of direct telescoping by this form of construction, to court disaster in another form. The elimination of the car platform and the introduction of solid-end cars and continuous vestibules, with strong under-framing to cars, are apparently the safe lines along which the evolution of car design by expert car-builders on our leading roads is moving. Mr. Dickson's plan means the dislocation of one or more 'joints' of the train, and the possibility of

passing cars sideways down a steep embankment, or over a bridge, or against the jagged sides of a tunnel or rock cut, may be as serious a menace to safe railway operation as is the danger which he seeks to avoid.

"The worst accidents in which telescoping has been the predominantly unfortunate feature are frequently those in which old-style cars were concerned—cars with platforms carried on timbers bolted to, and projecting from, the car-sills. In some cases there is reason to believe that the presence of the high-speed brake on the ill-fated train would have averted dire disaster, or at least softened it into mere mishap.

"The enormous amount of stored-up energy which must be dissipated before a moving train can be brought to rest was recently discussed at a meeting of the New England Railroad Club, in a paper read by Mr. Desoe. As an example he showed that a train weighing 1,500 tons, moving at the rate of 25 miles an hour would have 62,688,000 foot-pounds, or 31,344 foot-tons, of energy to be destroyed, as far as the train is concerned, before it could be stopped. This amount of stored-up energy, if suitably applied, would be capable of lifting the entire train more than 20 feet up in the air. Higher speeds with less weights may give practically the same results. These figures show the enormous forces which must be dealt with in solving the problem which Mr. Dickson has essayed. The deflecting method, in which the cars will not only be derailed, but probably shoved off their trucks, and bunched together, demands very cautious and conservative consideration from those best able to judge."

THE HOOKWORM OR "LAZINESS" DISEASE.

THE assertion made by Dr. Stiles, zoologist of the United States Marine Hospital Service, that the degraded condition of the so-called "poor whites" of the South is largely due to a parasitic disease, has been already noted in these columns. The description of Dr. Stiles's investigation as the discovery of "the germ of laziness" has put the whole matter in a somewhat ridiculous aspect in the eyes of most casual readers of the daily press. An editorial writer in *The Popular Science Monthly* (February) tells us that Dr. Stiles's discovery is really a most important one. His contention that the parasitic disease in question, varieties of which have existed in warm countries for centuries, must also be prevalent in parts of the United States, was first made eight years ago, but was not regarded favorably by his brother practitioners till he thoroughly proved his point last year. Says the magazine referred to above:

"The extreme and in some cases nonsensical statements made by the daily press have been startling, but not more so than the more serious and conservative statements Dr. Stiles made before the medical society to which he presented his results. The press has, however, misquoted his statements in more than one particular. His results briefly stated are these:

"If we go south from Virginia to the Gulf we meet two totally different kinds of anemia, which can be distinguished by the soils on which they occur, the parasites which cause them, the symptoms which result, and the treatment which is necessary. One of these anemias follows the more impervious soils such as clay, and is due to malaria, which, as is well known, is caused by a minute parasite which lives in the blood and which may be cured by a proper use of quinin. The other anemia, preeminently a disease of the sandy regions, is caused by a parasitic 'hookworm' (*Uncinaria Americana*), which lives in the intestine, and which is not affected by quinin, but can be killed by the use of thymol. These two anemias have heretofore been confused by most physicians, hence this new discovery clears up a matter of great importance from the standpoint of the practising physician, and it is not an exaggeration to state that it means a revolution in the treatment of fully half of the sick people found in the Southern sand areas.

"One of the most important symptoms of 'hookworm' disease is an extreme lassitude, both mental and physical; this condition is due to the emaciation and to the thin watery character of the blood, which does not properly nourish either the brain or the muscles. Now, curiously enough, it is especially in the sand areas of the South that the poorer whites, known as the 'poor white trash,' are found, and Dr. Stiles, who has been living among these people for a number of weeks, positively states that it is among these people that hookworm disease is especially common and especially severe. He found entire families and entire neighborhoods affected, and, owing to the symptoms which the disease causes, he asserts that this malady is very largely responsible for the present condition of these people. He states, in fact, that if we were to place the strongest class of men and women in the country in the conditions of infection under which these poorer whites are living, they would within a generation or two deteriorate to the same poverty of mind, body, and worldly goods which is proverbial for the 'poor white trash.'

"It is true that the poorer whites are found on clay soils as well as on sand; but Dr. Stiles maintains that on clay soil these people are healthier, stronger, and more intelligent, hence that they are better fitted for the competition in life, from which the hookworm disease practically excludes the poorer whites of the sand-farms. He has further traced families from sand to clay or to the cities, and proved their improvement under the new conditions; and conversely he has traced families from clay to sand, and proved their deterioration.

"An important point claimed in these investigations is that hookworm disease is especially prevalent among children, and that it not only interferes with their school attendance, but that children who are afflicted with the malady, and who have gone from sandy districts to a city, have the reputation among their teachers of being more or less backward and even stupid in their studies. All this agrees with well-established symptoms of the disease, for it is thoroughly established, not only by Dr. Stiles's investigations, but by observations in Europe and Africa, that hookworm diseases stunts both the physical and mental development. Dr. Stiles states in fact that he has found patients of twenty to twenty-three years of age who both mentally and physically were not developed beyond the average boy or girl of eleven to sixteen years old.

"There are other points in connection with this work, such as the perverted habit of dirt-eating, the presence of the disease among factory hands who formerly lived in the country, the financial loss involved, etc., into which we can not enter here at present. The happiest part of the entire work is that the disease can be easily prevented and that it can be cured. Under these circumstances, we may look for decided improvement among the poorer whites in the sand districts of the South, altho this remark is not to be interpreted as meaning that we consider that 'hookworm disease' gives us a complete explanation of all ills in the Southern States."

Visual Powers of Savages.—A series of observations on the visual powers of uncivilized people has lately been published by Dr. W. H. R. Rivers. The greater part of his work was done in Murray Island, where the people had remained undisturbed in their primitive condition until within the last thirty years, and have subsequently been rendered by the influence of missionaries sufficiently tractable to understand the instructions given them for the performance of the requisite tests. Says *The British Medical Journal* in a note on the subject:

"Upon the question of physiological acuity of vision as distinguished from acquired powers of observation Dr. Rivers's researches tend to show that tho the typical savage may be superior to the normal European, his superiority is only slight. He quotes many instances which suggest that it is long-continued practise in closely attending to the minute details of extremely familiar surroundings, rather than natural physiological superiority, which enables the savage to surpass the ordinary European so marvelously in the recognition of distant objects. The most acute-sighted savage would in the unfamiliar surroundings of a Highland moor be a very poor match for the native gillie; and Dr. Rivers considers that we have no right to assume that the average European who has received the necessary special training could not develop an acuteness of vision equal to that of less civilized races. These remarks suggest an important application in the training of scouts for military purposes. If any slight superiority in the visual apparatus of the savage does exist, it has been suggested that it may be partly accounted

for by a more delicate power of accommodation for long distances. The frequency in savage races of hypermetropia, where the mechanism of accommodation is always more or less in action, affords some corroboration of this view. Dr. Rivers has also found some evidence that irradiation is less marked in primitive races, and points out that this fact if fully established would also help to explain any superiority of visual acuity which might be present."

AMERICAN RECOGNITION OF MARCONI.

THE cordial treatment with which Marconi and his work have been received in this country are favorably contrasted by *The Electrical World and Engineer* (January 31) with the more "offish" attitude of the transatlantic public and press. It says:

"This latest work of Mr. Marconi is indeed something for universal congratulation, and we can only hope that it will stir up American inventors to see if they can not beat him at his own game. It is pleasant meantime to note his courteous recognition of the cordial attitude toward him and his work of the American
